(2:19:41) think is the ultimate answer for why this is being covered up is that this makes the most sense for why it would be covered up from National Defense is not just for a strategic Advantage but also because we don't want to destroy ourselves you know it may be the answer to the fmy Paradox why when we look up do we not see civilizations everywhere right maybe if life is everywhere we should be seeing civilizations everywhere maybe many civilizations when they become technologically advanced enough and unlock this Quantum and macro

(2:20:07) technology they destroy themselves right it's a scary thought and I think that's also why so many of the the long term or long time the Richard dolans of the of the UFO world are star have discussions about this Consciousness thing we're starting to realize it until as as human creatures we all socially somehow that we we raised our level so that this we don't have this bickering between us of of things that don't matter and we have to we have to raise ourselves to a higher level before we'll ever be able

(2:20:36) to have be responsible with this kind of a of a function yep I agree sir so thank you for bringing that up I think that's a huge point I'm glad that's one of our our last questions but we have a few more to do Locka do you want to ask a quick question then I want to see if audit the audit has any questions since he was asking to come up oh think that sounds wonderful am I audible is that does that work yeah we can hear you all right perfect hi Ashton uh I just had a you know few question I'm a

(2:21:07) physicist by nature and I was you know uh looking at some of the works that you have put in and U you know it was completely skeptical first but then I thought that maybe I'll give it a read and uh keeping the question really here uh tensively the video right doesn't corroborate with any physics based phenomena that you could be explained and talking about the quantum macroscopic coherence it's something that works on very small scales and cannot work on like uh matters as big as an aircraft like when you're talking

(2:21:35) about Bose Einstein condensate it needs an absolute zero temperature right which is hardly possible to recreate in Laboratories leave alone in a system where you know it's flying thousands of feet up in the here again coming to the other point about the three papers that you've presented one being the Princeton one uses uh Randon Summerfield model which is not exactly a standard model and again a theoretical aspect so I mean I kind of miss uh the physical aspects of it and the physics that you're

(2:22:04) talking about in this entire discussion which leads me off um to again doubt not only on the corroborating evidence given by the video but also on the legitimacy in a sense where the physics just does not make sense yeah so what I would say is you should check out my hard TRS podcast I think that what you'll find is what you've been learned to be true is not what really is true when it comes to a physics perspective the science that we talking about does not break any laws of physics out and there must be a unifying

(2:22:35) theory of quantum and macro it's simply a matter that we don't know what it is yet so if you were to think of it from that perspective then you might realize that there is potentially a way now perhaps there is no difference between a neutron star and an atom perhaps that the properties are determined based on or the behavior is determined based on the properties and not based on the size and I think that if you were to look at it from that perspective then your whole outlook would change again but the point

(2:23:02) again it's not about perspective anymore because the question now uh you know uh continuously harbingers on upon um the actual fundamental laws of nature right because there are certain things that cannot exist and certain things that cannot coexist because uh uh these are things that work in a very different way like for example if you're talking about let's say what what you're talking about is stand essentially unifying the gravitational field Theory or the maybe your unified standard model which in

(2:23:29) itself is something so huge that you know would have been an academy a long long long you know way back before a practical application of it has been developed and coming from a physics background where I've been engaged in the same particular field of interest that you're talking about uh predominantly Quantum information Quantum chromodynamics I I'm particularly sure that there are certain laws of nature which cannot be Harbinger in a sense you're talking about well that's your opinion and what

(2:23:58) I would say is if you can explain the double slit experiment you can win a Nobel Prize and what I would argue is that you should take a look at my hard TR podcast not listen listen it's not it's not the Young's Double SL experiment has been proven so I appreciate it sir but I'm not going to argue about it you can take a look at my hard TRS podcast if you want to learn more and if you want to keep your mind closed that's also your choice no one's going to stop you uh let's go to some more questions so a

(2:24:21) audit do you want to speak up hey a can you hear us you look like you have a very interesting account would love to hear what you're all about and also what's going on in terms of your thoughts on m370x Can Am I audible hello yes yeah hear you goodd cool sorry um so first of all Ashton uh great work man it's a pleasure to actually speak with you I've been following your work for quite some time now probably since the beginning um I just wanted to say that I haven't noticed a lot of people mention the

(2:24:57) appearance of the third orb in the satellite video and I was just curious is that something that you know about is this well known in the community is this something that just

slipped by me um just wondering if you had seen that if you were aware of that or if the community was aware of that so wait can you just reiterate what do you mean by the third orb because we see three orbs you mean from where it comes from or sorry yes yes so when at approximately 22 seconds of the satellite footage when it pans after the

(2:25:27) second orb has arrived the third orb is sitting on top of the ocean and it does a quick motion and then it joins the other orbs uh it's just sitting as like a w a pale white dot on the ocean and then once it gets into frame it makes a very erratic movement and then comes from the opposite side to see to to join the others and I was just curious if that was something that was already known well I'm looking at my stream and I don't see that if you can point it out maybe some screenshots later but yeah right now I

(2:26:06) don't necess see that I do know the second orb for sure comes from the water and shoots up which is really weird but couldn't really tell where the first orb and third orbs are coming from um third orb is there it is sitting right on in the middle of the left screen well I guess both screens since it's stereoscopic but I'm mostly focusing on this left screen and as it does this pan after the second orb joins PA you can pause it at 24 25 seconds and you can actually see the other orb sitting on the top of the

(2:26:42) ocean but what I'll do is if if you can't locate it I will um do a video uh put a circle around it kind of show it and then I'll share it with you privately so you can check that' be great man yeah am I not following you I'm following you now so you can DM me when you want but yeah thanks lot of I appreciate you being in the chats uh last few streams nights and and following along man it's always good to have uh you know big influencers and what on uh investing in the case and getting the evidence out there so I just

(2:27:09) want to say appreciate you as well as everybody else who's been out there um you know going through the evidence so appreciate you very much sir uh are there any last questions before we close it out for tonight oh here I'm gonna pull him up real quick as well go ahead um yeah okay um how you doing uh you're not familiar with me I'm getting familiar with you um say on infowar and I was just kind of curious uh my question would be can this technology be used for incoming missiles yeah so definitely check out my

(2:27:44) interview interviews with both Bob Rossy or uh Dave Rossy but more importantly Bob Greener if you want to know know about that Bob green or Greener basically says that this could be a perfect defense mechanism where we could just completely wipe out any type of nuke or missile that were to come at us and that we could just disintegrate it essentially or de atomize it and have the byproduct move somewhere else this could even explain why we haven't been developing a lot of anti-missile Technology recently as that we just have this Ultimate

(2:28:12) Defense weapon sitting there some of the other applications um I think I have them up where I can go over them real quick yeah I do um so we have Annihilation that we could cause from this we can do teleportation we can have faster than light communication we can create

fusion power free energy might be capable we might be capable of it force fields and cloaking are possible medical healing which is one of the things that I thought was just absolutely incredible um you know if I it would be nice if I could live for another 100 years but I

(2:28:41) have a feeling like I mentioned before I will won't be dying of old age um and then the lastly again the Doomsday weapons that I think think that uh rad was speaking on earlier that we really need to have as a conversation so um yeah I think that a lot of there's a lot of huge implications of this stuff and this is why it's very important I also think that we can actually recreate this and that's why you know if this were to die down or slow down then probably I would try to use some of my resources to

(2:29:07) get funding so that we can actually prove this technology in a lab like one of our last speakers I think there's a lot of people out there that from a fundamental academic perspective that this is been hidden so long from them that they don't think it's even possible but the way we get around that is that we prove that it's possible that we actually go and experiment it and show it to be real any follow up on that uh no thanks a lot I appreciate you answering my question I think we will let mellow or

(2:29:34) red panded do you have any last comments I think that we'll let if kim.com wants to say something before uh we close down we'll probably let him have the last word um but I'm starting to get tired I need to get some food I just once again want to appreciate everyone of you being here so do my my co-host have any last thoughts I'll just say real quick Great Space um audit what audit said was also beautiful how open sources has all been like all the different people making gifs of comparing things or maps and

(2:29:57) whatnot it's very uh beautiful to see happen in real time thanks Panda it's great to have you here it's great to be here um I really appreciate all the researchers that have hive-minded this so far it's really an honor to have kim.com and I want to say thank you for all you've contributed to this mystery and solving it on a on such a massive level um but I'm mostly here to listen to what you guys have to say right now uh has his hand up we' love to hear of course from Kim as well

(2:30:24) yeah I think we're not going to do any more hands up at this point if people have already asked then you know we've we've we've heard sorry we'll have to take it for another time I just don't have infinite time tonight um I also just before Kim speaks if if he wants to jump in I just want to thank him and everybody else who's put out all the information um out there on the huge groups of followers we definitely would not be here without all of that I also especially want to thank him for coming

(2:30:45) up with the great idea of having the Bounty once again right now up to \$145,000 to find the supposed hoaxer so anyone who wants to **debunk** the footage the only thing you should be focused on is trying to find this supposed Banksy hoaxer who made these masterpieces and presenting that Source data to collect that \$145,000 anybody who's not focused on that trying to **debunk** it is is doing it from a dishonest angle if we can figure out who the leaker is because

they're real videos then the minimum anyone else can do is find out who the

(2:31:14) hoaxer is so go ahead kim.com if you have any last thoughts thank you very much for being here sir yeah thanks for having me I'm just jumping in real quick to say that a friend of mine messaged me earlier and says he wants to add another 100K to the Bounty so that would put it to almost 250 um whoever uh you know has any information about where these videos came from can grab that boundy yes know so it's going to be a lot of money and also Ashton I just want to uh thank you for going on all these podcasts uh you know being

(2:31:51) such a transparent open guy talking to anyone listening to all the criticism and uh providing you know insights and that video that you posted today with with the cloud comparison I think just makes it even harder for those that are attacking you to say that this is some kind of uh CGI creation so you know keep going do your thing and I applaud you thanks a lot man wow I'm gonna have to make a new post later tonight after I get some food so \$245,000 on the line find the hoaxer guys no excuses find the hoaxer bring

(2:32:32) the source material proven that they the work that they did here you guys can collect it you can tell how serious we think these these footage is real and what's on the line here right if this footage is real it's going to reshape the whole world out there so once again kim.

(2:32:49) com just doubled it up thank you very much sir yeah but don't tweet it yet because it's a private message that I got someone wants to put up that extra money so let's wait for him to come through with that commitment uh he will message you directly your DMs are open right uh they're not so if you just want to DM me the person I'll follow them so that they can message me later awesome I do that right after this okay keep going man thanks man so okay closing thoughts once again I want to thank kim.

(2:33:18) com I spoke to him personally before he came out and supported the videos went through the evidence with him we spent like two hours talking through it going through it all I think he's a very logical and rational person similar to myself somebody who wasn't involved in these communities ahead of time but saw the these videos and how important they were potentially to society and the world in general and has been extremely generous with his time support influence and of course his uh money that he's thrown in for this bounty uh I can't

(2:33:46) wait to see where this goes and how far we can take it and I just want to appreciate everybody once again for being here following along with the case um getting the word out and everything that you guys do uh I love you guys all so much and it just means so much to me honestly so thank you guys I hope you all have a wonderful evening and feel free to check me out on my streams uh make sure you're following kim.

(2:34:09) com red panda Melo and everybody else who's been supporting let's just make this community amazing and better than anything else is it's out on the internet have a great night everybody peace okay everybody who's in the Stream thank you very much for being here uh that was huge guys if you heard that at the end oh my God kim.

(2:34:32) com coming up huge 245,000 potentially coming down the pipe if once I hear from that person directly um wow I got to go celebrate guys this is this is going to be awesome so um I'm probably actually going to come back on here in a little bit after get some dinner for a quick Recaps uh stream tonight um but maybe not so just again want to thank everybody who's on the stream right now uh that space I think was just super spicy super huge that was awesome I'm just on Cloud9 right now and yeah this has been awesome guys so I'll

(2:35:07) talk to you guys soon peace everybody

MH370x - All Evidence Space Preparation and Alex Jones debrief 12/1/23 - YouTube

<https://www.youtube.com/watch?v=W2e0o7mY-WI>

Transcript:

(03:34) you guys ready to start this thing up wow hey everybody everybody in the chat here what's going on TJ's looking for a pair of the forge glasses one second everybody we're boozing tonight oh where's my starting soon text it's not on there that's weird we noticed she was kind [Music]

(04:45) my te gone cold I'm wondering why I got out of bed at all the morning rain clouds of my window and I can't see it all div if I could it all be great put your picture on my wall it reminds me that it's not so bad it's not so [Music] bad I drank too much last night got bills to pay my head just feels in pain I miss the bus and there'll be hell today I'm late for work again even if I'm there will all imply that I might not last the day and then you call me and it's not so bad it's not so bad

(05:40) I want to thank you for giving me the best day of my life no just to be with you is having the best day [Music] Push the door I'm home at last and I'm soaking through and through then you handed me up town and all I see is you even if my house falls down now I wouldn't have a clue because you're near [Music]

(06:58) MEK I'm muted I guess welcome welcome to my welcome to my letter here yeah too funny huh that's that's a worthwhile copyright strike guys that's a worthwhile copyright strike totally worth it you think uh Lex is going to see our

(08:03) our our uh is he going to see our shout out on uh on Alex Jones we're sipping on uh yeah no man you guys guys we were catching on pretty slow there guys took you a while to catch on thanks guys yeah obviously that was intentional the music there I didn't care if I get copyright tried it was too funny it was worth it Lex man call me back Lex uh it's a dirty martini over here okay guys thanks welcome to the stream everybody just having a bit of fun just having a bit of fun four orb shirts too funny man yeah so yeah uh Alex Jones stream or

(09:11) uh podcast wow wow guys that was uh that was big that was big um oh Kim Iverson just appeared as well oh we got to post to Kim Iverson did it go live oh it aired live it's airing live right now oh wow okay um can we watch Kim Iers live or is this going to copyright strike me too I don't know what copyright strikes this year guys yeah Lex are you awake buddy yeah what if we got Lex Freedman to come into our uh into my live stream into the chat that would be that would

(10:16) be the best in both our videos the planes turning to the left is this that meant is coordinates have to be in the nicobar islands it has to be going south into the east in our videos and what this means is the whisper out data is nonsense and that should be obvious to anyone who's looked at it like I did because the whisper out data is like some bad James Bond writing oh the plane's hugging the coast now it's going to make a cut back and look and see if anybody's looking behind it and now it's

(10:42) going to sit there and do a holding pattern for 25 minutes none of this makes any logical sense whatsoever the problem with whisper out data is that it doesn't work because it's the idea of I'm going to follow somebody with a white shirt on but you're in a crowd of people with white shirts on so presumably what's really happening in that whisper out data is they're just piecing together together and they're trying to match something and and come up at the route so just to fully discredit this

(11:09) whisper out data we can all whisper the South Indian Ocean the body of evidence completely rules it out now there was no debris field found this is absolutely impossible if this 777 crash in the ocean you're going to have bodies luggage parts of the plane floating spreading out in the water for Miles the debris field to be visible from space for days it was the most expensive search like you mentioned in history 1500 people along the seventh Arc there's nowhere else for this plan to go the official narrative has it

(11:42) running out of fuel it's not like it flew off down to Antarctica there's nowhere else it can even go 20,000 views already not bad we have three different acoustic systems that heard nothing the sosus system they gave the game away when they told us about the Titan sub how the Navy did and they didn't say anything about it for five days I told Jackie deoy the Navy has a system where they can hear and pinpoint any acoustic detections in the ocean they would have heard the MH370 crash into the ocean so

(12:11) would have the Western Australia hydrophones as well as the Diego Garcia hydrophones which we actually seen that data and there are no acoustic detections consistent with the plane crashing into the ocean there's even two radar systems that would have seen it fly in the South Indian Ocean Indonesia's and the Jord system which is Australia's radar system I've seen the ranges on those radar systems they would have caught it there um we also had 19 passengers of the of the families that signed a joint statement begging the

(12:38) government to look into the fact that the phones were still ringing for up to four days after the event one of them even proved it on TV and then there's this active shipping route in

the area I mean this is from Africa to Australia there an active shipping route they claim the plane crashed in broad daylight there's no witnesses that saw it nobody finds a de ref field you know you can't hide all these shipping what they would have seen or cover this all up um and then there's four redundant

(13:05) whis garbage I don't know whis is based on the IM none these sent any data none of these went off so people that claim oh well we're going to re resume the search and find it in this new location I we'll just go ahead and guarantee you you're you're not going to find the plane but I wish them the best of luck or maybe they would maybe they would find a plane because I mean if you're on to something and you're exposing something then maybe a plane would suddenly appear in that in order to throw people off of this

(13:32) people a lot of news articles go ahead yeah well well you know what's interesting about this had you heard of Dr Steven Greer uh I know I had mentioned him to you but but had had you heard about him at you know when when was the first time you'd heard of him his work have people been bringing him up yeah he get brought up a lot um and you know I got interested as a lurker I've not been an in active investigator since about 2017 when I saw the dod Navy videos get Declassified that's when I thought oh

(14:04) wow government's going to admit that these videos are real you know there must be something more here can you tag people like this I am a very logical and rational and uh I would even say a skeptical minded person I didn't even necessarily believe that conspiracies could be real until I Fel found myself in potentially the largest verifiable one of all time um but I am somewhat familiar with Dr Greer's work and uh you know I try to keep an open mind now for anyone I talk to I don't judge people

(14:29) based on their pedigree credentials I like to judge them based on the evidence they put forth and the uh stories that they put forth and whether or not those are logical so I am somewhat familiar with his work um and I would like to talk to him and anyone else that has an open mind that wants to discuss the case because if this is a reverse engineering situation then there's going to be a lot of evidence that Stacks up towards that well these are the types of things watch or should a lot of the alien sightings we think we see are not

(14:59) they're actually Tech that our government has has and has been developing um and and then you know testing and using and that his theory is they don't want that they haven't released the tech they haven't shown the world that they have this and he says that it's from Alien Tech like that we've actually intercepted alien aircraft extract from that aircraft technology and then recreate like you say reverse engineer is that what you're talking about the the alien technology and then and then and then try to

(15:32) replicate it um and he says that the reason why they haven't come forward with that is because they wouldn't want for one other foreign countries to know that the US has been able to replicate alien technology because if it falls into the hands of that would change Wars that would change everything it's a game changer it's like the nuke being developed all over again

but something even uh even perhaps more dangerous um and so we don't want other countries to get their hands on it we don't want

(15:58) people to know that we have it and also I'll send you a link I think it would change the energy industry it would change you know if this Tech gets out there people are going to use it for good things not just War but for good things and that would be very disruptive to the people billions upon billions trillions dollars even maybe she did it's interesting because that's that's what you're then saying is you're saying yeah it looks alien and it probably is alien technology but that it is this is

(16:24) terrestrial this is this is the and you say it's the US okay you want the because of the satellites that pick this up what makes you think it's not Chinese I mean this is a plane going from to Beijing how do I get to this why would the US why would this kind of um you know these tech company these dark kind of tech Ops I forgot exactly the term step Greer uses on them he has a particular term for these types of of uh Black Op or something but yeah kind of yeah so so why why would the US be over there

(16:58) and test testing it on a passenger plane versus I mean that just seems to be I mean why test it on passeng civilian passengers why not test it on military people you know if you want to test to see if people can can be transported in this way um then do it to the military that's what they sign up for these guys are signed up for hey if it cost me my life I guess it cost me my life a civilian getting on a plane thinking they're just going to go to Beijing you know and they end up somewhere else where did they up do you

(17:29) think I mean this teex shows us what do we have any do you have any other um theory of what happened to the plane like after The Disappearance from these videos yeah so that's a lot a lot of statements you put in there I want to first of all agree with most of what you said probably if not all of it in terms of uh Dr GRE what Dr Greer talked to you about I actually watched your interview with him last night and I would agree that probably most if not all of these craft that we're seeing out there might

(17:54) be ours after kind of digging into this case I also would agree that when I look at these videos it looks like our approximation of what we are like reverse engineered version of what these uaps are would look like you know we're not looking at a Tic Tac we're not looking at a saucer we're let our hair down we're looking at an orb but this orb is a field around a small you guys notic I we red white and blue for Alex Jones as well um and then in terms of you know why would we do this it really

(18:19) comes down to the motive and we have put for person downed video very plausible scenario lithium ion battery fire scenario 221 kg in the cargo bay of this plane where the FAA outlawed them in passenger planes in the cargo bays in the year after in 2015 these are very energetic events runaway lithium ion battery fires are extremely dangerous this is a lot of those batteries so we believe that when this plane went dark it actually started on fire and when it goes on fire now you have an emergency event this is not a situation where the

(18:52) pilot is suicidal where they're trying to you know take out all the passengers it's a situation where they're trying to save the passengers they might be flying low because the plane could be depressurized they need to give the passengers enough oxygen we've even got 19 witnesses that corroborate this Mike McKay who sees it start on fire nine Witnesses along the coast who hear loud noises at the same time the plane goes dark eight Fisher on a boat 10 minutes after the plane goes dark seeing it Fly

(19:19) really low and then our key witness in the location where we think the videos are happening roughly around the same time it sees the glowing orange plane flying low descending consistent with them battling the fire using the fire extinguishing devices that's releasing bromine a halogen gas the reason why it's glowing orange is this gas is permeating throughout the entire plane causing it to glow orange she even sees smoke coming out of the back of the plane now given this event given this fire scenario what we're talking about

(19:50) here is a potential motive where you're trying to save the passengers on the plane but why are you risking your trump card right to what um Dr Greer would have mentioned is that this technology in my mind is certainly being hidden for reasons of National Security we have more evidence of that we can talk about later but like you said a lot of people say well nukes can blow up the planet right we can destroy ourselves with nukes we are talking about something that makes nukes look like child toys okay we're talking about the ability for

(20:17) doomsday weapons where an individual could blow up the entire planet even I've had reservations about continuing to disclose this information because I don't want our adversaries to know but it's been n years and if we can figure this out with a Twitter account and Google access then **China** and **Russia** better have figured it out and if they hadn't figured it out they're so far behind us they don't they're not relevant anymore so shade on **China** Russ scientists and Engineers aboard this

(20:43) plan if they haven't figured out there're so far behind that they're not Pat work there's this conspiracy theory out there that well take this fifth person patents don't work that way the patents are actually I love how you just ask people how does a plane crash without leaving a debris field just everybody go Sil reason 20 people on board the plane from the same company is way too many most companies have three or four people on the same plane if this plane is doomed you guys probably know all this already you can

(21:10) watch International Airport flies directly over it I uh airport that they go to right after we'll see at the end I feel like I might have gone a little too hard on the porter crew at the endend might got a little gone a little too the next thing they would try to do is land in the ocean it's also though 2 in the morning 2:40 in the morning pitch black we check the moon's not even up uh many of the passengers might not know how to swim because Mainland Chinese are do not learn how to swim at a same rate

(21:37) that we do in the west when this plane crashes and try even tries to land in the ocean it's going to rip apart it's not a situation where see the a t her is obsessed with those a that was

actually probably a miracle that the plane didn't rip apart even in that situation in the ocean it's completely different animal batter is wor Motorola you can look up um NC boy on Twitter he has like so much was started intentionally because you're trying to prevent these scientists and Engineers from I saw the guy talking

(22:07) about the debris search happening like bro what year do you think this is It's Not 2014 anymore saying let's go ahead and see if we can I wonder if we should add this to our list right survive this where's our list now we've been able to link these 2 fre skill Engineers to the US government and defense we found a 2005 National Security a report that is about the emure Super Chips and it mentions fre scale semiconductors n times it says this technology could be available by 2010 or 2012 but only if the government

(22:42) offers funding to make it happen and then we also found a press release that fre scale semiconductors had launched a major initiative dedicated to serving RF power needs of the US Aerospace and defense sector yeah L Lodge is a you can tell there's like an a that there was this Accidental liumy Fire lium batteries were and we got 500 pounds of them in cargo bay in my mind you might as well had a bomb on the plane and you can't keep these fires out you can put them out and they just keep coming back up again so the crew is

(23:17) probably battling this for hour desperate to try to get the plane on what was Brad's podcast they have no hope getting that done have to look even got the Malaysian minister of defense on an interview we don't pass survived or not unied but that they somehow knew not sure we can get the either that does not add up that's contradictory if the most likely scenario is a hijacking or even a pilot suicide scenario then you wouldn't be able to know had the only way you know that is if you have communication

(23:48) with the I remember any oh yeah ion you wouldn't send Jets up TR plan is because somebody else has already taken care of it United States government now why is it not shin the main reason why it's most likely not **China** is that they were actually trying to figure out the **truth** they put out a satellite image that was released March 12th dated March 9th and it looks like three orbs if you just Google satellite image MH370 it looks like they were staring at our event and they were doing some spycraft say hey we know what you did

(24:19) with the plane now it gets reported as being why the heck South **China** Sea his man speaking imp perfectly pound numbers it also gets um it it so in this situation it could be that they had some satellite imagery but it wasn't the resolution was not high enough to know for sure but they know something's wrong and I was going to throw this evidence out but then we found out went back to who that's not necessary March 9th the day after the plane disappeared all Theory no substantial evidence Malaysia's redor brain right here bra

(24:53) and what they stole this is like the people that think Alex murd is innocent related to the MH370 disappear the day after is that is this TJ right here the only reason why you do that is because you know something's wrong with the official narrative and if you have satellites everywhere and you don't see a debris field anywhere and they're trying to claim this plane

crashed of course their intelligence is going to be very interested in finding out what really happened to the plane so to me that rules China out frankly has the

(25:20) capabilities or had the capabilities in 2014 to pull something off like this uh so the people who are implicated is the United States government and some people would even argue as my last point that well what if it's a scap well first of all they never made this footage available it's not like they're posting on CNN and MSNBC to say hey everybody aliens took the plane no one's going to believe that right now they're going to go okay well you did something to it right everyone's going to go this is a

(25:44) cover up in the United States did something so the scap angle makes no sense whatsoever and the fact that what we see in the videos actually corroborated by 19 Witnesses you know as hard as it is to believe it is the story that makes more sense than anybody else's Story by magnitude it accounts for all of the evidence including the tiny bits of the flimsy guys it definitely just crashed in the ocean without leaving they had Burks on itot from everybody who support device Witnesses looked into they ignored the

(26:17) Mal Dives with this device washed up and the flapper on that everybody says oh well this flap R proves that the plane crashed the media reports being connected by a unique serial number but it wasn't it was connected by a non-unique serial number somehow mysteriously this bolted on unique serial plate was missing from the plane you can Google that and find out that as well so the amount of deception that's gone into covering up what really happened to this plane should be a good indication that these videos are more

(26:44) than likely the real end of MH370 okay so go back to the scientists who were on the plane um people it can't be replicated dude I'm literally looking at flux what they carry and where were they going to benefit from the tech yeah so they were from free scale semiconductors which I uh coily refer to as freescale superconductors because I if this is true then what it was a US Bas of compan that a y okay so they make semiconductor ships uh and and a superconductor is simply a perfectly conductive sem only downside of the

(27:22) interview with Kim is that she like not really up to dat on on the story it was like last minute you know she needed super conductive room temperature super conductive chips are used in quantum computers um can't be recreated guys you know defense purposes we were able to link them through this NSA security report as well as through a press release talking about how they were working with Aerospace and defense 12 of them eight of them were Chinese Nationals but they're working for an American company they're going to

(27:51) Beijing to upgrade the plants in Beijing and make them more efficient that's the cover story at least um so these are the people that we believe we can tie directly to the technology I do think we're living in t show room temperature super conductivity true story I had to all of the quotequote magic that ask my parents I don't know that the landing gear is not functional I actually think it might be more likely that the lights were off on the runway they're creating a bubble around themselves that's

(28:16) essentially pulling them out of SpaceTime able to reduce the mass that's within that bubble to zero which then allows you to ignore gravity it even allows you to achieve I love that the people are almost 2,000 people are watching why these these orbs are moving so quickly any object that's moving as fast as these orbs are in the videos which is around Mach 3 would get shred to pieces from the friction we see even one of the orbs looks like it comes out of the water which means that these would be able to Traverse through the

(28:44) water and through the air how's that not flux pinning and that would again require this not flux pinning completely separ I just don't get how they're able to cover this stuff up then what we think they're doing the people think this is not flx pinning are the same people think the plane can crash the o le degree potentially 440 volt pattern which could mean that What's Happening Here is they're both attracting to one another and repelling from one another at the same time then at the last moment

(29:08) when they Converge on the plane is when they're triggering The Singularity this phase CH State change of the plane to occur which is allowing this quantum entanglement effect where we believe there's a fourth orb that is entangled to those three where it's sucking it off instantly at the speed of light or Beyond to that location um so did these people on board the plane know it was going to happen we can't say for sure even with all this evidence we can't say exactly where the plane went we don't have this Premier PR

(29:38) now saying you know here's where it showed up fast forward to the end you want me to speculate I would say that this plane somehow got to Diego Garcia that's where all of the conspiracy theories said that this plane got it's a very secretive base in the Indian Ocean let's see fla got tons of contracts out there for construction and dredging but if you look at this base over the surface I'm actually not sure humans are like smart enough to be ready for this kind of Technology like I think like maybe like

(30:05) 40 to 50% humans are ready for it like you guys are ready for it but the rest of people what's up everybody what up J I forgot to say h Hello everybody match but all these Islanders see the red white I think I saw Amanda there somewhere low again consistent with this in the near location to where we find a B7 William you so if I was a Sean and Sean all the that's one of the only places you can hide the plane New Order MMA you can hide it from radar as well and this is what rules out some of these other theories out there

(30:43) everybody why did it not go to **Russia** well you have to go through I don't know 10 different countries radar system so some of those theories just think we're going to try to do a little bit of work here Bas this is fun perspective yeah okay so uh who would benefited from these if the because in my I'm just wondering if there's a theory that the the what caused the fire you said it was what underneath the plane that caused the fire it was yeah so there's 221 kilograms of lithium ion batteries that were put together that

(31:13) same day March 7th they missed two security screenings um the cargo bays are actually designed to withstand flame uh heat up to 1700 degrees fhe these batteries can burn up to

about 2,000 degrees so this is going to be keep this thing out and you got to keep putting it out over and over and over again otherwise it's I got two more appearances tomorrow too so tomorrow okay the is there a possibility that that was that that was done on purpose like because you said it's like a bomb so is it possible that that this that

(31:47) just kind of listening to everything to try to make sense of it is it possible that there was a concerted effort to get rid of the passengers on this plane that they were they had too much information that was too dangerous that couldn't get to **China** or wherever and that it was that they meant for this plane to go up in flames and to not make it to its destination and then there was this this operation that said well if you're going to destroy the plane anyway we have this Tech we want to try on it you know so can we try this Tech

(32:18) on it since the plane's G to go away anyway yeah there's a lot of mystery still and I I can really just follow the evidence and that's why I think this case is so compelling is that's what we done and we've reevaluate our hypothesis as we found that evidence again I would lean towards it being accidental but I can't rule out that there's an Espionage angle there where this could have fire could have been started intentionally um all I know is that this is the most likely scenario given all the witnesses

(32:44) given the very high volatility of these batteries yeah this is live on Rumble guys often are if you guys want to watch it I'm probably going to stop because also made a post on my Twitter as well about this SEC screening so it seems plausible that it could could be an accidental event um if you look up the FAA and the fire and lithium ion battery fires you'll find that they happen more than once per week even after they've outlawed them in the cargo bay and these are happening you know above cabin with

(33:11) the passengers so they're happening all the time but yes it could be a situation where there's an Espionage angle here now part of the reason why it kind of uh it's not as likely though is that if this plane's on fire from an accidental event you don't need to deploy your technology to make these will disappear you just let the plane crash into the ocean and everybody's going to potentially die but you know if there's also I'm saying that this is an opportunity to test it because if the

(33:36) people are going to die anyway I mean if you're in the military or in or with these kind of these dark Ops type programs you don't want to kill people we a lot of when it's always well it's because we had to or something you know you have to make an excuse for in order to live to live with yourself just being a human so if that's the case then it seems that they could say well already um and so since it's scheduled for Destruction we can then we have an opportunity here to test this Tech to

(34:08) see if we can make a pass wasn't right nowel it so you think it's recorded yesterday essentially with this technology this is like teleportation technology essentially in layman terms yeah and the endothermic event could be sucking the energy out of the batteries as well which could be stopping the runaway lithium ion battery fire so in my mind the most likely scenario is

that they're trying to save these people but the event the hypothesis that you before the narrative that you know it could be

(34:35) a test because the plane is already doomed and you know we want to see if people can survive this you know I certainly can't rule that out I'd say that's the second most likely and I think the third most likely would be that this is a way to prevent this intellectual property from getting to China because of what you're talking about the implications is that whoever controls this technology controls the world you know this is a significant step up from whatever our current technology is from propulsion even a

(34:59) step up from nuclear weapons what this has been described to me from talking to the engineers that I've been talking to in my podcast is this is a perfect defense mechanism as well anyone shoots a nuke at you you can teleport it back to them you might be able to just annihilate it so you know this essentially is a perfect defense a perfect weapon heard that Jack Jack is trying to steal um field free energy sources or you can create a system that es the energy from the vacuum of space Alex Jones said the borrows it if you want to think and

(35:32) produces more energy than you put in and what this all leads to if you just follow it down as a doomsday weapon right right yeah yeah I mean obviously it's a a very powerful weapon um the I mean I think you're being generous by thinking well it was an accident and and then they tried to save them I mean I think that's really nice of you but to me it just that doesn't it's good enough that was fun enough okay let's see that was fun with the chat right there for a little bit um yeah sfa's a fraud

(36:05) total fraud he's a [ ] dude complete and total fraud does surprise me even a little bit let's see here Jack quack damn Jack blocked Dave rosi as well that's funny dude Jack's a total great a clown holy crap how could That Could That Could Jack sarati be a bigger loser unbelievable dude Dave's like the nicest guy in the world uh morning Jeff I who's Jeff

(37:08) where's Jeff I don't know where Jeff is but morning thanks man yeah so Alex Jones said that uh put this on my gravestone guys when they take me out okay I want this on my gravestone this is this is like the best Tombstone thing ever uh truly one of the most mind-blowing interviews we've ever done on Infowars Alex Jones that's a that's quite this is quite the quote here guys quite the quote wow that's just wow okay take it easy Banner appreciate you buddy appreciate you yeah the only only problem with Dave

(37:57) is he's a Canadian man imagine if he was American probably just have to patrioti him right nationalize him who's Brian Johnson isn't Brian Johnson with that U UFO guy N I didn't ask about the Rogan but I did shout out Joe

(38:59) Rogan uh Info Wars was awesome went really well I was just saying uh I was just saying that he said it was one of the most mind-blowing inter one of the most mind-blowing interviews we've ever done on infow Wars Alex Jones yeah he kept the he removed the commercial stop the commercial break so we can keep talking it's how crazy how big it was it was big I mean had

an hour or less so had to really narrow it down a little bit tailor it down right I had a whole page worth the notes which I'm not going to post here but yeah okay I

(39:38) think we should focus on the stuff we got to get done here tonight though right which is this is the stuff you guys want to see right um yeah I think the reality is what however you feel about Alex Jones then oh I did throw he didn't react like I thought he would so I said hey I asked him I want to I say what do you guys think should happen to the people that have been hiding these these videos and what happen to MH370 I was like do you think that they should get sued for a billion dollars or potentially go to prison for

(40:23) sedici seditious conspiracy for 17 years and he just kind of reacted like he didn't say anything I was trying to set him up for that one he didn't take the bait though we're gonna throw some shade at Gaia right now as well guys so Gaia asked me to do a TV show and I wasn't sure I wanted to do it because it's Gaia and then I I I respond say okay I'll do it and then I get this back they're not comfortable I was just going to read it out to everybody we want to thank you very much for your

(41:12) willingness to be a guest on beyond belief February 16th unfortunately we need to cancel We R on all our shows by the Gaia board of directors I doubt that and they're not comfortable with the controversial suspect subject of Malaysian Airlines flight 370 while what you have to offer about The Disappearance uh of the of the plane is important it's just to touch you when you're dealing with such a heavy loss of life and we do not want to cause more pain for any of the families of the victims by discussing what might

(41:37) have happened what do you mean they got no answers they got zero answers I'm sorry it got this far but only that's only because of how much we value having you on we were hoping to work out but unfortunately this time we need to cancel your appearance so I just responded back yeah no problem uh I said no problem I guess you guys aren't interested in the **truth** and then just said you can ignore my email pretty pretty weird two two controversial for Gaia guys too controversial for Gaia hey Trump one it's too far-fetched

(42:14) tell me how a 777 crashes into the ocean I'll tell you what's far-fetched is the idea that we weren't tracking a rogue 777 in a post 911 world that's farfetched farfetched that we didn't find one piece of the plane despite searching with 42 planes and 39 boats that's what's far-fetched farfetched that we have satellites scanning the entire globe with global persistent surveillance monitoring and we didn't find the plane the next day that's what's farfetched these videos

(42:44) are much less far-fetched than uh the official narrative which is just complete nonsense this is also farfetched that the Malaysian Minister of Defense didn't send up a jet to track the plane walk me through that they had the plane on Military radar it's unidentified but they claim they know it was civilian airliner and they know it's not hostile how does that mesh with a suicide Theory how does that mesh with a hijacker theory how could you know a plane's not hostile unless you have communication

(43:13) with the plane right no I would never accept a response from guy after that I would never accept a response I would never accept I wasn't even going to accept it to begin with the only reason why I thought about it was cuz Kim Iverson told me that she is uh friends with G uh um one of the hosts and so I was like okay I'll accept it right away and I accepted it and then they sent me that email back when I'm like sending them my information about the flight I'm like okay that's weird yeah why is there no acoustic

(43:51) detections for a plane crashing into the South Indian Ocean from three different systems that would have heard it like just walk me through logically how that makes sense right like the crazy part is as hard as it is to believe what we see in the videos it's harder to believe the official narrative the official narratives makes no sense at all none surprisingly this somehow makes more sense than the official narrative we've got two videos in perfect synchronization with one another both for military assets both

(44:22) that basically are impossible to have faked that have extremely high quality where there's not a single thing wrong on either on either video not a single frame these are either perfect Banky masterpieces that somebody made within under 72 days or this is just what really happened in the plane they have a better understanding of physics than physics experts like who who would have even thought about these orb Trails we're seeing here how do they even come up with that how they even come up with this yeah some people just aren't ready

(44:54) to accept reality that's what it comes down to to a lot of people just want to live in The Matrix you know yeah I've seen the end of the satellite video we were going to look into that tonight at least I think I did unless it's something else is there is there something brand new oh wait whoa this is brand new okay what we got guys lay it on me lay it on me folks uhoh uh oh uh oh o boy we almost showed DMS guys oh wait no we got the DMS for away okay what what is this what is this what am I looking at

(45:51) here I can across the last few frames of the satellite video that I have never seen seen before when the user drags the pointer to the top right corner of the screen to hit the X in the Citrix zo session the screen collapses upwards going Bottom to up this is a weird glitch but extremely realistic detail to hoax afterwards the video is blank for a minute with one pink line appearing in the Middle where the two video feeds were separated the the closing sequence seems extremely realistic and a detail that no is this

(46:24) wait really oh Punjabi Batman again that's that's actually really interesting it's really interesting yeah we have a Discord but I have to follow you on [Reddit](#) in order or on not [Reddit](#) not definitely not [Reddit](#) on Twitter in order to get an invite thanks uh azriel McCloud appreciate it man yeah the Alex Jones interview is really good I think maybe be my best one considering it was only like 45 minutes getting better and better and better D what is is Punjabi Batman like an intelligence asset like what is this

(47:19) guy doing oh this guy's clown shoes yeah this guy's clown shoes these people that have probably real in their tags but then they end up just trying to like hate on everything are the

worst the worst kind of disinfo okay uh let's check our notifications I don't think there's anything oh well now people know what Subs I look at I don't know why does it show me all these info for subreddits Red's boring

(48:30) okay yeah it looked like a glitch you see with an Abrupt end to a JP 4 M Peg 4 I mean get a little boozy hey Misty Moon what's up uh no reply from Lex you should watch my uh watch the beginning of the stream watch the intro to the stream yeah I think that the interview went really well as well I think we probably get a lot of exposure from that I mean yeah it's Alex Jones and people are going to hate on us or try to tag us to Alex Jones or whatever but yeah I think it's fine the Punjabi Batman that one's

(49:18) pretty interesting that one's pretty interesting we might have to do something about that man I'm kind of worried about Tim pool cancelling maybe I shouldn't have brought that up too early the problem with bringing anything up too early is that people start talking to them and Tim pool has connections to the government so I'm a little afraid of them talking to him but whatever can't really do much about it yeah as long as people hating it's not really a big deal but the government tells people to stop talking about it

(50:05) then could become a big deal yeah here's the craziest part though like this is like bigger than Alex Jones stuff that he's made up before or not made up but he's talked about because whoa Ark wow thank you man wow how do I give how do I emote this how do I how do I do this it won't let me press buttons on this wow thanks a lot Arc that that's pretty sweet man I don't know what sex stands for but sweet man thank you very much I can't I can't uh do anything to your your donation um yeah the reality is like what we are

(50:53) what we're talking about here is probably the biggest conspiracy of all time and it implicates the government in a way that they really really really don't want to be disclosed and it it it kind of gets Oh that's oh that's the currency oh huh thank you very much for the sex that's fun to say well whatever thank you very much for Swedish Crowns I appreciate it man thank you for the donations whatsoever I I don't don't mind no matter what and once again I always say this but you know if you guys

(51:26) need your money please don't donate to me please keep it for yourself if you do have extra money you want to donate to the cause I appreciate it I I appreciate anything so it doesn't matter how much it is for me um and yeah I think that what was I saying yeah hey kadana what's up man yeah huge let down to go from kadana to Alex Jones much smaller podcast um yeah I have a feeling that Kim Iverson interview is going to be one of the biggest one she's had recently I mean 2,000 people watching concurrently

(51:58) is a lot that's a lot of people that means it's probably going to get 100,000 views or more um and yeah I think that it's uh what was I going to say the thing about this technology is man it's this is a lot man for people not just for people to accept but the government doesn't want this revealed this way I think that they thought these videos were hidden and that they were done with them and then for someone to come 9 years later build an organization around them

and a following around them and

(52:30) reveal the technology of the world like they are probably melting down right now the CIA or whatever is probably melting down right now just desperate all hands on deck call up all the resources to try to discredit this Ashton guy right that's cool we can talk back about the CIA too we can we can uh we can put them on notice we can put them on notice we got some uh articles wait this isn't even the right one we got our own CIA articles here if we were explaining this event in an elevator pitch I would say that this

(53:21) is the largest verifiable conspiracy of all time that these videos are the most important videos in the history of the world and that what they show is the true fate of MH370 and advanced technology that has been kept hidden from us that will change our entire world that will change the circumstances of billions of people that's the uh that's the elevator pitch guys now that the corridor crew got embarrassed by me on Danny Jones like badly and so they like had a meltdown and and it's obvious that they

(53:56) tried to recreate the videos and failed miserably so instead of actually trying to recreate the videos after they realized they couldn't they put out this crappy 5-second terrible terrible job and then they sat on the couch trying to ridicule me instead cuz they got basically just embarrassed by me like if you read the Danny Jones comments before he wiped them all he was just getting murdered by everybody everyone Danny Jones and uh Julian thought that there was Bots that's how disconnected from reality those guys are

(54:30) they actually thought that it was Bots that was telling them how bad their their podcasts were and how bad they were on the podcast actually in the Kim Iverson thing uh yeah she spent way too much time on the corridor crew stuff it was really dumb and I I dismantled them again on on Kim Iverson I TR and like I was a little bit sassy on Kim Iverson as well because like I didn't I thought like this whole idea of talking about the corridor crew stuff was pretty stupid so I I kind of dismantle them I make fun of Jordi

(55:04) lege the Jordy lege guy I mean how can anyone take this guy seriously I don't even want to I would pull him up but I'm not going to yeah I'm not going to bike to work that's for sure um although I do want to take where's hermes's video did he send it to me oh yeah here it is I'm thinking about making a do it directly from this is our response to the corridor crew official response as you can see here uh my client showed up for work on the day of the incident and this is just a second uh I'm gonna have to

(55:44) have a talk with my nephew wait whoa whoa you know what I want to see it the video is not it's not it's not working I don't I don't understand um is this what the jury just saw um that's I'm gonna that's the whole thing unfortunately yes that is not what the whole thing was supposed to be Not only was the animation so poor but it glitched and just froze up um so again we only saw like five or six seconds worth of video it was the animation so poor but it glitch and just froze up um

(56:18) anybody who looks like this automatically just discount everything that they say anybody that looks like this just game over guys it's it's over right down in there anyone who looks like this has absolutely no credibility what are you even wearing my guy like holy crap I I just I can't take anyone serious that looks like this this is like never wear these glasses in public I mean my God this is somebody who takes themselves way too seriously think they're some kind of Rap God fashion designer yeah this dude definitely still lives

(56:58) with his parents my goodness man my goodness this dude isn't hasn't talked to a real person in in a while yeah no that's definitely **redditor** **redditor** all over these guys they Banned Me from their sub**reddit** so fast I made a couple comments just talking about how bad their video was and they just instantly Banned Me from the sub**reddit** it's hilarious man like uh oh thank you EJ Vasquez appreciate it man yeah **redditor** syndrome is like the worst man yeah these are the people calling me a conspiracy theorist

(57:40) yikes yikes man and the funniest part is you just ask them like what do you think happen to the plane right and they'll just you know what their answer is the default answer is I I don't know I don't know anytime you ask someone like this they'll never put themselves that level of scrutiny so yeah somebody get Ash and another Martini um I might get another one yeah so if any of these **debunker** people ever try to **debunk** our our side just respond like this what do you think happened to the plane they will always

(58:10) respond and say they don't know these types of people are just complete Hypocrites they will never hold themselves to their own standard guys never never because if they had to put themselves in the same scrutiny they level on others they know they get sh**redd** it apart right like we've proven the video that the they didn't crash in the South Indian Ocean right and they have no defense against the evidence they just want to try to cut down other theories because it's disinformation like if those guys those

(58:40) guys clearly worked with Danny Jones and Julian Dory and they got super mad that they got dunked on and it's just it's **redditor** syndrome yo n I'm not frustrated but people want to know we're probably going to have to make a video responding though and we'll probably just use that yeah they're getting paid to **debunk** it for sure from what I've learned as well is that like the government actually just pays people to do [ ] like that as well when people are talking about bots on like Danny Jones

(59:09) and and uh Julian like they probably do have Bots usually that kind of stuff is projection the reason why they get so suspect of bots is that they're using them themselves oh and that's a good thing too that I wanted to talk about tonight so here's a little story for you guys two stories for you guys tonight you're you're in for a treat I actually remembered the story I was going to tell you guys before first story is I replied to Roseanne uh I saw her on Twitter and I told her that my uncle used to be a

(59:39) writer for Roseanne back in the 90s and there's pictures of me in one of the episodes I don't know what episode it is but there's a picture of me in the background of one of the

episodes because of that uh my aunt is also a set designer and so they somehow got a picture of me when I was younger on the back on the in the back of the uh one of the uh one of the episodes so that's the first story I don't think the L Lodge got paid off I think that they're just they've got their own theories that they're

(1:00:12) married to lur Lodge thinks the plane was shot down which makes literally no sense whatsoever uh but they were nice enough to me but the L Lodge like here's the thing and I don't want to offend anybody who's younger but if you are 20 years old or in your early 20s then you were a little kid when the plane went missing right and if you were a little kid when the plane went missing you have no frame of reference for what things were like when the plane went missing like I was actually following I was an adult when

(1:00:42) the plane went missing and what happened was super sketchy it made no sense whatsoever every all the information that came out right after the plane with missing was just didn't make any sense like they wouldn't tell us where the plane went missing you couldn't even tell like did the plane go missing in the South China Sea or did it go missing in the Andaman sea like none of it made any sense right so a lot what happens too is that people that are too young like they don't they just believe like they don't

(1:01:10) have the right frame of reference for like what actually happened back in 2014 you know and that's the same thing as like if I'm trying to talk about an event from when I was a little kid right like learning learning about the event from media is completely different than being there living in real time right so okay next story we are GNA I'm going to expose so much Truth for you guys like it's wild I have so much crap that we can expose I I'm just interested in MH370 right now so streamers twitch streamers out there

(1:01:47) a lot of the twitch streamers fraudulently have they have fraudulent viewers out there and the reason why I know this is that my my Twitter account goes back to 2014 the reason it goes back to 2014 is even before 2014 I started streaming on Twitch when I used to play more video games and stuff like that and you know what happened to me when I started streaming somebody reached out to me on Skype when I used to have Skype before Skype became dog crap and they told me that they were a developer for twitch they were actually

(1:02:23) a Dev for twitch and that they could hook me up with fake viewers and I said no there's no way you can hook me up with fake viewers like you know I didn't think that was possible they proved me wrong so at first the way it works is the moment you go online you message them and then they would boost you with however many viewers like made sense like 50 viewers right because once you get up to 50 viewers now you're going to show up much higher on the lists right and once you're higher on the list then people

(1:02:58) will come and follow you so I did like 50 viewers or whatever yeah you can buy fake viewers and this was this was 10 years ago guys 10 years ago and this is when a lot of these people were just up and starting right and they were and the guy told me everybody's doing it everybody all your favorite view twitch streamers they all probably were buying viewers all of

them and because that's why like the moment they turn on their stream you already have all these viewers come on there qar on thanks a lot man appreciate

(1:03:26) it so so then after like so I I pay for some viewers right this is I'm just going to tell the truth I paid for some viewers and like I paid him like I think \$200 and he starts giving me like 50 free viewers every day and so I would have my stream had 50 viewers but like I was only getting up to like 100 150 viewers or whatever like that and so then one day I'm like okay I want to see like how much you can grind this up I'm like just pump it up to the max so he pumps it up to 500 viewers and I didn't even think it was possible man

(1:04:04) I I really didn't think any of the stuff was possible at the time so he pumps it up to 500 viewers next thing I know I'm on the front page of twitch I have like 2,000 viewers I'm playing League of Legends I'm like uh you know Diamond rank or whatever because I was really really good at League of Legends I was like really good and and I was like approaching Challenger whatever rank stuff like that so next thing I know and like I go to my email and I've got like so many people following me and like

(1:04:32) three days later I get a permanent ban from twitch permanent ban they don't say anything I I messag them like 25 times asking them why I'm banned blah blah blah because I figured there's no way they could prove anything right I so I say like okay you know you know was it because of something else blah blah blah they won't respond they won't even respond on because it would implicate them because they knew that like all these other people are boosting streamer boosting their their viewers

(1:05:00) with fake views um so anyway that's pretty much the end of the story because after that I I never streamed on Twitch ever again actually that's not true I did set up another Twitch account like a few years ago um that I used for a little bit when I was playing uh magic cards on Magic Arena but never really like a lot of people or anything like that and I didn't I didn't bot viewers the second time because I just didn't care I wasn't trying to be a twitch streamer or anything like that but yeah so pretty pretty wild

(1:05:39) right so yeah when you um yeah thank you for donating by the way oh wait \$100 qar on I I didn't think it was \$100 oh my God thank you man Q starting on thank you wow that's huge once again guys you don't need to donate if you need your money if you if you want to donate I appreciate it greatly I of course will give you a shout out thank you qar n that's awesome of you appreciate it man man you guys are amazing I'm going to probably have to get my monetization set up so I can actually get paid this money that you

(1:06:15) guys are donating because like right now it's not even set up to pay me at the moment I have to like go I think they mailed me something I have to go get yeah I'm actually a really good Magik card player by the way like so back before Co started I started going to the game store uh by where I used to live and I would start playing draft on like every week and then uh I just I got really good at it like really good and so then I started playing on Arena when it came out and I got really really good like I

(1:06:50) was like whatever the highest rank you can be uh Mythic Mythic rank Mythic ranking both draft and in constructed but I don't know maybe after after all this is over I'll go back and play some Magic cards once again but I haven't played in a long time if I change the angle of my setup I'd show you guys a really my my favorite poster I have one of these giant posters it's like a cutout of the magic cards that's all foil from one of the sets it looks really cool the reason why I don't put it in the

(1:07:31) background is cuz I figure people make fun of me too much I was also very good at Starcraft in the early 2000s very highly ranked I used to play against Destiny actually believe it or not I used to play against Destiny that's what's funny uh that's why I messaged him and told him we used to I used to play against them back in the day yeah \$100 is insane guys that's that's just big time man is he still where is he he's not messaging in the chat just came in Hit and Run huh on that donation that's

(1:08:11) wild yeah yeah Magic's a fun intellectual game for sure man oh dude Magik hard stream man maybe maybe I'll I'll do that I haven't played video games in like six months or more like anything at all for even one minute um yeah I used to play wow I played the classic wow I was actually in a guild and we raided I was in the top ranked Guild on my server actually for a while as well we did these speed runs of uh NAX Ramis because I never played the old uh never played the old uh wow at all so when I got when it came came back I

(1:08:54) played uh a bunch that was Hardcore people at work would make fun of me cuz I'd be out traveling on site and then I'd be like hey guys I got to go raid with my with my my people and they're like what do you mean we're sitting here boozing I'd be boozing like we are boozing right now and then I'd be like sorry sorry everybody I got to go leave we're like everybody's just like hanging out boozing having a good time at the hotel and I'm like sorry guys I gotta go play World of Warcraft with my ra with my

(1:09:22) guild it's funny yeah I quit wow though D wow wow players are like as bad as **redd**itors there's always so much drama they got mad at me because I wouldn't I'm going to probably dox myself here they got mad at me because I wouldn't uh fairy fire the mobs enough because I was playing Resto Druid and I'm like Resto Druid was considered one of the worst so they only brought like one Resto Druid and so I wouldn't fairy fire enough mobs and they're like you're not fairy fire enough mobs we we could we could

(1:09:58) increase our time from like the fastest time by like shave off like 30 seconds and I'm like dude if I if I don't stop healing people we're going to lose people so sure enough they like replace me with somebody else uh cuz they were like I don't know they just didn't like my attitude or something like that and right after they replace me they never clear the the dungeon ever again they actually broke apart the whole Guild collapsed after that it was really funny I was like boy I was like this is exactly like **redd**itor

(1:10:30) syndrome anyway okay that's enough nerd talk right that's enough nerd talk okay um yeah what's up fam we should probably do some actual work right I also love XCOM of course I

played all the XCOM all of them some of my favorite games ever I I put like if I pulled up my my uh steam xcom's got like two 2,000 hours probably no I never played Starfield XCOM was one of my my top though period even the new one I played XCOM 2 I played them all people think I'm younger than I am I'm I'm like over 40

(1:11:11) guys oh ads are going to play what's all this ad stuff okay you guys are going to get hit with some ads here in a minute I didn't make it happen it's automatic oh yeah Windows 95 XCOM player yeah I was all about it man where like it would like glitch out because it wouldn't be like the right speed the old school XCOM was the best man every Mission takes like three hours takes like three hours yo you guys are getting me talking about nerd stuff you're getting me hyped up did you guys see Matt Gates posted

(1:11:54) did the same video that we posted did you see that did you guys see that Matt Gates where is it I I where does it downloaded that let me find it I don't think I called it Matt Gates oh no I did craft in a clear diamond formation Matt Gates posted the same clip like two days ago the same clip I was like whoa he posted the same clip for which I'm telling you we're on it yeah he actually did guys he actually did I I'll pull it up you know what just to prove it that was wild I saw him post the same clip I'm

(1:12:47) like whoa okay we were on it we figured it out like that's wild he didn't like copy it from my stream but he posted the same thing where is it don't make me look bad Matt Gates Don't make me look bad is this it yeah here it is right here this is it look this is the same clip there was a discussion about how authorities flow in the United States of America and we did see the image and we did meet with one member of crew who took the image the image was of something that I am not able to attach to any human capity either from the

(1:13:33) United States or from any of our adversaries and I'm somewhat informed on the matter having served on the armed services committee for seven years having served on the committee Advanced Technologies for several years um when we spoke with the flight crew look at this and when he showed us the photo that he' taken I asked why the video wasn't engaged we didn't have a system that worked here's what he said they were out on a test mission that over the of Mexico and when you're on a test mission you're

(1:14:04) supposed to have CLE have observed in the United States Congress one of the pilots goes to check out that diamond formation a radar a large floating what I can only describe as an orb again like I said not any human capability that I'm that I'm aware of not of any human capability I'm aware of I replied you say this is not human technology are you certain about that I'm telling you man how does he think this isn't human technology I'm a little bit worried about Congress guys Matt Gates is the

(1:14:41) only one who saw this and he didn't see our videos but he saw some other orb video right and he wasn't able to piece together that this is contractor technology guys I'm worried if you guys think we going to get disclosure from these guys I got bad news it ain't happening this actually made me worried that like Gates Luna um brette and MTZ are just like not they're

totally in the dark totally in the dark guys they're talking about aliens here man like we need to stop with the UAP hearings and we need to have conspiracy

(1:15:20) hearings about MH370 and the techn technology that the the technology is being hidden yeah rocks can float apparently apparently they can float I didn't I mean what can I say we got lk99 proof who doesn't think rocks can float y'all let me find it right here where is it damn I got so many videos man look guys floating rocks floating Rock apparently rocks can float suspended over the air with a magnet to the side of them look at this floating Rock how do people not think this is flux pinning uh I don't think dark journalist

(1:16:10) has reached out yet but you saw I have six messages so who knows probably not though yo someone should clip my uh someone should clip my Lex Friedman uh intro today yeah revealing this goes hand in hand with disclosure Amanda 100% 100% look at this people are trying to say this is fake and stuff like what the hell man yeah no I think it is reverse engineering to be honest with you but that doesn't mean it's not human technology if no I think that it's being suppressed lk99 has definitely been suppressed in

(1:16:51) the west so my sources tell me that in the west science gets he dude what dude what qar and N what wow man thank you wow yo please qar on if you need that money please you know save it but thank you very much man holy crap wow 100 more wow thank you man wow yo pretty soon you guys I'm not going to have to do my normal job anymore thank you very much though I honestly do these streams not for the money or anything but just because I like talking to you guys and also I want to make sure everything I do is totally uh dude the

(1:17:41) alien scientist did recreate L lk99 that's the part I don't understand I have the video hold on I have the video where is it okay well that's not it where is the LK no no I can find it on his YouTube he has it on his YouTube the the thing I don't understand is I watched El the alien scientist before this all happened Bernie you're still in here right Bernie I don't get it I one of the First videos where I was like oh this has to be real is is qar not even in the chat he's just donating just blindly starting on

(1:18:23) what a legend dude what a Legend um I don't know what's next after this guys there's we got a long way to go on this we have at least four more months of this until we get to the year end thing till uh the 10 year anniversary 10 year anniversary like how many people do you think are going to be pinging me on the 10 year anniversary it's going to be wild so let's find alien scientist go ahead and give alien scientist subscribe he only has 114,000 so look right here here it is here it is how you're sending out

(1:19:05) rewards and payouts explain to me why alien scient oh Bernie what's up why doesn't uh Jeremy think that this is real look at this so this is just normal iron right here right and the lk99 they have a little Flex of it where where's the little flakes where is it wait does this is this low quality oh there it is right here see this little flake right here the flake is following the magnet but you can see here the iron rotates much faster to me this is we created something here I I don't know how this

(1:19:45) didn't get more attention man look at that look at this I think they said this was just di magnetism but notice how when they move the magnet around this moves right away but this part doesn't it like Trails it you see that it's because it's got some superconductive properties I think maybe I'm not saying that correctly so I think the description and normally I would say yes it's di magnetism but we've got flux pinning videos Man we've got flux pinning videos exhibiting diamagnetism

(1:20:34) yep the iron fillings aligned similarly but jumped when the magnet was placed on top of the wax paper instead of beneath the grain doesn't do that it's pretty weird we definitely shouldn't have given up at all man we definitely should not have given up I I watched this back in August before the videos even came out this was like right before the videos came out that's wild same day yeah this is weird this is really weird I was very surprised when alien scientists did not keep looking into this but now that I've talked to Jeremy

(1:21:12) a little bit more wasn't it Michael Peron uh who is the one who's looking into this who who's the one doing it it's very odd look at this you can see the little flake track the magnet yeah look at that there's a little flake right here where my mouse is but you can see this bit rotate instead very weird man okay damn that's my whole job Stonewall Thomas and once again qar on appreciate you man oh there's qar on finally in the chat finally in the chat basically what we were looking at there is a imperfect Recreation of

(1:22:17) lk99 and the problem the reason why people weren't able to recreate L9 lk99 is because they don't have the recipe quite right right so here's the thing about it you can't if I tell you how to make a lasagna is every lasagna going to taste the same no depending on how people cook it if you overcook it it might not be the same so you have to have the exact right recipe right and of course the people that put the paper on aren't going to give you the whole recipe if they give you the correct recipe then what's the point of their

(1:22:48) patent right they're just going to give you like the basic details of or like the basic basics of it so then immediately gets suppressed so the US government steps in they have one or two people on Twitter go ahead and say oh nope it's fake and then everybody says it's fake I watched in real time while they did that but what we learned is that you don't need a meta material like lk99 for room temperature super conductivity you don't need it you can achieve it without it lk99 is a mixture of lead and copper

(1:23:19) when heated up neither of them are magnetic but as we just saw from that video when you heat it up you create a DI magnetic material they become magnetic copper and Lead yep pretty wild man I'm surprised that's what like I started getting really interested and that's why when I saw the MH370 videos I was like wait a minute are we seeing super conductivity room temperature super conductivity and the answer is I was I was right I guessed correctly that's why all the physicists and Engineers started want to talk to me

(1:23:57) because they're like oh this random guy guessed correctly that what we're seeing here is room temperature super conductivity creating this field this non-radiating barrier that we see

on the orbs here this non-radiating barrier it's super conductivity is what requires that huh I really think Super conductivity is the requirement for all of this stuff it's like the missing link it's like the key you guys notice all these uh people are trying to put the fake F uh fake Community notes on all my content now

(1:24:41) that's wild man that that wild they're trying to put these fake notes on my on my content oh Zach let's give Zach a guys let's give Zack a thumbs up don't be depressed Zach also I wouldn't post pictures of yourself I don't know man but we got you we got you Zach I don't uh look around on Twitter enough I've been too absorbed in my own stuff 10,000 views already on this yeah the corridor crew I literally quote them going it matches perfectly of course it doesn't match perfectly it's

(1:25:43) like what the Don Lemon yo I'm following Don Lemon guys oh I didn't even think about following Don lemon yeah I'm going to post a video for for here yo let's get Don lemon's job back guys let's vindicate Don Lemon I mean it's not a black hole but he's still closer than anyone else was man I don't know if it was a good idea to have these drinks before trying to do this uh all evidence review this might this might not go well where's CNN come on where's my oh there it is

(1:27:05) Don Lemon saying that this woman was Pastor Prime though was like pretty cringe man should we W should we watch that or should we just not leave should we not leave Don Lemon at a bad spot yo dude why are we vindicating Don Lemon CA look watch this man watch this watch this this isn't going to give me copyright stri right what if it was hijacking terrorism or mechanical failure or Pilot error but what if it was something fully that we don't really understand a lot of people have been asking about that about black hole on

(1:27:47) and on and on and all of these conspiracy theories let's look at this uh Noah says what else can you think about black hole Bera triangle and then Dei says huh just like the movie Lost and of course it's also they're also referencing The Twilight Zone which is a very similar plot that's what people are saying I know it's Preposterous but is it Preposterous you think Mary well it is a black Hol is about you know a small black hole would suck in our entire universe so we know who is this lady suck in our entire universe

(1:28:15) Don Lemon knew what's up triangle is often weather and uh lost is you guys are already liking it I think I always like L is a TV show at least she gets that one right at least she gets that one right wow there's a lot of people were were liking this what's this wait did somebody just say they have a security clearance Stonewall Thomas are you you serious I have a security clearance but I don't have an NDA and my job's in healthcare so it has nothing to do do with this um yeah it's a sinal 120 de 0 point

(1:29:00) pattern pretty wild I mean I'm never going to forgive well yeah I probably won't forgive any of them honestly but Don Lemon did say uh black hole so that was pretty wild oo what does this mean what does i i y KY k mean guys yeah what is this drip dude what but I don't know what these letters mean though sinal sin soal no sinal sinal sinusal yo Stonewall Jackson or Stonewall

Thomas tell us the **truth** tell

(1:30:05) us the **truth** just tell us Stonewall tell us hypothetically what what's going on let's play hot or cold are we hotter or colder to Quantum Mac macroscopic Quantum coherence guys it's getting harder to read the chat the more alcohol I drink the harder it gets to read the chat uh High threats oh he doesn't use the high threats email me at m370x I'll put it in the chat uh proton although I'm 50 emails behind right now so if you know you know that's what it means huh okay guys I'm not good with social

(1:30:58) media okay I got too much Boomer in me okay like a lot of you guys I'm I'm the the half Boomer age o the drip let's find a gif I've learned how to use gifts though now guys you see why I put so many recently drip too hard bro I've learn I've learned how to do gifts now I finally learned took a while social media is hard guys social media is hard oh wait I don't want should I upload this one we'll still we'll still vote this one guys we're getting old guys yeah Boomer should not say drip it

(1:31:51) doesn't it just doesn't ring off the tongue well no I'm gen I don't know what gen I am man I think I'm between Gen X and whatever comes after Gen X Millennial Forbes dude oh my goodness we do need a short with Forbes f orbs dude my man Forbes we might have to make something uh I don't see any comments being deleted I think Amanda retracted one four orbs dude four orbs works on so many levels what the hell is this what is this this is weird Okay guys hold on uh uh hold on hold on oops that's not what I

(1:33:08) wanted wait what's it called guys it's getting hard to think guys uh get for orbs yeah we have four orbs dude oo four orbs I like that Paul uh bing I need the Bing art guys it's being art time wait what wait what four orbs guys Stonewall tell us the secrets o qar n said something uip running lights at night in the visible spectrum stealth is not a priority when you have technological sup Supremacy yeah I agree you don't really need stealth oh hello look how many things it made oh wait this is not what we wanted

(1:34:06) though four orbs hopefully that's how you spell sinusal damn Sergeant you got that yellow fever sergeant Kim Iverson wait I don't know if this is appropriate to say since I just interviewed with her but she's she's attractive I'll say it like that that's that hopefully won't get me in trouble oh hello well look at this why is there five on this one yo why is this AI so so dumb this one's got six orbs okay guys yeah Bing is not smart enough can

(1:35:18) we get like a Google quantum computer on here yeah women just are smarter than us poor men guys think it's going to be able to figure this out oh look at that whoa what wait what does this one say on it what is this just alien language right here what is this what is this alien language you put at the bottom huh oh I like this one what is this weird alien language it puts at the bottom why is it doing that I can almost read it D guak is like is the AI trying to talk to us this is bizarre four orbs okay let's do

(1:36:23) well how do you guys want to do this three orbs are quantum Tangled AI is just not

smart enough guys needs to get needs to get smarter geodesics you think it's going to know the word geodesics hey did uh Stonewall Thomas tell us the secrets what's the secret sauce time travel uh huh well this one's got way too many orbs going on this one looks pretty cool though and the text is gone now come on the

(1:37:32) show yeah this is this isn't really working oh yeah with the text Ashton four orbs man AI needs to get smarter though it's not smart enough oh by the way tomorrow I'm gonna be on generation Zed podcast with Dave Rossy we're gonna be hanging out with Dave Rossy like all weekend oh my God that's it that's the one that's it damn I love this

(1:38:42) one I love this one this one's sweet I'm using this well this one looks just weird what the heck dude what is this this looks like some forbidden language stuff here what is this this one's just creepy my goodness I I'm G to save this one too this is the AI is coming to life what is this something doesn't feel right about this one this one feels like uh coming from from the devil yeah check out the Alex Jones podcast if you're new here and you haven't been watching this one is wild what is this

(1:39:41) one this looks like some alien language going on here this does not look normal whatever is going on here this one's creepy creeping me out this one feels like if I read this backwards then like yeah exactly kutu kahutu or whatever is going to get summoned called tuu called Hulu whatever yeah if we had to code this then we solve MH370 this is just what the f dude I think I think I've had enough uh AI art for no KN this is this is too much that's that's just too much one's weird too man that one's

(1:40:25) weird that one's weird that one's creeping me out okay um I think the video stuff are we going to be able to add more to the videos probably not oh maybe though maybe how about when we zoom in we can see Parallax right we might be able to add that one on here what was the other thing um can we say something about the satellite video have we we haven't proven that satellite video thing yet right what about the satellite video

(1:41:28) thing where it uh apparently you can still see the bars we haven't downloaded that application tonight did anyone else download that application the editing one yeah you can send me an image or link but you got to email it to me MH 370x proton me if you send it to me right now I'll take a look I don't know what Parallax means anymore I don't know what Parallax means anymore the corridor crew seems to have a a completely different definition of Parallax than me but what Parallax should mean is that the perspective

(1:42:11) changes right so if you're coming down and you see a perspective change because the Drone is flying like this you're going to see the you're going to see the uh cloud from a different angle right actually that's what I'm going to put in actually we already put the the parallax in there uh so you see how the clouds when it zooms in you can see different that there's a different angle on the clouds that's Parallax we're seeing a parallax effect here when you zoom in so it's changing the angle of our

(1:42:47) approach of the clouds from where it is earlier on that's parallax now stereoscopic would mean that we're seeing it from two different angles on the satellite video this is showing Parallax from one video okay let me see someone's messaging me hold on why is there un pinging me wait what do these guys say wait I think it's meme time folks what do you think

(1:43:52) it's definitely meme time it's time to meme on Julian Dory going to misspell his name on purpose somebody called him Dorian thought it was pretty funny no actually you know what where's wait we need a Jordi Le Forge meme Find Finding

(1:45:14) Dory that one's a little too uh one's too good too so I throw the you chose violence in there as well tag me is this one a gif

(1:46:24) yeah I have seen the movie Heavy Metal guys if you grew up in the 90s you had to have seen the movie Heavy Metal oh we got a message let's read it okay this is pretty weird this is it's a little weird little weird for me guys okay uh thanks LLY thanks LLY the Drone was probably deployed from uh

(1:47:30) card nicobar I'm already slurring my words yikes yikes guys work the orb from the fantasm movie what's the fantasm movie I don't I need you guys are the meme Masters fantasm orb F oh man Facebook I don't do Facebook there it was I saw it oh we're going to get copyright stried wait I don't want to get copyright stried again hey yo aella what's up oh here we go uh Book of Job 38 chapter 31 or wait uh whatever 31 C thou bind the sweet

(1:48:35) influences of the Pates or lose the bands of Orion this was written tens of thousands this was written thousands of years before we discovered the gravitational influence between the two nice we might have to look that one up I probably shouldn't be reading Biblical scripture while I'm uh drinking though seems like it might uh might not work very well interesting Book of Job can you bind the chains of the Pates can you loosen Orion's Belt can you bring forth the constellations in their Seasons or lead out the bear with its

(1:49:35) Cubs do you know the laws of the heavens can you step up God's dominion over the Earth can you raise your voice to the clouds and cover yourself with a flood of water do you send the lightning bolts on their way do they report to you here we are who gives the ebis wisdom Eis or the rooster understanding who has the wisdom to count the clouds who can tip over the water jars of the heavens when the dust becomes hard and the clouds stick together do you hunt the prey for the lionist and satisfy the hunger of

(1:50:07) the Lions when they crouch in their dens or lie in their lie and wait in their Thicket who provides food for the Raven when it's young cry out to God and wander for lack of food so that there is I guess question the meaning of the Universe right y I like our Biblical scripture time it's fun maybe not while I'm boozing though but it's good I'm definitely never going to forget Matthew 6 I should remember that yeah nicobar is an Air Force Base between India and the United States that's probably where the Drone comes

(1:50:38) from so just because you asked even though we're getting very very sidetracked now we might add this to our EV evidence I didn't see lur LOD part two and I'm probably not going to watch it someone can clip it for me or ask but we can explain every single thing in the videos so I'm not worried about that if anyone wants to **debunk** the videos all we have to say in response is go find the sir if you think they're fake you can collect your \$145,000 a lot of people want the videos to be fake because they can't understand

(1:51:29) them to be real every single part of the videos can be authenticated we've authenticated like everything there is already so um oh I don't have the shaman picture where's the the shaman picture dude I sort of love Jacob Chanley I didn't think I would love him this much I don't really want to get political but I want to vindicate this guy for some reason well not for some reason because he's just awesome here you go guys this is probably where it came from it could have come from up here too I

(1:52:10) think but the direction of travel this is actually exactly where the Drone is so it's like if it just came from straight here it's there boom boom boom this is the location that makes the most sense car nicobar right here there it is card nicobar Air Force Base boom yeah there it is wow vcx yep there it is holy crap it came from the car nicobar Air Force Base bam that's where the Drone came from the direction of travel is actually accurate holy crap guys we need to post this

(1:53:16) wow whoops we need to post this we we'll post it tomorrow we've posted too much stuff today wait what did I deleted already guys I deleted it already this is where the Drone came from

(1:54:49) h guys I'm I just why am I getting a feeling like we're on to something here yeah how did these Indian Radars not pick it up that's an Air Force Base right there wow what did he just say whoa guys we just had a new article whoa how do they not see it 200 miles

(1:55:53) how do they not see it it's impossible 200 miles I had to have seen it that would put the range like out here there's no way whoa we we might have just discovered something whoa March 14th guys I don't know if I should be doing this while booze this is this is POG dude this is POG as the kids say yeah we're not going to post this tonight but whoa I think we found something here this is spicy guys they had India radar had to have seen it too we might have to add another radar to our list KT was right

(1:57:18) there there's we're going to find something I can feel it in my bones guys we are going to find something here we are going to find something uh 200 miles is far enough it's far enough for us to see it this article is just a repeat of the other article yep car nicobar man it's right there the plane was right down here right here where this this is right here this is where the plane was KT is right down here in the middle of

(1:58:21) this and car nicobar is right there um that's where the that's where the Drone came from we just figure out where the Drone came from for sure holy crap wow carnik was right

there okay okay we're on to something we're we're actually on to something here guys yeah go to images good call what's this we're actually on to something

(1:59:26) here we're looking at random websites oh this is this is Victor's blog radiant physics okay well Victor's a clown but we'll go ahead and look at his stuff car nicobar is right there wow the best the path of the best IMAF ping path matches our path right up to right here where the plane is holy crap wow car nicobar is right here this is C nicobar right there plane is right here I mean dude we got this I wonder if this log on is Real at 1825 5 1828 maybe they no I don't think so look at this this is where they think

(2:00:34) it turned in the South Indian Ocean as well my God look at this look at this the exact location of where turned in the South Indian Ocean is where the video where the plane is in our videos look at this right here this turn right here this is exactly where our plane is where this plane turns this is the exact location of our plane right here car nicobar drone comes from here and it's looking down from the north look at this holy crap I mean how can people not think this is real how did somebody fake this the details are exactly where the

(2:01:10) plane was look at so the plane is turning South into the East here right the Drone is right here to the north this matches what's happening with the plane right here it's turning and the Drone came from this way it's right at the north of this man these videos are just real man I'm not sure where Lynn is from with these awx maybe he might have been deployed from there maybe they were just in the area right I think it was just a matter of opportunity I think it was just a matter of opportunity oh this is radiant

(2:01:49) physics blog again how do you say this name ilano ianello ianello Victor ianello I should say his name correctly although I blocked him because I hate when people quote my posts like he did well that's pretty spicy guys um let's remove mh37 Zero from this I want a better image how did this person find this image how did they find this I want one like this that looks cool like this with these little things how do they find

(2:02:55) this whatever we don't need it God I got so many messages follow him anyone who gets recommended I just follow oops yeah we got to vindicate Don Lemon we just vindicate this aliens guy too what's all this interesting very interesting wait this is Lockheed yeah I mean Lock's like

(2:03:58) definitely the on I I think this locked Martin what we're looking at here oh I want to reply to everybody I'm so happy these people are are into it okay but I can't focus on this right now [Music] um where oh harassment archives where guys I love you all but my favorite one is uh my favorite account is this guy whoever this is my favorite account i' I'd send him a message but I don't want to reveal my DMs I'm pretty bad at

(2:05:01) that willfully ignorant or willfully corrupt remember you work for us not the defense contractors and if you continue down this path of obfuscation a political Firestorm will be coming your way the likes bang has and she'll never let him know you are either willfully

ignorant or woefully corrupt there we are my old headphones going hard here it is I need to save this I'm going to put this in the art section of our Discord this is just art this this art right here what The Gatekeepers fear the most guys a shaman Alex Jones and Ashton

(2:06:02) Forbes combined for forming the Triforce of power we're forming the Triforce of power folks have I ever seen a portal not before these videos I mean I don't doubt it that we got some crazy Tech if we have this kind of tech man we got some some Wild Tech uh what is this please Ken give the portal a chance I liked Ken for a while but we had to block Ken after he started trying to lie about the witness that was really weird man that was really weird I got fed up with him after that who's this who Who Am I who am I blocked by oh

(2:07:01) MC West these guys are completely delusional dude estimate the situation completely delusional Mick West completely delusional completely delusional guys hey Banner thank you very much we been do this five or six days now it feels like everybody's family here feels organic dude what dude I hope qar on man please man you're making me feel awkward qaron on X the book of Nakamoto Nakamoto man qaran you've been going bananas guys my man you're making me feel awkward here I told my parents that they're like hey how's your normal

(2:07:47) job going I was talking to my parents the other day they're like how's your normal job going and I'm like it's going pretty well but I've been streaming at night and sometimes I get like hundreds of dollars in donations and they're like wait what how how are you getting hundreds of dollars donations I'm getting more money from my streams than I get from my normal job thank you very much uh we're gonna have to look up the book of Nakamoto we at least owe him this much right I hope this isn't going to get

(2:08:14) super weird but it might oh Satoshi the book of Satoshi wait this seems very familiar I watch anime so Satoshi is like a common name let can I get a cliffnotes version of this somehow wait this is Bitcoin how is this about Bitcoin how is this about Bitcoin oh Satoshi Nakamoto is this what you wanted me to look at oh interesting he's the creator of Bitcoin what what this is getting weird guys I was expecting some biblical things here and now we're talking about Bitcoin this is this took a weird turn this took a weird

(2:09:12) turn no this is not what he wanted he didn't want he did not want Bitcoin okay Heaven and Earth shall pass away but my words shall not pass away o Matthew dude Book of Matthew is just lit dude book of Matthew's lit well if you um qar on if you didn't mean the book of Nakamoto with the Bitcoin you're going to have to clarify because it looks like it's all about Bitcoin do I have to do Duck Duck Go will that maybe figure it out or just maybe be a little bit maybe get a little bit less cryptic I've had a little bit to drink

(2:10:01) so it's I'm struggling right now guys should I just play Stan should I just play Stan while I go get make myself another drink do we care about getting copyright stried will they copyright strike me from music or is it just video I don't know how smart it is I don't know how smart it is I've have no idea how smart it is [Music] um maybe if I use a random Youtube he what's this oh this is getting weird what's foresight made illuminate State his countenance was an empty slate

wait before I forgive drown

(2:11:05) to Life by Labor's pains a sum of Parts slacking brains an ape subservient quick before we get super weird this car nicobar thing is spicy guys this is spicy I might have to dig into this um anyone on my Discord we might have to dig into this car nicobar thing I think that this is definitely where the Drone came from it's the correct direction of travel and if we can find anything else about like why how could they not have radar how could they not have radar the Drone went the plane went right there we

(2:11:38) might be able to find something where they hid the radar data here this might add a third radar data source to our no radar detected situation wild okay hey until ofir am I going to get cop targets for their jeans germs passing hus through host some it preserved deep underground by The Sciences Sky okay this is too long for me and I'm I'm a little too boozed up uh where's my stand video this is spicy though I like this guys you should follow this account I don't know how does this account only

(2:12:17) have 432 follow followers how does this only have 432 followers this guy's like melt just like destroying the uh the disinformation in the UAP community and he makes the best videos and some of them feature me as well I don't even care when he makes fun of me honestly makes me makes me feel special I don't even understand half the stuff but but it's interesting um where's my stand video guys where's my stand video for Lu for Lex address of the original video it's right here at the top of my all

(2:13:09) pertinent evidence just go to my go to my profile my profile 64,000 64,000 followers guys let's go 64,000 can you guys believe I have 64,000 followers some of you guys were following me when we had like 1,000 followers thanks qar on I will try to follow I'll watch it while I'm asleep if you have any uh any wisdom qar on that you you wrote that book oh wow well guys take a look at the book that the link that our Hermes has just provided in the chat for the book of Nakamoto it's apparently not the B the Bitcoin starter

(2:13:52) just that's coincidence apparently you can see the podcast with me on my Twitter here's the Kim Iverson one 17,000 views in an hour here is the Alex Jones one 37 thou 34,000 views in four hours yeah rise was a really good one with Sonia putan as well some of you guys followed with like when I had like just a couple thousand followers back in August and September pretty wild man when kim.

(2:14:20) com first tweeted us out we gained 25,000 followers it was pretty crazy that was a few weeks ago and since then it's just been rising Rising rising Rising yeah the journey has been wild man it's been a wild wild journey I would never have thought that we would get this this big honestly I don't know I really don't don't know thanks pity one I appreciate it man yeah I didn't use Twitter very much at all before this either that's why I had 30 followers back in August literally 30 followers on August

(2:15:06) 9th and now I have 64,000 the media won't talk to us yeah I still hate social media it's

freaking terrible have you seen the way how nuts some of these people are yo check some of these check this like Richard gcki guy out or whatever his name is like these people are just legit nuts dude I mean I don't want to be mean to people but I've been drinking so I I can't hold back where's my I keep I save everything too by the way guys so like who who is this guy who's this Richard gric loser someone's going around claiming I

(2:15:46) have top secret US Government clearance is part of my job spreading claimed UAP videos which are obviously VFX renders who the hell is this guy who is this guy why is he using my hashtags can I block people from using my hashtags who is this loser why is this guy talking crap about me like he's somebody that matters in this world false top secret clearance claims what is this Richard grick you don't know who I am buddy I have a real job unlike whatever crap you do yeah that's why I don't drink cuz I

(2:16:33) get mean somebody sent me these images of this guy cuz he blocked me he blocks me and then he's posting crap about me who blocks somebody and then talks smack about them is really weird man like who is this guy and why is he using my hashtags definitely over the target we're definitely over the target this is bizarre oh I'll get him more you know I got I could definitely dunk on this guy if I wanted to I just choose not to because I don't want to give him any attention why is he posting whisper out

(2:17:12) data like he's read it I can recognize the whisper out data cuz I look through all 300 Pages this whis whisper out data is total nonsense if you followed me early on you guys would know this whisper out data is complete nonsense it has the plane like hugging the coast of Indonesia which it didn't do it has the plane doing some kind of cut back over here to like look for planes that are behind it which you couldn't ever infer that it has the plane doing a thir like 22 minute holding pattern Richard grick whoever this guy

(2:17:45) is I guarantee you he has never looked at the this whisper report ever yeah I'm not wasting my time but these are the haters that we deal with you know we deal with the haters oh snap uh I've got streamer mode enabled so I can't see people's full name oh boy Port Blair I don't know if Port Blair is the right one though we need car nicobar uavs though hello [Music] hello [Music] hello well I'll have to look at this tomorrow because I'm getting a little boozy uh Port Blair yeah I don't think this is the

(2:18:40) right location oh it could be it could come from here oh wow wow it could it's kind of far but it could come from there so Port Blair is a possibility and car nicobar is another possibility you see how many more less haters we have though like in my chat in my discussions there's way less haters now yeah Frederick vanck people always talk about this guy I haven't really looked

(2:19:43) into him wow no haters surprisingly no haters all the people are saying talking to Alex Jones will hurt your credibility Jesus man these people need to chill out it's not like I love Alex Jones as the person but we can still talk to him he seemed totally fine when I talk to him actually I mean I thought it was one of the best interviews we've had why do people act like Alex Jones

committed Sandy Hook okay I probably should stop talking about this like yes he had a conspiracy theory doesn't mean he is the one who is

(2:20:34) responsible yeah is qaran actually Elon Musk what if qaran is Elon Musk guys I wish uh Alex Jones oh nice oh I like the oh boy spicy dude I wish Alex Jones had responded to my uh my joke about uh we should uh we should find the people that are lying about the videos a billion dollars see how they like it we got to credit this person who's this person this is this is a good one this is a really good one so dude my followers are coming out with spicy artwork spicy spicy artwork dud why do these people get so

(2:21:42) butt hurt every time you blocking people dude I haven't blocked anyone that's just asking questions everybody's like condescending to me when they get blocked nobody's ever posted a screenshot of what they got blocked for ever because they'll make themselves look bad I like this one these types of people this is like your CNN brain right here why is room temperature super conductivity important uh how about I show you a video of rocks floating should I just show them a picture of rocks floating

(2:22:35) guys I'm a little I'm a little bit tipsy so I'm probably being a little more rude than I should be uh probably being a little more rude than I should be where's my video qar on I owe you man you're like paying for the whole stream tonight man join the X Force hell yeah which uh X Force person would I get to be yeah I want to wear a

(2:23:41) cape AI neuralink Gateway and dude is is qar on Elon Musk do I have to like have a chip implanted in me though I'm not sure I want that that's the only thing I'm against Frank speech is a virtue Frank qar on if you're Elon Musk join my uh all evidence review tomorrow night that'll make like 10,000 people join man oh somebody sent me an email guys game on where's my where's my proton male where is it we'll have to come back to this guys I'm getting spam with too much

(2:24:48) stuff I can't respond to everybody's [Music] messages LLY Hall is LLY Hall in the chat LLY Hall who are you in the chat isn't she Emily or something like that I don't see her I'm G to say stuff I shouldn't say Let's uh let's focus on our work what if qar Anan is regicide an on guys oo spicy do you guys think that the leakers

(2:25:53) the the hoaxers is going to come forward I don't think so okay let's uh I need to make myself another drink you guys want to wait while I make myself another drink real quick I I won't make blue cheese olives this time I'll just use regular olives wait what's this what's this whoa wait really is this a slideshow or something it's too bad I'm banned from the the this sub **reddit** I would troll people right real hard right now yeah you know I make myself blue cheese olives what you think I make

(2:26:53) martinis without blue cheese olives uh am I some kind of uh ingrate no no guys if you don't have blue cheese olives in your Martini is it even really a martini dirty martini extra blue cheese olives that's the only way that's the only way pimentos are for uh uh unsophisticated

people let's upload Zach guys I don't even know what he's saying here but we're going to upload Zach let's downvote this person who's who's talking smack about Zach guys uh I don't know let's just go along

(2:27:41) with the crowd guys it's **Reddit** let's just let's I haven't even read this we're just down voting because he was already downvoted what who are these people saying oh it's CGI guys it's CGI it's CGI get over it dude these comments are the are the wackest comments period get over it man stop talking about it stop talking about it like why are you even here on the sub**reddit** about the whole thing dude how many these accounts are going to delete themselves how many of these accounts are going to delete their account

(2:28:24) dude after they get proven real like all of them they're just going to all delete their accounts huh whoa Kim Iverson thing kind of blowing up huh man we were on Kim Iverson and Alex Jones today well technically Kim Iverson was yesterday but this should have more this should have more views this is pretty [ ] dude look at this the open- source algorithm behind Community notes is resilient to the technique presented here it ensures no single person can abuse their influence in attempt to game Community notes okay let's just check that out

(2:29:05) well somebody messaged me directly and said when a tweet is very popular lots lots of votes presumably coming in a not helpful vote doesn't deep s it in the same way it does with something less popular from what I've scen someone in the community knows is trying to F you okay let's go to the next one this is Chuck uh Costello This has been **debunked** and it's not a fact it's an opinion and this goes to the corridor crew this isn't even my tweet this is from Chuck uh Castello Castello I'm

(2:29:38) butchering it right now so obviously it can be gamed so obviously it can be gamed how do this not getting more views ridiculous man here was yesterday's post 52,000 views on yesterday's are we we're actually trending like mh37 X is trending today she can watch the whole video right here she wanted me to post it again but you can watch the whole video right here aant tell thank you okay oh it's more biblical stuff right now okay after this Bible verse I'm going to make myself another drink real quick I'm going to

(2:30:25) play some stand for everybody and then we'll do we'll try to do a little bit of work Isaiah 457 I form the light and create the darkness I make peace I create evil I the Lord do all the things these things the **truth** is immutable Psalm 22 describes the crucifixion 700 years before the first crucifixion God bless thank you anatella honestly that reminds me Isaiah 457 reminds me of like the big bang the creation of the universe the construct that we potentially live in right now yeah Community notes is super

(2:31:09) compromised dude super compromised they figured out how to manipulate it for sure uh um man this one made my day so this morning someone sent me this in a private message now they got my at wrong but that's fine they got my name here spelled correctly this is pretty awesome this is really awesome this just made my day getting a message like this this is what made me want to grind out that Alex Jones intervie I prepared for like two hours this morning

for the Alex Jones interview just to make sure I had everything

(2:31:45) right I was pretty excited yeah 34,000 views on this already pretty good okay um we're going to get ourselves copyright stried because I don't care I just don't care I don't see a way around it I just I'm going to put it on the side of the screen I think I can finish this in six minutes so give me a second here we go oh wait wait wait wait wait wait oh I already deleted it okay be right back

(2:33:11) guys I could it all be put your picture on my wall [Music] it all mind it's not so bad it's not so bad de slim I wrote you but you still ain't calling I left my cell my pager and my home phone at the bottom I sent two letters back in Autumn you must not a got them that probably was a problem in the post office or something sometimes I scribble the dresses too sloppy when I jot them but anyways [REDACTED] it what's been up man how's your daughter my girlfriend's pregnant too I'm about to

(2:34:05) be a father if I have a daughter guess what I'mma call her I'mma name her Bonnie I read about your uncle Ronnie too I'm sorry I had a friend kill himself over some [REDACTED] who didn't want him I know you probably hear this every day but I'm your biggest fan I even got the underground [REDACTED] that you did was scam I got a room full of your posters and your pictures man I like the [REDACTED] you did with rockets too that [REDACTED] was fad anyways I hope you get this man hit me back just a chat trly your your

(2:34:33) biggest F this [Music] stand my window I can't see it all [Music] dear slim you still ain't called the R I hope you have a chance I ain't mad I just think is [REDACTED] up you don't answer fans if you didn't want to talk to me outside the concert you didn't have to but you could have signed an autograph for Matthew that's my little brother man he's only 6 years old we waited in a blistering cold for you 4 hours and you just said no that's pretty shitty man you like his [REDACTED] Idol he wants to be

(2:35:19) just like you man he likes you more than I do I ain't that mad though I just don't like being and lie to remember when we met in Denver you said if I write you you would write back see I'm just like you in a way I never knew my father neither he used to always cheat on my mom and beat her I can relate to what you're saying in your songs so when I have a shitty day I drift away and put them on cuz I don't really got [REDACTED] else so that [REDACTED] helps when I'm depressed I even got a tattoo with Your Name Across

(2:35:45) the chest okay that's good enough so now oh did someone else donate something I no that was the the previous one right okay thank you guys for those donations you guys have been lighting it up yeah we wore that that Dao album out back in the day I don't think I got real copyright strikes I think I just got like my stuff demonetized or something I don't know how it all works guys I don't how it works um Lex said he plays whirlwind Barb guys what do we think about Lex playing Whirlwind Barb that song was dedicated to

(2:36:45) Lex one day Lex will have us on his podcast guys when we get 100,000 followers what

if we uh nah Sleepers for the week what if we get on Lex's podcasts and then he plays part of my stream what if at the beginning he plays part of my stream where I'm writing the message to him if you guys didn't watch the beginning of the stream today watch the beginning of the stream go back and play it after this is over just like the first five minutes it's pretty funny yeah I had a weird ET dream the other day

(2:37:34) guys it was super weird should I tell the ET dream story again hold on let me find my dog come here boo come here can Daddy pick you up come here oh such dog oh such dog such dog she didn't bite me this time guys oh such good girl good girl she's not biting me this is good this is good guys this is Lulu

(2:38:42) Good Girl Lulu you're on stream Lulu oh such dog yes Dogg us yes good girl yes good girl I'm surprised I haven't got bit yet okay okay here we go we're back yeah I rescued her from some people okay wow I'm surprised I didn't get bit though she does not like being picked up she does not like being picked up she gave me the growly action when I tried to pick her up uh she's not that big actually she's really small for a husky but female dogs are a lot different than male dogs a lot different yeah the numbers after the

(2:39:40) satellite are the coordinates yeah she's pretty awesome I definitely love her but man huskys take a lot of lot of effort man uh what is the meme of the day do we do a meme of the day um did we do a meme of the day not really she's not that massive she's pretty small for a husky man they get pretty big for Husky she's pretty tiny um I've had it for like four or five years maybe but I I rescued her from some people that couldn't take care of her oh look it's Hermes guys

(2:40:52) is this thing floaty whoa look at this why is it doing [Music] that why is it doing [Music] this yo Hermes sends us some mindbending stuff you look at Einstein is there a way to send it without this weird video like this I don't know what this even mean means I don't understand the internet enough why does it do this though whoa look at this one why is it doing this though is this like related to why

(2:41:55) toilets spin a certain way yeah she's uh she looks a little chunky but she's not that chunky houar on stop chat spamming the chat bro wait you didn't say anything though you got me okay hold hold on guys should I we have 15 messages should we see if Lex messaged us let me go see if Lex messaged us damn it none of these messages are from Lex guys damn I almost just revealed my messages again oh somebody sent me an email somebody sent me an email I totally forgot we were going to check our emails I'm here there um blah

(2:42:48) blah blah refresh here we go here we go here we go this is something what is this what is it going to be oh dude this is like some World of Warcraft orbs this is neat man thanks appreciate you sending me that should we see I dude I'm 50 emails behind guys 50 emails behind okay yo some people literally send me how the science works with my emails and I'm just not smart enough oh here's the upload 3D thing oh here it is wait I can't can I show this I don't know if I can show this is there personal information

(2:43:44) here wait a minute this looks like is this this is a risky click right here I don't know what this means does this mean something guys I don't know what this means h what about this one o 3D quality 3D MP4 huh this is spicy let's throw this in evidence chat does this mean it was uploading 3D or converted to 3D using the YouTube

(2:44:47) thing though not really sure risky click man it says 3D oh the other one says 3d2 huh this is pretty big it's pretty big what does VLC player do for me oh we're talking about Lex uh fredman yeah Banner you should sign up for XMen Elon Musk needs all the help he can get right now apparently there's like a war against Elon Musk yo so you

(2:45:51) guys want to see how [ ] Reddit is I guarantee if we go to the front page of Reddit news right now there's going to be at least one article about Elon Musk or Twitter okay how much you guys want to bet yeah our group of people is like our followers are like the the greatest group of people period how much you guys want to bet we're going to go to Twitter or we're going to go to Reddit news and we are going to find on the front page of the news subreddit how much you want to bet there's something about Elon Musk or

(2:46:26) Twitter here here's the meme of the day for for Elon Musk if if we find on the news subreddit something about Twitter or like advertisers pulling out or some nonsense like that Elon mus or Mick West will never never come to us oh look at this nice dude it's not as good as mine though it's good though oh should we join a space little drunken space okay what do you guys think sorry for me chewing hell yeah tier welcome buddy you know what's weird my some of my best interviews are all in Rumble

(2:47:31) they all Rumble oh yeah we didn't talk about the dream okay first let's find the X thing and then we'll talk about my dream and then we'll see um George Santos got expelled from Congress that's funny Jesus what somebody killed three homeless people man targeting homeless people's messed up dude Jesus man the news is dark today I'm surprised I haven't found something about X or Elon Musk yet I'm actually shocked we haven't yet huh wow okay well

(2:48:36) guys okay maybe I was wrong why are they talking about Hubble when we have James web telescope wow Mark Cuban selling majority stake in the Dallas Mavericks that's big wow so Mark Cuban selling the Mavericks he's going to become a minority owner wow it's pretty big Mark Cuban went off to Deep End dude though I don't know what his deal is Cam is super weirdo qar on you okay buddy that's probably Elon Musk dude I hope qar is not drunk drunk I

(2:49:45) don't want him to be donated to me while he's drunk that would make me feel really bad I actually can't believe I don't see something about Twitter this is the first day I've ever looked here not seen something on the front page about Twitter okay well whatever should we is there do we have any trolls no we don't have any trolls in our chats annoying okay who's ready for my story again if you were here you already heard it I've been having a lot of weird dreams which has just been bizarre because I

(2:50:19) usually don't have dreams that I remember but I had this one dream that I remembered and I was in a dorm college dorm I remember that I remember an attractive girl and I remember her telling me that she wasn't human and that she looked human human right but like also looked a little bit off and then she told me something about like I can't remember exactly what she said but something like it was I had to meet like these people so she takes me down into the like common area of the dorm and it was almost like it was like

(2:51:05) King Arthur the Knights of the Round it was like 15 people in like uh at at like some T tables and they were apparently all like aliens but they looked like humans and they like introduced themselves to me like welcoming me to the crew or something like that it was very bizarre man I didn't understand it at all I recognized one of the guys that looked like this Italian person but I don't know like it's like I recognized them but I didn't know what their name was and I actually don't now that I

(2:51:45) think about I I don't think I recog I like knew who anybody was but they like a couple of them looked familiar and then I woke up and I was like whoa that was a weird ass dream and it scared me I like turned on my light and I went back to sleep it was really weird man I just remember specifically it was a college dorm was that it was a college dorm and yeah they just told me they were not humans huh it was really weird I've been sleeping pretty well though since then haven't had any weird dreams since

(2:52:26) then well Banner just paid us so we got to we got to Google something I haven't been in college in 20 years well here we go go is this going to get weird man what what am I googleing here thank you Banner for the donation thank you qar on qar n's getting kind of cryptic man uh what's this oh well do I need to do image search here you might have to give me more than this oh man this is a risky click here this is like a geoc C's

(2:53:34) website prayer board yeah we're getting a little too into the woo here search it in YouTube oh boy oh boy five years ago is this it Josh you've seen it all you travel all around the world what do you think the Brown Mountain Lights are well for around 20 years now I have been studying the so-called Brown Mountain lights I can't take this guy seriously guys he might as well be wearing Jordi Le Forge glasses camping on and around Brown Mountain what's up with this hat I have taken a wide variet science

(2:54:28) okay well hold on oh I got yeah I supposed to YouTube this guys it's you can tell my faculties are somewhat diminished at the moment I can't click on this won't let me click on it wait what how's the first hit our the first hit's our stream the very first hit is our stream is it this one the alien interview how's this the third hit this one damn 24,000 views on Danny I I don't want to watch that how was that the third hit let's try this one whoa what the hell nah this is fake this is

(2:55:26) fake okay you told us you this is definitely fake yo of to get here us B be speaking English man yeah super fake guys very fake there's a better one than this do I have the good one okay so yeah this is super fake why made for us 8 million views Jesus nuclear war and the whole

nuclear war thing is stupid guys the nuclear war thing is extremely stupid no offense but we're looking at technology that can blow up

(2:56:30) the whole planet okay we got we got something new to search Banner is just on fire here with the donos wait did somebody else donate something uh thank you very much one foot NSD thank you very much man you didn't send a message but thank you where did that donation come from thank you guys you guys are giving me too much money man people are going to start saying I'm doing this for the money because you guys are donating all this money maybe like some of you guys are just doing this to discredit me so that they'll say

(2:57:00) that I'm doing this for the money what if they're donating to me just so that people will come and say that I'm doing this for the money okay here we go oh is this the one this is the one yeah I want to can someone find the link to the alien one that looks more real I want to save that oh yeah this is the one this is the one I think I was talking oh I can't say who I was talking I was talking to somebody who I think was talking to about this one this one's wild man this is one of the most convincing UAP videos

(2:57:35) I've ever seen I saw this a while back whenever they posted this a couple years ago they zoom in it goes underwater like what is that what are we looking at there you can actually see there's like a distortion effect around it right oh this is the aadila one the bounty is 145,000 yeah this one's really good someone find me the link of the alien interview though I'll find it probably be pretty easy that shit's not maybe I have it in one of my

(2:58:43) discords H I want to save the alien interview though I gotta find it there's one alien interview I'm not 100% sure is fake far to go that slow huh it's up to you what is this one thank you for those donos though don't think it's the skinny Bob one dude whoa look at this weird Distortion effect you see around it this is definitely one of the more

(2:59:49) convincing ones I've seen it goes under water right there you see it go under water right there goes under water right here doesn't even slow down you can see it's still moving at the same speed right there they're still tracking it comes back above water very weird they're still tracking it the fact they still track it there is very bizarre you can see the elevation yeah zero feet right there that's amazing they can tell the elevation like that I don't know what this could be yeah it splits in two right yeah now I

(3:00:47) remember this footage yeah if it has a non-radiating barrier it should be able to pass right through water it's a corridor crew it's VFX guys it's VFX is it the skinny Bob footage maybe it is I'm Googling over here I'm trying to find it somebody else help me out find me the alien interview you guys know what I'm talking about uh I don't think it's this one let me look n not the skinny Bob one there's a different one wait I stopped did I miss it where did it split in two did I miss

(3:01:56) it tell me what to Google to find the alien interview one it's really weird I want to look at it hold on tell me what to Google to find it yeah you know what I'm talking about Jimmy I

think you know yeah the one where they're giving it medical assistance yes that's the one Pat that's the one I want they like giving it medical assistance while they're like interviewing in the dark that's the one that creeps me out when I watch it something about it just creeps me the hell out oh I found the link to the

(3:02:39) alien scientist lk99 thing in my in my Discord I'm going through my chat right now or my my uh my documents right now huh I have random stuff from stepen **Green Street** before I knew he was a spook that's pretty funny he it's weird thinking how far I came from being like nobody I'm still nobody but looking for the alien interview yeah I don't have it I don't have it I need that one though yeah it's buried where is it oh you found it pat what's it called how do I Google it how do I Google it pat here I'll just

(3:03:35) Pat I'll make you a mod since you found it how do I how do I make him a mod the ones they bury are the ones I want to know more about okay Pat you're a mod you can you can post links oh there it is DN Rumble okay think I need to go to rumble for this oh there it is we found it we found it here it is we found it I got to save this this is the one that creeps me out

(3:04:43) guys ready for this this is the one wait why is it 1 hour what is this oh this isn't the this is like this one's the full video here it is here it is this is creepy man this one is the one that creeps me out if you want to know what an alien would act like this this is the one that creeps me out just the way it's mannerisms the way it moves around like it's looking around and trying to figure out what's going on I don't know man this is the one that creeps me out it's dni this one creeps me out I don't know

(3:05:47) man this one creeps me out qar on I guess you deserve you earned your moderator you've been acting kind of weird in the chat don't do anything silly wait where is Q starting on how come you don't you don't post enough okay Q star n you get to be a moderator somebody I think is going to have uh another link I want the just the shorter one it's actually VFX guys it's VFX cordor crew **debunk**ed it dude it's just so weird looking it could I mean it's obviously very easy to fake but could be a puppet right but it's

(3:06:37) just weird looking I don't know something about it creeps me out the way it's like moving the way visual effect effects guys visual effects the way it's moving just creeps me out and it's like looking at the light oh and then his mouth opens and here's where they come in and they like do something to it it doesn't even really look conscious man he's on the way to the green room right now we got copyright strike for showing that not like strip this is the part you can see its whole body I mean why would you touch that

(3:07:33) thing though I would definitely not touch it man super weird man really weird Jeff Jam is that TJ I don't know man something about this one creeps me out okay I'll put it in the chat because I I don't I don't think anybody else put it oh there he goes qar n put in the chat wait this goes to qar non oh there's qar on guess I guess we're following qaran now yo qaron doesn't follow anybody yo what what is up with this qaran let's call you out you don't follow anyone follows nobody this is definitely Elon Musk

(3:08:32) man this is definitely Elon Musk oh he tagged me look look at me getting tagged with all these important people look at all these people I'm getting tagged with it's like all these like super important people and then it's just like Ashton like why am I being tagged in here next to Graham Hancock Joe Rogan and Tucker Carlson who's post disclosure the Department of Defense 6.

(3:09:06) 5 million let's follow the Department of Defense guys let's let's uh troll the dod the hell is this yeah oh hey

(3:10:15) uh trolling the dod with the blue cheese Martini blue cheese olives Martini is the Department of energy on uh Earl Gray hot it's Department of energy on here oh this is the Department of energy is this is this really them is that really them guys well that's doesn't seem legit oh gov.gov guys goov how much you want to bet they're

(3:11:21) hacking my computer just for coming to this place why is artificial intelligence on the list yeah this place is sketchy this place is sketchy as hell dude once I see artificial intelligence now I'm sketched out guys Vehicles okay we're going to troll we're going to troll the DOE for

(3:12:55) not sure I should be trolling them this hard but we're going hard oh oh man was get qar non might giving qar non moderator might have been might have been a mistake we're going to let him we're going to let him cook though um for yeah we're trolling all these people right now oh Alex Jones debrief you know what we didn't really do Alex Jones debrief

(3:14:00) did we okay it's getting late too Patrick Jackson's a total fraud that guy's totally totally full of crap is that everything and the evidence points to a situation where this is the no I was up here last night working when you had him on I thought with the time of Sur a movement like this before we don't need okay here we go that yeah well first of all I want to thank Harrison and Alex both you guys for having me on I have a quick prepared statement I'd like to read here which is that people told me not to come on to

(3:14:51) this platform but people have also told other people not to talk to me this is a movement where we don't base our opinions on what other people tell us to think we they want to divide us and we want to unify us I want to talk to anybody who's willing to listen with an open mind the only side I'm on is the side of Truth we are doing this to vindicate the families the pilot the witnesses and the leaker all of my foas have been blocked the government has never fought against a movement like this before we don't need to fear them

(3:15:16) they need to fear us to speaker Mike Johnson put me in front of congress with pette Luna mosh witz and Gates and we will rip the truth from the FBI NCIS nro CIA and every three-letter agency my message to those agencies is do not underestimate us my message to everybody else is follow a path of your own choosing and do it all yourself this is MH 370x and let me just add you've got this new office they're trying to set up and woo yeah we just I got that bomb on them to get all the UFO data because the

(3:15:49) agencies themselves say there's a rogue group outside of government that won't give them all this data that's all confirmed right now and this ties right into that yeah exactly and I think that I've been trying to back Channel with some of these congressmen as well and that there's not a lot of appetite for another UAP hearing and I would say to them we don't need another UAP hearing we need a conspiracy hearing into what happened to this plane we are serving everything up on a silver platter here

(3:16:15) for them when we uncover this conspiracy we will also go ahead and uncover the reverse engineering program that these thirdparty companies like Lockheed Martin north of Grumman are guilty of and potentially uh using taxpayer money in Black budget programs that they have misappropriated damn not messing around just straight up dropping the hot fire all right give us the boil down I can't believe I'm watching myself myself with Alex Jones right now I actually can't believe I'm watching myself on Alex

(3:16:51) Jones and then let's reverse engineer from there from your best research what's going on is this alien technology is it human technology what happened to the plane and then we'll back it back through there toxic mascul the reason why we believe this is human technology is that everything and the evidence points to a situation where this is the US government intervening with a plane that is potentially dooming this plane takes off from qual andur just like Greg Reese is reporting goes dark at 1721 UTC because a lithium ion

(3:17:20) battery fire breaks out there's a wired article that actually talks about a fire scenario from an electrical fire they just didn't realize that it's really the 500 pounds of lithium ion batteries in the cargo hold that what are what lit up and this is what caused the pilots to turn around and go to pangloss International Air this is C by the witnesses along the coast Mike McKay who loses a job over his sighting it's C as well by fishermen who are a boat 10 miles off as well that see this plane

(3:17:47) flying low this is not a scenario where a pilot suicide the pilot is flying low because if the plane's depressurized you need to give the passengers enough oxygen the Malaysian Ministry of defense is one of the worst Liars I've ever seen I urge everybody watching to go watch his interviews he admits that the plane was unidentified but then contradicts himself and says that they know that the plane was a civilian airliner and not hostile they won't explain why they won't send up and the only answer that

(3:18:14) makes any sense is the snare we put forth it's an emergency event fire snare they know they didn't need to send Jets up yeah I mean okay so there's the debrief for you there guys uh we were ready to go today I was fired up I was ready I was I was ready to drop some hot hot fire spit hot fire in these people 40,000 views already in five hours this thing's going to go over 100,000 by tomorrow that was pretty spicy yeah well the problem with the renewed investigation is not going to get anything right this is being covered

(3:18:56) up by people that are not going to give off any secret we're not going to find a plane anywhere but it makes sense why they want to renew that investigation right because they

know it's all [ ] they've known it [ ] the whole time they've known it [ ] what oh that's the Sandy Hook guy yeah I think we nailed it right so that's the I mean what more is there to say right what more is there really to say oops that that's pretty much dropping the the the nuke so to speak so if that

(3:19:49) doesn't give us the attention that we need um I don't know what will honestly I mean I don't know what will my job does pay me pretty well so it's hard to quit the Spooks would have to pay me a lot to switch sides but they probably could afford it if we can do this much like if we can do this much with just Twitter account and volunteer followers imagine if we had the cap the assets and uh the resources that the intelligence Community has it just makes me kind of embarrassed for the US intelligence like how are we so

(3:20:28) awful like I feel like if I was on the intelligence side like I would be able to discredit myself way better than this than they're discrediting me feels like they're just lazy man feels like they're lazy imagine all the other stuff we could figure out too I mean wow wow damn people love Alex Jones why are people so salty man he caused damage to the families like come on guys it's called Free Speech man so okay let me ask you guys this okay this is what I'm going to say here oh wait that's not the one I want

(3:21:27) this one here this one right here okay if you're of the mindset like this person is here that you caused grief to the families how much should we sue the people who've been lying to the families of of MH370 right this is why I wanted Alex Jones to respond if we can sue Alex Jones for a billion dollars that's how much he got charged with for the for for line a billion dollars for causing grief to the Sandy Hook families how much should the US government pay the families of MH370 for lying about these videos to me it should be a billion

(3:22:09) dollars for each one 23 9 billion sounds about right right like this is wild to me that people have this view so I don't know sorry to get political but I've been drinking I guess it's not really political but now I think what it comes down to is this exactly 1 billion it's actually times 238 cuz you got to get the crew members involved too but this is why people should be careful about setting precedent it's easy to vilify somebody and say hey they owe a billion dollars right but then when somebody turns

(3:22:57) around back on you and says oh well now you owe a billion dollars for what you said then they all go whoa wait a minute I was just doing my free speech so it's like this is what equal justice means guys equal justice we have to treat people equally the moment we start trying to punish somebody because we don't like them then what happens is we flip that mirror around and then it becomes on you right and people yeah exactly looking for the truth people don't look at the bigger picture and so people are allowed to say

(3:23:34) stuff right it's not like Alex Jones caused Sandy Hook I mean I don't think that he what he said is appropriate but it doesn't mean like you have to be careful right because if we start punishing people we don't like then we have to realize well what happens when we do it what happens when it gets flipped around back on us like so yeah exactly there's two sides of every

coin and that's what people don't really want to realize when it comes to punishing people they don't agree with that's why what I stand for

(3:24:02) is equal justice Equal justice and that's why when I talk about charging people with seditious conspiracy for hiding these videos well that's because you guys you know the government already set the precedent right charging people with Sous conspiracy apparently we can do that for people who you know weren't even there on the January 6th riots so they've set the precedent that we can charge people with Sous conspiracy for hiding these videos right they didn't they didn't commit it directly but they were

(3:24:34) involved in hiding the videos what is this and just for the record I do not support what happened on January 6th at all and I would never be there for that but I do believe in Equal justice so if we're going to punish certain people a certain way we should punish everyone the same way that's my personal opinion yo qar on why don't you follow anybody no I'm not going to get cancelled that's said I don't support j6 but hopefully this doesn't get me canceled I don't think this guy deserved

(3:25:27) to be in prison for four years he spent four years in prison four years guys Edward C Lyn only spent six years or not only but he spent six years in prison this guy spent four years in prison for walking around the capital for trespassing right this is again why I think that we need to have equal justice it's messed up man yo qar n you you let me be your first follower qar Nan why you so stingy with the follows yo Jacob Chanley only has 794 followers and he follows me look at that look at that follows me classy

(3:26:18) classy yeah I'm not I'm definitely not going woke guys there's no chance about that don't worry about don't worry about me going woke I don't really know what that even means but I'm pretty sure I'm not going it I'm too much Boomer to understand what these terms mean guys is woke a good thing or a bad thing let me Google it let me Google it past of wake aware and actively attentative of important facts and issues well I probably will be woke then oh it means you have pronouns in

(3:27:06) your bios yeah no guys let's not get political let's not get political guys but yeah do you do you see any pronouns in my BIOS guys I'm starting to get afraid I'm going to get canceled here although I do kind of want my my bio to look like this I do have to give Andrew Tate some credit his bio is freaking hilarious this dudee is Master troll so when I practice how to troll people I want to be as good as Andrew Tate is at trolling people this is just stop oil guys just stop oil vegan just stop oil okay yeah let's get back to MH370

(3:28:07) guys sorry been boozing Z Zim Vice BBC Vice BBC dude I mean you got to give him credit for trolling pretty hard though he's trolling pretty hard here just stop orbs orb awareness guys okay okay guys I'm offending some of my followers I got to we got to focus here um what are we going to say about the Drone

(3:29:22) four orbs four orbs honestly that's why I want to talk to Andrew Tate I think he's pretty

smart man like we're battling the same disinformation complex and like just he he could probably teach us a little bit about what we need to do in order to prevent ourselves from getting like um they're going to come after me pretty hard especially after this Alex Jones thing I would guarantee they're going to start coming after us pretty hard they are G to definitely start trying to discredit me way harder than before because my

(3:30:01) profile is starting to rise a lot like how many how many followers do we even have right now yeah over 41 or almost 41 42,2 200 we or we're probably God 42 I'm struggling 64,000 what's this what's this o someone linked the proof of mq1 C Great Eagle Pat M look at you giving you moderator was not yeah so this was actually I used to think it was mq1 L you know what we might have to post this good catch Pat I've been looking for this one I'm going to have to save this in my documentation hold

(3:30:47) on proof of mq1 C I've been looking for this man I've been looking for this link but it's so buried now dude how do people think that this is fake when you can see the freaking nose on the Drone I mean what do they think somebody like just knew exactly what the Drone looked like and where the camera was people are people are so dumb dude thank you Aaron appreciate it appreciate it loaded with expanded eoir payload for quasi wide area areial surveillance monitoring or missions we sold them to

(3:31:59) Ukraine look how W wide the wings are in this thing 40 hours they can fly for 25 ,000 ft yeah I saw this a while back but this was before I got big and I never posted it but this is why I've been calling it mq1 C Great Eagle for this whole time good catch Pat M appreciate you we've actually got quite a few posts to make now I'm probably going to post this I don't think I ever posted this I'm probably going to post the videos again later too like this weekend probably on Sunday

(3:33:21) that's a good find this a good find oh is Bernie still around can you upload your other interviews to your channel I'm not sure do you guys think they'll strike me if I upload the Alex Jones interview huh I don't know will they strike me I bet they'll strike me if I upload the Alex Jones interview what do you guys think what do you guys think it's pretty slow it's not catching up to the the airplane ooh oo oh we found the we found the the V the camera rathon das2 sensors under the wings oo spicy this was a big

(3:34:35) one and it has a surveillance radar damn this is pretty good yeah I would have to probably get info wars permission but they don't even they can't even post on YouTube the reason why I don't post my interviews on YouTube is uh cuz I other people have it's not mine like I don't own it I only post my own interviews on there huh 2010 is when they got reassigned the name create Eagle this one says 29,000 ft do you guys you guys probably don't remember but early on in the investigation the **debunkers** were trying to say that the

(3:35:38) Drone couldn't Fly High Enough they were saying the Drone couldn't fly at uh cruising altitude but then we found out that the we're actually looking at the Drone like the plane is super low yeah YouTube it just deletes messages like crazy we need to Google this interesting

two sensors here it is

(3:36:44) so these are definitely r on cameras 100% so it's how crazy how much stuff we've gotten correct people say we speculate but we we just been nailing it nailing every single thing these are wrath on cameras y I'm definitely going to get disappeared man I'm definitely going to get disappeared there's no way I die of old age I'm just saying that to you guys right now I kind of wish we were spying like against China or Russia right now instead of the United States but it is what it is man United States is the one that

(3:37:25) disappeared this plane so oh it is an yeah e Electro Optical and infrared sensors oh could be northr gromin visible and infrared spectral bands

(3:38:28) wow all without emitting detectable energy holy [ ] this is the F35 pod why is it called Das you guys want to learn a little bit about super Advanced cameras I appreciate you praying for me because I think I need it the Spooks are probably pretty UPS set but this is all public information we just Google it that's all we find and we find everything oh look at this hello

(3:39:32) hello 2010 hello I think we just hit the jackpot chat I think we just hit the jackpot pot where's the Das two look at my dyslexia four unmaned aircraft each with an a Das to Electro Optical infrared with laser finder designator payload boom man this is this is super sus guys the general he was actually in charge of the

(3:40:38) Afghanistan and Iraq battles or area and international so this all just adds up everything adds up General Joseph F Dunford man some of you who are newer followers never saw the Joseph F Dunford stuff because I deleted it but we know the general who was in charge he ended up getting promoted to being the highest ranking military officer after this and now he's board of directors at lacked Martin it's not a coincidence I don't believe in coincidences I'm a CO coincidence theorist reconnaissance surveillance

(3:41:24) Target acquisition arned reconnaissance attack and Communications relay to support units I mean holy crap guys operating day and night oh my god dude this is our drone for sure it's definitely the mq1 C Great Eagle it's definitely this one what wait what wait what what link Google what was the X Force thing I'm just a little too I've been drinking a little too much for the X Force thing one is a dedicated

(3:42:28) investigator oh no I'm yeah I'm a dedicated investigator I mean this stuff's just super interesting man how can you go back to your normal job after this how can we go after our how can I go back to being a normal person after this man like I'm learning about the craziest stuff man learning how all of our military equipment Works we're learning how the satellites work this is just two martinis four four orbs worth of martinis four orbs Forbes this many martinis this is honestly going to be my

(3:43:11) like my avatar or something Ashton Forbes Ashton for orbs huh feel like there's going

to be another clue in here though don't worry guys uh kim.com told me that I can go uh flee the country if anything happens we went over the Escape Route this isn't even a joke this is not even a joke kim.

(3:44:02) com told me I can go stay with him and his uh I'm not going to tell people where he lives but it's not in the country so I have an escape plan if they come out after me well Hermes and qaran are like on another level right now thanks Karan you were the you were a legend tonight man you are a legend you are a straight up Legend qar if you're Elon Musk just let tell Elon Musk look to the east hold on let me give you a little bit of meme qar just in case you're just in case you're uh Elon Musk just in case this is

(3:44:48) us this is mainstream media this is the this is the light shining down upon the mainstream media right here this is their lies being exposed all their Spears have to get get sent up in the air I don't think we can get copyright stri for this but I think we already did for Doo I think there might be a clue in here we might have to look back at this later when I can read without being a little bit little bit buzzed but yeah might be meme time so we didn't really get through all pertinent evidence guys we didn't really get

(3:45:29) through all pertinent evidence I think we might be ready to claim that these are Ron cameras though I think we might be ready to claim it huh I think I'm going to put this on the evidence list there we go dude what dude qar on what thank you man wow man wow qar on I hope that you are a sober mind uh because if you are my

(3:46:34) goodness sir the Dono Max and this is getting a little bit suspicious just how much you've been donating dude I'm making more money from streams than I'm making my job now but thank you very much man how can this not be Elon Musk it has to be maybe Elon Musk is drunk right now thank you qaron guys did qaron follow me wait what was his name I don't know what his name was

(3:47:46) okay I'm GNA have to go to sleep here it's hope man it's late it's really late guys okay guys I'm going to show you my shirt just for qar since he donated so much money guys I do have a shirt on that is pretty funny at least I think it's funny it's probably not as funny as I think it is though somebody sent me this shirt and I I think my parents gave me this shirt last Christmas so just to be clear my official stance is that we're not looking we're looking at orbs that are produced by

(3:48:38) us and my offical IAL stance is that I'm not sure about non-human Intelligence on this planet although I if I had to guess I'd think that the non the ultraterrestrial hypothesis would be the most likely one okay how how do you guys like it there you guys go aliens don't believe in you is that what it says what does it say aliens don't believe in you either guys there you

(3:49:43) go yeah my parents gave me this shirt I think it was like a year ago or so this is this is woke woke alienism I thought you guys might appreciate that thought you guys might appreciate that shirt yeah yeah I don't even know I have no idea where they got this for me so

but I saw this shirt tonight I was like oh I have a feeling chat will like this shirt I I wasn't even planning on showing you guys but when somebody donates as much as qaron does and I guess you just have to rip it off huh uh look at what link let me look go up here

(3:50:26) look at what link did I already close it four or yeah I do need four orbs Ashton four orbs shirts we might need those my opinion is that there's definitely got to be some alien life out there somewhere I don't know if they're visiting us I would think more likely there would be like ult ultraterrestrials on the planet already like be that were before us if that's the case good night one foot n5d thanks for your donation earlier much appreciated huge thanks to qar on who pretty much completely paid for the stream

(3:51:14) tonight wow some of you guys are donating like crazy but yeah I mean I don't know maybe we do have to get some merch Ashton four orbs four orb shirts let's see when we talk to we're going to talk to Dave Rossy and and Salvador Pas on Sunday I want to see if everybody agrees with the four orbs hypothesis or because if that's really what this is all about four orbs then maybe maybe I we will do some four orb shirts snot thanks a lot man Bigfoot saw me but nobody believes him I have that shirt I like shirts that are very snarky

(3:51:57) right where they like tell a a snarky message I could definitely use an AI shirt as well if there are some let's see what we got whoa that's an airplane that's not AI see this is the kind of stuff I would wear but I'm a nerd like this yeah like this is my kind of stuff this is the shirt I would wear wait have you guys have you guys seen my MH370 shirt a shirt that says MH370 did not crash itself that's a good one guys 12,000 Subs wow that's wild man hey Paul you missed out we've been

(3:53:03) stripping we've been meing we've been booing we we figured out what the Drone is even though we kind of already knew I think we figured out the camera too I think we also figured out where the plane was coming from pretty wild man pretty wild I'm going to go to sleep in a minute but I'm going to show you guys the other shirt that I have as well most of you guys I think have seen the other shirt I used to post it but that was back when I had like 5,000 followers so maybe you guys haven't hold

(3:53:40) on I keep forgetting that like a lot of you guys haven't seen a lot of the videos and stuff either I used to post them every week and I haven't posted them in like a month holl at you how out your boy okay yeah I'm going to stream tomorrow yeah I have three of those shirts um yeah you can find that shirt on Etsy

(3:54:44) if you search Arana I'll show you guys it's not I don't own this shirt I'm not related to it I don't make any money off of it H how do I find this well we might have to dig around to find the link but it says Arcana on the shirt so yeah this is how I found it it was it was being promoted on **Reddit** that's how I found it it was like three months ago though if it's mq 1C it's Tech technically not the Pacific it's Indian Ocean it's coming from car nicobar or the Blair Port Blair so we got a very minor amount of

(3:55:49) work done today so you know that's cool that's cool everybody who sent me emails and I haven't responded you can blame chat for distracting me blame chat here for distracting me four orbs Forbes yeah I mean I don't like selling merch feels kind of awkward but bringing attention to MH370 is pretty spicy pretty good yeah hey Paul so everybody who just joined or joined halfway through highly recommend checking out the beginning of the stream it's pretty funny you'll know right away what I'm

(3:56:31) talking about the first five minutes oh hello Sean what are you bringing some spice I think ours is a das2 though I think ours is a das2 what was Jimmy saying well have a good night Jimmy if you're going to sleep I'm going to sleep in a minute as well I don't see your links though yeah blame the martinis guys two martinis is too many to me oh wait somebody messaged me on somebody messaged me on Instagram guys guys I don't even check Instagram hold on let's look at Instagram together let's reveal my let's reveal my

(3:57:28) messages guys I'm struggling right now hold on contact tour I only followed two people I think this is what this means hey look this Tim bersett what are these notifications oh boy gez but look at these random people following me this was a few hours ago holy crap how many followers do I have on Instagram guys I don't even check my Instagram oh boy 900 followers I have 900 followers on Instagram guys I don't even use Instagram Hey look it's me bench closed guys this bench was closed whatever whatever that

(3:58:23) means bench closed you guys would never guess where this is where this picture was taken never in a million years [Music] uh yeah it's freezing outside here too actually right now Instagram is pretty whack but I'm going to probably have to upload some more videos we do have a thousand followers in Instagram almost just not a big fan of Instagram 13 jeez why you guys what's L Lodge making you think bis someone will have to tell me tomorrow I'm pretty tired n it's not Singapore but good guess honestly really

(3:59:22) good guess but no I'll narrow it down that picture was taken in Europe yeah apparently we need to watch lur Lodge part two 50,000 views okay what kind of [REDACTED] they trying to say how long is this I mean it's an hour and

(4:00:29) 15 minutes I would not have planned to do part two completely Fallen apart more 70% of Muslim Malaysian women believe that men have a right to have have multiple wives though points in the actual year of the event this even appears to possibly okay first of all this is total nonsense okay anyone promoting this like I know lur Lodge for some reason thinks this is I can't believe lur Lodge thinks is legit but no offense to Aiden but the scale doesn't even match here man how could you think that this scale here on

(4:01:04) the right matches this satellite picture on the left we're not looking at an M here from Malaysian Airlines guys this is legit just nonsense total nonsense this is from Cindy I've talked to her she's out there man she's out there the plane didn't crash in the South China Sea the problem with Aiden is Aiden's like 20 years old and he was like a little kid when this stuff happened no offense to him but like he's getting the information from like what we have on the

internet now which is tainting the

(4:01:47) view radio frequency as we know another pilot did say he established contact with MH370 he does have that evidence correct first officer technology from reaching China or to dog that it was Blackstone Pro came Ashton stuff in October of 2023 which is actually what in the first place I also invited him onto the podcast to talk about it and he kindly accepted and that is the November 19th 20123 episode if he's got a cute dog though profile has been online since person on that flight as for the satellite so let's go

(4:02:25) to a spot that look kind of similar to the okay so first of all this is not how this works at all here BR this slider up so this is going to be important later uh this is how you control effects in editing software you can put in specific inputs of numbers so if I were to put in 14 is it 100 yeah 1400 instead of that I can but generally people are going to be using sliders like this you can make Minor Adjustments there anyway so that looks somewhat similar doesn't look anything like our video closer in but

(4:02:56) let's try so let's again that has been around since this also doesn't look anything like our video CH very much since then we're going to go into keying let's go this special effect was literally remastered in 2015 key that's what I remember doing back the color tolerance slightly so that way this is obviously not the same effect at all doesn't match at all one more step and then I'll then I'll discuss a little further so obviously this is the wrong color that doesn't

(4:03:23) match properly it's not just the wrong color but it's not the right shape we wanted that to let's take a look so I think doesn't even match on the border is color correction and then how are people like actually this delusional about this VFX nonsense you know what I don't feel like dealing with because if we do still not even close right still doesn't match along the edge still doesn't match in the middle at all that amount of time let's see what else he does part of it to Black so

(4:03:53) that's let's go looks like there's a little red in there so let's go like a dark red and here's so just real quick guys just here real quick guys not only does it not match but you don't have the luxury of comparing it like this this is not a situation where you have something you can do what he's doing right now the person that would have created this would have had to do it blind with nothing to compare it to they would have had to randomly convert it into this remember when I make the argument that

(4:04:25) it's like monkeys typing on a typewriter and pulling up Shakespeare that's the situation here and it still doesn't match what they've done is he's blacked it so you now just don't you can't tell that it doesn't the match but the effect that's behind the screen the only reason why it looks similar now is because he's overlaid it over the real one the r if you were to slide them apart now you'd realize that they don't look anything alike that's getting a little closer and

(4:04:52) then and what he's doing right now while he's trying to get it to match you would not have had the benefit to do this again it's an original work it's not something where you're

copying the Mona Lisa a little bit maybe like how do people not understand this oh y now we're getting a little closer so oh yeah okay let's see so that's a little lighter and okay always AAL wheels and patterns to show did here obviously I could really spend a lot more time and get a lot closer but the point I'm trying to make

(4:05:30) is that that asset's pretty easy to switch to this it's pretty easy to switch to this he didn't even get close that he didn't even get close and he just spent how long match is if you knew the exact inputs and the exact if you knew the exact inputs guys the point is we don't know the exact inputs the person that created this wasn't comparing it to anything they would have had to make it originally like these VFX arguments are so stupid it's just like can can people just think for themselves they both

(4:06:04) measuring infrared radiation so they are both cameras now I'm going to bring this back here from where I cut it previously yeah so here the big thing about this one on the left is that this is a cold signature that this is you know black is cold and you know obviously the plane being green yellow and then even near the engines red hot this is cold and the whole idea is that this is some form of endothermic event it's a cold event the plane is white in this one just like in some of the other elements that we saw

(4:06:38) prior just like these hot roofs just like this very hot you know exhaust stack that is white so is that flash and so are the clouds which would indicate that that's hot based on how IR technology works why on two thermal cameras we sto teaching critical think are we getting the opposite reading why are we getting the opposite reading because this is a false color IR from the cber system which does not depend on the thermal reading of it this is a IR camera that has a thermal layer over the top they're not

(4:07:18) comparable that's the reason is this one is measuring something different it's not measuring the thermal differences that this has to be explained to people over and over again kind of blows me away this is hot doesn't make sense because doesn't make sense guys well it kind of does make perfect sense they're not both thermal that's the simple answer answer this one's IR in a false color IR this one's in a thermal device register something as white hot like this and then have another thermal imaging device in the

(4:07:51) same vicinity registering it as and yeah let me know what your thoughts and give you updates and if you think we missed anything in this video or we got something wrong we are always corrected I like I said at basically every juncture if you have evidence to the contrary of what we currently believe our goal is not to tell you that you're wrong it is to provide the most complete story given the evidence available and so did I address all the points there for everybody so people it's going to look pretty awkward for some of these guys

(4:08:25) when these videos get authenticated because people literally can't tell real things from fake things they literally can't tell real things from fake F from fake things right that's the problem I think at this point which is fine I mean I don't really care what people want to believe it doesn't matter to me at all um but I do hope that when these videos are authenticated that

people realize how little they understand what's real and what's fake that that's really at the end of the day what I want so I'm going

(4:08:57) to go to sleep guys though it's been good um you know I think we've had some big podcasts today you know this is not going away anytime soon the only way to **debunk** these videos excuse me is to find the leaker or find the hoaxer we already found the leaker find the hoaxer find the source work right um we can tell that the VFX doesn't match that people think it doesn't look right isn't really a **debunk** you know that just means that we're just ignorant as to what we're looking at so find that

(4:09:28) hoaxer out there guys you have huge followers find the hoaxer bring the source files collect \$140,000 \$145,000 and uh yeah guys tomorrow night tomorrow I've got two podcasts I better get some sleep tomorrow's gonna be rough if I don't get some sleep um I'm gonna do the germ podcast tomorrow which I don't know if it's going to be live I don't think so though and then generation Zed generation Zed probably will be live with Dave Rossy I could talk to Dave Rossy about the paint drying that's how much I like this guy I

(4:10:07) could sit there and just talk to him about whatever so I'm probably going to go into the Dave Rossy generation Zed podcast just completely blind and I'll just talk to him about whatever he wants to talk about frankly it's going to be a good one I'll probably I might stream that even if he lets me I think he probably will and then tomorrow night we will do the uh all evidence review as well so we'll do all evidence review tomorrow night after the all evidence review I probably won't stream anymore

(4:10:35) after that because I need to uh get kind of caught up with s and Dave Rossy for Sunday which will be and then I'll probably stream Sunday morning to just prepare a little bit more for the Dave Rossy stuff and for uh s so thanks guys um thank you guys for watching make sure you guys check out both Infowars and the Kim Iverson podcast today make sure oh also just thanks a lot uh qar man qar non was huge today qar On's probably Elon Musk on his alt account but that's fine um and we support you Elon have a good night everybody

(4:11:19) peace

MH370x - All Evidence Preparation and New Posts 11/30/23 - YouTube

Transcript:

(00:03) okay now we're live let's do this we got a lot to do today I figured this was fake but it's pretty sweet cter Cruz going to have more stuff to **debunk** here give me a second I'm

overwhelmed with posts and stuff right now I can't keep up here it is who's this person Cristiano

(01:12) okay hey what's up Futures day trading journal we uh set the thing here okay how's it look here it's a little further out than I wanted but it's fine can actually see the microphone now okay praise be to TJ praise be guys praise be you guys think we'll be able to get away with not revealing personal information today probably not huh should we see who who's posted who's replied to us oh I'm a moderator of Discord that or subreddit that I don't really monitor okay let's see what we got

(02:18) here here it is this is the one I gotta listen to some music today guys um should we listen to music on the stream or should I just put my headphones in may just put my headphones in hey SMY fire what's up leak DM's coming uh I don't know I don't think the pilot was a co-pilot was a plant I don't think there's really any evidence for it I am starting to wonder about some of this other cargo though I'm gonna be interviewing with Alex Jones tomorrow guys Alex Jones which we have to

(03:29) address we'll do that a little bit later when there's more people yeah we don't want any more strikes we're not going to be able to show any more TV show stuff on on stream anymore that's okay although maybe we break that rule we'll wait till we have a few more people on we got something good for you guys tonight might upset some of our UFO Community people for

(05:28) for I should I'm gonna unblock this guy I decide I don't think it's a spook anymore a to audit what's up man awesome thanks a lot AIT I appreciate it man we're building a force here man force of people that are from all over the can't be stopped that's one of the things I'm going to

(06:33) address here a little bit later um I believe it's 100 p.m. central Time 2: p.m. Eastern I went to Outback Steakhouse tonight I had I had a the biggest steak to have on the menu I think I earned it then I got stuck on the the train train was blocking my way back home uh what was the story I was going to tell you guys gotta look at my Discord I was taking notes let me check we took care of the community notes thing we're going to have to play this uh Counter Intelligence game with our cards face up

(07:39) guys we know what the next play is going to be now right no none of those guys ever say sorry redditors never apologize I've never been apologized to by a redditor in my whole life um you got to learn how to deal with trolls you know the next play though is that they're going to try to label me all right right that's going to be their next play because of the people that we've been going on and because of going on Alex Jones they'll most likely attack me from that angle so I'll have to be ready for

(08:11) that I've already got some thoughts on it okay this is the Ric camera tracking thing I wanted I don't even know what continuous continuous Zoom IR really means is that when we're zooming in I think that's what Punjabi Batman posted should I reveal my Reddit DMS should I prove to people that I'm not Punjabi Batman by showing my direct messages with him people

probably like he just messaging yourself on two different accounts how do I go back to the **debunker** sub here oh this one's pretty cool

(09:15) too uh I'm not really convinced on this trying to match it situation here yeah maybe it's like there it's just like it could be any orientation man yeah I don't know about this this this scale is not right yeah it's not what software do they use to match the clouds yeah people are starting to fight back man the **debunker** sub **reddits** on uh suicide watch right now given your combos with s and the Thor project guy I don't I don't know who the Thor project gu is that oh Thor project is uh Bob Bob Greener yeah I

(10:20) would think the Deep Mind thing would be the relevant to the conversation what's deep mind I don't know what Deep Mind is oh I'm not sharing screen sorry guys I'm an idiot my bad guys my bad guys you got me you got me you got me at least I wasn't sharing my DMs yeah audit AUD feel free to cover it you know if you want to DM me or get information on it let me know otherwise I mean all my information's out there all the evidence and what have you um usually people don't get everything right uh when I watch Like

(11:12) read the news articles that people have written or the the pieces they do but they get most of it correct how do we know that you're not a bot good question good question I also changed the chat to 20 minute subscribers only so we should have less trolls now way less trolls I think I'm not trying to hate on anybody but it's really funny how people think that like just the the portal effect is fake like there's people that believe the conspiracy angle but they just can't believe that we can have this kind of

(11:54) Technology but like what's their what's their rationale we use some secret Tech to bring it down cool where's where's the where's the debris man where are the bodies where's the luggage we just somehow clean that all up over like a 20 square mile radius in the in the ocean in one day like how do we pull that off wait why did I downb this Jay Brown I love you buddy I know you're out there yeah people really just have to come to grips with the fact that the videos are real they're like really

(12:43) struggling with it it's pretty wild man yeah level 39 I already I don't have to click on this I already know uh no we don't need to get in touch with the vi the Marvel guy I mean I um damn I'm already forgetting his name the total disclosure pod uh he he's like friends with him I love how people like they think we made that up or something like people who want me to talk to VFX people that cracks me up like no I'm just talking to literal scientists like we're we're past the VFX

(13:24) angle we're talking to the scientists who can explain the science funny man like blows in mind people think that like all the rest of the footage is real but somehow they they fake the portal like and the orbs like walk me through that reasoning who did that the government for what what purpose nah these orbs are never going to be in my room I'm not worried about orbs or aliens um what's the one I want this one yeah look at this one

(14:36) I need to save this how do I save this oh there you go sweet okay let's save this video downloads let's call this uh drone camera strip camera perfect I don't know why some videos it just lets me download them dark journalist I mean somebody pings dark journalist on every single one of my things man every single one yeah I think Joe Rogan's afraid to cover this issue 100% also I think I'm probably kind of further down the list what I'll tell you guys is that I talked to Kim Iverson and Kim Iverson told me that I

(15:27) was already like on the top of her list of people to talk to before we even pinged her so people people know about me 100% guys so I mean you think like their producers are like who are the people out there that you'd want to talk to so we're on Joe Rogan's list we're on like Shan Ryan's list for sure right um it's just a matter of how up high on the list we are and if like there's red flags in terms of why they wouldn't talk to us from what I've heard about Joe Rogan is like Joe Rogan is he's the biggest

(15:57) podcaster there is he spends a ton of money money to keep his family safe right and he's probably a little bit afraid of the government as well like the Spooks the Spooks out there are definitely definitely going to uh like try to tell somebody like that not to talk to to talk to me right oh a a that's sweet man I'm on your you're on my list too a to audit I don't know how to where the I don't know how to do Emojis oh there we go I want to I want to type something in the chat D how do I make the Emojis go away guys

(16:48) I'm so bad with social media and all this stuff I literally have no idea um I don't know I kind of have a man crush on Lex Freedman right now I I think I might have to DM Lex Freedman he's actually the person I want to talk to more than anybody at the moment once I saw him playing Diablo before his interview I was like okay I I gotta talk to this guy I gotta talk to him I gotta talk to Lex Freedman that's who I want to talk to more than anyway I just want to sit down and just talk with Lex Friedman I don't want to talk about

(17:20) MH370 I want to be like when I talk to Lex Freedman I just want to talk about like the implications of the technology for like an hour straight although yeah I'll be honest I uh Salvador Pas and Dave Rossy are like my favorite place yeah Diablo 2 remastered is probably better than Diablo 4 frankly I miss Diablo 2 man that was the old days that that was my jam back in the days oh wait really guy who created Quake okay that's interesting no I I could totally see Lex and I just being like gamer buddies 100%

(18:05) 100% I used to play Diablo I think the people that watched my first streams they probably caught that I had like Diablo on my on my like one of my bars or whatever here but I quit after like I did the beta and then I played for a few weeks and then I then I quit Diablo but I had like a level 100 Sorcerer And I was I don't know almost level 100 uh Rogue or something I think yeah I think we might send a Little Love Letter to Lex I'm just I'm feeling it you guys want to send a love letter to Lex let me finish this part first I want

(18:44) to get this ready here so we got this recorded change shape oh the clouds change shape wow yeah yeah good call okay I'm not going to try to focus on this thing back here I think

Punjabi Batman's trying to think there's like a mountain or something back here but I don't think so you do get a better sense of the trajectory from this video this is a good video man Punjabi Batman's good with video editing man we better credit to him as well both these people people are going to St stealing people's

(19:35) work although I guarantee you Punjabi Batman does not care Punjabi Batman's been in my DMs for months what was that other guy I don't want to steal the other guy's work either where is it oh this one's pretty good too the the density change and the contra I don't know if we can do all these though there's actually been good stuff analysis on this on the **debunker** sub~~reddit~~ recently so actually been some good stuff recently in the last couple days like we've blown up to the point where like the **debunkers** are just

(20:20) outnumbered on their own form on their own sub~~reddit~~ now and uh wait he just made this one Punjabi Batman's just coming in so hard right now he's coming in so hard right now what's this one yeah let's copy this image too we need this this **debunk** man people are really stuck on this VFX **debunk** that doesn't match the I looked at the corridor crew on today the corridor crew totally falsified it image and just dishonestly pretended like they they took two of the same image and then they uh overlaid it

(21:05) and they said oh look it's exactly the same like I actually watched it today on kib Iverson's podcast the corridor crew guys could not be any more dishonest man they really couldn't this is an actual overlay when the corridor crew does it they take two of the same image and they CL they go oh it's perfect well yeah because it's literally the same image twice ridiculous man so crazy how dishonest that there like I am pretty sure those guys took a paycheck to uh post that fake video of the fake **debunk** with their uh

(21:38) Jordy lege glasses look this is down voted to zero on here even the **debunker** sub~~reddit~~ wrecked these Corridor Digital guys they've lost all credibility forever I like this one too the ink blot effect man people forgot is this the link to the ink it is I think portal is an ink plot see this people don't remember this in the early days the first **debunk** was they were trying to claim that it's a perfect match to an ink blot and then they immediately switched to the VFX look how many up votes this had I'm a VFX guy more in

(22:18) description they literally just kept making up fake to yeah see we're and then even right away people were always going we're just comparing two examples of dispersion and then people still fell for the fake **debunk** of the VFX even after that um I don't have a website people have offered to make a website for me I just I don't have any time man I have no time at all Lex if you're listening Paul C says you're a shill if you don't have me on uh thoughts on Steven Greer I'm not judging anybody guys I'm going on Alex

(22:54) Jones tomorrow so we're not prejudging anybody I think that a lot lot of what Dr Greer says is consistent with what we've been putting forth and even today on Kim Iverson which will come out tomorrow um a lot of what what just happened oh okay it's ads apparently an ad's going to drop I I don't know I just got a notification uh but a lot of what Greer has said has been

similar to what we've said in terms of like 70 or 80% of these orbs are like ours they're our orbs that are out there I think that's what a

(23:31) lot people have to like wrap their heads around a lot of these orbs out there are probably ours I think we're gonna have a great talk with Alex Jones tomorrow guys I think it's going to be good I'll address the The Alex Jones situation here in a minute H maybe this is the CIA angle I think we're going to think we're going to shoot a shot to the CIA okay we got our continuous drone oh where's the continuous drone thing how come I can't find the continuous drone thing now dude look at Punjabi Batman just

(24:36) going wild dude on the subreddit my dude's just going wild orbs rotate the wrong way the debunk's are just getting worse and worse man how can there be a wrong way for the orbs to rotate okay where the heck is it boy these videos of 145,000 really piss people off huh the bunkers are just super mad super mad how many VFX experts are there all of a sudden on Reddit oh the whole smoke doesn't show up in the fire I think we can just prove that lithium ion battery fire actually will there that smoke will show up um hey Victor welcome dude

(25:44) welcome yeah if we get uh infow Wars tomorrow should be 2 p.m Eastern uh I've got people back dooring a connection of Dr Greer potentially I mean nothing's been confirmed but look at this imagine if we did a space with Dr Greer how crazy would a space with Steven Greer be how many people you think would be in that space thousand 2,000 it would be huge man it would break the internet it would break the UFO community in half dude it would actually break the UFO Community half if we did a space with with uh Dr

(26:20) Greer oh here it is here's the guy hey Misty Moon what's up yeah doing a space with Greer would be huge man yeah he might be grumpy I think it'd be fine though then they find the plane 30 seconds later uh that was funny cuz I think uh Kim Iverson she wasn't very familiar and at the end she wasn't necessarily a Believer but she's like yo you know what's going to happen is they're going to find a plane I'm like yeah good luck I don't think so I don't think so yeah deger is super

(27:11) jacked dude so is that Blaze faas guy or that FaZe Blaze faas Blaze I don't know man maybe I shouldn't have been making fun of him I told him to go back to video games they were asking me really dumb questions though like she had me debunk the entire Corridor crew video today like they went through everything like why is it different color in one of them than the other one it's like well it's an endothermic event like I don't know it's just boring yeah what if the feds pull the plane out out of uh they pull the plane

(27:52) out out of Diego Garcia and then they crash it into the water yeah them randomly finding the plane right now would be like that would be the ultimate that's probably the next play though right is they go put the plane in the ocean somewhere I feel like they would have had to disassemble it though I don't think you just leave the plane sitting around too risky man you'd have to disassemble it hey man Amanda what's up Amanda do you go by Mandy okay let's let's write our love letter dear Lex

(29:24) I'm just kidding guys [Music] they really did just take a flap around and they were like here's a fla on guys [Laughter] um I I couldn't message Richard Dolan you guys you guys are cracking me up man

(30:35) [Laughter] if he's watching this he'll definitely let us on the show after this somebody should clip this and send it to him man um okay okay um no let's see uh chat's just killing me right now man huge fla run um for

(32:26) for for okay let's not make it too sick dude you're sick it's not what's up oh hey Robert what's up man yeah yeah I'm a

(33:30) goober guys I am I am what I look like man I am how I sound I am how I act if there's one thing that's true about me is that I am just as honest as can be and straightforward as can be I'm a nerd you know I'm a normal guy uh I don't really pick sides uh I think that's what makes it hard for people to discredit and attack me although they try they do try which message should I send the first one yeah thanks depleted uranium Cowboy I know you're uh you know you're also a rational logical person and following

(34:11) along on the case so I appreciate it man yeah I'm definitely not a social media guy man boy before this case I spent like no time on social media couldn't stand it getting away from social media was like the best thing [Music] ever Forbes orbs man forbs orbs let's do a poll guys let's do a poll wait how do I can I change the answers from yes and no oh I can okay vote in the poll guys thanks

(35:29) again for those donations man I appreciate it dude which message should we send Lex guys the love letter or the boring letter hey Banner what's up oh man I don't know oh boy if we go with democracy it's it's going to get awkward in here it's going to get awkward in here read it out loud on Alex Jones's

(36:41) show read it out loud yeah less is more less is more definitely I don't even know if I need this last line for

(38:08) chat 40 votes 75% s send the Love Letter oh boy my chat man you guys are the master trolls you guys are the master trolls not going to lie oh Jeremy sent us a message okay I've got so many messages it's hard to even find this stuff I got to add one more wine should I still send the Love Letter

(39:22) anyway okay I sent it to him oh love letter one oh boy look at all those votes wow thanks snot appreciate it man dear Lux how are you I'm fine just got here but I like to do a mixture of the two I might send them to this one as well this one's little this was too funny man you guys cracked me up man form a romantic logical problem postscript full s Shad has spoken you guys are cracked me up

(40:30) just in case we decide I'm going to screenshot it too funny check out my monopoly oh yes I love the uh uh God what is it um I'm too tired I can't even think I can't even think straight

right now didn't too many podcasts today double on tandas that's what I'm looking for the double on tandas okay you guys ready for the Spice for tonight we're going to break out the spice already hold on oh yeah we let's do this too wait

(41:53) what okay we got another thing here check this out somebody in our comments look at this something to add to add that gives more the video more credibility if you go to the original download clip and for the last minute the clip goes black but if you pump the contrast and brightness the three black bars are still visible that means there's no information in three black vertical strips this makes it consistent with somebody with recording a screen nobody created a fake clip that's going to add invisible dat that nobody can

(42:29) see wow wow dark Ambiance man wow that's pretty wild man I sent him another additional message okay this is what else I sent him yeah

(43:33) I'll show you chat don't worry I'll show you chat it's related to this right here oh you can put little wait you can put Emojis and text things okay why am I craving a donut uh maybe this is why you're craving a donut donut [Music] donut I'm surprised the coral crew didn't K with the donut you post the proof of the videos that were discussed eight years ago um I haven't posted any of this stuff really but I have that somewhere I don't know where I put it though Where'd I put

(44:31) that oh man we got a lot of stuff man oh boy we also have phone calls from NC boy we got actually a lot of posts man we got a lot of posts I I don't know we'll probably only do like one tonight and then I'll save some of the other posts for tomorrow here's the proof that that the videos were 8 years old captured by two different cameras supposedly chain of custody or didn't happen classic [Reddit](#) dude here's the source right here too doesn't exist though

(45:58) it's gone yeah I'm going on Alex Jones tomorrow guys we're not messing around boys so okay here's what happened today guys catch everybody up real quick I went on Infowars the war room with uh Harrison Smith and in the middle of it I was rocking it so hard Alex Jones shows up in the middle of the show and photobombs or whatever Harrison Smith and so while I'm on the commercial break the producer jumps on he's like Alex Jones wants you to come on the show tomorrow and I'm like okay well I mean how am I

(46:39) going to turn that down man I'm in the middle of the show and Alex Jones is asking me to come on because because he's been watching hey Sean Price thanks a lot man appreciate that really appreciate that so I mean how can I say no no it's funny because literally right before I went on the show uh I was in my Discord and I'm like the three people that people would probably have the biggest problem with me going on would be Alex Jones Russell Brand and Andrew Tate those would probably be the three ones that I would

(47:16) be people out are the biggest issue with and you know like yeah whatever you think of him like his audience is huge he's into conspiracies you know like a lot of my followers going to be totally fine with it the only concern right is that people are going to try to discredit me by

association right just like what new world order just put in so the way we have to play around this is we have to play with our cards on the table flipped face up so I'm going to have to make a disclaimer probably I might even post a

(47:53) disclaimer tomorrow morning or tonight just to reiterate my stance and it won't be to try to discredit him yeah they're going to try to discredit me exactly whoever I talk to it doesn't matter Matt Matt's got it figured out thanks again for that donation appreciate that Sean is that my dog okay yeah so no matter who I talk to they're going to try to discredit me it doesn't matter right and they're not going to let me talk to people that they control Etc so um yeah we're just going to talk

(48:25) with any anybody who listens right that's exactly it you got it that's that's the play we just say like this is this is our move let me let me check I was taking notes earlier um I don't want this a little too corny delete that this streamers fake account okay so what we do is this right um again cards on the table I don't even care if they're listening to my my play here Rex wants me to give a sh give him a

(49:30) shout out on on Alex Jones I don't know if I can shout out everybody man we got a lot of a lot of people to shout out right um I'm just going to say like they want to divide us we are trying for Unity we want to talk to anybody who will listen with an open mind that I'm just a guy who values the **truth** and equal justice we believe in logic and reason and the only side that I'm on is the side of **Truth** pretty easy right pretty easy that's fine I think Alex Jones is going to love it I think he's going to

(50:09) love it frankly yeah I'm probably going to shout out u7x as a whole so uh okay let's make some notes we also I want to shout out some other people as well that we can potentially talk to as as well right if I can work them in into the conversation it's better but if I can't we need to get Tucker Carlson shout out somehow we need to shout out **Rogan** of course uh I'm going to shout out Lex because I want to talk to Lex who else are we going to shout out I need to get Don Lemon on hard TRS

(51:14) Don Lemon if you're out there watching yo let's vindicate Don Lemon damn that would be a good way to balance out Alex Jones right what if we vindicate Don Lemon we have him come and just have him talk about why he's why he's talking about black holes on CNN that'd be awesome I'd love to vindicate Don Lemon in retrospect IID just apologize to him right away and be like man we were wrong about you Don Lemon we were wrong do the full spectrum no no no Neil deGrasse Tyson yikes yikes might as well get Bill n the

(51:56) Science Guy Patrick P David I can't drop the T man if I say the names of anybody political that that'll definitely get labeled Patrick Bet David I don't know who that is yeah I'm thinking Joe **Rogan** might not even be the right move you might have the same approach as as Danny Jones think it's impossible but I don't know i' Joe **Rogan** has like had normal conversations with a lot of people so I don't think he would man I don't know the old senator from Minnesota you mean Jesse The Body

(52:48) Ventura Sean Price 2 plus 2al 4 science exists Don Lemon on the Pod would be wild yeah it would thanks for the donation man if anyone's got a connection to Don Lemon uh make it happen if you're out there you have a connection to Don Lemon tell them we want them on elon's too high profile for us man way too high profile do you have to smoke up a joint to go on with Joe Rogan I've got a security clearance so I don't think I can do that maybe if we do it in the background and we don't let anybody know about

(53:22) it right oh snot dude snot Alex and Rogan are good friends Alex Jones's is he yeah CH Kurt jangle I think is definitely having I my analysis of Kurt jangle is that he needs a few more years before he can uh accept this kind of thing I think he's a very very very smart guy I think he's an extremely smart guy but I think that he is in the old academic mindset still and that was just my interaction from watching his interview with Salvatore Pas is that he's going through it in his mind and he's going

(54:11) huh maybe um okay well then we're definitely shouting out Joe Rogan for sure I don't think we need to shout out Russell Brand I think he will find his way to us I think we will shout out that might be enough uh kim.com of course kim.com earn some uh free advertising so did investigate Earth you guys want to hear some craziness I don't think they'll mind if I say this but I've been talking to um TJ shout out TJ guys should we shout out TJ from Skinwalker Ranch yeah I mean you guys got to get me

(55:10) in touch with Richard Dolan I can't message him I can't message him uh if you guys were watching the stream yesterday you probably already have a good idea of what's coming up soon that's what I'll say in terms of like what you've been asking me in the chat so investigate Earth um the three-part series on investigate Earth apparently each episode has been having more than a million downloads million speaking of which Jeremy ree wants me to name drop

(56:23) him as well man everybody wants me name Dro to Alex Jones um okay we'll put a maybe list of name drops I don't know how many like it's a little awkward you name drop too many people you know uh can I direct message Kurt jangle I mean I've been following him I definitely want to talk to Kurt J mangle people have recommended me to him several times and that's the reason why he's not following oh I can message him okay guys

(57:52) uh people are asking me to name drop them that's why Love Letter to kurk guys love letter to Kurt Sean price thank you very much our Lord and savior TJ let's let's take a moment of silence praying for TJ praying that the dog the the smoking dog man is finally found on Skinwalker Ranch praying for TJ oh that's a good idea putting together science panel my gatar is going haywire right now Coast to Coast already came out it was live I think you have to have a subscription for it though but it was really good it was really

(58:41) good oh that reminds me so do do we have enough people watching oh yeah we do okay um okay we're going to throw some shade at Jame James Fox here guys I figured out how uh how James Fox's career is being threatened can you believe it we did some investigative research and we were able to figure out how James Fox's career was being threatened

incredible absolutely incredible oh wait hold on oh boy I'm going to show my DMs guys here it is who's that is that James Fox guys hold on yes this is really James Fox

(59:46) everybody this is really James Fox I gotta listen is is this James Fox everybody oh get the out of here that didn't just happen James come in James James James you copy what's going on James Ali looking through the goddamn window there's an alien Looking In The Window Guys yikes right now there just was I unlike many people don't think this video is a mask a mask can't have blinking eyes and reflection in them it just can't oh I'm going to get copyrighted aren't I one more time though it's worth it it's worth

(1:00:47) it guys James Fox James Fox Says our videos look like a \$3 bill get this guy right here out of here here a guy that thought he saw an alien in the window that didn't just happen James come in James yes this is real everybody yeah actually I think that might just be a VFX guys it's visual effects guys right now there just was there's an alien guys there's alien in The Window Guys right now like many people don't think this video is a mask a mask can't have blinking eyes and reflection in them it just can't this

(1:01:29) that woman has the best straight face I've ever seen she this woman should play poker this woman should play poker have blinking eyes and reflection how does she not burst out laughing how does she not laugh Colorado with a lot of unanswered questions I'm leaving Colorado with a lot of unanswered questions like was that a real alien in The Window Guys yeah how can we Poss possibly compete with uh James Fox on a TV show thinking he SE an alien in the window amazing amazing 13year old just in case you guys

(1:02:08) Wonder yes that's a real show that has a real video I had to ask cuz I couldn't believe it myself couldn't believe it myself actually couldn't believe it myself um I thought what is this deep faked I'm like is this def fected cuz my goodness oh I I got to write down what the show is hold on I I have it don't worry guys I have it I have it yeah that's just a mic drop moment right there um anyway we figured out how James Fox's career is being threatened somebody probably blackmailing him threatening to

(1:02:44) put that that clip on on the show uh where is it oh boy man you guys had too many chats in our general today too many chats see oh here it is not faked it's from a show called Chasing UFOs they played a prank on James by the team so w yikes buddy yikes if I'm on some random show and all of a sudden I see an alien head in the window I guarantee I'm not going to go g guys I just saw an alien called Chasing UFOs is the name of this show wow wow yeah cordor crew can't **debunk** that one

(1:03:48) man challenge the quarter crew **debunk** the video **debunk** that video from James Fox maybe that's we've done a few too many memes though I'm getting a little worried we've done more memes than we've done science recently okay let's let's post something what should we uh go with oh I've got a yeah fooled by a produced alien mask but can't discern the validity of the videos very very wow that's like equivalent of TJ telling us we don't have any evidence yeah that's like we need to

(1:04:41) tell that's like TJ telling us uh you guys don't have any evidence and then showing the the dino man or whatever from Skinwalker Ranch o man these UFO communities I just they're too out there for me man it's too much for me uh okay Rex leak Jeremy ree what Rose say new thinking allow with Jeremy much love I'll be honest with you guys I have uh you're so arrogant dude he's so arrogant I want to I might just like make a clip of Julian saying that for my stream just the stream of just going you're so

(1:05:43) arrogant he's so arrogant guys honestly we need another UFO uh another UFO space like it's better than like real housewives it's my guilty pleasure I'm not going to lie to you guys just listening to people rage about me having them swear at me sometimes they'll just swear at me they'll be like f you Ashton I hate you I'm like okay Whoa man that's that's not a that's a proportionate response Timothy alberino I I don't know who all these people are he chose violence you chose violence when you start

(1:06:27) quoting Game of Thrones man you chose violence in the space man I actually woke up just laughing my butt off just laughing my butt off man just laughing my butt off no if I was humble we would never be at the place where we're at right now I know you're joking Amanda but that's the reality is like you have to realize when people are humble and they try to accommodate everybody you can't get anything done that's what leads people to this idea of nothing can be proven true there's a lot

(1:06:59) of people out there that have the redditor brain that think like nothing can be proven true I just have to straddle both sides all the time the reality is like you have to pick your lane man and you got to stick with it and everybody's against you and you just got to go with it you know nerd report hold the door Hodor Hodor that's what I should have said I should have just started saying Hodor Hodor but yeah I'm sure there's a lot of good people out there what I would say is that I've got so many pod cast requests

(1:07:31) that I can't even accommodate them all I'm booking until like the second month or the second week of uh December and I'm doing more than one every single day every single day like it's a lot at some point I got to chill out with so many so many appearances I want to help out everybody and do every Everything uh but it's just it's a lot of appearances and I'm thinking that when we get on Alex Jones things are going to really escalate probably and I'm actually happy if like people want to

(1:08:03) book me out um okay fine we'll look him up guys jeez every like 10 people ask for Timothy alberino wait what this guy looks familiar why does this guy look so familiar should we check him out on Insta oh yeah wait wait a minute is this the guy that went to Peru wait why does this guy look so familiar is this guy an actor this guy looks like I've seen him on TV yeah we need to chat Timothy arino how do I get in touch with this guy dude he better be on Twitter man why are these people not on Twitter I don't

(1:08:52) have the social medias man oh okay he's on he's on Twitter dude I have more followers than some of these people blows me away dude he's got pictures of him just looking

badass like over like Peru dude I want a picture like this yeah I want a picture like this holy crap this is awesome D Peru yo are you guys ready for me to be on Gaia oh dude did you just drop a Kobe Bryant quote on me oo no you didn't oo oh we just dropped Kobe quotes the biggest mistake we have in life is thinking we have time o deep

(1:09:51) dude Kobe's my hero man rest in peace Kobe no not even a joke Kobe would just he would just grind hard dude dude I need a picture like this though for real no I'm definitely uh I'm definitely going to die young 100% man the CIA is going to take me out the moment that this topic goes away and falls into the radar they're definitely going to take me out I'm like too much of a risk that's part of the reason why I'm trying not to let this die out Sean right Sean Price thanks again man wow you're you're

(1:10:31) donating a lot here appreciate that you're right there's been a lack of Science and increase of memes it's hard it's hard to take people seriously when they don't agree that gravity exists 2 plus 2 equals 4 and well we argue it again I guess somebody needs to ping me into this guy's messages when you guys see him make a post it's not a retweet somebody pinged me into it these guys have been asking for for an interview for a while does he actually post anything oh he was on Coast to Coast as

(1:11:11) well wait he was on the coast to coast the same night I was on it wait he was on the coast to coast the same night I was but he was on with George knap dude how awkward is it that George knap and uh Jeremy Corbell have been ignoring this both of them have been ignoring this that's really awkward and I was on Coast to Coast the same night imagine if George nap you know why George knp wasn't the the host right if George nap was the host the whole time I'd be like hey George why have you not been reporting on this man why is why

(1:11:44) has Jeremy been quiet about this the Eyes Only See with the mind is prepared to comprehend should we uh ping this guy oh who he repost Dom stuff oh because Dom was posting his stuff why do I think they're ignoring me yes I is a great question man I think they're told to ignore me that's the only thing that makes sense man you could argue that Corbell wants to credit himself you definitely could argue that that's the is Jeremy's tight with Joe Rogan I think that Jeremy and NP probably think it's VFX just like James

(1:12:33) Fox that would be my guess is that they've been bought in to the VFX nonsense I know for a fact that Ross kohart is as well or or I mean they're pretending one or the other I don't know but I've literally seen the emails of Ross whole heart telling people he thinks the VFX is a perfect match which is just frankly embarrassing I couldn't tell if he was a spook or if he's just really that delusional you got to realize a lot of these people are controlled by the government more than you would expect

(1:13:11) guys if there's one thing I've learned and this isn't even a joke is that many of these influencers are literally controlled by the government literally controlled paid for bought and paid for and the other part of them are just useful idiots they don't even realize they're being they're being manipulated right and then it all comes down to money right um yeah I've already

messaged Ryan Graves a couple times not sure definitely should try to get on to that Harry sis is totally legit guys I actually know who

(1:14:05) that is so that's a bad sign for anybody yeah I would say yeah the old school ufologist like there's a new guard man there's a new guard that's going to take over from the old guard and it's already happening like you guys might be some of the ones that take over like if you're in UFO Aly and you're following MH 370x like you're part of the new guard yeah I don't even want to be like even that associated with the UFO Community honestly but I don't mind talking to them and the people that are

(1:14:44) open-minded does he have a podcast does this guy even have a podcast does this guy even have a podcast does Timothy have a podcast guys yeah the new guard is going to rise up guys that's just the reality of it I'm just I I tell the **truth** no matter what guys that's part of the reason why people are afraid to talk to me probably is that I'm not somebody who can make up a bunch of BS um I could probably talk to Hal off yeah maybe I have a connection to him maybe oh he has a YouTube channel okay

(1:16:20) I mean I think everybody should vet me but man don't they just have to like watch all they have to do is watch my uh no I no I was on with jackv was a Jackie um that I'm with but uh all they have to do is watch my like 40 interviews right to know who I am do they really need to vet me any more than that I haven't spoken to OMG the Y files but I love OMG the Y files I wish they follow me back man AJ follow me back man why won't they follow me back why oh wait what the hell AJ why won follow me back

(1:17:30) bro why won't you follow me Notice Me Senpai man I just want to be followed by AJ that feels like it' be awesome oh really they did a new episode yeah um I think I what the hell I think I've like tweeted Adam before somebody sent me um yeah I mean MJ is the goat of course but you know Kobe was the goat of the newer generation after after uh after MJ uh somebody actually I think it was his wife or somebody on his team that they asked about MH370 I think they said they were looking into it so but I don't

(1:18:28) think they can do it on I don't think they can do it on the main show it's too much for YouTube Oh Jeremy doesn't like Jesse Michaels well that's good then that probably means we have some in with Jesse Michaels I've spoken with Jesse Michaels before I already mentioned that I'm telling you guys you wouldn't even believe the contacts I have guys you wouldn't believe it that's why I don't bother saying it LeBron exists yeah LeBron is not Kobe guys let's just be real he's not

(1:19:09) Kobe yeah Jesse is pretty cool Jesse surprised me is what I'll say that's what I'll say about Jesse he surprised me I thought he might be a little bit more hesitant okay uh I didn't I didn't message Kurt yet that

(1:20:52) for for that sounds pretty good right should we send the Love Letter to Kurt I sent it to

(1:22:12) him we sent it what if I accidentally what if I accidentally copi and pasted this what if I accidentally copy and pasted this to Kurt o I probably never get to talk to him ever again I'd probably FBI would probably come and uh arrest me okay let's make sure I close my Twitter so that we don't have messages show up uh strange orbs abducting plane airliner abduction anything else in airliner abduction we need we should probably make a

(1:23:19) post hey take it easy William thanks for all your support man thanks for emails as well tell Kurt about my wet dreams oh another big Dono man you guys are going wild these donos Izzy 2018 thank you for that donation not sure if you've covered this yet but has there been any data analysis on the Family's call text and call attempts as far as I know there isn't any out there which is pretty weird pretty weird somebody sent me an email that I was reading and uh man I think I had a dream I'm trying to remember it but I can't um and

(1:23:55) in the email they were thinking that maybe that they weren't able to react by the time the plane got to panang so maybe panang by the time it got to panang they still hadn't they hadn't responded yet and that's why they didn't land in panang but still just doesn't make any sense you just turn around and you just land in panang so I don't know it's weird it but that idea too was that maybe the plane had been hijacked by like intelligence operatives and they were keeping the passengers

(1:24:28) under control but I'm pretty sure you get over 10,000 ft you're not going to have cell phone service anymore but yeah so hopefully that answers your question uh for Izzy there were supposedly some ghost calls uh but we're not going to look into that tonight let's pull our social media over here yeah this this was a good interview this war room interview I also have to prepare for do we have an opinion on the Peru stuff good question yeah I probably have to prepare for my normal job as well gez man it's

(1:25:16) hard to go back to my normal job man hey do Malo what's up buddy K I'm not going to repeat that message K Nacho Man Randy sandwich that's that's a good name JM L thank you for the donation jml thought experiment with NSA CIA Tech spoof spook power why didn't they make a hard move to scrub the leak videos the answer to that's actually pretty straightforward so why did they not delete the videos guys the answer is the strien effect the moment they start trying to delete the videos then everybody's going to realize

(1:26:06) they're real and I'm not sure they can delete stuff off the the Wayback machine so once the stuff's out there it's out there and most likely the moment it's out there **China** and **Russia** figured it out and once **China** and **Russia** have figured it out there what the point of deleting it right so probably a combination of factors but I have thought about that yep good question honestly good question um what is my opinion on the Peru stuff you

(1:27:25) so yeah I'd like to hear what he has to say officially yeah supposedly panang is the closest airport the longest runway capable of taking a 777 in emergency situation so that's the reason why you go there thanks Izzy appreciate you man I mean the point of scrubbing them would be that you need to make nobody else look at them right but they probably got

overconfident as well when nobody believed that they were real and they just thought that they nobody would believe it they never thought a guy named Ash and Forbes would come along

(1:28:01) nine years later and rally a monstrous Army of followers and Believers and people that follow the evidence like I honestly believe that we're like five steps ahead of the intelligence Community right now that like they're sitting there trying to figure out how to discredit me and I'm sitting here going on Alex Jones tomorrow you got to realize government is dumb right they're dumb collectively they're stupid and they're slow that's the thing about government everything is so has so much red tape that it just

(1:28:34) doesn't happen quickly like everything gets delayed everything gets held up in order to cut through that red tape you have to you need Freedom you need uh you need to be able to act independently and that's not something the government has the other thing about government is that they plays are just I don't think they've ever run into somebody and again I'm just playing with my cards on the tables face up against these guys right now like I'm just telling them literally all my plays and what I'm going to do

(1:29:04) cuz I just that's how far behind I think that the disinformation campaign is against us um and I I think that we can anticipate all their moves as well pretty well um what was I going to say the yeah the thing is that I don't think they've ever run into a situation like this before they're so used to being able to discredit people using their tactics that they've never run into a situation where somebody knew how to use social media in a way that makes their tactics obsolete right like if you look at their

(1:29:39) tactics what what do you see the most right you see people trying to uh put a stigma on me people trying to set the narrative about me people trying to say that I'm a mean guy or uh that like I'm rude for blocking them you see that a lot right they try to play the oh he blocked me card right and it just doesn't stick because I've already said like that's why I made my statements about like I'm going to block anybody who's rude or condescending that we're setting an setting a community that's just

(1:30:13) better than that right um and then their next play will be to try to label me as alt-right you know definitely that's going to be their next play 100% and they've already trying to label me as like that whole Corridor crew calling me UFO guy is 100% fabricated like that's coming directly from the handlers call him the UFO guy don't say his name they don't say my name ever right they and you'll notice this as well all the people that are controlled they're never going to say my name the people that are the useful

(1:30:48) idiots those are the ones that are going to say my name the people that are controlled that are going by by The Playbook they know that you don't say the person's name you just try to discredit them with some other name right all this is just honestly like disinformation 101 it's honestly just embarrassing how straightforward it is and this is how it's been so easy so easy to pick them out like **Mick** West 100% controlled by the government no question whatsoever he's the easiest one to pick out

(1:31:20) right um but a lot of these other guys also very controlled and so you can see their tactics and I'll teach you guys their tactics too and the funny part is I can figure out their tactics just from deduction yeah it's always personal attacks always and we've seen it in the people that they've tried to discredit before as well right um yeah UFO guy like that's couldn't they come up with something smarter than that hey let's call him the UFO guy like I'm like as far away from the UFO guy as possible

(1:31:50) like the combined IQ of the crew probably doesn't even match mine and that's probably one of the most egotistical things you'll hear me say like those guys are not smart people um okay hey uh uh how do I pronounce this name aant I believe your intentions are genuine but if you want to discover a community of people that have profound insight into what you're now noticing contact LA Marzulli yeah it's pretty interesting yeah we're the courage crew and like the thing is the power of this community is what makes it so that

(1:32:41) it's really tough for them to attack me like the crazy part now is that we have so much engagement that their disinformation attacks like you saw the people that are like oh Corridor crew **debunk** this and there's like 20 of you guys just swarming them right that's what breaks down their disinformation and then when they get blocked out of my replies that's what they hate the most they hate being blocked out of the replies because you can't control the narrative if you don't have a voice

(1:33:13) that's why you see all these like bot accounts that they buy and these alt accounts of people that I've blocked that are like one follower zero followers these are people that I've block that they're going on their alt accounts right because they're so upset that they can't get into my DMs and the reason why some of these podcasters that I blocked or whatever are mad because one of the tactics I'll teach you guys one of their tactics whenever I see it I just block people they try to pull you into their into

(1:33:39) their replies right so like let's just take like this this person this is obviously somebody who's on our side right but if let's just say that I'm somebody who's trying to use the disinformation T what they'll do is they'll do a quote reply and they'll try to quote reply you and be like Ashton is so stupid haahahaha right or you know that's not exactly what they say but it's like this because what they're trying to do is they're trying to get my engagement into their replies they want

(1:34:07) me to reply to them so that my followers will notice them because otherwise their engagement is so low that when they post stuff nobody's looking so like Victor of the independent group would do this all the time to me and when I saw him doing it that's when I blocked him because when you block them then they can't quote you anymore you also saw Julian doing this right Julian was doing this as well they don't go and reply in your replies because they know they'll get dog piled they do the quote reply where they try

(1:34:36) to get you into their replies where they then have the control very manipulative so when I see people doing this kind of thing you're definitely getting blocked these people they

think they're smart but they're just honestly stupid as hell I see right through all their tactics so anyway um so thank you again uh off Anella because of that donation I'm going to take a look oh yeah 30 Films I'll be honest guys I get a little bit worried when we start talking about Nephilim and all these things that I

(1:35:30) don't understand what what are the other ones that people talk about because we believe that the Jesse Marcel senior was nothing more than a py it was a setup what crashed in the desert outside Roswell was something not of this Earth in part two which we're actually working on as we speak well 30 movies though can I can't see a reason why not to talk to him I don't know if I want to reply to a promotion though should reply to a promotion guess we can give him some free pump promo here we'll be a little bit

(1:36:41) koi this should this should draw some attention okay how's that for you um off onella hopefully that that's worthy of your uh donation there yeah I don't like saying these guys names but Julian was actually up at 2 am furiously replying to the YouTube channels when the YouTube when he thought it was Bots or whatever it's funny dude cracked me up uh if one wanted to go help how would we go about doing it good question Izzy so Izzy um some of the best help is if you are you know just looking into stuff

(1:37:27) if you find anything relevant ping me getting in touch with podcasters and people that can you know uh extend the reach if you can just look at the evidence yourself that's also really important right so I've got the evidence pinned in my profile here so you can go through the evidence when people reply and have questions like there was a guy that was just saying everything wrong today just copy and paste the stuff out of here you can literally just copy and paste it the most common ones are what about the debris I thought there was

(1:37:54) debris surprisingly why didn't crash in the South Indian Ocean is not the number one thing the number one thing is we found the debris and then you just copy and paste this that helps a lot also Izzy if I follow you um Izzy tell me your Twitter if you tell me your Twitter I can follow you and then I can give you an invite to the Discord if you want since you're donating yeah that's man Amanda just basically said the same thing if you really are dedicated you want to help out then yeah you can get a

(1:38:22) dis you can get an invite to the Discord and then you can follow along in real time what do we do to get ready for Sunday physics good question uh I'm gonna probably talk to Dave Rossy on Saturday and see what we're going to do but him and S and I have been on an emails thread where we've been talking to one another I'm sure we won't have any problem filling up the time on Sunday at all in fact I imagine on Sunday I'll be doing very little talking and just a lot of listening hey Justin how's it going

(1:38:59) man oh yeah we were going to look at the original video right so somebody said if you turn up to brightness that when it goes dark you turn up the brightness when it goes dark that you can still see the bars in the middle or something how do you explain sunlight there is no I mean there isn't sunlight coming from the right do you see any Shadows the plane goes directly

over several clouds where the Shadows at I don't see any directional light what I do see is that there's more the clouds are whiter the higher the

(1:39:51) further up they are like here here's a good example there's no directional sunlight on this Cloud right here this Cloud right here does not have directional sunlight on it it's not shaded on one half neither is this one over here so this idea that there's directional light doesn't make any sense if there's directional light wouldn't these two wings or actually that's not a good example but right here where the plane goes literally over the cloud shouldn't we see a

(1:40:32) shadow shadow no there's definitely no shadow on the fusel lodge what are you talking about this is why I ask people where's the light coming from there's no as far as I can tell you can't tell any directional light source here there's no Shadows anywhere what you do see is more IR radiation the higher up the clouds get that you do see so that's my opinion at least guys I don't know I'm willing to be thought wrong but these coordinates indicate the nicobar islands

(1:41:09) and there's no way it can be day daytime it's not coming from the right though right here you can see these clouds are volumetric and the left side is not shaded it's not darker on the left at all on any of these I think people are imagining there's directional sunlight and yes this is the original the GPS coordinates are on the bottom they're only in the they're not in the thermal the GPS coordinates are only in the satellite right down here in the bottom left the clouds are not two tones the

(1:41:46) clouds have more IR radiation near the top than near the bottom that's why you see the different color like even these clouds in the background if there was directional sunlight we would see the directional sunlight on these clouds back here see back here there's no directional sunlight on these clouds nothing's obstructing it there is no directional sunlight anywhere in these videos it just looks like it cuz it's false color IR I would also speculate the reason why you see this graininess is cuz it's

(1:42:25) nighttime the reason why it's so grainy in both videos is cuz it's actually nighttime just like if it's grainy if you're looking in like uh um Whatchamacallit night vision glasses yeah it's rendered IR layer now someone was saying if you change the contrast here you can still see the bar I'm not sure how you could tell that it's pretty interesting so have I seen the corridor crew yeah we've seen the corridor crew thing guys can watch my uh full **debunk** of every single thing on Kim Iverson

(1:43:19) tomorrow if you really want I'm not going to go into it again we've talked about many times you can watch my thing yesterday about it too yeah I don't know if it was contrast or brightness I'm not even sure how we would check does anyone know how to change the contrast or brightness on videos guys some of you guys need to just catch up man why can we see the light but no change to the cloud lighting because there is change to the cloud lighting what does this look like no change to the cloud lighting uh

(1:43:58) there is there you can see the illumination in the background and in the foreground here foreground background background no illumination of this Cloud that's obscure obstructed background illumination over here this is basically the proof that it's real right here so I need editing software somebody else should do the editing software and see if they can prove that it actually has the bars showing that if anyone wants to help out and has editing software you can download that that video um is there a way to change the

(1:44:39) brightness on this somehow what does equalizer do I don't know what this does properties wait that's not my hard drive location well okay let's pretend like that is my hard drive location yeah interesting uh Point uh off onella what weighs more 1 Megabyte or 1 gigabyte of data the answer is they both weigh zero and have no spatial coordinates interesting thought interesting thought experiment yeah nighttime also explains why there's a flash it's not why there's a flash it explains why we can see the

(1:45:31) flash so prominently if it was daytime we probably wouldn't be able to see the flash at all we wouldn't see the illumination of the clouds like we do so clearly VLC I don't really feel like downloading more stuff tonight guys I'm probably not going to stay up too much longer I'm pretty tired but um yeah I mean here's the accurate illumination of the clouds actually I mean you can see the bars right here yeah we might do the VLC thing tomorrow or whatever but uh we didn't actually get

(1:46:05) through the all pertinent evidence I may have to push all pertinent evidence to to Saturday because of the Alex Jones stuff I just got too much stuff going on tomorrow let me see oh man Saturday I have two things as well oh boy this is going to be a long day man yeah I mean I definitely didn't make these videos guys you guys can pretty much figure that out I think you guys know there's no chance I made these videos my technical skills uh when it comes to social medias and and the interwebs and YouTube is not uh not

(1:46:43) Advanced enough tomorrow we have Alex Jones and then after Alex Jones we have Jackie Devoy right after I'm putting Alex Jones in my in my thing even though there's no way I'd miss it I do have to prepare a little bit for Alex Jones tomorrow okay I want to do a post yeah I can type I can at least do that much I have some skills they're just not in YouTube and stuff like that yep Alex Jones tomorrow guys The Alex Jones on Infowars live tomorrow 2 p.m.

(1:47:40) m eastern time oh yeah my disclaimer statement where do we put it let me copy it I can adjust it a little bit yeah I'm gonna have to get ready for bed right after this I want to make one post I think we're going to post this IR one it's pretty interesting I like this IR one somebody send me this 911 pilots.

(1:48:25) org if anyone wants to look at this and tell me if there's anything interesting in here let me know I don't know someone you can look in this someone can tell me if there's anything good in there anything spicy anyone on my Discord maybe or anything like that if anyone who has time oh okay you guys are giving me more donos huh depleted uranium Cowboy thank you yes I do need to go to bed and get ready wow Izzy thank you again very much man you guys

donating I just I I say this pretty much every time oh Bernie's here hey

(1:48:52) what's up my dude multistream um yeah Bernie I'm gonna be on Alex Jones tomorrow man um tell them about my dreams uh thanks for the donations guys I like to say this every time though you know if you need your money please save it for yourself I would prefer that other people have the money um but if you are have excess money and you do want to donate and help out the cause for MH 370x I appreciate it we will put it to good use um you know I don't know what's going to come after this but we will figure something out um and yeah I

(1:49:30) appreciate everything that you guys have been doing and everybody who's been donating so thank you again uh depleted uranium Cowboy I know you've been following for a while and in a lot of the streams and Izzy 2018 appreciate you very much okay why would they use this technology on the plane and not something like an enemy well it had to be a really good reason to use it they probably didn't think that it would be found out but that's a good question is you don't want to uh you don't want to show your trump

(1:50:07) card right away right you want to keep it to the last moment who says I'm not a Believer on Fontella honestly The more I've learned The more I've come to believe that there is a Creator and that we are in a construct 100% I've actually been praying like almost every day I never pray for myself I pray for other people so I don't think it it doesn't feel right to pray for yourself for some reason what I do hope for for other people is that they will have they will become the person that

(1:50:41) they want that they will live happy lives and that they will achieve all of their uh dreams and desires that's what I usually pray for for other people so yeah I thank you guys for everybody who's been having me in your prayers as well cuz reality is I probably need them that's we're uh we're definitely uh we're deep in this thing right now so let's let's do a post and go to sleep I like red p and de koala a lot red panda koala is like my favorite UFO person I don't pray for

(1:51:32) Mick West though no I think Mick West doesn't want my prayers anyway I'm I'm 100% sure that Mick West is uh not a man of God maybe that's being judgmental but fairly certain he's not this guy down here is super annoying I can't stand this dude oh I can agree with this wait what is this what is this is something happening between Gavin Nome and Ronda santis dude that would be a slug match I've already told you guys that I'm not a fan of Gavin Nome I actually voted for Gavin Nome used to live in

(1:52:18) California and then I I tried to vote to recall him is this is there going to be a fight happening oh look at this you why don't we do this in a way where we both can have were you you a m with Donald Trum outside September 2020 he did all of that until oh snap these guys de to fall prey to The Fringe of his party and as a consequence of that Ron tens of I don't want to get used Tobe strided though I probably will the equivalent if I had to your policies the equivalent of 10 911s tens of 10 911s he said he just called 911s this is

(1:53:04) like he just referenced 911s dude Florida had a lower standardized covid death rate than California did that's a study one more thing one more the other thing we had the other thing California had California had higher this is like this reminds me of UFO t let me talk about these guys are just like it's like a UFO Twitter space look at how cocky Gavin new looks everyone to be heard smile oh my goodness this you know what this reminds me of guys how many 911s 911 try giving short simple do about a lot because that's what Jesus wants

(1:53:52) 911 was bad I agree with that what are your plan I agree with that that's pretty much what I think of when I see that stuff anyway uh thank you very much an Fontella that's enough politics for one night right uh beautiful Matthew 6 will come and his will be done good good my friend Matthew 6 I'm curious giving to the needy be careful not to practice your righteousness in front of others to be seen by them if you do you will have no reward from your father in Heaven so when you give to the needy Do not

(1:54:30) announce it with trumpets as the Hypocrites do in the synagogues and and on the streets to be honored by others truly I tell you they have received their reward in full but when you do give to the needy do not let your left hand know what your right hand is doing so that your giving may be in secret then your father who sees what is done in secret will reward you really good passage guys really good passage here the reason why this passage is good is that you should not donate to people for personal selfish reasons you should do it because it's

(1:55:03) the right thing to do that's what this passage means I should have I should have known that off the top of my head thank you an Fontella for that awesome passage thanks snot I'll tell Alex Jones you said hi snot says hi guys is what I have to tell Alex Jones o wonder what his response will be and thanks again Izzy for everybody for the donations there okay uh next live stream will probably be tomorrow I'm not sure if I want to do the evidence review but I may push it for another day that's a good passage guys that's

(1:55:41) that's good man on Fontella is dropping **truth** bombs on us here okay yeah no virtue signaling just do things for the right reason without trying to get uh credit for it you know okay I think we don't need this part

(1:56:58) God it's been so long since I actually wrote up a **Reddit** post man it's been so long the author of that is a former United Airlines Boeing 777 pilot that's interesting very interesting oh yeah we got San diegans down here Shula Vista I used to live in uh can I say where I used to live probably shouldn't say where I used to live let's say I used to live in San Diego let's say that I used to live in San Diego guys so I know exactly where you guys live I'm coming to find you banner I know where

(1:57:40) true L Vista is bro you be living on the border my man wo I know where you guys are at yeah Punjabi Batman is back dude yeah where haven't I lived guys to be honest with you guys I used to travel a lot too so I have been everywhere pretty much everywhere in the country and I've lived overseas as well living overseas was a great

(1:58:45) experience but I never want to do it again not that I don't like living overseas I think it's great it's just I love America too much honestly incoming threat allegations I guess I should be careful now the now the haters are going to be going ashon was threatening people where they lived on his stream um oh wait where is the other link crap what this one is the one we need right yeah this one

(2:00:18) for for okay maybe we shouldn't call it [Reddit](#)

(2:01:29) update funny story I almost moved to Texas and then my parents said they would disown me if I moved to Texas so that should tell you some some idea about where my parents lie politically I was I was literally told him I was moving to Texas and then instead I ended up moving back home I wanted not like with my parents but I wanted to be near home so I could be near my family since they're getting older The Alex Jones podcast is at um 2 p.

(2:02:07) m eastern time if I if it's if I have it wrong I'll let you know California yeah I had to get out of uh California man had to get out of California Punjabi Batman is definitely not posting on alts guys why does everybody think when I find people talking about people posting on alts usually it's just projection usually it's like because those people are posting on alts they think everybody else is posting on alts and I'm not Punjabi Batman people tried to say that David grush was Punjabi Batman they tried to say that David

(2:02:55) grush is me do you guys remember when people were saying that I was David grush before I revealed my name that was pretty funny everybody out there is David grush everybody out there's Punjabi Batman they tried to say that I was pji Batman it's wild man for for

(2:04:31) okay going to sleep right after I do this post guys pretty tired Punjabi Batman's actually real identity is Bruce Wayne am I Alex P Keon oh what dude guys look at this two messages over here what if one of these is from Lex guys what if one of these is from Lex somebody should reach out to Lex and have him watch the the first part of the stream tonight if you weren't here for the first part of the stream go back and watch the beginning of the stream when we wrote our letter to Lex if Lex sent me back a love letter I

(2:05:14) would literally die laughing I would actually just die laughing oh I'll lit H Amanda have a great night have a great night Amanda's my favorite follower guys um yeah we're making a political disclaimer statement so I already said earlier I'll do it one more time right now which is that we are going to go on anybody who will give us a platform we this this uh Community does not adhere to labels or left or right are we are not about division we are about unification what we see is that the people who are trying to divide us and

(2:05:51) the people who are and everybody else and we're everybody else these videos can bring us unity in this time where we are extremely divided and we don't prejudge people either okay we don't we don't judge people based on what the media tells us to think about people if we did that then people wouldn't talk to me either people have said not to talk to me either so when people tell me not to talk to somebody that's I'm not going to listen to that at all because

if people listen to those types of things

(2:06:16) then no one would talk to me either I might even say that oh I like that this movement doesn't base our opinions on what others tell us to think I like that a lot yeah we got this boys and girls we got this I'll work on it tomorrow a little bit let's just reread this real quick

(2:07:48) for this is looking pretty good no CNN brain here yeah my community is too damn smart and my communities are just straight up the best memers period like any meme War we just we would annihilate anyone we would basically deploy our orbs of memes on people and it would be no contest no contest at all yeah I think I'm going to read that statement tomorrow as well oh you reading that paper interesting oh so yeah I'm going to send this out in just a minute here the other thing too is that man NC boy found something really spicy guys NC boy

(2:08:53) figured out that there was two phone calls one at 1839 UTC to the airplane why would they call the airplane at 1839 UTC and then why would they not call back right away like if they couldn't get through we might have something pretty spicy in the works here tomorrow yeah so this this fall this calls from the NC boy is going to be like our next thing so let's get this one out let's send this one we can delete this I think we're sending it I just had to double check make sure I didn't make any grammatical

(2:09:31) errors okay this should be good ship it ship it folks this is a good one this is our first **Reddit** post in a while guys okay guys here you go you know make it get big guys make it get big we're it's our first little evidence Izzy man Third Man third donation today I think thank you very much Izzy you're off the handle wait Izzy you never sent me your uh your tag Izzy put your Twitter tag in the profile and I can give you a Discord invite before I go to sleep put your tag in the uh put your at tag or whatever in in the

(2:10:20) in the chat and then after I add you you can remove it what do we think Iz I don't think this is you Izzy this you Izzy I don't think this is Izzy guys I'll make another Post in the morning about Alex Jones what have you oh we found her connivance this is you Izzy oh look damn Izzy got a lot of earrings okay Izzy I won't I won't go at you on the Stream wait is this you do we do you guys think this is

(2:11:26) Izzy oh wait she says no this probably isn't her I don't think this is I don't think this is Izzy guys anyway Izzy tell me tell me your Twitter profile and I can follow you yeah this is not Izzy whoops if not find another way or follow us tomorrow Izzy and I'll get you a Discord invite if Izzy if you send me an email to MH370 xpron okay you want okay well somebody else just stepped up to the plate at TL Nola okay TL Nola we got you TL Nola damn Izzy Izzy doesn't want to get that attention okay guys uh I want to

(2:12:28) thank everybody tonight once again this movement's been awesome we've actually even talked about potentially trying to get funding to teleport an object how cool would that be if I work with like Jeremy and some of these other guys get some funding literally just teleport an object and prove that we can do it macroscale teleportation how fast do you think the dod

would come and shut us down down probably pretty quick I would imagine anyway thank you guys very much um TL Nola I'll send you a Discord

(2:12:57) invite right now everybody else have a wonderful evening uh support me tomorrow on Infowars on Alex Jones we are going to break the internet we are going to just shatter the communities between the people that believe and can believe in the science and the people that can't so I love everybody who's out there uh keep in mind we are diverse group of individuals from both sides of the political Spectrum we have people who are academics out there so be respectful to one another and let's do this thing

(2:13:26) guys I'll talk to you guys tomorrow okay

MH370x - Advanced Science and Memes Stream 11/29/23 - YouTube

<https://www.youtube.com/watch?v=8joFEKV5ij8>

Transcript:

(02:12) hey everybody what's up we're going to get started in a minute appreciate you man following yeah I've got a new intro for the videos too that I uh going to start using at some point give me a sec we got another podcast later tonight it's been a busy day man guys should definitely check out the Liberty pod on on Rumble with Clint and Ian it's pretty legit it's too bad it's not on YouTube Stephen wants

(03:27) to do a podcast interesting okay getting a lot of requests for Stuff these days okay let's do full screen face o guys what's up oh morning from Scotland it's morning in Scotland I don't think it's morning right now in Scotland in like midnight oh yeah we got new papers for today we got a new paper Cliff High tweeted me Uncle Cliff what's his uh Twitter I've seen people mention and people I feel bad because I don't know all the personalities on social media man who's who's Uncle Cliff Cliff High

(04:34) oh yeah I've been following him I've been following him oh yeah he reposted the hard **truths** podcast oh yeah thanks man thanks Cliff if you're out there not bad this one's going to be pretty Epic Man not going to lie going to be pretty epic uh I don't have an NDA so no I just go hard dude I don't even care I just say whatever the hell I want to say oh man give me one sec I might have to go hit on my barber this

(05:47) weekend so fun story I was talking to hey robets uh I was talking to my barber when I saw him probably like a month ago and I dropped the MH370 stuff on him and it just blows his mind and so The Barbers like we end up talking after my haircut was done for like I don't know how long I want to say like another 30 minutes and yeah it's pretty funny still haven't been

recognized in public which is good got 60 over 60,000 followers haven't been recognized in public yet even though people have sent me messages

(06:20) saying that they one person sent me a message saying they were at work and they heard someone talking about me at their work I think that's pretty funny man I definitely I prefer this anonymity where you are not really known you know um yuck man **Mick** West did a debate with Eric Weinstein gross man gross I'm like 99.

(06:52) 9% sure that **Mick** is uh intelligence asset like 99.9% sure what I've come to learn is like well I mean I think this is just out there in the UFO Community is this idea that there's let's switch it back to full screen face there is like these warden factions right in the disclosure camps like half of them I don't know how what percentage but some of them want the information to come out and other ones want to keep it hidden right and so it's a matter of like which side is winning the battle right um I mean if you really think about it right there

(07:32) is some people that have probably been in that covert area of science their whole lives and they want the world to be a better place right maybe they've had changes of hearts and then you've got the people out there that probably think that this has to be kept secret because of either the dangers or national security purposes whatever um and it's a fine line it's a fine line to straddle no doubt man but I came to terms this morning that's why I made that post this morning right that we're just we're moving forward

(08:05) with it I no more doubts no more second guess in it if it means that we obliterate ourselves and that's our own decision to make like as humans as a human race we have to we still have to be smart about what we do how we disclose information but we can't just second guess ourselves just because of what might happen the tomorrow that we're building is not the one that they've set out for us yeah I think we are winning I think we are winning yeah um yeah the **truth** can't be hidden forever either like it's going to come

(08:53) out one way or another uh the Ian guy flipped on my last podcast what do you mean I'm not sure yeah Elon Musk is definitely battling the intelligence community and the disinformation squad for sure you can kind of see it now guys right like we can see the pattern um you know we can see what they do now like the battle lines started to get drawn so like one big aspect of this case is we're also exposing the disinformation campaign that is keeping this stuff secret and we can see who aligns with who right like you see like

(09:46) Jack Safa like start aligning with people like uh the corridor crew which like why is a physicist retweeting or posting Out YouTube videos of some garbage VFX people that are just like literal clowns like it goes to show that there's something happening there right and you can see these this like UFO Community which once again I'm not part of the UFO Community I was looking at this uh I've been getting pinged on this Corridor crew like post and they're all trying to like defame me saying I'm a UFO guy like

(10:21) guys I have a real job and it has nothing to do with UFOs and I'm extremely good at my

real job as well so it you know it's pretty funny that they're trying to like these people are especially reddit reddit is the most delusional people in the face of the planet man like Reddit brain is like as bad as CNN brain people like have no connection to the real world um let's see what we got in questions here but yeah I mean I think the reality is that these these videos are going to expose a lot lot of people and in the

(11:02) end if these videos do get authenticated which I'm hoping that they will and Declassified then we'll know the people that you can never trust again right it will completely shatter The credibility of the corridor crew of Danny Jones of Julian Dory it'll shatter The credibility of Mick West it will shatter The credibility of people like John Greenwalt who's a Foya expert whatever that means imagine somebody who's a Foya expert like I don't even have to have any inside contacts to know that John

(11:30) greenwalt's definitely on the inside right you don't spend your whole life doing foyer requests and not become an asset right they're only leaking to this guy whatever they want him to be able to see right John Greenwell 100% is either a useful idiot or he's on the inside only leaking stuff that you know is useful to him or that he's being allowed to leak you know and all these guys are aligning together right with the James foxes the world as well right James Fox is definitely with these guys no doubt

(12:04) right um and people like James Fox but like guys you got to realize like the whole point is they want they want people on their side that you like that they think is credible like anyone comes out with some weird video about how they're a victim don't trust that man imagine if I made a video that's like if I made a video and I'm like guys I'm I'm such a huge victim of all these attacks trying to ruin my career guys like that would people would be like dude you're such a you're such a loser

(12:34) why would you do that but you have someone like James Fox do it and people like oh we we love you you're you're so good no I definitely can't convince James Fox James Fox is a big phony 100% phony guys I've talked to his friends he doesn't believe in any of this stuff he puts out videos that he doesn't even believe in like dude is phony McGee 100% I would never watch anything he does ever again never again we're just laying down the law on some people right now because why not it's

(13:13) fun yeah I had people coming to my DMs I'll tell another story that I'm not going to name the person it's not anybody that anyone knows or anything but like when people come to your DMs and try to like psychologically analyze you like gez man you got to have major issues to be like hey do you have do you have uh autism or something it's like dude what it's like don't ever psychoanalyze somebody just for the record like I took actual abnormal psychology in college so I'm actually familiar with the DSM 4

(13:45) which is now the dsm5 it's the thing that they use to categorize psychological uh behaviors and and to call people like crazy is also like really it's disingenuous to real real mental disorders a lot of people like to claim they have a mental disorder to just like be special or

something like that too don't do that either right but never never try to diagnose somebody if you're not a psychologist like it just comes off as like it's one of the worst possible things you can do it's it's

(14:18) classic **redd**itor syndrome um yeah I think that this technology existed for a long time for sure the question I'm wondering is how long this technology existed somebody posted the uh Philadelphia Experiment uh earlier and that might have been one of the first times where they they tried this out I don't know it's hard to say it's really hard to say man I'm not sure but I keep wondering like we didn't stop after we split the atom right we never stopped after we split the atom that was in the 40s guys

(14:57) so what have we been doing since for the last 90 years or 880 years right Joshua carb we've got a Scarlet clone glowing in the vat for you growing in the vat for you yeah I need I need one of those yeah I've got a um I've got another podcast later tonight with cadon so I wanted to stream a little bit earlier plus I wasn't not as tired today it's hilarious man N I wasn't talking about that person in the chat but there was somebody else who dm'd me about it do I have any evidence prior to this

(15:36) case I was literally nobody prior to this case and I'm still as far as I concerned nobody special and just to be clear again I'm not part of the UFO community at all I mean obviously what we're doing has Crossover with the UFO Community because we're looking at technology that people can't believe is real but it's funny cuz you look at the UFO community I'd say we fractured the UFO community in half half of the UFO Community has no problem believing the videos which let's go ahead and just show

(16:10) them well that's loud so half the community has no problem believing these videos just make sure we can see it yeah the other half of the community appar ly is offended by these videos which is very weird don't you guys think what would there be to be offended by about these videos these are the best UFO videos in the history of the world nothing's even close to this can anyone think of any UFO videos that are even close to this the turkey one maybe even the turkey one's not as good as this the only reason why I would even

(16:52) compare the turkey one is uh that it's longer but there's 's nothing that even comes close to this in the UFO community and yet these people are like offended by this information you know me like I get like a 100 posts a day by like stop talking about this stop talking about this like that's such the weirdest response it's super weird man yeah but here's the part two is like I don't know if we back engineered this or if we came across this ourselves but who cares either way right why does it

(17:30) matter that's the that's the weirdest part to me like I don't care if we reverse engineered this or Came Upon it can we just get the answers for the MH370 right yeah most UFO videos are just potato camera guys like Blurry lights and autofocused stuff like this is straight up the highest quality footage we've ever seen we've never seen anything like this with these orbs with these trails and stuff like this at least I haven't in the last six years I don't know if other people to have

out

(18:00) there so it's like man I don't know UFO Community being broken about this is wild I didn't have any dreams last night I was actually pretty excited that I didn't have any dreams I wanted to just have this one night where I didn't have some crazy dream I been I was having so many dreams that I was wondering if they had some kind of device in my uh in my place that was like doing something to me cuz like I I'd go like years without having a a dream that I remember and all of a sudden I was having him like every

(18:29) single night it was bizarre yeah Dave rossy's explanation about why they were hard to film I might I got to clip some of Dave rossy's stuff if anyone's in the chat that wants to clip some of the parts from the interview Dave Rossy um yeah go ahead and and and do that because I want to post some clips from his thing and I already have some from Bob Greener as well but some of Dave stuff was that's what I had to be like yo we're not suicidal here he was starting to scare me he was saying a little too

(19:03) much I felt like orbs have only like orbs aren't really that new though like I'd say orbs are in the Zeitgeist like the last five years or so but before that they really weren't like that's the weird part about the orbs thing right yeah Bob Greener convinced me it's real man Bob Greener man holy crap this guy is I've been talking to him a lot we got some clips from him as well I think we might show YouTube won't let me send you super chats H I don't know how that works I really don't know how social

(19:49) media works let alone super chats sorry to be that guy if anyone else in the chat Knows Why Super chats don't work let them know what's OG I don't know what these words mean someone on [Reddit](#) earlier I got I was looking at Red I look at reddit like once a day to see if I have any notifications and uh somebody's like oh you're the one who made this it's so obvious now I'm like what I'm like what the n-year long con and then I came out of the woodwork to promote these videos and what I'm a secret VFX expert too I

(20:26) can't even get my YouTube to work these people think I'm a a VFX expert we might have to have green you're on again actually cuz I mean the last time the connection was terrible man connection was awful last time yeah see like people keep telling me all these acronyms I don't know what any of these acronyms mean office of cia's office of global acquisition Global access okay now there's been a couple videos that are similar to the MH370 videos I should see if I can save some of them so that I can go back to them if

(21:10) necessary let me look at my uh I've got a database of stuff I've got a database of UFO stuff too oh that's where I put that oh that's where I got this one too we got some spicy stuff guys last few years I've been saving stuff in a in a safe space Oh here it is I have it I do have it wow I saved it okay guys somebody asked me if we have stuff that's similar to the MH370 videos how about this looks like a a perfect equilateral triangle to be pretty weird if I saw this outside my plane I'd probably be freaking

(22:13) out that's the main reason why I don't think this is real I'd probably be screaming for someone to be watching but the other part the flip side of that is like most people just have their things down oh it's rotated for sure most people have their like flaps on the window down though this just seems fake to me I don't know nowadays I can't tell what's fake or real anymore from like what's that based on what we've seen but people asked if there's other stuff that's similar we got that one

(22:49) that's similar yeah we got stuff coming down the pipe a lot of people are asking me what other podcast I'm going to be on stuff like that I mean you guys kind of I think you guys already saw hey red panda nice to have you in the chat red panda red panda's good guy you guys should follow him on uh on Twitter for sure I don't know if he has a YouTube channel but definitely follow him on Twitter at least wait if I click on people does it go to like their YouTube channel or something oh you have 26,000 subscribers red

(23:34) panda okay well you got 26,000 And1 now you guys can tell I'm not really like that connected on social media somebody else was trying to make fun of me saying that I'm a YouTuber I I think that I'm about as far away from a YouTuber as you can get right now I literally just have a YouTube channel so that I can interview some people that I want to talk to that's it that's literally the only reason Reon how many how many like followers do I even have 11,000 okay that's not bad that's not

(24:12) bad I guess I have a decent amount but I'm I'm no red panda koala over here 26,000 oh somebody just sent me another one on X should take a look at another one before we get into the science here yeah my favorite thing about me too is that I'm not a social media dude if I wasn't doing this I would just not have social media at all I'm just I don't like it so wait who sent me something what is this what's this people are sending me stuff I don't know what it is oh

(25:17) yeah Vortex math we'll uh give a shout out to benef TV beneficence TV because he made this sweet thing for us that I'll show you guys where is it he made this for us you ready for this [Music] spicy oh yes I'm going to start putting this in the front of my videos this is just this is sweet man thank you uh beneficence beneficence TV beneficence I don't know how to pronounce it let's watch it one more time one more time three times is the charm this is sweet I love this that's pretty awesome thank you for that very much man

(26:17) appreciate it so here's his website if you guys want to check it out I'll put in the chat for you guys if you want um let's download this also want to thank Hermes who put together this sweet uh video for us let me find it how do I download stuff okay oh this reminds me of something from the other day yo I kind of wantan to kind want to reach out to James o'keef and see if

(27:22) he'll do his HoneyPot thing and try to get somebody to like who do we have to get to like the media what if we could get James O'Keefe to HoneyPot someone in the media and have them admit that they won't report on MH 370x that would be funny that would be funny if we could get him to use one of these blonde women's that he uses to HoneyPot one of these like

CNN people or something and have them undercover claiming like yeah we know about the MH370 case but we're not allowed to report on it that would be amazing I

(27:52) would actually I would I would die laughing I would die laughing like he did with that one guy what was the guy some I have to look it up I'd have to look it up anyway let's look at hermes's video wait where'd it go no I'm gonna I'm gonna do it directly from uh this guy I gotta put this I gotta listen I I might have to put this on Instagram so as you can see here uh my client showed up for work on the day of the incident and I can't believe Danny posted this like claiming that this is like better

(28:42) than the original you know what I want to see it the video is not show it to me it's not it's not working out I don't I don't understand is this what the jury just saw um I'm gonna that's the whole thing unfortunately yes that is not what the whole thing was supposed to be Not only was the animation so poor but it glitched and just froze up so again the dude with the glasses just kills me dude what is going on here dude Jordi la Forge is sitting here on the couch Jordy how could anyone take this

(29:21) man seriously how is anyone going to try to dunk on me when you look like this unbelievable my man unbelievable I don't know who this guy is but wow I guarantee you he never wears these glasses after this never ever again my god do the Fashion World just one favor so again we is that this guy down here at the bottom oh my God was crazy it was absolutely crazy it's like the the getting he's showing very clear frustration he's Hing hands on the table here's Danny right here very clear frustration he's banging his hands on

(29:58) the table when his attorney can't present a simple video it's someone does need to reach out to Don Lemon we might owe Don Lemon an apology man I we really might I I don't know what's going on with this dude what's this I don't know money P me money P me money pen sent me something but I don't get it anyway uh someone said they sent me a video but I don't see it oh I almost clicked on a on a voice message that I shouldn't I shouldn't click on that you guys would be listening to I don't see whatever video

(30:56) you guys whoever said sent me um hey Justin yeah I prefer to actually stream earlier uh I have a thing another podcast later tonight cadonna I don't know if kadana is even in the chat right now oh I love when people demand that I have to address stuff there's literally no discrepancies on a single frame not sure why people keep imagining stuff we we've seen yesterday's my yesterday's favorite was people are imagining there's a bird there's a bird in the video when there's just literally a

(31:38) mouse moving through it so let's see visual work X you need to answer why your footage has been denoised and the original is showing a pause in the footage that looks like a hard cut I think I think you might need to stop imagining things my man the is a lot of people just want the footage to be fake so badly that they just imagine stuff that's not even there it's really wild man the answer is if you think the videos are fake the only thing you should be focusing on is trying to find the person who all you have to do is find the

(32:17) person that hoax them that's it that's the only thing you should be working on if you think the footage is fake only thing you should be focused on is try and find the person to hoax them you can get \$145,000 all you have to do is bring their Source work that's all you have to do that's all you have to do I can barely do it guy don't come to my chat saying that I have to address anything man I don't have to do anything I don't want to do yeah guys all you have to do if you think the footage is fake is you have to

(33:08) find the hoer that's it that's the only way to **debunk** the footage at this point guys this isn't like the first week that the footage has come out we have addressed it everything anyway if you're not trying to **debunk** it then I don't have to address anything thanks though let's move on to some other stuff I've got 50 emails in my box man so I'm trying to get through them but it takes a minute uh let's see yeah 145,000 can buy a lot of stuff man connection between these orbs and

(33:54) the pilots the orbs are pretty interesting I don't know yeah my favorite are the people that think that I somehow um somehow made these videos God guys that's that's a new level of delusion that I I somehow made the videos come on man granted I appreciate it because you know that means I'm better than the corridor crew sorry I was just reading my my Discord oh so I'm thinking we are going to do another evidence review stream probably tomorrow you know probably do another evidence review stream

(34:52) tomorrow oh yeah let me get the uh nightbot going too where's oh wait this isn't the right one for nightbot fan okay cool yeah a lot of people like have you guys ever seen anybody who says that I **debunk** them for asking a question actually post what the question is no never once right the the uh I I've never I've never once blocked somebody for just asking a question they always come at me with some condescending attitude or trolling or whatever and then when they get blocked

(35:55) they cry about it and they go he just blocked me there was a guy earlier today that was trying to make posts the other thing they love to do is they try to tag me into their posts to think I'm going to come talk to them or whatever so that they can get attention that's never going to work uh careful nightbot is brutal guys nightbot nightbot doesn't mess around so I don't know why nightbot got you there oh be careful of all caps and be careful of too many characters as well nightbot will delete you nightbot don't

(36:26) play starlinks we think they're starlinks I who was I I was laughing with the alien addict guys I might go on the alien addict guys um stream again the alien addict guys are hilarious man uh let me go full screen the alien addict guys we were talking we were sitting there I'll take this off we were talking about how everything's like Chinese lanterns and we're like I've never even seen a Chinese lantern in the real in the real world and everything's oh Chinese lantern this and Chinese lantern

(37:16) that I mean it doesn't even matter on those podcasts right like it was actually good it they elevated us even more um I have talked to Kim Iver that's what I'll say for now more to

come blurry creatures actually they're in my email right now I just I'm busy man it's hard I want to do everybody's podcast but I'm literally looking at my calendar and I've got more than one every single day more than one every single day like it's crazy like I'm I've got a podcast every day for the

(38:07) next week maybe two on on most days and I can't I don't even have enough time to work on the actual case right like it's hard I don't even have time to work on the case that's how much stuff I've been doing and I have a real job I'm doing eight hours a day on top of that uh big Chipotle Burritos buddy uh it's nr22 not n 33 don't trust what Google tells you you just learned a valuable lesson Google lies it's pretty funny who's ready to show how Google has no credibility we're going to break the

(38:44) brains of some CNN brains right now guys you ready this is my favorite when people come at me with the nr33 yeah I still have my day job amazingly how am I working my day job it's hard it's hard I do my boring day job stuff actually wait I love my day job I mean I love my day job and uh I'm and I like I I just immediately once I'm done I like I got to do m370x stuff it's so hard to go back to being a normie man so hard okay guys you ready for this let's let's destroy some CNN brains

(39:22) okay it's NRL 33 guys it's nr33 wait a minute wait a minute is this the fact check by Newsweek posted on August 9th let's scroll down and see on this August 9th 1 p.m oh look it's me it's me guys oh look it's me on August 9th when I had 30 followers this is false no it says NRL 33 but those are not threes they're twos or it could be NRL 32 which is launched in 2010 which is a geostationary satellite it's actually nr122 for sure but whoops turns out Google's wrong turns out Newsweek is

(40:04) wrong yikes that's pretty cringe guys oh I'm not even sharing oh man oh God dang it okay wait hold on here we go again here we go again okay here we go oh here it is guys here it is okay it's it's up there now guys here we go look at this August 9th August 9th look at this it says enter all 33 in this in this fact check that you can Google just scroll down it's not 33 it's 22 it's like even lieuten or was like even the Admiral or was it uh vice admiral whatever Tim goule even got fooled by this guys this is how D how

(40:50) much damage these fake **debunks** do people just don't even read they don't even fact check it at all they're just like oh yep must be that sure and no don't just disrespect no disrespect to him you know I just think that it goes to show that it doesn't matter how intelligent or your credentials everybody can get fooled by fake news everybody can that's why we have to teach critical thinking that's why we just have to pull it up and be like this is a three over here this is a three these are twos this is a

(41:20) three these are twos this is a three these are twos it's like come on guys just just teaches you right here that Google is just straight up nonsense and so is Newsweek I'll never trust a single thing Newsweek ever puts out ever again never again rest of my life just wow man APR August 9th man look at my response within one hour within one hour it's wild man I **debunked** it

within one hour before I was even like relevant okay let me see sorry if a benefactor said they would pay you enough to not work your day job yeah i'

(42:02) probably quit in a minute yeah for sure man yeah nr22 went up in 2006 just a heads up at least I'm not showing my DMs guys at least I'm not showing my DMs that's good it's good hey man if you think you found an air send it over to **Mick** West because if **Mick** West didn't find the air then you probably don't have an air go for it but just as a reminder the only way to **debunk** the footage is to find the hoaxer if you think something doesn't look right no one cares the only thing you have to do is go try to find the

(42:52) hoaxer and get collect the \$145,000 that's all you should be focused on spending your time on anything else trying to **debunk** the videos is just a lost cause so spend your time however you want but you know don't be surprised if I don't pay attention yeah we've moved past the fake stuff guys like we're not going to get bogged down on that we're moving forward so that's why we're working on the science stuff tonight which we're going to get started here in just a minute yeah I want to see what the New York

(43:34) satellites are capable of to man okay visual work X if you don't uh if you don't give it a rest man it's going to be uh the end of your stream tonight in the chat just let it go man if you can't let it go then you obviously have some emotional investment my favorites when I'm not trying to **debunk** it I'm just trying to tell you that the footage is looks fake it's like okay man we get it we don't care we told you we don't care yeah we just did the the **debunk** Jenny of the corridor Crews latest

(44:11) **debunk** attempts we might play it one more time because it's funny no I'm gonna I'm gonna do it directly from one more time for you guys so as you can see here uh my client show show up for work on the day of the incident and this is just a second I'm gonna have to have a talk with my nephew one more time for you guys you know what I want to see it the video is not show it to me it's not it's not working I don't I don't understand is this what the jury just saw I'm that's the whole thing cter crew

(44:55) literally made 5 seconds and they realized how crappy it looked and so they stopped trying and then they sat on a couch wearing Jord lege glasses trying to talk smack five or six here's the oh let me stop it they made five seconds of the footage it looks like garbage and then they realized that it was going to look like trash and they stopped trying and then he just sits on a couch looking like a jackass talking crap about the footage so again we only saw five or six seconds worth of video Jerry D is hilarious by

(45:26) the way crazy it was absolutely crazy it's like the the defendant is getting hosed he's showing very clear frustration he's B yeah I don't want to hate on cring Walker too Ranch too much again I'm not like somebody who's trying to say that um like I don't care what other people believe in doesn't make like I like I tell people um I used to watch Ghost Hunters right I enjoy Ghost Hunters not that I think ghosts are real I just think it's kind of cool kind of spooky but you know whatever I don't sit

(45:53) there and be like Oh ghosts are stupid you guys are believe in ghosts it's like why I don't care doesn't matter to me if they're real or not yeah those glasses are the weirdest thing ever I can't believe that somebody wore those glasses and seriously tried to dunk on somebody else I'm 100% sure that dude will never wear those glasses ever again I mean I hope he won't got Jordi Le Forge out here **debunking** us geez okay so let's we should do a little bit of work since I'm getting distracted

(46:30) here yeah especially after they said they could make the videos in hours and then they put some garbage out that makes them look like the hacki VFX people in the whole world it's like yikes man yikes yeah we clowned on that a little bit we're probably going to do uh we're probably going to do another meme tonight guys even though I don't like to do too many memes it's it's pretty funny I don't see any connection with any other conspiracies and the reason is because I don't want to connect anything

(47:02) else to MH370 these footage is already enough man but sure there might be stuff that's similar I don't know I don't know not sure yeah I mean I don't I don't care if ghost are real or not I mean doesn't doesn't bother me I never felt like I have to go try to **debunk** people and tell people to stop looking into ghosts imagine if I'm like hey guys ghosts are fake why you let say drop it just drop the ghosts guys drop it why you keep trying to say that ghosts are real and hunt and searching for ghosts just drop

(47:32) it just drop it that's what like people when I'm talking MH370 that's what it sounds like just weird man I think the government didn't get rid of the plane I think they were trying to probably save the plane yeah we're not linking this to definitely not linking this to mh7 guys from my own personal reasons we're not doing that as well maybe he had the maybe he was wearing the 3D glasses guys maybe those were 3D glasses maybe Jordi lege there was uh that's why I'm going to call that

(48:12) guy Forever by the way Jordi Le Forge um maybe he was watching this version that we turned into actual 3D maybe he was watching in 3D there maybe they could have made a 3D video that would have been pretty impressive with the blue and red with a perfect Recreation that would have been impressive literal 3D you guys can put on your blue and red glasses here wild yeah the flax increasing because we're over the target hey pror uh hey Predator MN what's up Edward C Lyn's already out of jail have a watch of my uh take a look

(49:09) at the rumble video with uh Clint Russell and Ian Crossland Crossland for some reason I always get his last name wrong I think it's Crossland is there 300 people on this stream 326 people on the meme stream y'all we're meing okay we're going to actually try to do some work here guys uh do you guys so big Chipotle Burritos do you know what video is do you know what do you know what video is man video is literally just images stacked on top of one another guys cracked me up man you think you can deep you think you can disprove

(49:56) the satellite go good luck man found surveillance we literally found it on lockie Martin's website uh I don't have to look it up you watch this video big Chipotle burrito this guy thinks he

can disprove the satellite we've got literally 24/7 coverage of the whole world just just Google cbers man and go to the video that's all you have to do is go to just go to Google and type in cbers man and press the video button oh look at this we have Google video playback of the entire world 24/7 Global persistent surveillance

(50:34) monitoring what do you think Glo what do you think Global persistent surveillance monitoring means uh big Chipotle Burritos help me out with the definition I love when people just make like all these silly claims and they don't they haven't like looked into anything man all I have to do is just pull up all I have to do is just pull up the videos I got a whole I have every single thing could needs to be dump **debunk**ed on my hard drive look what do you think this thing's doing here what do we think it's

(51:07) just scanning the Earth doing nothing what do we think's going on right here like I love when kim.com posted this because it's like gez man people don't even realize that we've just got full video playback this isn't even showing the low earth orbit satellites this isn't even showing the low earth orbit ones look at this science Robert Russel what's up we never forget who we're working for guys this is just the straight up hail Hydra hail Hydra tag right here yikes man yeah two things that you two things

(51:49) that you shouldn't uh oh it's not proving anything guys it's only taking pictures what happens when you stack pict pictures on top of each other oh they create a video why do you think our videos are six frames per second why do you think this is six frames per second six frames per second because it's a huge field of view scanning from what is it pictures in IR IR data from satellites creating a Google Earth it's Google Earth man yikes man stop digging my friend friend stop digging don't trust

(52:28) Google and don't trust Wikipedia friends that's how you get CNN brain that's how you get CNN brain guys Okay who wants to do some science who wants to do a little bit of science okay today we're looking at conditional possibility of spacecraft propulsion at Super luminal speeds so what does this mean this means moving faster than the speed of light yeah we're moving on guys I I we're moving on from that interesting um yeah okay so I'm kind of I want to actually work on stuff tonight

(53:08) but since you guys insist USA 229 let's take a look guys let's see what it says in Wikipedia what signals intelligence satellites wow wow by the nro signal intelligence satellites now let's look up and see what signals intelligence satellites are for oh and should we check out what the the purpose is as well used to locate ships and aircraft from Radio Transmissions they admit oh look it's the exact thing that we're doing wow amazing their whole purpose is the exact same thing that we're watching

(53:49) incredible but of course they can't do video because pictures aren't the same as video except for when you stack them on top of each other oh oops I guess they can do video and you know what while I'm getting the stuff ready here let's go ahead and just get this fired up for everybody because apparently people didn't watch some of my my content I've been putting

out oops I'll turn it up for you guys oh wait it's not playing the sound oh wait hold on [Music]  
everyone this is Ashton Forbes here to

(54:30) bring you the MH 370x satellite video explainer our organization was able to recreate the satellite position using amateur trajectories available on the internet USA 229 was in the correct position at the nicobar islands around 1840 UTC capable of taking 3D stereoscopic footage with its pair of satellites USA 229 is a pair of Sig signals intelligence satellites launched in 2011 the same year is USA 224 satell picture he posted on Twitter in 2019 the Sig system connect assets by an interconnected network of shared data if

(55:06) you Google Sig payload the top link references the mq1 C Great Eagle the asset in our drone video in the day five press conference the Malaysian Minister of Defense has asked there are us spy satellites over the regions are we in touch with them to which he responds yes yes sellers they us spy satellite the regions are we in tou with them yes we are in touch with cbers is a space-based infrared system which conducts Global persistent infrared surveillance officials at the 460th space wing also confirmed cbers provided

(55:36) technical data to the intelligence Community to help solve the mystery of MH370 the coordinates on the bottom left of the satellite video indicate the location to be near the nicobar islands this is why I made this video satellite designation in the video says nr22 not n33 as claimed in the false Newsweek in France 24 **debunk**s nrl22 is presumed to be the command satellite it was sent into space in 2006 at the start of the cus program the Regis aonan side by-side videos have been proven to be stereoscopic with

(56:06) clear Parallax here's my favorite guys remember when they were trying to claim there's no Parallax how are people seriously trying to claim there's no parallx just look at a Wiggle sidebyside videos have been proven to be stereoscopic with clear Parallax we've even been able to convert them to actual 3D in the satellite video the mq1 C gy Eagle drone is cropped out of view at the top of the screen the mouse we see is moving at 24 frames per second but the background is six frames per second indicating a Centric session logged into

(56:36) the actual spy satellite database the mouse moving off the screen in multiple directions and six frames per second background is evidence of a large field of view on a computer generated Battlefield map the second orb appears to come from the water and shoot up through the clouds unlike the Trump satellite image the MH370 satellite video does not show any Shadows meaning this video is likely shot at night time using a false color IR the orbs form an equilateral triangle consistent with a 120° 0 point sinyal pattern the pattern

(57:07) changes orientations about halfway through the sequence and becomes vertical showing purpose the zap we see accurately illuminates the detailed volumetric cumulus clouds in both the foreground and the background bam get out of here that's that's what I have to say to the **debunk**ers boom Get Wrecked okay um let's do a little bit of stuff now we don't need these hey everybody hey everybody who just jumped on uh Amanda I see you on there yeah I got kraad on in like two hours so uh I'm GNA have to wake up a

(57:46) little bit I'm going to be tired oh thank you very much for the Dono is it my channel yeah okay your name is my channel man social Med me is confusing especially when people call themselves my channel but thank you my channel tomorrow is Infowars on the War Room I'm GNA be on the war room tomorrow on Infowars I don't think it's live but and I also have another thing I'm doing tomorrow that I haven't announced yet they'll be coming out on Friday so yeah this thing's not going away guys not even a little

(58:20) bit not even a little bit okay so yeah subluminal speeds is like faster than light travel right it says right here faster than light travel spacecraft propulsion so we got a paper today about faster than light travel okay concept design special relativity sure so special relativity I think has to do with Einstein right or is that just general relativity I actually have to reach back out to Sam triple his people didn't hit me up yet huh I should probably check that out later all good though I think the lithium batteries

(59:06) were used for being on fire I think they were just on fire uh thanks Garth man that's nice you to say um that's my guess is that they were just on fire yeah I don't know I feel bad cuz I don't really know a lot about social media and stuff but Info Wars war room is that like a live thing oh yeah I'm going to be with this guy so did he end up getting he went to jail for j6 how long did this guy go to jail for literally didn't even enter the capital and they got gave him Mr meanor charge for entering a restricted

(59:54) area man I don't know I don't know man I'm not saying I would definitely have not have ever been there but it seems a little weird how some people like who weren't even there ended up going getting like criminal charges where is the like I I can't even find their actual like website it's all buried underneath stuff you Google war room and you get only stuff about this guy don't even get the actual website oh he got 60 days he's still in jail wait is he going to be interviewing me from

(1:00:32) jail maybe I'll have to vindicate him oh so there's a fill in oh wow oh wait culture wars is where there's going to be two people with opposing views to present their case oh that's interesting to know huh interesting to know do you think let's say hypothetically I was on culture wars do you guys think that they would put somebody like **Mick** West on the other side interesting I need to look that up real quick isn't culture wars like about culture stuff though not like about MH370 it would seem kind of

(1:01:34) weird is this it culture war huh oh this is going to be interesting H I don't ever see somebody like **Mick** West being on Tim pool show is it always somebody versus the other person is that how this works

(1:02:51) wait definitely looks like it's somebody versus the other huh it does look like culture wars is always with somebody else though right definitely is always somebody on the other oh maybe not maybe it's just Tim pool with yeah okay it's not always versus somebody I won't be on culture wars are you sure about that how sure are you guys that I won't be on culture wars what if it was Alex Jones

(1:03:55) interviewing me tomorrow that would be wild I'm like 99% sure it's not yeah no it wouldn't be **Mick** West I'm just trying to think of who else they would put on who's what what does it mean when people have check marks next to their name oh look at this the fifth kind does this mean you're like a badass if you have a check mark next to your name huh that's interesting James Fox oh yeah maybe we would just be like Ian

(1:05:00) that' be interesting I wouldn't mind talking Ian some more he's a smart dude man problem is I'm not that great with the science you know the fifth kind this is interesting welcome fifth kind welcome to the party my man give you a subscribe here I I don't know if my one subscriber will really help you out here oh you need 100 subscribers to get to the thing oh that's why you get a check mark neat huh yeah this is pretty interesting if you guys are into some of the more uh it's not even necessarily

(1:05:41) esoteric but looks like it's more of like the secret uh culture stuff lore that's out there you can check this out yeah I think I'm over 11,000 Subs pretty wild did I freeze no think it's still going that'd be wild okay let's uh focus on some work I want to get this I want to get a piece out on salvator pas' stuff we've got like two more to do I think oh you got books nice man nice oh it was a good day today good day I talked to some important people today can't really talk about it but I've

(1:06:25) talked to some important people we got it on a podcast stuff's happening tomorrow it's gonna be a busy day tomorrow man okay so the equation stuff kind of goes over my head anyway I'm going to presume the math checks out here right we're going to presume the math checks out oh yeah I think more than 1,000 per day or more than 300 a day probably I don't even know but I think I did the diamond podcast like a week ago or something it had like 3,000 Harrison Smith oh yeah Harrison Smith's interviewing me that sounds

(1:07:07) right yeah Harrison Smith you just talk to him solar damn I got a lot of connections man chat chat knows people apparently I do too guess it's going to be somebody who's not somebody who's not in jail currently that's that's messed up dude's in jail for not even going inside the capital though I mean I don't think this is the guy you can't even find it like they've got anything related to Infowars like just doesn't even show up on Google I have to like use Duck Duck Go or

(1:07:53) something should we just check real quick let's just check let's see how messed up Google is yeah he's probably cool I don't judge people ahead of time certainly not anymore oh this is Minnesota Vikings player that's not the right Harrison Smith for sure oh here we go yeah okay oh yeah seems like a cool dude okay of course when I search on Duck Duck Go I get like tons of stuff here right could reidan be lurking in my streams I doubt it if he is he should be reaching out to me yeah Greg Reese was awesome I owe him

(1:08:41) for sure man I'm also fascinated to see how big this gets yeah do you notice the difference difference between the search here on Google and duck ducko it's night and day you search on Google is nothing but mainstream media crap it's unrelated what's this God reuter's

fact check yikes man okay we're not going to go there right now okay let's go ahead and do some science now guys dude uh who is it the Clint or whatever or uh yeah Clint uh Russell he interviewed the um Jacob Chanley and he got a strike on

(1:09:39) YouTube just for interviewing him just for interviewing him Jacob Chanley served his time in prison served his time in prison he got out and they still gave him a strike just for interviewing him oh you did a interview with Rachel Richard Dolan fifth kind yeah man send me uh an email do you have Twitter fifth kind let's go find see if Twitter or if fifth kind has his Twitter account we could work something out I do want to talk to Richard Dolan too I think yo fifth kind how do I find you does anyone know what fifth kind

(1:10:25) uh emails or twitters uh fifth kind you can also email me if you want at MH370 xpron I'll put in the chat just make sure it's a podcast request as well oh yeah maybe I do that oh okay there's fifth kind TV okay cool cool cool cool cool oh sweet yeah you can DM me now oh no okay I I think I I don't know if I let me go check I did it again guys I got to check see if I revealed

(1:11:30) anything let me see nah I'm good I don't care no big deal we didn't reveal any personal information wait let me double check again let me double check again guys I know people are trying to go back right now probably see if I what I revealed nothing that matters nah I already told you guys I was talking with uh Kim Iverson if you're if you've been following Along on social media you know I've already been talking to Kim Iverson so no big deal anyway and uh Stephen deer there's nothing nothing special in there no

(1:12:17) personal information or anything like that I'm super bad at uh I'm super bad at revealing personal information revealing my DMs I must be like the worst person at social media cuz I just non-stop revealing DMS all good though yeah fifth con you can hit me up though we can work something out uh my schedule is booked for like the next week but you know two weeks from now it's probably good or anything time beyond that if you want to do a interview or something like that it' be fun I think yeah doesn't matter anyway like the

(1:12:52) stuff that I'm recording like tomorrow is going to be coming out like right away anyway so I'll probably start promoting it like like the Infowars thing like right after I get a link or something like that yeah Aaron a Aaron just before I dig into this um I've already said this people that have follow me know this but I was never in the UFO Community before this and I I still don't consider myself in the UFO Community but I was like lurking in UFO stuff for like last few years and I was never just to be honest with you guys I

(1:13:26) don't I don't think there's even like one major conspiracy that I really believed in before this this stuff came out that's why it's been like a like a wow situation for me cuz man when you deal with a conspiracy of this magnitude and you come into a just cold turkey it's a pretty big red pill to swallow it's a pretty big red pill to swallow it's like oh boy yeah Cliff High maybe I can pin Cliff High too I mean there's a lot of people I'd like to talk to I don't really want to answer

(1:13:57) personal questions um about my situation and family stuff like that so don't ask about that stuff you don't mind oh did Richard Dolan say that the UFO Community is one of the most compromised well this is going to be a short science article guys we're already at the end all it was is math the whole time okay oh Cliff High has military knowledge oh interesting I hope I don't get champion in the UFO Community that's not what I want I think I just want to let the UFO Community do their own thing and I'll

(1:14:41) just be there just on the side helping out just indirectly not intentionally I I'd say the UFO Comm Community probably is the most compromised though it BW blew me away with how compromised it was TJ snitching on Ashton is my favorite part of the season of MH 370x what if uh what if Skinwalker Ranch does like an episode where they just try to hate on M 370x just because of like my interactions with TJ that would be the funniest man I would just play it all the time just laugh myself off laugh myself to death yeah this is pretty much like the

(1:15:21) speed of light stuff so this is similar to the last one if you can reduce the mass wait what's CRT what's CRT yo salvator Pi help me out conditional replacement technique does he quote himself here Salvador Pas is definitely leaving out the special sauce on this one for sure show the meme okay we'll show the meme we've got a meme we're going to drop right after we drop this paper too although I feel like I've been dropping a little too many memes maybe a little bit too many

(1:16:25) some people in the chat were going pretty or in my Discord were going pretty hard on the memes too man where is it Corridor crew man they just keep embarrassing themselves man this is how you know they're redditors though redditors can never admit they're wrong they just always double down over and over again they're just so predictable we're just murdering people with uh 500,000 700,000 subscribers 6 million subscribers total clowns all you have to do is just be a normal person just makes people look

(1:17:17) silly uh I have to follow you and then you have to ask for a request get to the Discord hey Paige how's it going alt f4 to teleport CRT basically equals teleportation okay this feel like we need more this doesn't feel like this is enough like this is just continuation of the last paper let's see if we can find any some more spice here what else did s send me okay the elect the high energy uh electric field generator one was a lot better than

(1:18:20) this I liked it more and then we had high frequency gravitational waves I already put that one out there this one was good too let's look at this one oh this one's got a seal on it Naval a air systems um damn Chipotle you're a upset today huh don't don't get so mad man yeah at this point you can't even recreate it cuz it realize as well that the footage that we've got here there's no there was nothing to recreate it from if somebody made this is a complete original so at this point the only way

(1:19:12) it can be debunked given the pathetic debunks to date is somebody's got to find the actual ho the hoaxer right find the person that made these masterpieces and 2014 I mean how can we not find them right we've got hundreds of millions of social media Impressions what are

they just hiding somewhere not being found just find them find them and bring the source files and collect \$145,000 seems like that should be easy especially for these people have millions and millions of followers they can't they can't find these

(1:19:44) people cordor crew has 6.5 million subscribers they can't use those subscribers to try to like if cordor crew was honest they would just make a video telling their their followers to try to find the hoaxer right that's what they would do yeah der plated uranium knows what's going on where's he at yeah he's up there yeah Paige welcome to the chat glad you finally made it glad they finally made [Music] it I love how much people care about credentials but then when I bring credentials out it's like well those

(1:20:35) people aren't real they don't matter it's funny man I've literally when I was on Julian dory's podcast I say that we've got Jeffrey Ford who is the lead VFX artist for endgame Captain America I think it was Civil War I may have that wrong and Spider-Man no way home and he sits there and tries to Google him cuz he doesn't believe it it's like okay man uh I'm literally talking to a podcaster who's friends with him who literally pulls up the text message and lists it out while I'm on

(1:21:09) the podcast with him these are the people that think that credentials matter but if you bring credentials out then all of a sudden no no no no no no my my YouTuber who literally says five factual things incorrect that's the one I'm going to just blindly believe just based on credentials alone not based on any facts whatsoever it's funny man you want to know something else that was funny okay yeah thanks uh Dylan uh good day from Australia here I'm gonna read you guys a text message that I sent to Danny

(1:21:43) Jones okay Danny was texting me so much before the video dropped and then right after the video dropped he never texted me again after he started seeing the comments um and I'm not going to send his messages I'm I'm not that guy I'm just going to send one that I sent to him okay so what when i s to him I guarantee you if we the reason why they haven't post any of my text messages because they would not make them look good yeah I'm going to do that in a sec we're going to work in a sec this one's

(1:22:39) important it's related to what we're talking about here okay I guess technically one of these is his message but it's not doesn't make him look bad or anything like that so here you guys go you ready if credentials don't matter why do you always mention your VFX guy who claimed it would take six months from who is from Marvel and I say because that's what other people value I don't need a Marvel guy to weigh in for me I look at the totality of the evidence including what what it would take to fake the

(1:23:24) videos and come to my own conclusion having the Marvel guy weigh in is nice for exactly situations like yesterday when someone makes subjective claims about how easy it would be to make see the Top Gun post which I'm sure is real CGI is the slowest and hardest part of making movies if they could turn it around in a Day movies would uh come out a whole lot faster if the VFX frame matched Nico would have modified it to match 100% that's why I say

how many pixels match you should have him move all the pixels

(1:23:55) while he streams it and see how long it takes I'd love to watch that and that's just one frame which was the most similar I bet it would take hours if not days so really the point there is I don't care about credentials but I bring up the Marvel person because other people care about credentials the people that are trying to **debunk** me with credentials I just counter them with better credentials easy so that was the point of that text message guys not to not to dunk on Danny or anyone else yeah I'm sure he removed all the

(1:24:32) comments I'm sure he did yeah we're moving on okay so next thing here guys yeah let's move on guys from other to other stuff though we don't we don't care about those podcasters we already dunked on them but here's a question Rich says why not get an fx artist to be the fact witness it would strengthen the case I already have the lead VFX artist from Marvel what more do I need that's literally what I just said on the text message just now the reason why I don't need a a VFX artist to weigh

(1:25:15) in is because I know the videos are real I don't need the evidence tells us the videos are real I don't need a VFX artist to weigh in I already have the Top Gun VFX artist from Marvel Studios what more can I ask for I've already been on sea Atwood Maddie I've already been on Sean Atwood here you go atw Unleashed here it is yeah let's do some math here I don't think you can link YouTube's here yeah ego is a big part of being being people being unable to admit they wrong I actually am one of the people

(1:26:14) that can admit they wrong and I do pretty frequently but I don't admit I'm wrong when I'm not that's that's uh having no conviction if you do that yeah I literally talk to the guy who knows the Marvel VFX expert personally have I convert have I confirmed his credentials just Google him dude you guys like **redditors** are just so like geez man it just you don't want to believe so you just convince yourself that it can't be true like just don't use cognitive dissonance man like of course I talk to the guy

(1:26:50) who's friends with him and it wasn't me saying it it was the the YouTuber like here let's just you guys want to watch just go to my YouTube channel man I have it literally posted on my YouTube channel okay so this I think we've already po did I already post this how am I going to post this on YouTube guys how am I going to post this on YouTube or how am I going to post this on Twitter I need some more papers that are easy yeah being skeptical is fine guys it's just a lot of people just have emotional

(1:27:53) reactions right can I make a slideshow maybe that's a move huh I think I have to use paint or something like that right okay I've had enough of uh Chipotle here it's time to go away too much **redditor** brain Man Too Much **redditor** brain my biggest advice to people is get off **Reddit** man just get off **Reddit** okay you'll do you'll do yourself a world of favor if you just get off of **Reddit** there's basically nothing true that's posted on **Reddit** we could do a screen recording or we could do honest I'm not even a big fan of this

(1:28:56) because I think we already posted these oh this is the patent defense this is the patent defense let me double check my emails real quick give me one sec I want to make sure this is the right stuff uh oh yeah Quantum coherent assets will mind break the public it's definitely true yeah I wish I didn't have uh I probably just delete my [Reddit](#) soon I kind of wanted to be banned from [Reddit](#) I'm I'm like they've been looking for a reason to try to ban me they've been looking for a reason to

(1:29:59) try to ban me on [Reddit](#) they'll be doing me a favor honestly I I don't even post on [Reddit](#) I just check there every so often hey bradical yeah I think most people that can have more than two brain cells have been banned from [Reddit](#) not I mean there's a lot of people that don't uh that are still there that aren't banned that aren't you know that have more than that brain cells but [Reddit](#) went like completely just total fascist banned everybody that can think for themselves now it's just an echo chamber and that's

(1:30:36) what happens where like you know we won't say their names but the podcasters right where they just they have no relation to reality anymore where like they think that everybody's going to agree with them and then they get to the real world and they're like they're like oh what everybody does doesn't agree with me what yeah getting banned from [Reddit](#) it is probably a badge of honor honestly they grew up from Tumblr yeah that's about right man yeah it's a hard pass the only thing good about [Reddit](#) it is some of the small

(1:31:14) Niche subs and stuff like that like that's about it otherwise there's nothing good from it I stopped even going you couldn't even go to the news sub[reddit](#) anymore there's no news on the news sub[reddit](#) every other post is about how bad Elon Musk is you're like like what the hell man there's no news here yeah [Reddit](#) was the one I mean got to give him credit for that [Reddit](#) was also the one that banned the topic as well so should tell you a lot should tell you a lot okay I think we're going to try to

(1:31:49) do a paint on this oh I don't know if this is going to work guys I don't know if this is going to work uh oh I don't know if this going to work I have no idea how we're going to do this yeah my favorite Z got banned it's not the one you guys are thinking of though I mean it might be the one you're thinking of but it's not the obvious one that you're thinking of

(1:33:04) think we're going to do it like this it's not that one one that's that's the obvious one that's not the that was not my favorite sub[reddit](#) no you need video a Maxwell's Concept in action uh I haven't Googled H what was it ha that's better not be something that's going to get me in trouble let's find out oh okay uh ha doesn't give me anything interesting oh that that sub[reddit](#) was messed up I'm not even going to say the name of that sub[reddit](#) live but that sub[reddit](#) I did

(1:34:02) watch just because like that sub[reddit](#) would show you the Grim reality of people it messed me up though man that's that's a little too much man I'm not really that worried about that sub[reddit](#) going away but that's not my favorite one though not at all hey Misty Moon welcome to the party thanks for following it uh a few of my co-workers doing know about the

investigation but they don't really comment too much about it they don't comment too much about it convert to jpeg is that what I should do can you

(1:35:03) convert to jpeg like that is that going to work wait is that can I do that did someone just saved me a lot of time how do you do that people think I made these videos and I can't even convert to jpeg guys oh boy it's pretty pretty sad pretty sad how do I convert to jpeg does anyone know how to convert to jpeg n screenshot I mean that's what I am doing snippet is screenshot I am I'm doing screenshots guys snippet is is screenshots save as JPEG maybe let's try that out hold on can't save his jpeg I don't

(1:36:03) think we can try I think it's going to break it yeah no that breaks it well whatever we're going to keep doing what we do here we're going to keep doing what we do I did save as doesn't work there's no save as JPEG I'm just doing screenshots guys I'll be done before we figure out how to do jpeg I can probably find a website that'll convert to jpeg for me but we're almost done already we're almost done already yeah I do work in healthcare it and I prefer not to lose my job at

(1:36:57) the moment or my security clearance kind of need it to do my job so you know don't want to lose that um where'd it go oh here it is does anyone notice that like why do these these PowerPoints look so janky can the government hire some people to make some non janky looking geoc cities PowerPoints these things are just like man I think they could hire somebody who's got some actual uh actual skills I'll feel bad if salvator Pas made these I'm just ripping on them

(1:38:01) okay save this one what's this one called like Navy patent office something or other oh now I can save it as a JPEG well that's awkward oh but that's because it's this other version here um I don't know which patent he's defending here yeah the fifth C kind you you figured it out I'm in it for the long con man I haven't seen manifest no but uh yeah I waited 13 years or N9 years and then I pay tried to pay somebody to **debunk** me and somehow I have uh visual effects skills that I haven't been able to show

(1:39:12) off yeah there's people watching at me mess around Ms paint but you know I've got those those VFX skills but I mess around I just decided to mess around in Ms paint for fun my favorite attacks are the ones that think that I either made the videos or that I'm uh **Russian** disinformation is my other favorite one **Russian** disinformation I have a US security clearance but I'm **Russian** disinformation guys can you at least can people at least say I'm maybe us disinformation because I'm definitely not rushing

(1:39:47) disinformation but let's keep it at least somewhat based in reality let's just keep it somewhat based in reality okay I hope you guys are ready you've waited all this time we're going to have a Meme here in a second oh no what did I just do okay there we go I'm still not sure what we're going to actually say about these this post I feel like it's a little bit redundant but I told s i' post this stuff for him because he's coming on my podcast so I kind of got to do it for him okay let's figure out what we're

(1:40:34) going to say about this um I think we just attack this from the perspective of like this is his like what it is it's the patent defense a lot of people think that um that his patents like you can't that the patents were you know that anyone can patent anything right so maybe we just red pill people with this the black pills that AI made the video yeah like hyper Advanced AI the problem with anything making the video that's like government or something is like who are they trying to blame like we never found a plane like the videos

(1:41:13) actually just make sense they like actually explains what happened to the plane that's the crazy part that's the wild part about the video is like the everything in the videos adds up to what the only story is that makes any sense as crazy as it seems that's why when the uh who was it FaZe Blaze or someone do you guys know who this is are there any younger people that know I assume it's some twitch streamer I wasn't sure but they had like 1.

(1:41:43) 5 million followers FaZe Blaze oh yeah here here we go this guy came into my replies thinking like oh it has to be fake or whatever and uh oh wow 3.7 million followers on YouTube oh dude he's jacked oh [REDACTED] I can't mess with this guy oh this dude's jacked is a baller what's going on guys fa blaz Lucas here and today I'm going to be surprising my little brother with a Lamborghini and it's going to be really funny because he came into my replies and is like you know not looking at any of the evidence thinking that uh

(1:42:23) I don't know I already forgot what I was talking about never mind I'm like I just I don't care about like video game players or whatever these people are and people like they can't think that the the videos are real doesn't doesn't matter to me man oh yeah I mean that you know think oh he thought it was AI made so that's when I was like no dude it goes back to 2014 I'm like just look at the first page of my evidence list like literally if you go to my YouTube he's like oh AI

(1:42:56) made this I'm like dude they go back to 2014 man I'm like just literally click all you have to do is just click on this link right here the very first thing says March 2014 it's like come on man just spend a little bit of effort dude just that's all I ask and then I told him to go back to video games and he's like maybe you can make a video for me and I'm like I already made a video I got that too I'm like cuz I know people can't spend more than two minutes on looking at something

(1:43:21) so that's why I made my uh I'm making the explainer videos okay let's make a TW uh hold on let's post this let's post this yeah I don't want to hate on anybody but the people I respect the least are these YouTubers that just make like uh Zoomer content there's really no other way to put it I don't have any nicer way to put it guys is just like oh Zoomer content where oh or just put out little stuff for kids cuz that sells the best it's like okay man cool you got rich selling stuff to little kids I get

(1:44:02) it yeah it's almost meme time I hope you guys are ready I've got a pretty spicy one coming up the the videos were posted originally on uh YouTube they they've been deleted off YouTube the account's been deleted let's see what we got here we're posting like unification of quantum and macro and super faster than light travel stuff and people are coming at us with

just nonsense man just total nonsense for

(1:45:40) oh David Le thank you very much man appreciate that let me give you a heart I want to heart this thank you David Lear you didn't ask any questions but you donated that's very nice of you cheers David give you a little what is this uh party emote or something appreciate that if you have any questions feel free to go ahead and ask or whatever you want to know I do like to answer questions for people uh I think that they said when did does chat anyone remember when the YouTube from reeside not got taken down

(1:46:10) I think it was 2017 or 2018 I have a bad feeling about reeside anan's health I have a feeling that reeside anan's health is not reeside andan is either like in prison or maybe not on this planet anymore would be my guess just just a guess otherwise why would they not have come forward right why would they not have come forward slam dunk Mo love you too oh so I see the inertial mass reduction this is this

(1:47:19) is the money guys if you're somebody on here who wants to know what's being held back this is the slide nural Mass modification this is the one the **Russians** and the Chinese are probably watching my stream right now unless they already know about this because this is where the spice is at right here this is the spice h hm

(1:48:48) h h I want that we you think breaking the swinger limit

(1:49:51) is correct oh Banner you spam too much nightbot got you bud you can't see my screen should be able to see my screen yeah I think if you just refresh if you can't see my screen man when we're going to the courts I'm trying to reach out to all the lawyers there was like three lawyers that were related to the case in the United States I can't get them to call me back which isn't too surprising but they might call me back at some point yeah Trump uh is the one who made space force which seems kind of

(1:50:45) interesting careful man night bot's going to get you that's too many emojis yep Intrepid Soul you got wrecked man nightbot doesn't like more than three Cliff High YouTube video you might find interesting wait he's out of YouTube as well man how do I find people man yeah nightbot brutal dude you guys got to be careful is this Cliff high is this Cliff High okay here we'll get to it just a second I don't know if this is a cliff high or not okay I don't think this is

(1:51:49) him maybe a mod can find whoever they're talking about let me know we're almost done with this it's funny how often macroscopic Quantum coherence comes back right this makes me wonder about the plane getting sucked backwards a suction into the condition vacuum H very interesting this is definitely talking about our stuff guys I'm glad we read this before our second followup

(1:52:53) interview with salvator pas this definitely has to do with accelerated vibration break down I mean I don't I don't know I don't know how to break this down macroscopic Quantum coherence macroscopic Quantum coherence

(1:53:57) the way it's been described is you needed to take the electrons the think of a cloud of electrons around an object like my cell phone here cloud of electrons around it right you need to break those out of their equilibrium and when you've broken them out of their equilibrium now you have them form a matter wave coherence where they can pair together and then they will self-organize into this matter wave now think of them as like solid electron or multiple solid electrons around the object that can then cause the entire

(1:54:26) object to undergo macroscopic Quantum coherence or where now it can act like a Quantum object that's how I understand it if anyone else wants to correct me please do because I'm a Noob I'm a Noob as they say in the Science World I have salvator P's voice in my head right now guys it's like in my head right now you

(1:56:08) there's not really much yeah we do have a response to corridor's video guys don't we here's here's my response to corridor's video you can share it with them we'll do it one more time do it directly from here's our response this guy so as you can see here uh my client showed up for work on the day of the incident and this is just a second uh I'm gonna have to have a talk with my nephew wait whoa whoa you know what I want to see it the video is not show it to me it's not it's

(1:56:43) not working on I don't I don't understand is this what the jury just so um that's I'm going to that's the whole thing unfortunately yes that is not what the whole thing was supposed to be Not only was the animation so poor but it glitched and just froze up um so again we only saw like five or six seconds wor this is our response to the corridor's video absolutely crazy it's like the the defendant is getting hosed they did 5 Seconds of a janky Recreation and then had a guy looks like Jord Le Forge

(1:57:16) sitting on a couch and trying to make fun of other people that's our respon video thank you Hermes for helping put together that response video appreciate it I think that's good right King of the normies I might actually drop King of the normies uh in one of my interviews coming up just as a little shout out to you guys memer of memes dude my dreams are great last night I

(1:58:19) should dream last night thank goodness um yeah no my followers are the best memers I would I would put our memers up against anybody's memers anybody followers if it was a meme War it would no one's going to stand a chance not g to stand a chance yeah oh do we have to **debunk** the VFX nonsense again do we have to **debunk** the VFX nonsense again guys I I feel like I have to **debunk** this silly VFX stuff every time okay so let's we'll just do it real quick guys real quick okay first of all this effect is not in our videos this is

(1:59:04) not in our videos I don't know why I have to say this every time this should be pretty obvious right this is not in our videos obviously right that's obviously not in our videos but even if you think this one frame right here even if you think this Frame matches I don't know what you're looking at when you think this matches so let's just pull it up side by side right over the top you can very clearly see that it doesn't match it's similar because they resized it and you can tell it's not the

(1:59:36) same color you can see the middle is not the same you can see the dots aren't the same you can see it doesn't overlap correctly like I don't know do people have eyes anyone who has eyes can see these don't match even the corridor crew literally contradicts themselves and that they say it matches and then they say well of course it doesn't have to match well which is it does it have to match or does it not have to match obviously 100% match so that's why I ask how many pixels match you can tell that

(2:00:08) it's not a 100% pixel match just like clearly right so what did they do they added a bunch of black pixels over here around the edges here or what do you guys think they did without having something to compare to so obviously this is not either of these effects clearly it's a donut clearly the VFX they used was a donut this match is better than that all they had to do is just recolor this donut look guys they just they used a Shader and they made the dut black easy perfect match how can you guys not see that this Donut's a perfect

(2:00:44) match it's too close to not be a perfect match guys don't worry we're going to dunk on the VFX people here in a minute the reason why it's similar is because they resized it and somebody used a uh they used a search to try to find an asset that was similar right it's pretty easy it's pretty funny the butthole metaphor yeah just because two things look similar doesn't mean they're the same it's pretty simple look man if you think the VD if you think it matches all you have to do is

(2:01:27) go find the person that hoaxed it and collect \$145,000 there's really there's \$145,000 in the line if you think it's fake go find the person who did it collect your 145,000 otherwise you're just wrong otherwise you're just wrong maybe you're the one who's wrong maybe it doesn't actually match and maybe it's not actually in our video right oh all you have to do is go ahead and find the person who did it we put 145,000 on the line oh yeah let me sorry I didn't see your super chat um hey Bailey Carter

(2:01:59) thank you very much for the Super Chat can you look at this article posted by the guardian tell me what you think a visual Guide to the parts in the debris found um I'll do you one better I've already got the oh cadon has hitting me up are we late oh no okay not yet I'm going have to drop in a minute so I I got to meet up with cadon in a little bit Bailey I'm gonna help you out here give me a sec where is my image where are you at CNN we got to get that CNN brain going okay well I'll just search

(2:02:48) here okay here we go here's the CNN thing can I make this bigger here's what's been found oh if this starts talking to me is it making noise okay so here are the parts that they found there's only three tiny Parts the only part that's been connected with a serial number is the flapp on and the flap round they did not connect to a unique serial number they used a non-unique serial number because the unique ex serial plate was missing the media doesn't mention that so you want proof there it is missing ID plate

(2:03:28) delays confirmation of MH370 a critical identification plate was missing from the flapper on whoops it's weird that CNN and MSNBC and whatever don't mention that you think

that's important how does how does this plate that's bolted on fall off the flapper on that's weird anyway if we look at this these tiny three pieces here even if you add up all this and there's no they didn't find this big piece like here this big red piece is not found they didn't find a piece this large so if you add up all these tiny

(2:04:03) pieces this is not finding the plane so if we go to our evidence there it is go and this is all pinned on my profile right so you don't have to like listen you can just go to my profile read for yourself it's all there **debunking** the debris no debris field found by the search above or below water not one single piece by the official search they search with 42 ships I think it was actually 42 planes and 32 ships I think I have this backwards we'll double check the debris that they found is consistent with fire teleportation some

(2:04:45) debris actually had burn marks on it the debris actually had a honey comb pattern consistent with Boeing fla Ron match to the non-unique serial number it's just a part number the debris is not consistent with the Barnacle growth although I'm probably going to delete this because I don't really like Jeff wise and then uh then I I actually am going to delete this I don't want to talk about Barnacle growth and then they there was an exact copy of the plane purchased by G Telesis in October of 2013 less than 6 months

(2:05:15) before the plane went missing exact copy scrapped 10 years too soon yeah it's like 1% of the plane maybe less n we're not talking about the Dream from last night again you can watch yesterday's stream if you want um God bless America indeed okay hopefully that helps you Bailey thank you very much for the Dono appreciate it let me know if you have any followup question on that yeah guys I'm a secret VFX expert on the side I waited nine years to to to deploy these videos obviously that's that's the case

(2:05:55) well meanwhile I have to snap snapshot or uh clip Snipping tool on uh PDF because I don't even know how to convert it one thing I want to know if anyone can tell me can someone tell me how people have like four videos how do people have like four videos on yeah the reason why I removed the Barnacle growth is I don't really understand the Barnacle growth stuff and I don't think Jeff wise is credible so I'm not I'm not going to quote him on anything um when I look at YouTube Some people have like four videos somehow I

(2:06:27) don't know how they do that like when I look at other people's posts they have like four videos I in like a in like a box I don't I don't get how they do that hey Kathy can any of us help you um right now I don't need much help people have been helping out here and there with stuff that I need and I appreciate it yeah good night William I don't I didn't see you say good night but good night man yeah I I probably want to talk to Lex Friedman I'm afraid people now that people know I was talking to him though

(2:06:58) they're probably going to try to tell him not to talk to me which is good all good I don't care I would love talking to Lex Friedman especially after I saw him post Diablo stuff I played Diablo for like a couple weeks it was kind of fun this reminds me of the Chappelle skit sprack sprinkle some crack in the ocean instead of crack it's random plane parts now here's the thing I

think that those plane Parts actually could be from MH370 I mean it's you see it's very little debris right very little debris

(2:07:28) and thank you very much duck vision for that donation um it's only like a little bit of debris less than 1% of the plane those could have just fallen off from the fire situation yeah yeah we're not talking about the podcasters anymore I I just want to move on from that I think this is fine can we just post this where's my boy uh my science man depleted uranium Cowboy what do you think you depleted uranium Cowboy do I need to adjust any of the wording here I think it's probably fine right the parts could have been planted

(2:08:11) the one part that I think would have been planted is going to be the flapper on that's the only one that I think they would have planted cuz that's the one where they like fought saw it they're like oh it's from MH370 and they just go ahead and like say it's all done right that that's that's the only one that's kind of sus okay if you guys want to like it or whatever um there we go I'm going to post in my Discord okay we have been letting people into the Discord slowly very slowly

(2:08:49) if I follow you which if I see you like supporting the content and stuff like that um repeatedly I'll probably start to follow you uh and if you can if I follow you you can DM me oh leak project what up leak project hell yeah leak projects in the house um then you can DM me and I can give you an invite this is the book of Thomas thank you Rex for having our our thing on the other day boom man we need some more views on this guy guys let's get to some more views Rex we need some more views on this if you haven't watched this check

(2:09:25) out the leak project interview it's only like what 30 minutes or something like that how long is this is this going to get me copyrighted hopefully not oh it's actually like 38 minutes yeah Salvador Pas is Sunday guys salvator Pi is Sunday let's see what kind of messages we got yeah see this is what happens with people people thought they were only going to watch for a few minutes and then they get they get sucked in they get sucked in man yeah that interview is good I also recommend let me see oh wow we already

(2:10:16) got 17 likes on this okay probably from the chat make sure you check out the leak project thing yeah this community is pretty sick we got some pretty dope people in here man um hard Tru number four Sunday guys right here wait how do you how do you do this here you go you want the hard Tru number four here you go there's hard Tru number four if you want that Salvador Pas and Dave rosi simultaneously in the in the chat with me it's going to be it's going to be big friends it's going to be big Quantum and

(2:11:02) UniFi uh macro unification that's what I decided to call it it's going to be sweet this is going to be a good one so come here check this one out I don't know if like does something but like it I guess maybe and yeah it's going to be sick and then check out this Rumble I don't know if you guys have Rumble check this out this was one of my best streams interviews to date one of the best ones apparently he got copyright he got strided on on Twitter for interviewing uh Jacob Chanley the shaman pretty messed up so check that

(2:11:42) one out too there's a few links to that okay you guys ready for the memes I know you're ready I don't want to do too much memes what's what's all this oh okay well okay sure I don't want to do too much memes but I got a nice one so you can see I can recognize the people that are out there supporting right like I recognize some of the same names over and over again that's weird it's pretty weird what's this I don't know about this Australia stuff people are linking to me 40

(2:12:47) camera yeah here's this was yesterday's meme post guys so today's meme post is even spicier you guys ready for it let me get it this guy's not a glowy but it just upsets these people when they say like ridiculous stuff okay I won't I won't waste more time on this oh yeah I gotta ping Stephen and work out of time to talk to him he wants to do a followup I think we'll do a followup with him okay I'm talking to Jackie on uh Friday Jackie valet hopefully I'm saying her name correctly

(2:13:52) um I don't think the patent thing really makes enough sense it's not it needs to be something about more than money man needs to about more than money you know why are people get so angry at these videos man it's ridiculous how angry people get they just can't believe that they live in a in a world that has uh more complex than what they think huh okay here we go guys for my VFX friends out there this one's for you guys get ready hold on we got to turn it up you guys ready it's meme time oh no not Jack M no sorry no I said

(2:14:46) the wrong one there's another a jack name like I'll show [Applause] [Music] you Jackie not Jackie not Jack Jackie not if it was Jack Val I mean come on I know who that is no no it's not Jack it's VFX guys visual effects visual it's not even very good ones that guy is going to be headed to the it's not even a very good one guys it's VFX guys VFX room any minute now yeah the Green Room no no what are you talking about going to go to The Green Room it's fine he's a desicated man we just saw a

(2:15:33) man become desicated oh God you saved me Doug I couldn't watch you go in there thank you and what you here with me you can't save my life I do VFX [REDACTED] the next part is the best you're playing me aren't you absolutely not I don't know what the [REDACTED] is going on I should have known a real trip to Satin was beyond JS Small Time Huger what no see you back home crying probably in cool of course they all fall for it and they all think it's VFX we really are in space I think you're so cute when you're lying we're

(2:16:15) all right no no no what's your next move huh that's a good question thought I might TW you one go ahead I like being hit I should have just maybe I should just clipped the part where she says gentleman right yes listen Mr she's got a KN okay anybody who wants a th000 new bucks help me escape they're literally in an airlock cuz I think it's [Music] bfx racing to get into the air lock I'm scared I'm to scared H jokes on you her you're big a desicated man if these are effects they're pretty darn good these are VFX

(2:17:04) are pretty darn good y'all pretty darn good [REDACTED] okay anyone else think it's a game show Sarah they all just start running they still don't think it's real they still don't think it's

[Music] real this clip is really relevant to our situation right now my [ ] actually I've changed my it's a desicated man who watch it when her arm breaks off at the end that's the best these bfx are pretty darn good look it's floating away in space yeah these are like this is [Reddit](#)

(2:18:08) right here I want to put Corridor crew face in her it's VFX guys visual effects it's a projection it's not even very good ones that guy is going to be headed to The Green Room any minute now yeah the Green Room what are you talking about got to go to The Green Room this is me right here it's a desting we a man become desicated VFX what do you mean literally no issues with the videos it's VFX I'm scared I'm so scared jokes on you her big a this is Avenue 5 this is my favorite scene on Avenue 5 season 1

(2:18:49) this show it's on HBO if these are effects they're pretty darn good okay we got to post it oh let me see what we got here I was just checking see if there's any nothing I know no that matters my fed disinfo social media what's even in here oh this is the Poltergeist initiative thing that I posted way back I'm like what do I have I have a folder called fed thisinfo social media and it's got that Poltergeist initiative thing that I posted a while back in there I was actually going to post that

(2:19:42) again okay is that what he says they're pretty darn good yeah it's not the me memes we deserve it's the ones we uh um yeah I'm not meeking with Jack valet no I'm meeking with Jackie what's her last name Jackie devoy Jackie deoy not Jackie valet Jackie devoy she's a a British uh podcaster streamer on Friday

(2:21:16) for we'll do a little reminder is that good I think that's probably good the rumble show was uh um Clint Russell and uh Ian

(2:22:26) Crossland I would sit down with anybody Weinstein fine sure anyone who wants to talk yeah yeah Project Unity was fine until yeah liberty lockdown is the one um uh Project Unity was fine till he just went off the deep end and like I don't know if does he just like decide his opinions based on social consensus that was really weird man he's started getting murdered in his replies and then he starts like rage retweeting his own replies it was super weird and then he says makes some post about he's going to

(2:23:03) stop replying and replies like how about just stop replying instead of making a post about how you're going to stop replying super weird anyway here we go I think this is good let me I want to make sure I quote this guy correctly I love the look on his face when he goes running out into thear I'm so scared I'm so scared I love this these are effects that pretty darn good these are effects [ ] okay I think that I think we're good wait what did somebody just

(2:24:23) say what page say I don't see I'm going to have to drop here in a minute because I got to get ready for cadon what was the first sentence in what not following you guys okay I think this is good thank you thank you this is what I think every time I see someone say it's VFX appreciate you correct me there VFX are pretty darn good maybe I'll get rid of this then I want it to be

(2:25:29) shorter because I don't do yeah there we go okay okay want to get under the Twitter limit here this is what I think every time I see someone say it's I think it's fixed it right now right yeah it's fixed okay I need an editor man I need an editor okay I think we're good **debunk** update okay I'll give you guys the the sauce so you don't have to go anywhere what what in the butt what what in the butt guys okay well this was a good stream tonight we did some science we did some memes as we often do science little

(2:26:14) science little memes uh um we didn't get around so I want to do I don't know is it going to be live kraad are you on I don't see you let me ask cadon is it live cadon I'm not sure I bet it's not live but I'll try to post uh if it is if it's live I'll post a tweet but my guess is it's not live it'll probably be update it'll probably come out like tomorrow so just a heads up yeah why would they not to call it MH370 right like it makes no sense man makes no sense oh it is going to be

(2:27:01) live it is going to be live how are people getting into my Discord oh I invited somebody I forgot yeah who's this here we go here it is okay chat here you go we're going live in 30 minutes or less that's the cadon I better go try to grab some food real quick before this thing guys um I might be a couple minutes late to it I'll let crock it on and know I'm gonna

(2:28:04) have to drop though guys um I do want to do an Evidence review I was thinking about doing it tomorrow night we might still do it tomorrow night because then I can edit it while I'm going through it while I do the the evidence review I don't know not sure either evidence review tomorrow night or Friday for sure I'm not sure which day yet we'll see anyway we'll talk soon guys thanks for being here tonight thanks for the donations thanks for the questions thanks for the trolls and the haters who

(2:28:34) are uh you know constantly out there elevating us and check out the kraad honor stream and uh look for more stuff tomorrow appreciate you guys I'll see you guys over at kraad Onis

Transcript:

(00:00) hitters in the game and they both focused on obviously right Skinwalker Ranch Y and the you into Basin very interesting yeah I mean Bigalow he's a character man he's not returning calls these days um he wants to be left alone which makes me think he's got something else that he's working on um but that that's the way this has to happen uh you know there's a lot of rumors about like what he's done what he's doing still um pretty interesting stuff uh I mean his interest is in like the afterlife right

(00:27) now right so that would be like trying to prove it the reality of something like that yep that's that's I mean I'm curious to see where he's gonna go with that though like where he tries to take that and how yeah I hope he doesn't uh hope he doesn't kill the audience you never know man right that would be the easy way to do it I guess yep no there's uh I mean he's got you know you'll never know what him because he he Mak you you know does one thing and then you're look he does the

(00:55) misdirection so you're following what he's doing and then over here he's got something else going on right like like I think he made the those inflatable capsules for space station like what and signed some huge government contracts you know all the while under the GU of UFO stuff um I don't know man but I think like you're going to start seeing more and more of this and especially now with everything that's going on like I'm one of those forign Believers that you're never going to hear from the

(01:17) government right like you know we've talked about this in these spaces many times government in my opinion is never going to tell you anything because there's no benefit there's absolutely no upside it's all downside to them um the only upside would be if they can Implement some other something else hey I'll tell you this but at the same time um you're no longer allowed to I don't know use your phone or I'll tell you this but you got to be home by 10 o'clock every night because you know

(01:40) there's aliens in the skies like they wouldn't tell you for no reason uh so I think it you're going to see these more and more of these we're started here in a sec happen hopefully sooner rather than later yo yo welcome everybody yeah a lot of people time they get sucked in by theinformation time all have known history here we are the razer's edge of History uh you know you and on the front lines you I might have to drop out of the space I don't know if I'm a focus participating pushing it Forward um

(02:10) victim compy wild with AI as well we were talking about AI earlier and I I have ai related collaborative business so I'm I'm thinking of ways of um of using AI to further the research of things that you do and um yeah talk about that any to make this quieter oh yeah couple weeks ago I was I went to the Spruce Goose I was invited by Google because I do a lot of work in AI as well um outside of what I do here I was invited by Google guys so yeah I posted some pictures online of me there um meeting with them because there's some

(02:42) interesting AI is another animal uh it's not what everyone thinks it is um it is it is way worse no I'm just kidding uh it's uh it's just not as it's not what everyone thinks um okay okay what does everyone think and what is it really you know it's superable no no I mean it's not like there's this impression that it's you know yeah the YouTubers have spent no time looking at the research and just keep saying like false things from a business standpoint it's kind of ridiculous man be sure um but right now

(03:13) not in that position I think you're still you just watched a huge uh a huge misstep so one of the concerns I had going into this year was because I come from the dotom days right the

problem is like they're trying to get us to focus on the VFX **debunk** that's what the disinformation is trying to do right and we got to just Avid and during those days things were and what we did learn though is anytime you have an industry like this to pop up you're going to have pitfalls that happen have steps um because of crypto wait this guy I

(03:48) even like this thing I'm I'm gonna unlike it Mass I think people think that like Corridor Digital these people are going to come in and rescue them and like argue with me like my favorite is when they like they ping their favorite YouTuber like he's going to come to their rescue a lot people got in they're never going to API calls well you did that with a company that's not public who just fired their CEO who now has all kinds of turmoil inside and I'm sure their data retention policy has not been

(04:19) clearly outlined so you're going to see there was been Brian RL talked with Brian has just had a you know he's been posting online a lot about um his Michael solid a PhD know because a lot companies went all in with open Ai and you know this is the first this is the first shoe to drop there should there'll most likely be another but we you know these people didn't learn anything from the day to days and may won't use away all of your stu um to these third party upstarts who just who knows what their

(04:54) deal is oh I can provide you a fern and gooey and then upcharge your API calls and make money and uh don't worry about what doing to data and so that's where the industry is now and so you lost a lot of trust and so now we have to re you know come back from that which is going to be difficult but it's going to happen wow that's so fascinating to get your perspective on that um yeah I didn't know you you were that deep in the AI world how fascinating yeah I'm been getting into it just this year um

(05:22) and yeah maybe we could you know follow privately about some of the details but I have this really cool uh business partner who has a a really badass uh you know resarch and development AI firm with a lot of pretty amazing you know projects that um some of which he's not allowed to tell me but um so he's been a great business Mentor as well as mentor of AI and so we've been hatching all these different projects and ideas together and it's it's really nice because he's also an artist but also um

(05:46) but also an experiencer so um so we've been brainstorming all kinds of uh projects and Concepts some of which we you know I was mentioning earlier in the space um in terms of using the technology to further our understanding of the phenomena Etc one example that I'm allowed to talk about is not a big deal when we've been um he's an experiencer so we've been starting to um enter those narratives and text into you know language of training models and um you know looking for patterns things

(06:14) like that so yeah we were also talking about Chris was suggesting here like I like Willi probably our the same kind of approach to try some work oh well I just dropped out of the space oops whatever I think we're going to focus on some work anyway I forgot that I was in the space right there when I hit that close button oh well all good we're going to do a little bit of

work here guys we don't really need to sit and listen to that stuff um let me send a message to Melo we got stuff we have to prepare

(06:58) for TJ stalking me yeah I'm not going to listen to that anymore depleted uranium I want to work on stuff I got I got to prepare as well I've got a big call tomorrow that I need to be ready for so I want to work on a little bit of salvator Pi science give me a second gotta download some papers um let see what we got here we're going to look at some s with our Pious papers here is this the same one man s's been sending me a lot of stuff I just can't keep up man see what we got

(08:01) here start with this one let's see what other what else we have Julian Corey yeah totally destroyed man yeah check out those comments on that on those uh check out those comments on those interviews I think it's funny how like people that live perpetually on the internet don't know what real people are like those guys in those uh those podcasts really thought that they that people were going to resonate on me they really thought they were dunking on me they had no idea they just no idea it's cuz they perpetually live on

(08:53) **Reddit** where everything on **Reddit** is fake and and curated and they don't realize like what real people think so the original concept described is named in the high energy electromagnetic field generated this Concepts governing physics entail the coupling of gyration high frequency spin vibration and possible uh curve a linear translation of electrically charged systems if we couple the system's high frequency of rotation with high vibration frequencies in the range of 10 to the 99 to 10 to the 18 Hertz and

(09:34) above we can obtain the electromagnetic field intensity values in the range of okay the thing about salar Pi is like having all these numbers is great but it doesn't mean anything to Common People these extremely high electromagnetic field intensity values emphasize the novelty of this concept especially suited for the design of H energy grav generation Machinery with power output levels much higher than those currently achievable utilization of of such high power sources for space Power propulsion and generation as it pertains to reduction

(10:05) in a spacecraft's inertial mass now we're getting spicy as a direct result of the local vacuum polarization is an important application of the described theoretical Concept in this matter extreme spacecraft speeds can be achieved is he talking about our um I think he's talking about the way that they're able to create the geodesics yeah I didn't think that the Danny interview was going to be that bad for him honestly I thought it was like going to be okay and then I thought when he was messaging me I was already super

(10:44) suspicious when he started calling me and stuff about the interview and so I like asked him how it would go and he's like oh I think it'll be even and made sure he wouldn't edit it and then he went with the sketchy name and he just got destroyed in his own video pretty wild that's why I'm not afraid of going on anybody's podcast man at all like even if people are going to try to like Ambush me it doesn't matter man um like after that that interview I got so much more attention and so much more

(11:18) people being like hey you you handled yourself well and that cuz a lot of people saw right through it you know it's wild yeah salvator needs a dumb it down for me as well yeah feel hey okayy crypto hey Bernie what's up buddy appreciate you man uh I can address my security clearance sure I have a security clearance because I'm in healthcare it and uh I'm a contractor so that means I've work with the government but not for the government right and uh my security clearance doesn't have anything

(11:56) to do with uaps or Advanced Tech technology I'm not hiding anything I don't have access to anything secretive I only bring it up because it makes it harder to discredit me so the only reason why I one of the only reasons why I thought I would be good for being the spokesperson for these videos is that it would be very difficult to discredit me right A lot of people would think that if you're just a random person off the street it's easy to say that you know this person might be crazy or something like that right

(12:25) you could even say that you know may they could even say that was Russian disinformation but with the security clearance it it rules all these narratives out right so that's the reason why I thought oh well I have the security clearance that'll be pretty tough yeah generation Zed Dave Rossy we just did a whole we did check out uh hard truths number three man I'm actually going to be on generation Zed on Saturday by the way and Dave Rossy will be on hard TRS number four with salvator Pas on Sunday so it's going to

(12:56) be pretty awesome that's why I'm trying to review this stuff s wants me to post this before our uh our our um interview I think he's going to talk about some of this stuff so the question is how long is this because I don't like reading let's start with the conclusion right yeah don't worry guys my my health is fine I'm as happy as I could possibly be man yeah I mean you guys can use your imagination on why someone in healthcare would need security clearance you know you can figure it out but once again it

(13:33) doesn't have anything to do with advanced technology or anything everything that we have been posting is uh publicly available uh The Lex tweet well people who were uh people were in the first half of my live stream yesterday probably saw everything that happens so they can probably catch you up I had to delete the first half of my live stream stream because I accidentally had my my DMs showing the whole time so people just watched my whole conversation got to keep the DMS off the screen guys whoops um yeah bu a weapons lab you guys people

(14:18) think too highly of me people think that I'm the person that made the videos people think that I'm like running like counter Intel or something or like scop it's like man that' be that's you guys giv me way too much credit man although I will say we are running counter Intel against the government clearly I mean that's by definition what we're doing here people are trying to keep this secret we're trying to keep it out in the open yeah I think the most likely scenario in my mind still is that

(14:47) they're trying to save the lives of the people on the plane I mean just that's given the fire

scenario that just seems it all falls into place and then that that also makes sense of why they had to cover it up right you guys will definitely want to check out what's Clint's what's Clint's uh Liberty podcast wait is that the right Clint that's not the right Clint is it isn't it like Liberty pod damn uh what's Clint um there's going to be an awesome interview coming out probably what tomorrow or something

(15:30) uh I'm afraid I gotta like let me go look at my let me go look at my DMs guys uh Liberty lock pod with Clint Russell that one's going to be sweet man jo mama ain't much but I like your your perspective thanks man thanks jo mama and yeah I just want to repeat uh because I think I've deleted all my other streams that uh you don't have to pay you don't have to donate if you if your money means a lot to you I would prefer that you keep your money um I will try to respond to everybody regardless of if you donate or

(16:10) whatever Super Chat whatever this is but I appreciate that and if I ever do become wealthy off of this somehow then my only goal in life will be to give back to people I've made a lot of powerful connections recently I feel like I probably won't have to worry about money for the rest of my life even though I'm not wealthy right now but I have enough money from having worked for the last 18 years but um yeah I mean if this were to take off or if I were to lose my job I probably would try to F I probably would

(16:39) try to switch over into being a podcaster I guess people say that I'm pretty good at it but I don't know um I think it's okay to say what I was talking about with Lex I'm just thinking about it uh I was talking to him and uh I mean a lot of people saw like I had my chat open so long story short he wasn't very familiar with the case and the situation so uh I feel like if I spend the time to explain it to him uh he most likely would be interested but I'm not sure he seems like a really open-minded guy I

(17:15) think it was really cool that he reached out to me uh after like we like you know blew up in his replies I I honestly highly respect Lex fredman I've seen a lot of his his interviews that he does and I enjoy them because I really like intellectual conversation and he's a very deep thinker and the moment I told him as well that the reply that I replied to was a good one because he thinks that like all these people think all these narratives about him right and I kind of can relate to that because it's like the

(17:44) same thing for me where people are making up all this [REDACTED] where I think that I'm controlled by who this person or that person and uh you know none of that stuff's true right and whenever people talk crap about somebody it just makes me want to talk to them more honestly cuz I don't care what side of the political Spectrum you're on whatever I just like talking to real people man so you know talking to Lex I almost would prefer talking to Lex over talking to Joe Rogan to be honest with you guys from just a personal

(18:12) standpoint because I just think he's a a cool guy in general I wouldn't even care if he like set me up on a hit job interview I don't think he would I think he's he would never do that I don't think but I would just like talking to him in general that would be like one of the highlights of uh

my interviewing of with people but I like again I like talking to everybody who's just a real person in general uh William thanks a lot man I appreciate it I've seen you out there I've seen you on the front lines you

(18:39) know I appreciate it man thank you very much for your donation it's awesome yeah I think they would want to make the the plane they didn't want to make the plane disappear because the plane is on fire so this plane everybody's doomed on this plane like this this plane is screwed man and uh so most likely scenario is that they are teleporting it somewhere else to safety that's the most likely scenario not not you know whatever you guys can believe whatever you want I don't really care but that's what I think the most likely

(19:07) scenario is but what this really comes down to is the technology right yeah Rogan I I'm a little skeptical of man I'm a little worried he seems like he's gotten a little more bitter over the years not sure though snot what's up buddy why can't we see the Drone in the satellite video because it's just off the screen I've actually got an image just got an image just for you cuz you donated um man I've got so many images now it's tough people like if anyone is going to like just out there going to try to got

(19:43) to me in a podcast just realize like I always come prepared I'm always prepared I always have the receipts you're not going to catch me on something that I'm not familiar with I mean at least I don't think they are so you know at least come I'm prepared right these people don't do their homework and they think they're going to catch me so the Drone is just off the screen probably on the other side of this uh smoke Trail up here in the very early part and then it goes underneath the smoke Trail here and then

(20:11) it's looking down at the plane while the plane's turning here so this is the why and the reason too is that presumably the person that leaked this didn't want to like they might have thought that the first video was enough they honestly might have thought the first video was enough and they didn't even intend to releas the second one Punjabi Batman just uploaded on Reddit okay well now we got to go check Reddit out guys Punjabi Batman actually pinged me the other day for the first time in a while but I I didn't really agree with

(20:43) some of the stuff he was posting so I didn't really run with it I like some of what he posts I think he does have connections but uh I'm not going to run with any like everything he says wait did he get unbanned he got unbanned from airliner abduction maybe it was only a temp ban oh we already this is old news though right guys hold on I'll show it in a sec okay let's let's see what uh what angry post we're getting today guys let's see what we got here how mad are people look how mad people get man why people

(21:34) get so angry dude these are the types of people that get mad when I block them like they're just insisting Let It Go think like I think guys think like I think it's just CNN brain chronic online syndrome see it's just same thing again every time I want this to be true but hey I it's not true and you have to believe what I think it's like guys you're transparent man you're transparent the end of the heat vision proved me the other way okay man I'm not even going to

bother it's

(22:33) just too low effort man like I'm not this is like thing PE people want me to like make them believe right and that's not what I do I just show people the evidence uh Kurt jangle I think he's I think I like him I think that he's probably believes that it's fake so that's probably why he hasn't reached out already it's the only reason I can think of which is fine I mean I think Kurt jangle is probably going to go through uh an evolution of understanding as he gets a little bit older and I don't mean that in a bad way

(23:04) I think he's a good guy just think that people start to realize there's more to this world as they get a little bit older just checking it out I think I think Kurt's actually real chill I like this thing a lot uh I don't respect Jack s fty at all I think he's completely full of crap so I didn't watch I wouldn't watch anything with him involved what what kind of claims Bernie did Jack make I think that anybody that is disrespectful to people who are just asking basic questions is not somebody

(23:45) I'm going to ever listen to I mean I I came at him from a very respectful way and asked him stuff and he just push back like like a total [REDACTED] so someone like that I'm never talking to ever again like there's nobody the people that get blocked by me none of them are coming at me from a respectful tone they always come at me like disrespectful condescending and then they claim that I blocked them for just asking questions but you notice they literally never post what their post is um you know it's it's very easy to

(24:20) see through people very easy yeah I mean I would not trust anything Jack says around David grush at all nothing at all I've already spoken to the um Corridor crew thing on the the space we were on earlier uh and it was just like grade school level propaganda you're never going to see the corridor crew doing what I'm doing right now streaming showing you transparency like they clearly got extremely upset when I dunked on them on the on Danny Jones thing and like yeah a lot of people have unsubscribed from concrete I've heard a

(25:03) lot of people mention that which yeah I it's a bad look for Danny Jones and if these videos come out as true then it's going to end the career of Danny Jones and Julian Dory and and probably Corridor crew no one will ever believe anything they ever say again yeah the cter crew stuff is like meant for toddlers man that's the kind of like logic that they subscribe to is like little little kids like oh we're going to put little Graphics in here and laugh while we're on a couch like honestly it's just straight up

(25:33) embarrassing man straight up embarrassing you'll never see me doing corny stuff like that yeah it's like a little circle jerk it's just yeah really dumb I'm not even going to respond to it it's honestly not even worth responding to oh Theo yeah Theo Von actually that that would actually be legit we I wonder if we can figure out a connection to theovon that's a good that's a good idea that's a real good idea I hadn't really considered him let me let me see if he's on Twitter

(26:11) right I don't know if I follow him what what was he famous for wow I wasn't even following him one million followers wasn't he a wasn't he a comedian seems like he doesn't really post much I like him though I think he's a smart dude what's his podcast called is it just called like three ofon I don't know I can message him yeah not today not tonight that's a good recommendation though yeah seems like a real good dude but that's a that's a good recommendation thank you oh I'm I'm jeez I wasn't even

(27:03) showing you guys I'm just sitting here talking without you guys even showing the screen you guys got to let me know man I'm sitting here like not showing the screen you guys wonder what I'm looking at I'm sitting here looking at stuff on [Reddit](#) you guys aren't even uh aren't even seeing what I I was replying to people yeah I had never even heard of corridor crew either never even heard of the corridor crew redacted would be good I think yeah Jack and Tim were discussing the grush Congress claims from sfa's

(27:34) experiences and Jack disclosed the CIA originally hired him to reverse engineer the Roswell crash yeah I Jack thinks Time Travelers in the future called him on the phone the time travel stuff is where I get hung up yeah he's completely full of crap guys dude's completely full of crap the time travel from the future stuff makes no sense at all it would break causality so yeah he's just full of crap man he's like that orb Guy what's that orb guy Patrick Jackson Patrick Jackson's completely full of crap

(28:09) completely full of crap Lex may put you up in a Motel 6 hey man Motel 6 would be better than the eono lodge I get to the eono lodge and I'm like yeah okay this was a setup interview like yeah I'm pretty sure he doesn't put mitaku in the Eon LOD he was so cheap dude so cheap the next pod I'm going on this week I think I can announce something as well dude I look at my calendar every single day has a podcast and I have like more I could respond to but I'm just I'm wiped out man kadana tomorrow night kadana if

(28:53) kadana is in the chat we're going to go on kad's thing and to be clear too I'm not just just doing only the big ones although now I've started to make friends with some of the big podcasters like when they reach out to me like leak project did then I'm definitely helping them out I'll probably go on uh Oppenheimer Ranch again the whatever magnetic resonance podcast just because Diamond's really cool man Diamond knows a lot of stuff I could tell right away that this guy actually knows stuff um

(29:22) and then I'm going to be on Infowars on Thursday guys uh I'm actually going to be on Infowars on Thursday interestingly oh I should hit up Sam tripley again I don't think his people reached out to me yet unless I missed it but I'm sure he will but yeah if I talked to Sam tripy if he knows Theo then maybe I'll try to get a connection that way I oh I almost said something I didn't want to say there's more stuff coming though guys so this isn't going to disappear we've got stuff that's going to be going

(29:56) into next month already already starting to get planned out and I think that some of the stuff that starts coming out is going to elevate us even higher than we are right now some of it I

I don't know if I'm going to be promoting it might be stuff that happens behind the scenes uh I wish Shawn Ryan I don't know what's going on I think Shawn Ryan's skeptical people probably reached out to him yeah magnetic reversal news with diamond he's real cool man he talks a lot as for a host but he

(30:28) knows a lot so I don't really care yeah we're going to be on infow Wars on Thursday that's pretty neat I don't think Alex Jones is going to be like talking to me but um and I I I'm a little careful I'm a little skeptical I mean there's a lot of people that have negative connotation of Alex Jones even even I did but again I'm going to repeat I'll talk to anybody and I'm going to save my judgments of people because I've learned that you know everything's [REDACTED] out there so yeah

(30:56) we're going to just you know take it one one step at a time and I know a lot of people may think oh well you know you're catering to the alt-right or whatever I'm just going on anybody who puts me who puts me up man if some people on the left wing want to talk to me I'd be happy to talk to them I think that I find that the people on the left wing have a harder time under believing this stuff because they're more grounded in conspiracies can't be real we're at the Pinnacle of civilization there can't be any more

(31:24) science than what we already know so yeah I think yeah I don't know I don't know man with Sean Ryan I'm not I'm not sure what's up with them to be honest with you I just don't know I'm just very skeptical of anybody who has a lot of Spooks on and a lot of military people on yeah P Jackson came up with an orb system he literally just makes up [REDACTED] guys Patrick Jackson is a literal fraud who just makes up nonsense like just go read the book review that's all you have to do it's

(32:01) all just a bunch of nonsense it's not even coherent like no offense I'm well it is offensive I mean he deserves it he's a fraud but you know I gave him a chance I didn't prejudge him and he just posted a bunch of nonsense and then I went and checked out his book review and realized he's definitely full of crap uh yeah and the problem is that these people if somebody's out there trying to tell you all the answers and how they know everything works just guys red flags turn away turn away the reason

(32:31) why I started a podcast is because I don't know how all this stuff works and I want to try to figure it out yeah these aren't contrails but the orbs do distort them so it's interesting but we already knew this we've already had the the screenshots of this this one's the Reversed one what's yeah I mean the smoke does dissipate so I don't know why people don't realize this is smoke it's weird oh we got L reviews in the chat you angry L reviews don't you have more uh hit jobs

(33:21) to do on me too funny man I've never seen anyone saltier than L views guys yeah the Reversed one's interesting yeah it's interesting how the uh the UFO people have gotten a lot more quiet about me have you guys noticed that the UFO Community people as we've gotten like way bigger they've gotten a lot Qui quieter huh it's pretty funny that's okay guys I'm not

going to I wouldn't give you the attention of shouting you out on a big platform I'm too nice for that plus like a lot of these haters

(34:10) don't don't deserve it frankly and just keep saying my name boys just keep saying my name all it does is bring more people to the evidence I don't care I don't think about the haters for one minute I got too much going on if I told you some of the people that I'm going to be talking to it would blow your mind straight up blow your mind and that does sound egotistical but man I just can't believe situation we're in right now it's wild so what's he trying to get to on this second part here I don't

(34:51) really get like the first part we already showed the three frames thing he's just trying to show watch them as they overlap this isn't this what the corridor crew is trying to **debunk** in the Danny Jones thing saying how this like didn't look natural like this looks exactly natural like this is exactly what it would look like when they overlap like this I thought it so weird yeah Diamond's chat was all dude he was just regulating the haters it was awesome please RoR in tweets and the Mage 37 two tweets with the same

(35:26) information could add to the phenomenon uh yeah we can take a look yeah I won't respond to the haters you're fine yeah that's funny I think guia actually pinged me I probably go guia I don't care oh kadana what's up kadana yeah we'll be talking tomorrow we'll be talking tomorrow kradon can't wait for it yeah yeah if anyone wants to **debunk** the videos and find the hoaxer man all you got to do is find the hoaxer use your extended resources to find the hoaxer and um bring the source files I

(36:16) mean they will have a hard drive full of source files to make videos this perfect you would have to have a whole hard drive full of your work so just bring those source files and you can collect \$145,000 \$145,000 real money 100,000 from kim.com 20,000 from investigate Earth podcast Chad and Sherry shout out to them and 25,000 from a wealthy donor who ran for higher office who I'm in direct communication with 145,000 total you can collect that money all you got to do is find the hoaxer man should be easy right it was

(36:54) easy you easily **debunked** it should be able to easily find it hell we found the the leaker so I mean there's no excuses whatsoever that's good money man 145 Grand I almost want to find it if I thought these videos were fake I would definitely be searching trying to find that person because I could use that 145 Grand I'm not going to lie I would use that money I'm not that rich I'm not that rich I wish I was uh is this my right one let's see what we got here uh we got to do some salvat P science so let me take a look

(37:24) who this person they wanted me to find was oh I forgot I have a community man how many people are in our community 2.8 th000 members whoa whoa it's getting big what's the what's this what's this uh oh reported posts uh oh uh oh stop it man stop talking about the videos man I don't know what this is Let's uh should we remove him from the community I don't I don't know what this means wait no Jil fins was on our side I thought Jil fins isn't on our side anymore is this even a reply to anything

(38:07) I don't even know what this is do I remove this chat Chad tell me if I remove this or not why the haters just hating so hard it's so funny does anyone know does anyone know if this if we should remove this person or not guys if you think the videos are fake why are you in our My Stream when I think things are fake I don't uh I don't go around like trying to troll people about them that's just weird Behavior man I don't think I'm going to remove this post because I don't know what this

(38:51) means just don't pull up your DMs yeah I'm not going to don't worry about it just ignore them yeah I think we're going to ignore this one okay let's find oh oops I got to let's keep it we kept it we're ke keeping it uh who's the post damn guys the chat's moving too fast someone remind me who I'm looking for who am I working for man I can't find it where there's too many messages man I'll have to dig through and find somebody said there was two posts that we got to look at whoever

(39:36) that was can you please let me know again what about open a GoFundMe n that's not going to happen that ain't going to happen I appreciate it but nah if you really want to donate and you feel that strongly about it you can do whatever the Super Chat is in this YouTube thing you can do that if you want I guess that's probably the only way I'm going to do it will Ashton compare butth holes if he went on Joe Rogan probably I'll probably use something less crude but I I don't know debunking the

(40:06) videos like it's just it's a waste of time like we we have the Bounty out there that's the only way to debunk them I don't need to deal with crappy debunks okay there it is rhoran how do I find rhoran is there a search function I already got another report rorian have I seen this video yeah we've seen the video guys yeah this one's really cool oh so this guy posted in the thing in the Discord or in the thing yesterday yeah this one's really neat I like this one I mean technically they're adding

(40:50) frames onto this but yeah where's rhoran oh this got a lot of this got a lot of views man I like this one this this really shows but you can tell like this is just adding frames in there because the orbs aren't spinning um oh he upscaled them nice dude higher quality damn nice dude all I should be monitoring the community a little bit more huh contrl F doesn't find him oh yeah rhoran doesn't find him command out control F doesn't work how long ago was it man can someone give me the day to rhoran posts what am I

(41:49) looking for tweet some information that could add to the phenomenon man this thing's been going wild man I i see a lot of you guys in here I appreciate you rorion where's the bot Army okay well you're getting blocked for that one don't worry don't worry Lou you won't be back too funny the trolls baby the trolls they're mad man they're mad that we got way too big for them they were trying to minimize this thing and make it go away and all they did was Elevate us even higher anyway if you're still watching

(42:47) Lou uh go find that leaker go find that hoaxter I mean go find the hoaxter collect 145,000 I know you need it I know you need it I can tell just looking at you I'm just kidding I'm not trying to

be rude man I don't know where this rhoran is man someone's going to have to oh we've got mods We've Got Mods in fact it's time to upgrade Hermes to a moderator let's add Bernie to a moderator where's he at oh alien scientist that's real alien scientist right there right that's Jeremy I'll add

(43:27) him as a moderator I think that's yeah so yeah alien scientist dude we might need to talk about that we might need to talk about actually showing real teleportation live on camera uh I was talking to royy Herbert he wants to show it too I might be able to find fundraisers who can fund us like literally just teleporting something how freaking cool would that be man that'd be sick dude if we just if we just prove it by showing teleportation on camera dude that' be awesome man that'd be awesome we're making connections we

(44:05) might be able to make it happen dude we might be able to make it happen Okay congrats my new moderators alien scientist Bernie and Hermes appreciate you guys helping out if you see anybody being douchebags you just you know boot them or whatever you got to do I can't find this post about this thing here uh oh yeah we were I was going to make a post about the clouds actually I'm I'm going to do that real quick as well friend press cadon let me find where I posted that I think I downloaded it that reminded me thank

(44:38) you where is it oh I gotta be careful some of this stuff I don't think I'm supposed to share this one yeah yeah you can see the clouds moving here it's just not as simple as like left right yeah Jeremy and Bernie are really dope I was tell I tell people like cuz people ask about alien scientists they actually asked me today on the Liberty pod um which I think should be coming out tomorrow with Clint Russell and uh Ian um God what Ian Crossland that was that was an awesome interview I did today with them like

(45:26) that's going to be a big one you guys are going to enjoy that for sure it was good man that's okay uh Bernie no rush man like I've been getting overwhelmed with emails man really overwhelmed uh but yeah like people ask about alien scientists about Jeremy and I say that like yeah Jeremy is like you know he's hardcore in the conspiracy Community he does his research that he was he was very skeptical of me at first which made a total amount of sense but that you know I think I earned his trust to some degree and you know um like yeah

(45:56) I think that by the end of it I'm very proud that I was able to earn somebody's trust like that who's you know really wants to vet people and make sure they're legit so that's what I tell people I actually told Ian Crossland that today as well when he brought you up Mar Fugal TV I don't know what that is everybody rhoran I you guys keep talking about rorian I'm looking back like how many days ago is this rhoran post like you guys got to help me out here like tell me the day where you're

(46:27) seeing this or something cuz I don't see it yeah we are going to have uh Salvador Pas and Dave Rossi on Sunday it's going to be amazing I'm I'm just getting better and better with my doing my interviews as well Dave rossy's interview blew my mind dude blew my mind I love that guy he might be my favorite person on the planet right after Salvador Pas it's Jeremy ree alien

scientist folks if you're not familiar with alien scientists highly suggest checking it out someone tell me where rhoran

(47:04) is how far back I mean guys you're making me search really hard here for rhoran you're making me search really far back yeah I just want the **truth** too man that's all I want I don't see any rhoran stuffff yeah Dave Rossy is like one of the most respectful people ever I wish I could be as nice as Dave Rossy is I I just don't have that level of niceness in me icy slide seems to be a play on words meaning intelligence Community Forum slide I would say that the parts they found in the ocean are completely

(47:49) consistent with the fire event and the teleportation and that some of them even had bird marks on it oh maybe because it's like I'm looking at latest and not top posts no man I don't know man someone's got to help me search where up here rorian I mean I don't know guys anyway unless somebody can give me a direct link to rhoran thing or whatever I'm not going to go digging around for it it's too much work uh one sec just me to make sure you guys don't see all my files here although I don't

(48:33) think there's anything really that that secretive I have some pretty big calls tomorrow as well that I got to be prepared for people I have to convince that the case is worth looking into could mean a lot for what happens to the Future this case I can't really say much more than that right now but yeah uh who made this for me I want to credit them but I don't I don't remember who made this it's awkward imagine if I was the maker of this and this was like the nyear long con and then I come out of the woodwork

(49:37) it's just like this doesn't that story doesn't make any sense and also I don't have the visual effect skills Russell Brand would be interesting yeah I don't know I think that I'm just skeptical of some people I think that even people that like are revealing conspiracies would have too much of a hard time believing the teleportation thing even even Tim P Tim p is like oh faster than the light communication exists and then uh Brian lup's like you got to talk to Ashton the teleportation

(50:07) he's like well I don't know about all that it's like wait you just you just said faster than like communication exists why didn't they teleport the planes that hit the Twin Towers you know that's not the first time I've been asked that question people have actually asked me already why would you not teleport to planes to hit the Twin Towers I think that they didn't have the technology before then because you're right why wouldn't you teleport to planes to hit the Twin Towers although I think alien scientists

(50:32) would have something to say to you about that I'm actually not sure what his opinion is on on that that particular conspiracy theory yeah it was pretty weird Danny got so emotional I think the reason why he got so emotional just to be perfectly honest is that I knew he was going to pull out the corridor crew thing at the end of the at the end of our interview because he kept giving me these smirks he be like like he had something up his sleeve and I'm looking at him like huh what what he's going to play right and I

(51:01) was thinking that the corridor crew was going to done like some amazing Recreation and uh then I see that it's just garbage stuff that he read off of like metabunk that was already all **debunked** or whatever and I'm like just typing like oh okay I'm going to destroy this guy which I did and then uh um so then I just destroyed Nico's credibility and Danny was so upset by it right Danny sitting there like why won't you just believe him I'm like well I just **debunked** every single thing he said

(51:31) he like but but he's been doing this this is his job and I'm like oh wow okay like that doesn't mean anything though like he was just he was incorrect right and just like honestly like my impression of Danny and Julian is that they're **redditors** that whatever they think is popular is what's real right and it's weird because yeah it's during the day it's like dude you didn't read like anything I've put out there it's like it's night time man it's not daytime like the clouds don't move yeah

(52:05) well uh they do move like we're looking at it right here does this not work what is this is this an is this a screenshot I think this is a screenshot G oh no oh no oh no this is a screenshot well that's not good we're going to have to find this yes this is a screen grab oh boy wait what but it's anov file why what am I doing wrong here chat is it the wrong file format type did I do something wrong here do I have to use a gif for this yeah I think the rhoran thing's fake people couldn't find it I don't

(53:06) know what that is all about does Twitter not support MOV files what do you guys think pretty weird I guess I can try to convert it we'll convert to MP4 see if that fixes the problem the whole Cloud's not moving and no Parallax thing too it's just like what the hell dude this should fix it okay let's redo our post yikes oh I also I was posting to the wrong thing I was I was posting to the MH370 thing instead there we go yeah I think it didn't support it

(54:33) I don't think we need to post anything else there it's fine uh let me make sure I didn't mess with okay there we go well you guys can you guys want to like it here you go yeah Mar Marcus it blows my mind as well how much can be inferred from just looking at two videos like I literally never would have thought we could get this much information just from watching two videos like it's incredible it's really incredible this is definitely the best clouds move **debunk** I'm save this one guys in your in your stash you

(55:12) definitely want to have this one available I'm actually going to put this in my list of **debunks** as well because it's just that good my old clouds move wasn't as good can I play the video about the cell phones ringing probably Thanksgiving Fox have a good night man um Krypto wants or no Bernie wants to know how much is 145,000 American uh a lot of money is the answer it's a lot of money the reason why I love the um the the Bounty is that it just shuts the **debunkers** up right there's nobody's

(55:58) going to come forward because they're not fake videos Dave rosi doesn't wake up and choose violence we gotta we gotta show some memes the other that stream was just a legendary stream man that was a legendary stream I don't think nothing can get better than

that stream frankly I woke up literally laughing that's how funny it was I was just laughing so hard this is why Corridor crew probably got so upset man they probably saw this got so angry they just got absolutely destroyed on Danny's podcast definitely didn't

(56:45) expect it so I guess they don't support mov or something like that so anyway yeah interesting I just use a converter though fixed it up real quick yeah a lot of people think that this reminds them of the movie Millennium someone so show uh showed me a clip from that it looked like really like the movie millenniums weird man but then again like you know it's just teleportation like a lot of movies talk about teleportation oh sorry what was somebody somebody wanted to see something damn uh whoever wanted to see something

(57:24) remind me you want to see I've already forgotten I'm getting to yeah that was the meme of the year right there that one although there's this other one I want to modify I think we should add some more people to this other one I I love Melo but I think I'm might have to replace him with like uh kim.

(57:42) com and then we'll have to add some other people here as well we might have to add investigate Earth podcast over here let's see yeah I'm backing up uh yeah we're backing up all our stuff I mean it's most of it's been backed up I mean a lot of it's online as well right yeah I mean if people think that they corridor crew is good they're just they're not really on the intellectual level that they can understand these videos to be real those types of videos appeal to people who are are just mouth breathers

(58:26) there's not really another way to put it oh but they sat on a couch and and and put a bunch of graphics on the screen it's like geez man yeah they're not on my intellectual level man no offense to them but I'm I'm trying to talk to like real people who are smart who are like scientists we're not trying to get blogged down so let's just put the cards on the table as well uh yeah I mean even people that are **debunkers** don't even respect that their **debunk** that's how bad it is um but the

(58:59) cards on the table what I think the intelligence Community is trying to do is they're trying to just get they're trying to get a war of popularism right so that people believe oh you know Common People just believe that there's a it's a video game or something right they want to get that instilled in their minds um and and that's all they really care about uh so you know from our perspective we also can't get blocked down like blogged down with it so if you were in the space earlier some guy is

(59:23) like raging because he's 100% convinced that he's looking at VFX or whatever and links a bunch of old posts from four months ago that we've **debunked** like 10 times over so we can't get blogged down on people that think we're looking at VFX we have to move past it because they're trying to like hold us up right from keeping on investigating and stuff like that we barely have enough time to investigate as it is like with all the podcasts that's been going on so we want to be moving the case forward not

(59:51) slowing it down flat times ooh that's your your fifth super super chat or something um 911 plans in new ORS were Holograms uh I'm not sure I agree with that so just full disclosure guys I was never really a conspiracy person and when it comes to things like mh17 and 911 I'm probably never going to believe in the conspiracies and the reason for that is I was there for both of those in real time I'm old enough I'm over 40 years old so I was watching in my dorm room uh when the planes hit the

(1:00:32) buildings uh in real time and the other thing was and I watched The Towers collapse live so it's hard for me to get behind a lot of conspiracies even though I don't want to Discount anyone who you know believes what they want to believe um the mh7 stuff as well I was on Facebook when that happened back when Facebook was super lame and the general who shot down mh17 posted on Facebook and bragged about it I'm not sure if this is common knowledge or not but he deleted it 15 minutes later after they went and realized that

(1:01:08) the plane they shot down was full of passengers right it's it's really messed up and that guy never faced Justice over it on mh17 and so when people try to connect mh17 to MH370 I don't like it because there was a lot of Dutch people yeah and I don't know if there was an inside job or what honestly on 911 but you know for me it's a matter of like I don't know I'm pretty sure those planes hit the buildings cuz I was watching in terms of WT tc7 I don't know you know seems really weird seems weird

(1:01:48) all I'm an expert on the only thing I'm an expert on is MH370 that's it and these videos that that's about it I I'm not an expert on anything else and maybe my normal job uh my normal co-workers a lot of them don't even know yet although I'm wondering waiting for the day where people are like okay I saw you on Infowars or I mean when I'm on Tim or uh if I go on something like Tim pool or something like that people would definitely recognize me right or like Lex fredman or Shan Ryan like that's going to be the

(1:02:16) time where like people are going to recognize me right let's see yeah got a so this is the best comment here um John Hernandez says quter crew are sensationalists right so that's actually should tells me I want to tell the story Jack thank you very much man appreciate that and thank you flat times as well for that um so if you go to Venice Beach ever if you go to Venice Beach and you go down and walk along the beach at least back in the day you used to see a bunch of performers right and the performers are

(1:02:51) always talking about how they're going to jump over 15 people or jump into a helmet or something like that it's all sensationalism right it's all sensationalism and they don't it's all about trying to get money or whatever it's never about them achieving some great feat it it never lives up to the hype they're just trying to build up the hype or whatever that's what people like the corridor crew are right they're sensationalists they're trying to appeal to people via propaganda for money it's

(1:03:21) not science at all it's not science-based none of what they is if you're a VFX expert you're not sitting on a couch watching videos telling people what to think you should be sitting

there live streaming you do your VFX work yeah alien scientists I do want to talk to you about it actually man um not right now but at some point in the future we definitely need to I'd be curious to see I I've been told that you are uh quite a bit of an expert on your research on that so be interested I'm

(1:03:52) just a little scared to mention it right now because I'm live streaming and I don't want to get YouTube striked there's certain topics I get a little worried about getting YouTube striked on I'm trying to I'm already worried I getting YouTube striked over this topic so that's just my that's my concern anyway let's take a look at salvator P's stuff so he is talking about this energy generation M Machinery with output levels that are very high and I'm wondering if he's talking

(1:04:23) about creating this gravit force in front of the orbs I'm trying to visualize what he's talking about oh yeah so he was talking about in order to achieve the reduction in inertial Mass the problem with the salvator pises papers is like he leaves out some of the stuff right so it's it's hard to you know dig into what he's trying to say with leaving out certain important aspects right so that's why I generally try to understand from the theoretical concept what he's trying to get at so to be more exact the concept of

(1:05:05) hand can be utilized in the design of a device to manipulate modify the local SpaceTime latus topology energy density which can be achieved via local vacuum polar energy polarization moreover due the nature of the emerging physics involved is possible to experience spatial temporal displacement effects I mean to me it sounds like he's talking about creating geodesics right I think it is yeah we could do a space and talk about it um Jeremy that's probably the safe move right that's probably the safer move if we want to talk about that

(1:05:42) topic I think that'll that'll help uh brometheus was I ignoring you let me see what we got going on sorry man chats just moving really fast Prometheus sorry ask your question again BR meeus I don't see your questions up there my bad though not trying to ignore people just a lot going on uh the one thing I'll say about 911 is the most traumatic part was watching people jump off the building and literally hearing their bodies explode I will never ever forget that is definitely the most disturbing part by

(1:06:28) far in that people had so little hope in the destroyed building that they thought they'd have to jump off I mean that's heart-wrenching man heart-wrenching stuff I I was ready to go to war after that um basically what Dave Rossy talks about yeah uh sorry I don't know BR meeus what you're talking about but yeah if you have any questions let me know um so what are we going to post on this let me see if there's anything else in here that we can try to understand from a Normy perspective oh okay this is the high

(1:07:08) energy electromagnetic field generate H MFG yeah we we've talked about the **debunk** videos kind of kind of silly um zero borders people probably did see the plane fly over Lan kawi but if you see a plan flying over like what are you going to think are you going to call the police like I think planes fly over airports all the time right the thing about why it didn't get oh yeah you're not going to be able to post links probably the reason why it probably didn't land the

more I thought about it is that the lights on the runway were

(1:07:45) probably turned off because it was 2 a.m. so if the lights on the runway are turned off it's not going to be safe to land oh you were linking rhetor oh the the guy's Twitter okay well we'll take another look at it RoR rorion oh whoops one follower what's going on here no posts no replies uh uh uh how do I find their Post in the I'm not sure how to find their posts is there a way to find their posts anyone know anyway we're going to go back to doing some science where's the science at okay we're going to do some salvator

(1:08:52) Pi science here oh I'm probably only to go for another 40 minutes so I got to try to hit the bed early man I don't know if I'm being messed with if there if there is the capability to mess with somebody's dreams then they're definitely messing with my dreams I've never had so many vivid dreams in my whole life and it's not like I'm going to sleep freaked out or anything like that like I've just been going to sleep normally and I I the dream I'll tell you guys about the dream

(1:09:20) I had last night was so weird I was in a dorm I guess I was in college or something I'm not sure in my dream and a bunch of people came up to me that looked like people right but then they just told me that they were like beings from another planet and then we had this like round T discussion with these like be that claim to be from another planet but that look just like just like humans and it was it was really weird I recognized like one or two of them but like most of them I didn't recognize and I I didn't know what their names were or

(1:10:03) anything like that and it was so vivid I woke up and I remembered every part of it I was just like what the hell man why do I keep remembering these weird dreams man and I I was trying to like interpret it but I couldn't figure out any reason why it made any sense there was one hot college chick uh I guess alien if you would call her that or spe person from another or something but they look just like normal people it was like almost like they were like shape shifters or something or I don't know I don't think

(1:10:30) they were shape shifters just they just looked just like us uh Godly luck thank you very much Banner man appreciate it buddy greatly appreciate that the dream was odd man I they weren't blonde though it wasn't like they were like all hot blondes they just like they looked like a cross-section of people right of different ethnicities whatever and I don't know it was like they came to me and they told me like hey uh uh you know I it wasn't like you were selected or something but like they just revealed themselves to me it was

(1:11:00) weird because I did think about this weird this star seed thing I don't believe in that stuff just be real with you I think everybody's the same but when I woke up for some reason I was thinking about this this thing that I've heard in Twitter spaces about star seeds and I was like huh that's just weird man I don't know I don't really know I didn't interpret or anything like that Jack Safari skinwalker is he he talks about Skinwalker stories yikes man nothing was around me it's not like I

(1:11:28) went to sleep and I was like freaked out or anything like that but I've had so many dreams recently that are like that like I started looking around being like man did they plant some kind of device in my in my um house or whatever that like is messing with my dreams like when you start dealing with teleportation you start to get a little bit paranoid you're like what else can they do man can they like actually like manipulate people's psychological State maybe I don't know could be unconscious stuff subconscious

(1:11:56) coming to the surface I'm not sure maybe uh what do I mean by I recognize them one person I still I have his face right in my I looked like an Italian guy that I some reason I recognized him like I knew who he was but I couldn't figure out his name like that's what it felt like like when you recognize somebody you're like oh yes I've seen you around but I don't know what your name is like that's it looked like with the one the Italian guy I remember his face so vividly even right now and this was last

(1:12:28) night it was weird man it was really weird and then I woke up and I'm like okay uh I'm going to turn the my NightLight on sleep with my NightLight on I'm an adult and I like had to turn the light on and sleep with the light on because I was just like it's getting weird man it's getting weird yeah I don't know don't defame the great works of TJ guys Mill Ash I respect you dude but I like made Skinwalker we did real research for that I love TJ man I don't know why TJ is so offended

(1:13:17) at uh our work I don't really understand it uh yeah ghost I was thinking about Havana syndrome but anyway for now I want to uh I want to try to focus on this I told salvator Pas we get these out I want to get at least one of these out tonight this is the H MFG as compared to the high frequency gravitational wave generator this is one of Salvador P's P patents that's up there okay there's four forces yep stationary electrocharge gives rise to an electrostatic field while a moving charge generates both an electric and

(1:14:11) magnetic field additionally accelerating charge induces em radiation in the form of transverse waves namely light mathematically as well as physically em field intensity can be represented as the product of an electric field strength and magnetic field strength em Fields act as carriers for both energy and momentum and EM is electromagnetic yeah so electromagnetic fields act as carriers for both energy and momentum thus interacting with physical entities at the most fundamental level interesting artificially generated

(1:14:51) high energy electromagnetic fields interact strongly with the Quantum vacuum State thereby giving rise to emergent physical phenomenon and this is the part where I start to worry about them messing with my dreams man he's basically saying that he can they can use electromagnetic fields to manipulate you know physical reality this is why I start reading too much science man it freaks me out yeah I yeah the most of the reason why I don't want to talk smack about people is because I just don't want to say their

(1:15:31) names and give them more attention like some people crave the negative attention just as much as they crave the positive attention right so that's why I don't like to talk to most

people like that don't talk smack about people otherwise I'd talk more speak so Bernie says honest to God according to Eric heckler's testimony and research apparently they could actually be messing with your dreams with uh EF waves yeah man this is what like I would never have gone down this rabbit hole but when I'm watching a

(1:16:00) plane teleport from SpaceTime on two different videos does definitely make me wonder man definitely makes me wonder like several months ago I would never thought they could be messing with my dreams now I'm like hm could they be messing with my dreams Gateway tapes no I'm not familiar with Gateway tapes buy an em shielding hat or blanket to keep the electronics at your bedroom I'm going to be like that you guys ever watch uh Better Call Saul I'm going to be like the brother and Better Call Saul

(1:16:32) who's like got no lights in his his place he's got an EMF detector looking for any electromagnetic frequencies yeah I agree with Bernie and um Jeremy and roy Herbert I think we got to get funding and literally just prove teleportation on a macro scale I'm not sure how we're going to be able to prove it but if these orbs can do it it we can figure it out I feel like I feel like we got enough smart people that we can just figure this out man yeah dudes tried to expose me and end up looking silly it's true man I

(1:17:06) didn't even think they would end up looking that silly but they ended up looking sillier than I thought I actually thought they might delete the the podcasts I thought they were going to delete them if I was them I probably would have deleted them they look really bad I if they can do this we can figure it out right right folks do we think it's that they're making it look like an electron here get a space blanket dude if I have to get a space blanket man I think I'd just rather have them Havana syndrome me

(1:17:39) or whatever they're doing I just don't want to be that that kind of weirdo that has a space blanket tin foil entire Pedro everyone needs to go to sleep with your tin full hats on tonight guys I don't know just to be honest with you guys man I'm thinking more and more about selling out to the feds I kind of want them just to call me man this is getting a little scary this technolog is getting scary man I just assume at this point **Russia** and **China** have already figured it out that's the that's what's keeping me

(1:18:14) going here the other thing that's keeping me going is the families the families that have just been totally screwed over man we got to do it for them man even if it ends the world we got to do it for them okay let's keep reading here okay let's go down according to Quantum field Theory this strong interaction between Fields is based on the mechanism of transfer of vibrational energy between the fields further inducing local fluctuations in the quantum fields which permeate SpaceTime hm matter energy and space time are all

(1:18:55) emergent constructs which arise out of the fundamental framework that is the vacuum energy state so what s's saying here is that matter and energy are you know the same and SpaceTime itself is an emergent construct that if you want to call it the ether which is nothing right that even space is itself is something so what he's saying here is that space time

and matter and energy and space interact matter and energy interact with space are emerging  
constr TRS makes sense everything around us ourselves included can be described as

(1:19:28) macroscopic collections of fluctuations vibrations oscillations in the quantum  
mechanical Fields matter is confined energy Frozen in a Quantum in a Quantum of time yeah  
that's true matter is Just Energy right keep track of the what yeah I gotta be honest the uh you  
guys should follow alien scientist if you're not already I think his YouTube's pretty huge uh  
Bernie is related to them and the the panel that he had on blew blew my mind man blew my  
mind that's how I found out about Dave Rossy and it was funny because I'm

(1:20:18) sitting there be like Dave Rossi is smart as hell in the chat next thing I know I get a text  
message from him he's like hey I'm Dave Rossi I'm like wait what and I was like wait you're Dave  
Rossi I he had sent me messages before and he's like yeah I'm Dave rosi I'm like holy crap that's  
when you know you you found a friend okay [Music] um okay therefore under certain  
conditions such as coupling of high frequency axial spin with high frequency vibrations of  
electrically charged systems the rules and special effects of

(1:20:53) of quantum field Behavior also apply to the macroscopic physical entities okay yeah I  
love you guys man I'm so happy to have found all these people man I can't even tell you guys  
that's why when people tell me like what my mental Health's like I'm like dude I'm happier than  
I've ever been in my whole life like if I had to go back to the way it was before without knowing  
all these people like I wouldn't even want to be on this planet anymore like just knowing how  
many smart awesome people that are out there it's

(1:21:26) like it's like damn man I've I've made friends with people who are just like super smart  
that are going to potentially change the world like I don't know if you guys ever get that feeling  
where you you run into somebody who like you're like this person is going to change the world  
right but I've had that feeling like every day now and don't worry I'll always be grounded there's  
no chance of me I don't even get Star Struck if I meet a famous person it's just like meeting any  
other

(1:21:53) person I'm not going to change at all no matter what either even if I had millions of  
dollars I wouldn't change I don't even care about money honestly all I care about is the time I  
have on Earth I'd be happy with no money or happy with Millions makes no difference to me I'm  
a simple person I don't need flashy stuff I just like practical stuff yeah the vibration part I agree  
depleted uranium Cowboy I think the vibration part's key here very key and yeah I respect all  
you guys all the

(1:22:26) followers and stuff how many people are even watching right now almost almost 300  
yeah I won't sell out the capitalists no if the government comes and talks to me though about  
this I don't know we'll see what they're what their offer is just kidding I would uh if the go let  
let's let's do a hypothetical thought experiment man if they throw Scarlet Johansson at me isn't  
she married but if they threw her at me boy that'd be tough I was like in love with Scarlett  
Johansson when I was in my

(1:23:01) 20s I would have done anything for that woman um God don't get any thoughts out there intelligence Community don't get any thoughts this isn't a Travis C uh Taylor Swift situation here uh let's say they came at me and they uh tried to have me like make this go away which they're probably desperate about right what would it take for me to make this go away I would probably make them admit that it's MH370 I'd be like I'd be like okay you guys have to admit it's MH370 and then we will then I'll let it

(1:23:42) go right and I'll say i' i' be like I'll say it's VFX right like that's probably if I come out saying it's VFX then you guys know that I sold out but then I'd be like okay I'll say it's VFX but you guys guys got to say that that's MH370 and make up some [ ] for what they did to the plane right cuz then at least the families could get the truth and then they wouldn't have to admit to the obvious technology which is real here that we've been disclosing because that's the part

(1:24:08) that they want to hide right that's why the weirdest part of the VFX like the phony VFX debunk is like okay even if that was a match which is not it doesn't debunk any of the rest of the videos like how are people so like not realizing that like oh we found one frame guys the whole thing is debunked like dude I've got two videos man they're both of MH370 you found one frame that you think is a match that's not and you think that debunks the whole videos oh well but the clouds don't move but they do move

(1:24:39) there's no Parallax oh The Parallax moves too VFX is the safe word Scarlet Johansson signal signal right now okay I just I don't believe you I just don't believe believe you that's all she was the highest paid actress in 2018 and 2019 okay is she really sing Single let's just look no she's married guys she's married I was about to say okay government if you can make Scarlett Johansson happen I will admit it's VFX all mids VFX if you can make scar if if she can divorce this guy Colin Jo let's

(1:25:30) see how hot is this guy let's see if I have a chance oh no I don't have a chance oh look at this guy he's probably like 10 years younger than me too oh no he's yeah okay we're about the same age damn this guy landed Scarlett Johansson dude luckiest man on the earth holy crap sat Saturday Night Live guy landed this Saturday Night Live hasn't been funny since probably 2005 wow this guy luckiest man on the planet folks he does news segments oh oh I guess we'll have to find somebody else no three-way is not acceptable

(1:26:17) enough for me no no government if you're listening you need to clone Scarlett Johansson that's the only way that you can get me to admit this is VFX if you do that I will sell out I will sell out oh he looks like me Justin maybe I have a chance maybe I have a chance maybe I have a chance okay let's we're getting distracted folks we're getting distracted uh moreover coupling of high frequency gational and hyperf frequency vibrational electrodynamics as used in the concept here within disclos cond

(1:26:52) conducive to a possible physical breakthrough in the utilization of macroscopic quantum fluctuations vacuum plasma field the qvp as an energy source an indu an induced physical phenomenon for which the technology Readiness level has been considerably

Advanced by a team of researchers from NASA oh is that joint space joint space something rather interesting as an energy source yeah depleted uranium Cowboys out here he's like I just want to talk science guys you guys keep talking about Scarlett Johansson he's like can we just

(1:27:27) get to the science the research involves the use of high radio frequency microwav driven resonant C cavity Q Thruster technology within the qvp physics the quantum vacuum plasma the qvp is the electric glue of our plasma universe the quantum vacuum plasma the chasmer effects and the I I shift and spontaneous emission are the specific confirmations of the existence okay it's important to note that the regions which the EM fields are the strongest the more potent are the interactions with the qvp therefore higher the induced energy

(1:28:06) density of the qvp particles when sprung into existence these qvp particles May augment the obtained energy levels of the uh High electromagnetic field generator system even though they are shortlived these virtual particles have a real effect to be more precise the EM Fields created by the hmfg system interact with the vacuum energy state which is an aggregate State composed of the superposition of all Quantum field fluctuations filling the entire fabric of SpaceTime contributions to this vacuum energy State density are made by

(1:28:41) the quantum vacuum zero point fluctuations the quantum Chrono Dynamics gluon and Quark densities are the newly discovered higs field among other yet undiscovered Fields super symmetry in other words major contributions to the vacuum energy state are made by Collective Quantum fluctuations in fermionic fields fields of matter Quantum fluctuations in bosonic fields fields of force and Quantum fluctuations what I'm hearing here is that we can have a free energy system is that what you guys are reading out of this to me

(1:29:12) this says free energy am I wrong I'm not good at understanding all the physics but for some reason it like I can understand what he's getting at I don't know why I can do that to me it sounds two things that you can either create a gravitational field or that you can suck energy out of the SpaceTime I'm not sure what he's saying here what do you guys think yeah feel free to thumb uppers it yeah depleted uranium Cowboy agrees I think it's like like bow borrowed energy right sucking the energy

(1:29:49) out of the SpaceTime hm interesting the hard part is now I have to try to explain this oh boy when I make a post about this like I just generally just copy and paste the stuff because it's tough so you guys think it's both you think it's both creating lot of words yeah I think it might be both I think it might be creating the geodesics and being able to take energy borrow energy from SpaceTime itself yeah it's not exactly free energy but from a p from fundamentally it's free energy sucking energy from the

(1:30:30) fabric of SpaceTime makes me wonder about those orbs right or gating energy from the gravitational field yeah what does it cost that's the question Orwell man I don't like to get into politics but I do like a Hillary Clinton joke now and then imagine Hillary Clinton with that machine everybody poof starting with Ashton what's my understanding of wave length versus frequency uh uh I mean wave length is how long the wave is Right frequency is how often it hits

I guess I'm not sure you going to make me Google this

(1:31:21) now inversely proportional oh the higher the wavelength the shorter the frequency yeah that makes sense so I actually had it I actually had it correct damn Matt Gil buddy you're you're killing me right now I don't think I'm going to say that because I don't want to get my stream uh taken down but that's a funny joke tapping into the energy that spins the G uh galaxies Ashman didn't poof himself how do you force government disclosure that this Tech exists well I'm glad you asked that question uh

(1:32:17) ideally we talk to Congress and we figure out how right we need need to talk to Congress and figure out how we disclose this I think that's what my question is going to be yeah okay let's read some more when it starts to get into the math I'm it's beyond me guys the physical equation which describes the maximum intensity achieved with the high energy electromagnetic field generator wow I I know what it is now high energy electromagnetic field generator how do they keep everybody quiet good question man

(1:32:52) I don't think they kill everybody because I just want to believe in the good in humanity I think they just pay them off make them sign ndas make them take up a new identity yeah Jack there might be a lot ahead of us but I don't know I feel like we're running dry on new stuff although I do have a whole list of like huge stuff if anyone out there is a VFX expert if anyone out there is skilled I do need a title card and a closing card for my YouTube just something that says like here I'll do a little paint thing real

(1:33:26) quick I need something that's like 5 Seconds long that's like let's just say like have it be like blue and red for MH370 and have it be like MH 370 X right and then maybe it's like got like underline like this I don't know and then have the blackr be like black or something so this is all like black and have it like I don't know do some kind of graphic where it comes in so I don't know if anybody's good with Graphics wants to make something like this obviously not in paint but I could use that for just like when

(1:34:05) I do my little videos and stuff like that that would be pretty sweet MH 370x so and so like when I do the here I'll show you the video I'm so embarrassed that I had the wrong thing on this one okay I I missed the X in here guys I missed the X so when I make this I want to have the thing pop up and be like MH 370x and then have it show my face and then at the end I want to I want to put the MH 370x in at the end so I don't know if anyone can do that that'd be sweet you can get a you get a free follow if you do

(1:34:45) that man damn you guys are going too hard in the chat I can't keep up if I missed your question just repeat it needs to be said that I'm not suicidal yeah the title card has already been **debunked** Matt Gill's on fire in the chat right now man it's crazy how many followers I have they're like huge followers though man with like hundreds of thousands of followers themselves like a lot now okay there a lot of math going on here guys okay now he's talking about how much we can generate with the power when

(1:35:32) we start talking about how much energy we can generate like these numbers don't mean anything to me it's just a lot I'm guessing this is like a lot presumably this is where you need the smart smarts the the math smart smarts to get in here yeah Bernie that was funny dude that uh Matt's on fire and chat right now yeah here's a good one from Michael wines what would this do to the world religions I did not expect this the religious side of the people that have seen this have the least problem with this

(1:36:08) surprisingly it's the people that are the non-religious ones I think so if we were divide the left and right in the United States politically the people that are more religious are going to be the ones on the right although this is not a uniform thing right this science is actually not inconsistent with religion at all if anything this science proves that there is a construct and there's a Creator because in order to have teleportation be possible basically we have to be living in a simulation I have already

(1:36:37) 60,000 followers wow it's only been three months and we have 60,000 followers it's wild man I've never been on TV never been on TV just insane um it's the people that are the non-religious ones that seem to have the biggest problem with this because it challenges their perception of reality it tells them that no there's more to this world than you have been LED on right oh you're probably getting ads I think I turned uh monetization on on this sorry guys I just had the settings from before

(1:37:15) my bad I think you can just skip the ads right yeah I think we live in a matrix yeah I mean more or less I mean I don't think we're going to like be in like the Matrix where like where our energy being sucked out of our bodies but uh I think that yeah we live in a construct for sure and yeah because religious people believe in a in a Creator it makes sense honestly it makes sense yeah I would say anybody who has a big following or whatever they should use that following to try to find the hoaxer anyone who thinks

(1:37:57) they're fake use that following to try to find the hoaxer man should be easy should be really easy how can they not find the hoaxer guys I mean somebody made this they didn't want any credit for it they they they do better work than the corridor crew does and they don't want any credit for it doesn't make any sense they would have to have a hard drive full full of the work right hell I I stuff for my job that's just like making a couple small changes and I've got like whole Excel spreadsheets with

(1:38:27) like 10 tabs on them for it right these people don't have anything that they've saved like they can't find the they can't find the source files for 145 Grand yeah exactly depleted because there isn't one there isn't any source files right it's wild man yeah I'm not against earning money off of the work I think monetizing YouTube is probably the limit that I'm going to go although some people have told me that I should post my podcasts on some other website that I'm going to look

(1:39:04) into because they say it's just better and then I can get it on a bigger audience as well so plus that can be my backup job my backup in case I lose my job over this which I'm a little bit

worried about a little bit worried about I'm little little worried about getting that renewal and that security clean clear like what do I put on my security clearance renewal guys I'm going to be like um so I uh kind of uncovered The Biggest Secrets uh in the military that are out there gave away the the secret sauce of

(1:39:37) the our secret teleportation Tech I don't think they're going to renew my security clearance man we'll see though oh you got an intro for me benas oh you won't be able to post the you won't be able to post post it here uh beneficiary TV can you tell me your uh Twitter account and then I will follow you and you can DM me so yeah beneficiary TV if you have an intro for me that's pretty sweet man but post your Twitter account so I can follow you and then uh you can DM it to me oh yeah okay post on Vimeo that's that's

(1:40:29) sweet man but you won't be able to post the Vimeo link here either that's the only downside I I think about when I think about the universe and what it what it is I think about the Rick and Morty episode the tiny verse and the Teeny verse like that's that would seem like maybe that they got it like on the nose I don't know oh there we go nice Ben E Factor okay Ben E Factor everybody's going to follow you now they're watching you gave it away oh we all know who you are now this is you right no this is this is

(1:41:12) not you this is not you it's a zero guys if you followed that guy that was that was the wrong one you guys messed up oh there we go go let's go ahead and give our bro a follow here guys he only has seven followers he only has seven followers thank you very much for supporting man we appreciate you you know what let's go to your YouTube as well buddy but the alternative is who what's going on is we're sitting how many subscribers oh we'll give you another subscribe too for helping out my man give you some free

(1:41:49) advertising here should we check out our YouTube comments oh yeah yeah you guys should check out leak project man legit dude how many people 10,000 views already that's not bad that's not bad um duck Vision thanks a lot man patreon yeah you don't need to do super chunk man oh wait do they really take a bunch of the super trunk chunk money chat money that's messed up dude that's messed up uh but no I don't want you guys donating money especially if like you need the money I I don't really want

(1:42:25) you donating I just have it on but thanks yeah have a good night ghost have a good night ghost yeah appreciate that guys so yeah you can DM me I'm not going to pull up the DMS here because I seem to be P giving personal information away way too often yeah Rex is really cool I've got a lot of people in my instant messages wait I have 60,000 followers now oh yeah wow wow 60,000 followers already that's wild man that is wild that's a lot of followers man already 5,000 views on this in 48 minutes seems like a

(1:43:17) lot yeah check off the boxes I don't know what this means what did Danny post today should we go check did he post on Twitter wait that's different Danny Jones I was like he doesn't have that many followers is this a joke okay we're we're unfollowing that they recreated it guys they recreated it with a higher render guys they literally didn't recreate anything this is this is

the recreation this is their Recreation yikes man this is about as cringe as it gets should we let should we meme on

(1:44:21) Danny guys should we meme on Danny I think we might have to meme on this this is uh this is pretty embarrassing holy [REDACTED] oh damn it I didn't want to do that oh wait no no no I know I know know I know I don't know um oh guys I have a I have a good idea guys uh what is it it's called Uh I knew this was going to happen I actually that we've had that just been smooth I want to see the part where they recreate the video in the in the courtroom scene here [REDACTED] my channel is being shadowbanned I

(1:45:21) doubt it who's Jason beas should I need to follow that [Music] person oh no I follow him there's a part where they do a recreation in this and and it's so garbage and it's so funny don't they they don't have it man God oh here we go here we go oh can I steal this somehow how do I steal this oh come on you made it brother Promise Land on the screen uh my client show on

(1:46:26) the day of the incident and here we go here we go here we go here we go okay can I make this bigger on the day of the incident and this is just a second I'm going to have to have a talk with wait come on wait whoa whoa you know what I want to see it the video is not show it to me it's not it's not working I don't I don't understand is this what the jury just saw um I I don't understand is this what the jury just saw

(1:47:37) U that's the whole thing okay we're just going to do like 5 Seconds how long is it like 5 Seconds that's the whole thing is this what the jury just saw um I'm G to that's the whole thing unfortunately yes that is I I don't even know if I want to give him attention but it's I think we might have to is this what the jury just saw oh the sound worked I didn't want the sound how do I turn the sound off perfect Recreation guys

(1:49:10) oh yeah just saw is this what the jury just saw um is this what the jury just saw um is this what the jury just saw U too funny guys what should I what should I comment should I should I just comment nothing on it should I just leave it as this should I just post just post it with nothing is this what the jury just saw um this show is hilarious you guys gotta watch if you haven't seen jury D you gotta watch it I'm just going to post it without a comment I think just no comment I'm just going post no

(1:50:19) comment guys just okay here you go guys this is for [Music] chat you're going home easy too funny man render looks so awful dude I can't tell if like these guys just digging themselves deeper like this is their render look at this look how fake this looks this looks so stupid this is really their dunk I thought he was joking this is one of the podcasts they tried

(1:51:23) to Ambush me on they got me they got me dude it's all over this is this is the recreation yeah it looks just like it man you got it should I retweet this guys I might have to retweet this n this is their serious Recreation right

(1:52:40) here look they recreated it guys looks just like our videos perfect perfect Recreation they're just lobing us yeah they're just lobing us easy ones knock out of the park man retweet it chat wants me to retweet it it's just too funny I can't even dude okay tag them tag them oh

(1:53:53) we got to make it look real official we're we're breaking breaking update anyway guys for

(1:55:36) I couldn't have done without you oh should we tag Danny in here as well no I mean he's already in the replies I add Danny too okay what what's his thing concrete what is this thing what's his what's his tag is that concrete okay we got to have a little bit of fun with it guys we gotta have a little bit fun wait is that is not is that no that's him who's that concrete he posted it really great work guys you guys don't want me to send it okay let's let's do a pull guys yeah we know for a fact that they

(1:56:42) did Jeffrey Ford go look him up should we do a pull I don't know if I want to give him any attention we got to have a little bit of fun guys I'm going to do a poll okay let's do a poll should we troll Danny and Corridor okay guys quick you guys got to vote got to vote do we do it or we don't do it I'm going to let the we're going to let the people decide guys we're going to let the people decide it's a democracy here guys it's a democracy why I give them anything because it's hilarious man because it's

(1:57:36) hilarious they're not worth the energy you're right but it is pretty funny h have to hold them to account take the high road guys is close 60% all exposure is good exposure it is too funny I think we're going to have to do it guys this is this is troll level 1,000 right now I do love [Music] trolling just take out the inflammatory language okay just the video we already sent the video though be humble they said I have mental health

(1:58:48) issues yeah yeah I think we're going to troll him guys I'm on corridor's side but I voted yes we tagged the corder crew they're they're tagged on the top okay we'll take off the breaking update it's a joke right yeah we're sending it I I might even put the breaking back in there as well the breaking is the extra troll guys you got to realize trolling is fun guys we're going to do it 61% so we're doing it we're doing it here it goes yeah it's too late guys sorry the

(1:59:40) poll 60 I go with the I'm a man of democracy guys guys it was 61% to 38% you're right it was unnecessary but it is funny it is funny though should I tag kim.com I should have tagged kim.com damnn you're right I we won't do it much more but we got to we got to laugh a little bit guys I didn't post other funny memes right I I didn't post the other memes we could have posted it's funny man it's funny funny we got

(2:00:50) it sometimes it's just you got to go for it you know uh tag the owner of quter Crew He retweeted it so I think we I think he deserves it look at this man look at this crap I could have gone a lot harder guys yeah I could have gone a lot harder man that that's just not that's just like light trolling man I could have gone a lot harder than that what is this guy wearing on his face what is he wearing dude is this a serious person is this a serious person right now what what is

this is is he trying to joke wearing

(2:01:47) this or is he unironically wearing these glasses dude so obviously much better like oh look at these guys look at their work three seconds of a jankiest fakest thing I've ever seen in my whole life he's been doing it for decades folks wow man just wow dude okay that's enough trolling for one night um yeah I don't know how they expect us to take it seriously it's not even 40 seconds it's like 5 Seconds of video how can we be expected to take that seriously man okay I got distracted folks got

(2:02:38) distracted yeah was he actually wearing those like unironically it looks like some Jordy La Jordy la Forge dude Jordy Le Forge dude yeah I think we can skip the math section I'm not really going to understand this like okay um I'm still laughing at that video I can't believe that that was their Recreation sorry if I fended folks in here sorry I know we shouldn't stoop to that level but you got to be honest I got to be true to myself and I love memes guys I love memes I should have we should have uh

(2:03:28) yeah I mean if I wanted to be real mean then I would have like uh I would have like uh photoshopped some of those Jord of Forge glasses Pho Photoshop some of the Jia Forge glasses on them as well onto the onto the VFX that's if you want to be real mean okay so this is interesting use an exotic manner to bring about an effect where the craft goes to zero Mass when this the velocity equals half the speed of light this is big so maybe we take need

(2:04:36) to take some notes down so let's take a few notes I think that this is interesting copy this I love how they're sitting here trying to **debunk** like VFX stuff and we're sitting here like figuring out how gravitational waves can can cause zero Mass it's like it's honestly you're you guys are right we are above it but at the same time you got to have a little bit of like adult stuff and then you've got to throw in the memes in between there yeah exactly exactly Eric Eric gets it can I how do I

(2:05:25) thumb up people or whatever you can do came for the science stays for the memes yeah the cordor crew are not serious people man they're not serious people I don't know that they're assets but they're they're not serious people okay it is feasible to remove energy Mass reduction from the system by enabling vacuum polarization as described by P Poff in that the diation of inertial and thus gravitational Mass can be achieved via manipulation of the quantum field fluctuations of the vacuum in other

(2:06:09) words it is possible to reduce those spacecrafts inertia that is the resistance to motion acceleration by polarizing is this still the same paper okay well we're definitely copy and pasting this still I'm still laughing about the meme though still laughing about the meme yeah TR I can't get over it either we're we're going it from we're going from how to do inertial Mass reduction to memes about them yeah they're very serious man Cordo is very serious that's what this is what serious

(2:06:58) people look like guys you want to see what serious people look like they serious

people wear Jordi Le Forge glasses here's a serious person guys hold on wait for it wait for it this is here you go serious people will sit around on their couch and uh talk crap about people in videos while with Jordy Le Forge glasses on it I can never take this person seriously no matter what in fact I'm gonna have to screen capture their face because this is just unbelievable dude we got to add this guy on this is just he's gonna have to get

(2:07:41) added to a meme I can't take anyone's if I ran across anyone in real life looking like this I would not be able to stop laughing I just could not could not take them seriously absolutely not line the Triad lithium line the TR lithium away Mass removal essentially means that you're going to make the plane have zero can't I can't dude I'm looking I can't stop dude I can't this too funny man uh sorry I don't like to make fun of people but what the heck man I thought he was joking around man I thought he

(2:08:23) was joking around James cos Mei dude brutal James absolutely brutal James oh my God James oh my God James [Music] jeez oh man it's too funny guys we got to have some fun with this you know we got to have some fun yeah guys they totally Dunked On Us dude this Star Trek James you are a freaking Legend if I'm not following you I'm already I'm already following you of course I'm already following you I can't get over this one I'm gonna

(2:09:29) wake up laughing tomorrow man I'm gonna wake up laughing tomorrow James is the legend dude how did you find this James how you how do you have this on standby ready to go I just [Laughter] can't this too funny man too funny dude dubik cubes on fire in here okaye closed guys mind blown mind blown guys oh my god dude Qing on Ashton what's this weird

(2:10:46) stuff sh that gift was too good man James James just brutal dude brutal okay okay okay back to the science guys I literally can't believe they posted that Recreation you can tell that they like tried and they gave up and they realized it was going to look super crappy and that they would uh that they just gave up on it and so they decided to do their couch thing right like you can tell that they were trying to make make it and they were like oh no this is going to look like crap and they're like oh okay we're going to do this make fun

(2:11:23) of them on the couch thing instead guys like you can definitely tell okay anyways back to the phase conjugate portal technology thank you for whoever pointed out that video man thank you very much man like that's just my god dude they said they could do it in hour and then they just like put some half ass crap together okay back to the portal technology everybody we we do have a Discord but uh we do have a Discord but you have to be following me if you want to invite or I have to follow you I mean a little bit of hyper Advanced

(2:12:17) science and a little bit of uh memes that's how we we put it together chat is full of legit meme Lords yeah this community is amazing man I've got the best community on the planet simply simply amazing simply amazing it's all there is to it by day we just we dropped some Advanced science teleportation Tech and then by night we just meme on people dude just straight up meme on people real real real question though Real Talk how do people who have 700,000 followers on or 700,000 subscribers only have like 8,000 followers on Twitter or

(2:12:59) like 2,000 followers on Twitter someone walk me through that math is that math in the paper here is that math in the paper how can you have so few followers on Twitter and have 700,000 uh subscribers I don't I don't think I follow that math okay wait think of the vacuum energy State as a chaotic system comprised of random highly energetic fluctuations in the collective Quantum fields which Define it considering I'm not going to I'm going to butcher this guy's name ponis work on far from equilibrium

(2:13:36) thermodynamics a chaotic system can self-organize if subject to three conditions the system must be nonlinear it must experience an Abrupt exertion far from thermodynamic equilibrium and must be subjected to an energy flux in Order of Chaos an artificially generated high energy electromagnetic field can fulfill all three conditions simultaneously when strongly interacting especially in an accelerated vibration mode with the local vacuum energy State recall that these interactions are induced by the coupling of hyperf

(2:14:08) frequency ax axial rotation and hyperf frequency vibration this all comes down to hyperf frequency vibration it seems like of electrically charged systems hyper frequency vibration wait why does it say h placed on the outside of the spacecraft in strategic locations in this manner the local vacuum polarization namely the coherence of vacuum fluctuations within the immediate proximity of the spacecraft surface is achieved allowing for smooth sailing through the negative pressure repulsive of the Void so he's definitely

(2:14:46) talking about how to create uh uh how you create a um basically geodesics that's what he's talking about for sure I don't know how they get big but a lot of people have been mentioning bot Farms they have I had I had uh podcasters come out to me and say it's really weird how big these guys following got kind of odd uh oce Rams did I already ratioed his post doesn't surprise me man I mean I have a huge following and my following is like our following guys our our community is like 10 times more active than people

(2:15:41) with the same amount of uh followers like I I get the the engagement of like 600,000 follower uh accounts do that's how big our our community is that's why they can't like Community notice or anything cuz like our my our community is just brutal out there I appreciate you guys and the stuff that you're doing out there depleted uranium Cowboy let me see what you got I guess if you don't have a sphere at the destination you can fly there really fast like for space Farm interesting okay [Music]

(2:16:22) so is this like a is this one sentence here this is quite the sentence we got going here I think I'm going to copy this wait where did my thing go I don't want this to be too long but I want to I want to summarize his work a little bit B I think we need to put some science out there right yeah I'm I'm a real one that's for sure I mean when I read this stuff guys like just being real like we're talking he's like he's got the patents out here all people have to do is just read it I'm not even a physicist or a scientist

(2:17:13) or an engineer and I can understand what he's talking about here how are there people that go out there and like don't read this like if I'm a scientist this is the stuff that like

gets me excited that's my P that's my PG uh terminology by the way I was I could I could make it rate at R gets me excited guys as an aside force and matter field unification is feasible with the concept in hand due to the extremely strong interactions between ordinary matter in the quantum vacuum plasma vacuum energy

(2:17:45) State interactions with exhib which exhibit extremely high energies on the plank length scales and intermediate proximity of the disc spacecraft surface when I read this stuff I don't want to go back to my normal job man I read this and I go wait a minute why am I doing my normal job I want to do something awesome I want to do something cooler than this and yeah I highly recommend you guys read these on your own time if you want as well um I don't know I'm I might up be doing it justice so this original concept which

(2:18:22) may represent a breakthrough technology does reveal a novel approach to design of energy generation Machinery with power output levels much higher than those currently achievable by conventional means I mean I'm definitely hearing two things here I'm hearing free energy machine and I'm also hearing uh propulsion mechanism like we see in the orbs the reason why this is important to read is that I'm about to be interviewing him in a in a on Sunday you'd rather be skinny dipping with Scarlet that's that's for real

(2:18:59) 100% I mean that's the only thing that can pull me away obviously I don't have a Scarlett Johansson back here because if I had one I don't think we'd be reading these papers right now yeah Jimmy I haven't really thought about investigating other cases but um yeah I'm going to post this on my Twitter guys Jennifer um probably here in a minute actually Salvador Pas wants me to it's got six pages H it's kind of a problem but we'll figure it out so yeah we're going to post this but

(2:19:34) just to be real with you guys like I think we could take down NASA I really think we could just take down NASA now we don't have as much evidence as we have in this case but NASA's full of crap man I've got like a handful of things where we could take down NASA if I ever do convert this to anything else I'm probably just going to be like a **truth** Seeker that just crucifies people that lie and organizations that lie that would but I'm definitely going to get disappeared there's just no way

(2:20:01) when you start dealing with these organizations that's that's what happens but yeah NASA's totally full of crap 100% yeah they scrub photos they put NASA put red filters on their Mars photos for like 10 years if you go to Mars it's not red it looks like you're on planet Earth if you stand on the if you're standing on the surface of the planet they put all these red filters on their pictures for some reason it's so weird man just ridiculous man and and who can tell me that NASA isn't

(2:20:38) uh who can tell me that NASA is not like seeing UFOs give me a break man how many times has they like had like live streams in space that they've had to cut it happens like twice a year uh what about working with stock director Steven Greer um yeah people don't know how how **[redacted]** Nas is they're just totally full of crap um we might actually be having a contact with uh

Dr Steven Greer I we're back channeling something where we might actually be able to get in touch with Steven Greer Dr Steven Greer which would be pretty awesome

(2:21:24) um yeah the exact time of The Flash is going to be roughly 1840 UTC I think we're within like 5 minutes plus or minus 1840 UTC so we might have something better than the interview coming guys might be better than an interview so I don't want to say too much nothing's been solidified yet and I've been keeping everything close to the vest about everything like again if I told you guys I don't I don't like to be the person that's like giving you guys like I hate that I'm doing the thing what I said I

(2:21:58) hate which is like you know trying to lead you guys on but I've been talking to people man that I stuff's happening that I would never have imagined in my life man never imagin my life n there's no change in the weather because this is a a transitional phase State change yeah you know what I I always thought there might be something there with the Gary McKinnon stuff I might have to go rewatch The Alien scientist interview with there yo Bernie tell me some more stuff from the Gary McKinnon stuff he said he brushed out the UFOs

(2:22:37) anything else that was spicy from that I totally believe they brushed out the UFOs totally believe it for sure yeah Greer is kind of out there I mean he definitely thinks that there's like multiple alien species visiting us but that doesn't really hurt us right if in the right venue like we don't have to tie ourselves to Greer but I'd like to talk to him I'd like to get his opinion on the on the science like we can we can not prejudge him and see if you know Dr what Dr Greer thinks about the

(2:23:08) teleportation my guess is he's going to be all about it that's my guess guys not 100% sure but that's my guess wait did I already copy paste this is this is this repeated how how similar is this for space this I read it correctly it was for space Power and propulsion generation I'm proud of myself guys I'm just a dumb Dum over here and I was able to figure out that this is free energy and propulsion

(2:24:15) generation it's not quite the same Sun is a little bit different I don't want to repeat this extreme sentence this is a little bit too much this sounds a little too star treky here sounds a little too star treky my guess is that the United States government picked up the gravitational effect from this zap 100% yeah I'm sure they did I'm sure Diego Garcia has gravitational gener or uh monitor whatever and I'm sure they picked it up yeah 100% we're never going to get that though like never

(2:25:19) this basically says Salvador Pas would never kill himself right here oh you have a top three o AO moments with uh McKinnon oh that's pretty spicy I might have to check that out uh Bernie what's your channel man plug your channel for us I didn't realize you had a separate channel is it bur eye is this you no this isn't you EJ Vasquez coming in hot oh you put a link in there somehow let me see I can't guarantee anything but I can take a look can't guarantee anything but I can take a look thank you for the

(2:26:13) donation have I seen this one already bro your paper's too long dude I only do like five page papers let me get to the conclusions I need a conclusion or introduction I need a summary this does seem similar hello this does seem interesting this does seem interesting let's look at the intro of this I gotta go to sleep soon I got to sleep but I I love science man it's abstract okay tailored light exit citation of

(2:27:18) nonlinear control lattice vibrations have emerged as powerful strategies to manipulate the quantum materials out of equilibrium generalizing the use of coherent phonon phonon interactions we might actually talk about this to nonlinear couplings among the other types of collective modes would open unprecedented opportunities in the design of Novel Dynamic functionalities and solids for example the collective excitations of magnetic order magnons can carry information with little energy dissipation and their coherent and

(2:27:49) nonlinear control would provide attractive route to achieve Collective mode-based information processing and storing in forthcoming spintronics of Mag magnetism here we discover the intense terahertz Fields can initiate process of Mag magnon I don't know what magnon is up version mediated by an immediate magnetic resonance by using a suite of advanced stereoscopic tools including newly develop demonstrated two-dimensional 2D terahertz po po po poetry technique enabled by single shot detection we unveil the unidirectional

(2:28:24) nature of coupling between the distinct magnon modes of a caned antiferro magnet calculations of spin Dynamics further suggest that this coupling is a universal feature of antifer magnets with caned magnetic moments these result uh these results demonstrate about a route to inducing desirable energy transfer Pathways and terahertz induced coupling between coherent magnons and solids and pave the way for new era in development of ultra fast control of magnetism interesting interesting thing EJ appreciate it man I will uh put this

(2:28:58) somewhere where I'll save it you know what we should also start a new notepad put that there we got our questions rolling that's an interesting one EJ thank you for sharing that man wow you guys put a lot of messages in the chat yo lot of messages oh your main is crypto Alchemist 369 oh you got to have a backup is that how YouTube works you got to have your backup let's take a look there we are this is you right yeah this is you yo 10,000 almost 10,000 subscribers let's get crypto Alchemist up there

(2:30:04) boys there he is there's the man oh look Ashen Forbes nice oh look at this yeah was that the fake video yeah like look at these fake videos so when you have fake videos like that the video the thing's always in frame right it's not like they put it out of the frame it's always in the frame wait is James in the chat right now yeah James James just dropping meme nukes on people right now dude he's dropping warp memes on people it's too funny sorry I'm just reading some of the chats yeah Dave Rossy talked about phone

(2:30:57) on that's why I think we might have to talk we might have to ask him about that I might have to Ping him about that later I'll just be real with you guys Dave Rossy is like pretty

much my favorite person on the planet right now but s's like him and S are fighting for one and two right now so on Sunday I get to talk to two of my favorite people on the planet which is that's going to be a treat for me it's going to be a treat going to be a treat anyway everybody make sure you give uh Bernie a

(2:31:26) follow here I'll probably come back here later and check out and try to find those things but I got to go to sleep here in a minute so let's take a look here I want to see if there's any more stuff we need to take note of here okay make our Twitter post we're going to make a Twitter post about this for sale and then I'm going to go to sleep I think this is probably good enough I think that's a good summary right what is that what you think guys think hold on yeah this gets a little bit little

(2:32:41) wordy yeah okay I think that's what we're going to do I think this is good so now we need to zoom out and then how do you make it side by side there's a way to do this uh two page view there we go spicy perfect okay yeah I think we got the important parts I agree oh man we got a lot of messages I got to check I can't tell if he's trolling me I think he's just trolling yeah

(2:33:53) much higher quality so so high quality you guys just ratio the crap out of him dude this is yeah we got us guys I can't tell if this is a joke or not I think he's joking right all

(2:35:23) they've done this in a few days imagine what they could do in two months guys yeah you got me you got me Mal ac007 with two followers yeah imagine trying to defend this imagine trying to defend this try to defend this this is the fakest looking thing I've ever seen just wild bit okay anyway yeah Jimmy thanks night and people who have to go to night sleep I have to go to sleep too as well but thank you guys very much and thank you um who is the person that made the thing I've already forgot anyway I'll find

(2:36:03) your DM thank you very much for making the carard the graphic for me you guys are heroes appreciate it you guys have to watch jury duty man yeah tuck Tucker's video is good man that was that was good yeah this is their best effort this is just pathetic man you guys got to watch this though because so what happens in jury duty is um they make a there's like a one of those really awesome like Taiwanese ones or whatever and then the defense comes and makes this and it's just like garbage okay anyway we're not done yet

(2:36:40) guys we're we're almost done almost done yeah I love it people were trying to think that they would that we should pay the the corridor crew for that Recreation yeah we'll give you \$1 that a was a great great for that Recreation crypto take it easy buddy love you man take it easy yeah everybody new friends new fam this has been sweet uh we're almost done guys we're going to we're going to sleep here in a few minutes hail

(2:37:44) TJ hail TJ and the cringe cringe Watcher Ranch damn he damn Salvador Pas really uses s instead of Z's yikes man I'm changing it I'm changing it we're changing it to American s if you're watching if you're watching man I'm butchering your work St I can't I can't do it with the British English guys yo we uh we won the Revolutionary War sorry guys we only use American English

here I'm tagging MH370 in anyway we're tagging both I don't even care okay then we need

(2:38:52) to oh I'm going to lose my picture of this guy I'll get it later those glasses man those glasses dude just too much man someone need to tell him that you know one of his friends needs to tell him man no Jordy Le Forge glasses dude that's when you you take yourself way too seriously if you start wearing stuff like that wait where' my paper go oh here it is okay screenshot that screenshot this for the record guys Salvador P told me to share these papers and that's why we're doing it that's why we're doing

(2:39:45) it for um well how do I describe is it's not really like a free energy machine but for

(2:41:44) for is that you think that's accurate to say pull pull energy out of the vacuum in space time I think that's accurate oh yeah my next podcast is with uh salvator pas and Dave Rossi I'm probably going to start promoting it tomorrow morning I wanted to get some of the salvator P's stuff out here so podcast number four I'm also going to probably start uploading them to I don't know iHeart radio or something I'm not sure somewhere online I can't upload the PDF you can't upload PDFs on on um on Twitter which is

(2:42:51) why I have to do these stupid screenshots I wish there was a way to upload a PDF but there's not I wish Lise have a good night if I missed you Prometheus what do you need man you keep tagging me but you don't say any questions you got to tell me you got to ask questions uh what's my stance on Tom to L I don't know I don't really have one he says a lot of stuff I think that he's connected to the right people so oh actually no I do have a stance on Tom delange I do know a little bit about him my opinion

(2:43:27) on Tom delange is that he's too out there that he does like he like needs to like if you're going to be a person who's trying to show the information what do you mean there's no text showing dude I think you're confused Prometheus um if you're going to be a person that's going to be try to advoc for disclosure you've got to be a little bit professional right I think it's a way to pull energy out of the vacuum of SpaceTime but yeah the Salvador Pas and Dave Rossy on on Sunday is going to be

(2:44:12) awesome 2 pm Eastern 2 p.m. Eastern 1 p.m. central 11:00 a.m. P Pacific and if you're in Europe it'll be night time for you has the concern ever surfaced that this effort was human initiated then the crew and his passengers disappearance is considered murder yeah absolutely I I treat this as a criminal case Robo one 1776 I treat this as a criminal case 100% I don't know about murder but it's definitely a conspiracy we don't know what they happened to them we can't prove that they killed

(2:44:50) them can I put the PDF on YouTube maybe oh you want me to put it in the description uh I can probably try I think it's better if you just guys just try to read it here I'll I'll try to figure out what I can do with the papers probably what I'll end up doing is I'll probably put the papers in um either my Salvatore Pi interview or I'll put him in the one on Sunday with Dave Rossy and salvator PAs okay

(2:46:39) I think this is fine right yeah good night guys we're going to be going to sleep here in a minute yes Prometheus we see your messages bud I'm just looking over at just some any spelling mistakes okay okay thanks everybody go ahead and uh like

(2:47:44) that okay sorry I can't just give individuals all the attention in the thing in the chat guys so um There's the link guys so go ahead and and find that if you want to read the paper like it whatever make a comment I think that this is pretty cool uh science that we're looking at here tomorrow I'm going to take a look at this other one conditional possibility of a spacecraft propulsion at sub super linal speeds seems pretty cool we should have done this one first this one's way shorter man yeah thanks

(2:48:23) EJ thanks to everybody who um donated and was here hanging out we were having some fun tonight we did a little bit of science we did a little bit of memes it was a good time and I love you guys have a good night we will talk tomorrow man peace

Transcript:

(00:01) [Music] H hm [Music] sorry about that hopefully you guys are back in here geez I'm really bad at revealing stuff huh embarrassing uh where was my last one delete this more actions deletes turn monetization on okay let's try this again are you guys back back people are probably like what just happened there well I guess you guys got

(01:05) to watch that time this time I got to police my DMs I guess ah it doesn't matter that much guys I I didn't reveal anything too important it's just funny how ignorant I am of how DMS work they were just wide open sitting over here on the side of the screen too funny uh let me see here well at least you get to watch along you got to watch along I didn't mean to to bait you guys I guess we have to switch over okay wait how do you make this go away down here are way so I don't have my messages popping up

(01:48) here like what is this how do you get this to go away okay I guess we go like that okay my bad y'all my bad yeah we we wiped that out it was I keep doing stupid stuff like uh revealing personal information but it's no big deal yeah I couldn't believe I didn't notice this it's funny I make up another thing and everybody just watching me say it and I'm sit here playing koi about what I'm saying and talking about but I mean okay I mean as you guys saw um oh yeah the cam was sort of blocking

(02:27) it anyway so I guess it's not that bad but yeah I was I was talking to somebody right who

uh you know I'm not going to pull up my messages I'm not going to pull my messages up now I was definitely talking to somebody that we were you know pinging earlier today and uh I think we grabbed their attention 100,000 views yeah how many replies yeah I really want to know what uh Sean Ryan has to say because we've like ratioed Sean Ryan on like two different posts

(03:32) n we're not going to we're not going to troll any podcasters guys people in the chat want me to troll some podcasters Monica balushi asking Ashen for a date I wish oh man guys don't come into my chat being butt hurt it's like if you get blocked the last thing you should do is come and cry about it in my YouTube channel like I don't get why are people so uh immature you know like if you got blocked like and then you cry about it why I'm not going to unblock you just be like hey man I'm sorry that

(04:23) I was rude to you like nope nobody can ever do that nobody can ever apologize when I block people they're they're rude usually like every time the amount of people that I've unblocked after blocking them accidentally where I haven't reblocked them is one one ever what about muon yeah we're not going to probably uh actually I think I think muon actually asked me to join uh think they actually what are the palladians what what are these muon actually asked me I think to do a uh some kind of conference or

(05:04) something or talk I don't know Taylor set off blast waves quiz cotal asks um that was I think what they guy was talking about in um that they like all look similar that like all blast waves look similar what what are plans is this an aliens thing does anyone know Chris melon it's hard to think that people don't know what's been going on with MH370 stuff unless you are not on the UFO Community like we've fractured the UFO community in half which hasn't even been my intention hasn't even been my

(05:46) intention oh this is cool oh I like this wait is this real well this is sweet guys we're okay we got to we got to keep this um so first of all guys if you need to reach me um as you might be able to tell I'm extremely extremely busy I'm like 50 emails behind so if you want to reach me to share stuff you can do m370x at proton But realize like I don't have time to be talking to people one-on-one uh it's just too busy so this is cool though this is AI art right this is awesome I'm saving this hold

(06:36) on holy crap I've got 30 messages in Discord as well oh boy yeah unfortunately guys I'm just overwhelmed with stuff at the moment I wish I wasn't but I guess this is what happens when you start getting popular or or inFAMOUS however you want to look at it kill them with color oh the Bears might end up winning oh boy cringe okay um let's see what we got going on this this is awesome dude look at this yo I want this Lego set holy crap he must used made this with the AI right let's get my headset

(07:47) on I'm still laughing at myself for sitting here playing koi about who I'm talking to and you guys are just reading the messages oh man I'm bad at this oh I'm bad at this who's my favorite genshin impact character no I've never played that game I think my brother played that game though genion impact is that that one of those um phone games or something like that

the only way to join the Discord is if I have to direct message you or you have to be able to direct message me so if you end up like retweeting my content

(08:21) or anything like that then uh if I follow you you can message me and I will give you an invite potentially right now the Discord is uh private what is my rationale for believing grush so you have to realize that um when you when it comes to credibility for people it's not a kind of situation where they produce evidence you have to put it you have to look at what they say in totality right um and for grush he's putting his life on the line right he's making himself a public figure he's talking in front of

(09:03) Congress under penalty of perjury where you can go to prison for lying to Congress so first of all I don't think if somebody goes to Congress you shouldn't just assume their line I mean that's a that's a huge risk right and uh so I think that grush is telling the **truth** because of the totality of the information that I have seen about uaps and UFOs in the last few years including the 4chan leaker the uh ebo scientist I think that those are two of the more credible leaks that are out there that um you know again you can't

(09:39) really confirm them because all this stuff's being kept hidden so if yeah it almost becomes a situation why would you not believe them at this point right I think that a lot of people think that unless they have absolute proof nothing can be real it's almost like I call it like the 2020 syndrome of people who are younger if you're a little bit older you realize that like in an investigative case it's not about having like absolute proof of watching the person do something although we have two videos of

(10:05) that happening ourselves it's about who what what story makes sense that they're telling does it back is it supported by you know other evidence is the way that they're speaking generally usually when I listen to somebody I can tell if they're bullshitting like right away and I don't know if this has to do with the fact that I I've play poker a lot in the past it's funny Julian and I were talking about this and Julian was claiming to be some kind of rounder which I I knew he was full of crap uh

(10:32) but um I used to play poker a lot a very high level like the some of the most expensive games in the world I've played in the World Series a poker Main Event before and I think that those skills help you to understand when people are lying or not and get tells off of people and the one thing you learn is it's very hard to tell if people are lying uh usually you can tell based on I don't know just little things if I have a superpower like determining if people are credible is is one of them uh I will

(11:00) be on potentially the tinfoil hat with Sam triply he asked me uh on Twitter earlier so there's very good possibility that that will happen I don't think it's been confirmed I imagine there's a lot of people talking to him telling them not to talk to me or whatever that Ashton's so rude and so **arrogant** but that's fine I don't care Alex Jones mentioned you wow yeah we got to look that up I don't know if I want to if I if I go on Alex Jones I'm definitely definitely going to get

(11:30) labeled as alt-right there's no way around it probably uh I don't know I wonder if I should just lean into it even though I would I don't think I'd consider myself alright but hey man I don't know if it helps get the word out the problem is then people try to discredit the case say it's like qinon or something there's not even there's no such thing as qinon uh why would we use a Reaper drone to capture video If we have orb technology I don't know it doesn't make a lot of sense you think the orbs have

(12:00) video cameras in them seems unusual I think the answer is for intelligence purposes what do I think happens next I'm not really sure uh I don't know what happens with the future you know I'm just doing stuff I don't have schemes or plans I've got I put all my cards on the table and we just see what happens right I think the other thing too is a lot of people have their preconceived notion about what is what this UAP phenomenon is and for me My Views are just wide open like I don't know I don't

(12:37) know what it is I don't know if we're dealing with aliens from another planet if we're dealing with ultraterrestrials maybe like beings that are our cousins on this Earth um I do think that what David grush says is probably true but I think we should be careful of the lens with which we interpret his information uh so that we're not putting our own biases in it a lot of people want there to be a you know what is it the Galactic Federation or whatever I mean I don't know man I really don't

(13:04) know I'm not sure I really even believe the aliens are visiting us um to me if the most likely scenario would be that there would be beings that are already here that's to me in my mind but I don't know and from what I've been hearing I would say that the way we came upon this technology is we' reverse engineered it over a long period of time and that maybe we found something buried you know talk with Dave rosi uh I think we realized too that like these craft if they are hovering around here on our planet they're not

(13:37) invincible people ask well how could they crash well because their flight mechanism um might be based on our magnetic fields our gravitational field uh and just because they have a technology that may seem Advanced to us doesn't mean they're more advanced than us in every way we were talking about that when we talked a little bit about the pyramids and historical cultures is that perhaps in some ways they were more advanced than us maybe they understood um like if you do play video games like Civilization um you realize you can go

(14:07) down different research paths so you might be more advanced in one way but less advanced in another way I think that's how we should think about it if there are other beings out there am I familiar with Missing 411 I reached out to Missing 411 but I've heard not positive things about the person in general doesn't mean I wouldn't wouldn't listen to them but uh I don't know let's see let's see what else sorry I missed some messages if I missed your message and you have it and I didn't answer let

(14:39) me know I think we're going to try to take a look and see if we can find the Alex Jones thing so I definitely want to hear what he's saying regardless of anyone's opinions why would we

use Rockets when we have anti-grav Tech well JM jml I think that's self-explanatory you don't Reveal Your trump card right if we start having making anti-grav ship they're going to get they're going to get captured reverse engineered Etc this is the kind of technology that is transformative that will change the

(15:08) whole world so if you start making anti-grav planes then everybody's going to have anti-grav planes everybody's going to have that technology this kind of Technology kind of Technology we see in the videos which I'll show here this kind of Technology here is the kind of technology that you you keep hidden to the last minute only when you have to use it in Desperate situations which is why I think that the motive here has to be about something more than money or patents it has to be about the intellectual property on board I don't

(15:42) even think it can really be about saving the plane like out of the goodness of your heart because you don't risk this kind of Technology becoming publicly available for even a passenger plane full of people you just let it crash this kind of technology is kind of technology that if we if you've watched my Dave Rosy interview you'll know the implications and the implications here are huge we're talking about being able to wipe out any nuke that that was shot at us like basically Perfect Defense

(16:12) someone choose a nuke you send the orbs up teleport it back onto them you might even annihilate it and there's nothing they can do about that these weapons are these technology is so Advanced that it's not the kind of stuff you just start rolling out you know your your super ships but we probably have some we probably have some but ultimately J jml that's the that's the word that's the what we're dealing with here is that this technology should be made available to all of us is that what we see here will change everything

(16:41) we don't need propul we don't need chemical propulsion anymore okay let's see what else we got here Dave pades of missing 41 I I don't know if Dave pades of missing 411's really going to be able to get on board with this for a lot of people on no matter what your political spectrum is on this it's too much right why do we have girlfriends when we have fem Bots that that's another good example right sometimes the old sometimes the outdated stuff is a little bit better right um I think the Biden

(17:22) Administration definitely has knows what's going on here I mean Biden was vice president when this happened Obama is definitely implicated this is not the kind of this is the kind of thing that has to come directly from the president there's no way Obama did not know that this went down no way he had to sign off on this type of thing I'm sure and it makes sense if you look at Obama's stuff he was actually like all about disclosure then he gets into office and then he just goes quiet about it this

(17:49) happens to every president Trump too Trump to did you see Grant levac post about the smoke yes I blocked Grant because he came into my DMs trying to **debunk** stuff and I didn't want to talk to him about it because I'm extremely busy and I don't like to deal with people on a one to one basis and so then he goes and makes this post like trying to chop me up and chop my

quotes up to try to make me look bad don't ever do that guys that's how you get blocked permanently okay I'm done with UFO Community I'm

(18:22) done with these types of people I told Grant that he can come up with his own theories if he wants but to try to chop me down or my ideas down is just the very stereotypical type of person that I try to avoid right so if Grant wants to delete his post to make a formal apology then I will consider unblocking him and not until then so don't do that don't come in my DMs don't come in my DMs telling me what to think the rule still applies we were actually at a very good run where we didn't have that happening

(18:53) for a little while um but everybody feels so self-important that they feel like they should have a one-on one conversation with me about the case which the reality is I'm just too busy for that guys so I think he got offended when I told him I didn't want to talk about it in DMS and then he made this post about me and that's a huge mistake man don't do that don't do that that's how you get blocked and how you are no longer part of the investigation Justin I'm a fake bot say great podcast with Dave yesterday yeah

(19:25) the joke there is that um when we were in the space with Danny and Julian like they're like oh someone told us that Ashton's buying Bots and that all the commenters are Bots all the negative comments I'm like dude like these guys are not living on planet Earth man uh so anyway let's I don't think anything's been scrubbed off the internet uh UFO nut oh and I might have to repost some of oh hey Robert thank you very much I think that's you yeah thank thanks for Robert for the Dono um yeah I don't think wait I I'm trying

(20:06) to understand your context your message here I don't think whoever did it did it to save the plane but to keep the information out of people's hands the problem with that Robert is that you can just let this plane crash this plane is on emergency landing right here and here's the thing about real quick about the smoke I don't think this can be exhaust that's the only other possibility is that this is exhaust this can't be fueled the fuel would be dropping you know fuel is going to drop to Earth it's heavy and

(20:34) it's probably going to show up cold in the thermal as well so this is can only be exhaust or smoke and I just don't think exhaust is going to be this visible not like not like this is here so you know people want to argue about where the Smoke's coming from it doesn't matter it doesn't matter where the Smoke's coming from right like everybody's so invested in trying to nitpick things um it's it's matter it's not contrails that this plane is flying low right and we have an eyewitness on the

(21:03) ground who sees smoke coming out of the back of the plane so it's like okay man whatever you want to believe the Smoke's coming from I just don't care um and so this plane if it lands on the ocean here it's just going to rip apart man like let me find the other video of that just I'm now I'm worried about accidentally revealing information I don't want to have to delete any more streams I keep having to delete streams uh but yes if you guys didn't see the previous stream I am talking to somebody

(21:38) who we were uh kind of getting trying to get their attention think it worked and yeah they may look into the case so who knows what'll happen in the future man um you know somebody who has an open mind who I respect a lot who I've watched some of their podcasts and I think they're the type of person that we could have like an awesome intellectual conversation about what what I'd love to talk to people like uh let's just say hypothetically Lex Friedman about would be the implications of it you know I think Lex

(22:06) would love to have a conversation about what this technology means and if it's a good idea to reveal it to the world and that's the kind of conversation I want to be having with like smart people and and all UFO people too I don't mean to put people down uh so let's do airplane crash [Music] ocean oh this is it right here oh wait no that's not it okay guys you ready you ready to watch this Johnson you guys ready to see what happens if you try to land a plane in the ocean and ignore this guy's crazy face

(22:53) here I don't mean to say crazy in that sense but he's he's got some something going on here but watch this okay we're ready for the we're ready for the okay so this is a real video here watch this does this look like this is does that look solid to you guys what do you guys think what do you guys think there if your plane is filled with fuel I think it goes even worse than that let's let's give it another go look at what happens to this plane on this is a controlled descent yeah I don't think a lot of

(23:38) people are going to survive that guys certainly not in the middle of the ocean the middle of the night where it's pitch black and the other part two is it remember it's pitch black so somebody made the point too that in third world countries like Malaysia the landing gear the lights on the runway we probably turned off in panang so if the lights in panang are off off then landing on the ground is going to be extremely difficult it was probably a doom in that case yeah Sol solenberger pulled off and that was on the Hudson River okay the

(24:08) Hudson river is not not like Landing in the ocean at all any congressional representation support guys all I'm going to say is not going to say anything I'm just going to smile at the camera guys let's just say I might be talking to people I might be talking to people but also just say if I hypothetically was going to talk to anyone in government I probably can't talk about it I because I want to keep it close to the chest so the family seeking compensation is something that I may do another piece on

(24:53) because it's just so weird man and thank you again Robert for that donation appreciate it man uh let's see yeah I'm not going to delete any evidence review streams in fact we need to do another evidence review stream uh I I would definitely like to do one so uh let's just make a quick note here what we got going on new evidence review stream salvator I don't know if we're gonna have time for all this tonight uh Alex Jones or something was that on Infowars not sure we got to find that uh why do you guys think Lex is a skill I'm

(25:35) curious anytime somebody tells me negative things about somebody that just makes me want to talk to him more as long as Lex isn't going to try to pull what the other podcasters did

then I absolutely don't care what his opinions are on anything and if people say that he's a shill that just makes me want to talk to him even more uh Anna Palina Luna I like her a lot actually I like the way she talks um I like that the UAP disclosure stuff is coming from both sides uh that you know she's a Democrat

(26:07) MTZ is a Democrat and then you have Gates and Brett who are Republicans I think it's important that it's a non-political issue I think that we're never going to get disclosure from the government that's just not going to happen it's never going to come from the government they're going to cover it up I mean look at the technology look at the implications of what we're dealing with this is National Defense issue here this even gives me pause guys if this wasn't MH370 on these on this on

(26:36) this video here I would probably be applying for government jobs I would say hey guys uh yo I want to be involved in the orbs man hook it up but because that's MH370 we're doing what we're doing we want we need this to get um revealed to the world that's the reality of it you know I mean this just deserves to be public man these these families just didn't get any answers as pilot gets vilified the witnesses all get discredited imagine being a witness that sees this and you report it and then they just like crap

(27:13) all over your sighting it's just ridiculous man was Lex all over the place I mean he's pretty young so I think he just kind of appeared I mean where did I come from right you can make the same argument about me like where did Ashton come from he just in three months he's all over the place now well the answer is this is a pretty huge thing going on right now and we have a Grassroots movement that is supporting it you know like how many people are in this right now I didn't even post this 256 people

(27:40) are watching right now and I didn't even post this on my Twitter so people want to know information uh ban. video is that where I can find it okay I'll take a look I'll take a look boy people really have divided opinions over Lex the more you guys uh hate on him the more I want to talk to him um and the reality too is just even if somebody was a glowy it doesn't mean they're necessarily bad the way what I've been told behind the scenes and I have connections now is that there's sides to this some people want this

(28:17) stuff to come out some people don't want this stuff to come out you know so yeah this would be a massive Paradigm Shift guys this is huge and that what somebody said yeah they need to be able to continue their oil Wars or their proxy Wars wars in the Ukraine which you know we could probably just win the war anytime we would want but it's not about that it's not as simple as just taking things over it's not as simple as oh we just make all the **Russians** Americans like that's not nearly that simple is **Putin** even still

(28:48) alive guys is **Putin** still alive I heard rumors that he had like died I don't know if that was real or not I mean being around for six years seven years 2017 is when I got interested in UAP so that was a long time ago that's six years ago guys yeah take it easy JN appreciate you guys if anyone has to go to sleep appreciate you Lex is the intellectual man's Andrew Tate well I would

talk to Andrew Tate too I don't give a crap yeah you guys got to realize I don't have sides man I I don't have

(29:20) sides I'm willing to talk to anyone who wants to talk about the evidence talk about the situation talk about the case talk about you know get the evidence out there people cuz what we're dealing with here crosses political Spectrum man crosses the political Spectrum this is huge man it's huge no I know I know you guys aren't all hating on Lex a lot of you guys like him obviously you guys like him um hey everybody hey Alex okay let's see if we can find we're just chilling tonight yeah if I got on Andrew Tate how

(29:54) hilarious would that be I I like it would just be hilarious man like the dichotomy between like this situation and this technology in them I'm not sure that like people like the Tates would like even believe this right I think that both sides have a difficulty believing this what Andrew Tate and uh trist and Tate would appreciate is the coverup aspect of this right and the aspect of like the vilification that happens cuz I said this on my other podcast which I may or my other stream which I may have deleted

(30:26) I I don't like to talk too much about IC stuff and people who are very um controversial but I do think that the Tates I think the US government stepped in to make sure that the Tates were uh let's say marginalized right they needed the world to believe that they are not people that you should listen to and so they got Romania to drum up some charges on them right that makes it sound like now if anybody thinks about them they're going to think about the allegations against them right and they're not going to

(30:58) think about uh how much influence they have which that's the part scares me man the government doing stuff like that to people is what scares me like you know trying to find some stuff in your history and and trying to like wreck you or whatever that's the stuff that Spooks me but yeah he's he's a smart guy man you guys shouldn't underestimate people like Andrew Tate like he he's definitely an intelligent guy man he's well read you're not going to be able to you know um trap him or whatever in a

(31:31) conversation no chance okay yeah I mean I think they did they might have done the same with Alex Jones too like I that's why I've been having to go back to all my preconceived notions about people and that's why we don't judge people ahead of time no matter what no matter who they are right so maybe I should say that about Alex Jones as well because we're about to go watch something potentially um did they really go to prison uh uh the Tates were thrown in jail they were thrown in pre-trial

(32:01) detainment imagine getting put in jail for months without any formal charges in Romania they can do that it's called pre-trial detainment and so they don't even charge you formally they just throw you in jail during pre-trial detainment while they investigate the case that's not like in America in America they charge you right away then you can bail out and when you I say bail out it means they set bail as long as they don't think that you are um and this is for the audit the auditor guy right this is where I mean

(32:33) about equal justice thank you Banner appreciate it man um that in America you bail out you pay money and then you can get out of jail and then you can have the trial go on while you're out of jail in Romania they threw these guys in jail for months didn't let them out didn't charge them formally while they just smear them in the media like that's like damn dude I'm 100% sure the FBI the government government was involved in that anyway we won't talk too much more about that yeah it's actually a little bit similar

(33:02) to Edward C Linn Edward C Linn was put in pre-trial detainment they wouldn't let him out but the judge like doesn't list any like strong reasons why he shouldn't be free I mean unless you think he's a spy like let the guy out Robert thanks a lot man really like the Bob Greener interview we'll have to have him back on yeah I agree man I agree why did the nightbot hit you Banner oh yeah don't don't don't do all cap or too many characters guys more than three special characters in a row

(33:30) nightbot nightbot a a beast yo he's a beast um it's funny because sometimes I think about like what it would be like if I was on someone like Andrew Tate like I feel like he would be like hey Ashton you got to you got to hit the weights man you got to work out I imagine working out with him and then doing like a intellectual conversation about the Matrix I would love it that' be too funny man that' be too funny yeah uh in terms of his following you know I think that he cultivates uh a group of people that yeah I don't know

(34:05) if I agree with everything but I don't know it's not that big a deal I think people can believe whatever they want to believe they can have their own opinions on whatever they want as long as people aren't out there uh uh you know committing crimes you know it's fine if people want to be you know exercise their freedom yeah right can you actually block nightbot I don't think you can man night bot's a beast see yeah that was an actual that's an actual bot okay let's see if we can uh do some

(34:35) stuff that's relevant here what was it band. video or something how do I find this stuff guys you seem to know a lot about entertain almost like he's your idol uh no not really I did follow the case though uh many months ago cuz again I believe in Equal justice so I'm very curious there's Alex Jones right there is there something on here where do I find the thing about Alex Jones ban.

(35:22) video okay what if I become Tate 2.0 I I don't think there's any chance of that guys do you guys know which of these shows he he talked about the cas on I was talking to kim.com and he Pro he made me promise that I wouldn't uh wouldn't change or become egotistical if this got big and yeah I I never will so I would never let Fame change me in anyway uh that's just not going to happen so don't worry about that you think he's on the Alex Jones Show where do you think I have to find the thing

(35:59) about this yeah it might be hard to find the spot this one how many things does he do per day but he get a decent amount of views man you're already arrogant you're so arrogant I love how that's the the claim against me is that I'm arrogant really that that's the take huh okay I

think what's the difference oh here we go what's the difference between arrogant and uh is it she spell her name with a A or a e what's the difference between arrogant and being right what do you guys think

(37:01) I'm not sure what the difference between being arrogant and being correct is it's a fine line I feel like yeah actually I agree there too like Alex Jones getting hit for a billion dollars for what defamation or whatever is pretty ridiculous too and I was never a fan of Alex Jones really um although I want to be careful because now given how everything's gone down I don't know I've had to reassess all my preconceived notions I never thought I would be looking at a rabbit hole as deep as the rabbit hole that we've we've

(37:33) been in I'd rather be right than arrogant yeah arrogance is confidence without humility that's that's interesting I like that delivery Maybe what's this about yeah this was not released by the government anyone who thinks that these videos are released by the government has not been paying attention quite the opposite they're still hiding this stuff man people can believe whatever they want but I think a lot of people go a little bit too down the rabbit hole um little too down the rabbit hole with

(38:30) this like we're exposing this because it is the government we're not exposing it because we are the government quite the opposite and if anyone thinks I'm a disinformation agent or whatever then again they haven't been paying attention man dis information agents aren't streaming every night letting you watch them work in real time damn Brian L just named me I think that's can con right I I fell asleep for oh he just messaged me wait did he follow me uh we're going to have to watch that

(39:25) too yeah this is getting big guys imagine if we were on Tim pool did he follow us scared about clicking my messages I don't think he's following us no he's not oh wow do you guys know what the culture war is with Timo uh I don't know about that it's Tim P

(40:32) called you a PR grifter uh Hermes wait when were you on Tim pool uh let's see what would be your reaction if Edward Cen publicly denied leaking the videos and denounced them as fake uh I don't know I I don't think I'd believe it he'd need to explain what he got charged with I mean the evidence is overwhelming that Edward C Lyn's the guy man completely overwhelming uh guys don't uh I don't want to ban anybody so don't be derogatory towards any races or anything like that I don't you

(41:11) know let's see also there's C certain topics we're not going to talk about like wars in the Middle East that are happening there's just no there's no winning there's no right sides is the issue yeah and somebody just brings up a perfect comment I will say this comment so he bring Ashton on and then be like so how about Israel versus hamus uh guys I'm not touching that with a 50ft pull like that's just I've got a lot of uh friends that were from Israel I lived overseas um I'm friends with people who

(41:44) are on the other side as well there's it's a very complex situation you think we can

convince uh Tim pool maybe man maybe I think that would be pretty huge let me uh take a look at one of my text messages here yes so Tim sounds skeptical like anyone would be but I think that once you go through the evidence with people it it will make it um make it pretty apparent so you guys think we're going to be able to find can anyone figure out if anyone can help figure out where the Alex Jones thing is that would be big

(42:41) Edward C Lyn somebody pron somebody spelled it correctly middle C is middle name uh so help me someone help me figure out where this is at and we're going to look at Tim pool's show where's this show at is it on YouTube I thought he has a website I thought he was banned off YouTube maybe not oh the culture War this is what they're talking about potentially having me come on damn this would be crazy imagine if I'm on a show like this with had people like Vivic on it damn my opinion of Vivic is like this dude feels like he's

(43:27) I can't decide what this guy's deal is feels like he has a lot of support that he's like being selected his stuff was just too highly produced search bar yeah see this is like I think I have to go to his website right yeah this is this stuff's not right timcast don't oh timcast is what it is right pretty sure it's Tim cast yeah Lex Freedman would be the best I that's what I would enjoy the most because he's just an intellectual right somebody who's deeply introspective I need a time stamp for

(44:10) the Alex Jones thing wherever wherever this is I have no idea I don't want to go di in for it yeah on infow Wars thing I'm not sure where that's at so the timcast thing oh there it is Brian Lupa this is whoa whoa whoa guys holy crap not only did it get a mention it's we got to take a picture of that how do I send this WOW guys yo whoa this thing is getting huge guys

(45:16) this is getting huge hard to ignore I think we are definitely going to get labeled alt-right I think it's it's pretty hard to not get labeled alt-right at this point but oh well let's go guys holy crap I mean we were just on the the front page look at this holy crap what does synchronicity mean I don't know what that means is that a conspiracy thing I'm not sure about Bob Lazar anymore the was he was uh Alex Jones was showing the Greg Reese video cuz we already Greg Reese already did the thing

(46:00) on us as well alt correct oh I could have screen captured it but I needed to text message it to somebody um but we can do that man my Discord is uh popping off man to many messages man Robert thanks again man you've been donating a lot I appreciate

(47:04) it yeah and so I mean a lot of this too is like even if somehow we were wrong about some of this like there's still too much evidence something clearly happened guys 48 minute Mark horsey okay on which one okay and then the shout out from Brian Lup is at 157 in today's stream okay let's see is there not like a link to listen to this oh you have to log in to view the content members only oh man members only that's whack damn is it on is he on The Daily Show is that what he was on H this feels bad yeah when people tell me something's

(48:03) fake then I I want to look into it even more so I don't know maybe this is this one looks

like his his live show 157 oh wait no this one was what 47 minutes something like that why can't I hear anything after they took the shots oh he is still part of Infowars so he he definitely knows then about the plane situation anyone know in here where he talks about it anyway let me know if you guys can figure out where the Alex Jones thing is would love to hear it I want to monitor whatever social media people are talking about on um EJ

(48:58) Vasquez perspectives on Ultra intense laser driven terahertz radiation from plasma pushed in the American Institute of physics Google it lasers change matter yeah honestly you should check out the interview with with um uh Dave Rossy because I think he was mentioning same things as well that you can allow this um what is it oh God too tired tonight um self organization to happen in a in a I don't know if it's a lattice or in a helix or caducous type Manner and that they can change from uh was it matter to Resonance or

(49:38) sound or something pretty much pretty interesting it's a little too a little too advanced for me synchronicity is when God Winks it's interesting yeah the important parts of the verifiable facts and I think the most important parts are that we found our leaker that we can prove that the didn't crash in the South Indian Ocean and something else happened I don't really do forensic analysis on the video um really I think that's where I leave it to the world and the **debunkers** to handle that I do the

(50:07) investigative side of the video looking at the evidence in the video trying to determine what happens oh I have to pay to watch it man do we do we have to become a member of Tim pool's thing well I wonder if it'll come out but this is pretty big though anyway and it's funny cuz he just messaged me while we were talking here we're going to do an Evidence review later this week most likely we'll do an official evidence review maybe I should make a post about it should we do an Evidence review

(50:43) tomorrow let me look at my calendar real quick 156 on Tims yeah I don't have to I don't have the thing to be able to pay for this though damn do you guys know if there's anywhere else to watch this oh here it is here it is he gives me a shout out man this guy can con I I I I'm not bound by any contours or anything but I'm HonorBound not to not to say these things hopefully I don't get copyrighted for this work on right now our Star Trek level sci-fi Star Trek level I just let me let me put it this way we

(51:32) need to talk to Tim pool guys we need to talk to Timol they able to we talk light years away faster than light Communications what he's talking about just imagine that level of Technology like these kinds of ideas like how would that even be possible things like this things like elesium guys we need to talk to Tim pool we need to talk to Tim Pool Guys I have seen the projects it is he is connected the stuff they're building he is connected I think technology ends the moment AI goes exponential the point of Singularity

(52:06) when AI becomes so rapid expand I didn't think he was this connected intelligent no offense temp I don't mean that in the bad way times above human consciousness I thought he would be way more skeptical I got to give a shout out real quick to my my friend Ashton Forbes

on Twitter let's go7 teleportation theories it's I had him again another guy I had in my podcast a couple weeks ago they've got it down to where I 100% believe that we have some sort of a teleportation device the MH370 from 2014 you think

(52:38) it's tele they teleport the plane away yep I don't know about all that this this this guy and a group of other people not you know just credit to him but they've been going through this I mean they've pieced it together Brian if you're watching I love you man [REDACTED] love you I don't care if I don't get monetized I love you they know the guy that they think did it he was he was arrested and and and and and imprisoned wait like a guy fired a teleportation no no no no these three orbs start flying

(53:01) around the the the plane and then just all poof it's gone Tim look at it I'm telling you look at it Tim you just mentioned faster than light communication it's The Simple Solution racer where is it a plane crash in the middle of the ocean mean where is it nope nope Tim where are all the other boats that have crashed and sank oh yeah seven seven you you got to look into it yeah the simple Razer simple solution you got to look into it my man you got we have got to talk man we have got to talk Alex Jones is 35 minutes and 30

(53:35) seconds thank you esic Gold Live people want to believe the world's not so boring okay sorry let me turn the volume up you guys we're going to listen to the projects that I've learned about that are classified government contracts listening we're going to listen to this again guys people in government I've talked to people in medical research I cannot say I I I I'm not bound by any contract or anything but I'm HonorBound not to not to say these things but the projects that are being

(54:02) working worked on right now are Star Trek level sci-fi Star Trek level I just let me let me put it this way I can say as much as I can say in St he's talking about faster than light communication right now guys he's talking about faster than light communication let's just Dave Rossy what are the implications guys what are the implications faster than light communication here it is all you have to do is reapply these to these other aspects of course I would never mention his hat guys come on I I don't care

(54:41) about stuff like that but wow he he gets it but he is not realizing the other implications of the exact thing he's talking about right here if you have faster and light communication it enables all these other things faster than light communication that's what he's talking about with Star Trek he doesn't realize that teleportation is also possible quantum teleportation if we can teleport information it's just a matter of unifying Quantum and macro and thank you vas guys I may have to take a look at your information that

(55:13) you mentioned above I appreciate that did I get everybody else's stuff it does not surprise me that it all comes down to lasers as well macroscopic Quantum phenomenon guys o OKC You' got it art Trek they are able to communicate with Starfleet can you guys hear him better now I turned up the volume light years away mhm okay just imagine that level of Technology like these kinds of ideas like how would that even be possible things like this things

like elesium they're being built message I have seen the

(55:51) projects it is wild the stuff they're building I think technology ends the moment AI goes exponential the point of Singularity when AI becomes so smart it can rapidly expand itself and then it's just 500 times five million times above human consciousness I gotta get I got to give a shout out real quick to my my friend Ashton Forbes on Twitter MH370 the teleportation theories behind it it's wild I had him again another guy I had in my podcast a couple weeks ago they've got it down to where I I 100% believe

(56:27) that we have some sort of a teleportation device the MH370 from 2014 you think it's tele they teleported the plane away yep I don't know about all that this this this guy and a group of other people not you know just credit to him but they've been going through this I mean they've pieced it together um they they they know the satellites that were watching it when it happened and it just they they know the guy that they think did it he was he was arrested and and and and imprisoned wait like a

(56:51) guy fired a teleportation no no no no these three orbs start flying around the Yeah Tim when was the last time a airliner crashed and nothing was found didn't crash into the ocean man Tim we need to talk buddy we need to talk if Tim knows about faster light communication information then yeah the plane and then just all a sudden poof it's gone n Tim look at it I'm telling you I I was very skeptical look at it nah plane crashed n it's it's the simple solution's racer where is it the plane

(57:23) crash in the middle of the ocean where where is it where is it where are all the other boats that have crashed and sank oh yeah but seven seven you got you got to look into it yeah the simple soam razor Simple Solution tends to be the one that makes the least amount of assumptions so a plane crashed the the it sinks frag least amount of assumptions is that the plane can't crash without leaving a debris field that's not possible we've got two videos watching this plane teleport two videos ripped apart ocean current send them

(57:49) away they find some of them they don't find the rest that's just the really easy explanation but I think people want to live in people want to believe the world's not so boring I will tell you so I completely disagree with his take right there um that people don't want to believe that the people want to believe that the world is boring actually is what it comes down to if you have faster and light Communications then we absolutely can do these other things that we're seeing guys that's why this

(58:18) is so huge this is why I actually think we can convince Tim now I always thought I thought for sure he'd be skeptical like anybody is but fashion light communication comes directly from the double slit experiment and yeah some of the projects that I've learned about that are classified government contracts wild wild stuff we'll see if we get to that point technology advance and just in case he's listening anyone else is listening right now no debris field no acoustic detections cell phones still ringing days later no elt

(58:51) transponders go off no black boxes found it's on an active ship shipping route no one sees anything supposedly crashes in the daytime guys this plane did not crash into the South Indian Ocean no chance advances and I'm sure when radio first came out people were like wow this is crazy like how do we communicating over Wireless how does it work and they to explain it the the the charged electromagnetic spectrum was beyond human comprehension and then we found evidence of it it's like soku puzzle AI

(59:21) is going to map out the universe it's going to be wild and on understand how crazy it's going to be when there's going to be a single Terminal A A A Godlike Ai and you're going to be able to ask it uh you know I want to create a an exo suit like Iron Man and it will just be able to give you schematic right now and it will it will explain what's possible what's not possible because it's just m everything I couldn't conv say it very well so uh I was looking at a rock there a rock store at The

(59:50) Frederick mall it's awesome they have rocks anyway so wow that was wow guys if we can get on Tim pool we can convince Tim pool I'm 100% sure now I'm 100% sure yeah no I understand how big the South Indian Ocean is guys federally federally regarded there's nowhere else for the plane to go the plane runs out of fuel in the official flight path the flight there's nowhere else this plane can go they've searched everywhere what people need to realize is the this argument the ocean's really big is

(1:00:23) frankly stupid it's just stupid there is nowhere else for the plane to go we searched everywhere that the plane could have gone you can't not have a debris field for a 777 crashing into the ocean we just literally pulled up the video of a plane ripping to pieces on a control descent in the ocean there's going to be a debris field visible from space for days we're going to find it the very next day if the plane ripped apart in the ocean this is not like it was 1995 it was 2014 there's no acoustic detections for a

(1:00:57) plane crashing into the ocean there's no way the plane could have crashed into the ocean not possible that's what's amazing about the case we almost don't even need the videos That's How Strong the evidence is where somebody said it was at 35 minutes man I've got to look back up now was anyone paying attention where the MH370 thing was in this Alex Jones thing yeah we're getting talked about by people man this is pretty big that was wild man that Alex Jones said faster than light travel or

(1:01:31) communication is possible I mean he's he's right on it he's where I was a while ago but once you start to see this and you dig into this 3530 found it tampering with our DNA that they're able to shut down our immune systems uh this doesn't seem right of something to our DNA yes but I don't know how exactly it's being triggered I don't know that either or why it's happening now thanks Banner appreciate it man what can we possibly do we need to act quickly 3538 did did I go past it **I was wrong**

(1:02:07) about WR this is x file stuff by corporate G that with some big quote Stars up you know better so that's what this is ladies and gentlemen and and and anyway am I on the wrong video

serving this maybe it's a different one our slaves they will all be destroyed as well and I can look of the future and tell you oh from weapons and reactors and populations I don't know control and the globalist themselves are going to be destroyed in the process the only question is the globalists are going to be destroyed

(1:02:58) yeah if you're not caught up on the the case guys don't uh don't judge man uh Fred really regarded I think you're are just you got CNN brain my man they knew exactly where the sub was from the tit from the Sosa system they knew literally where it was immediately and they lied about it like I think you got to wake up my man that the Navy knew exactly what happened to the sub the moment it happened and they let there be oxygen counters on go off for days so you got to realize like the TV's lying to you man you don't have to

(1:03:36) believe me it's fine I don't care but you you'll come to terms with it one day you guys ready for this missing Subs Titan was likely detected they literally detected it the moment it happened they let oxygen counters run down for 5 days on National Television they went and picked up the debris like the next day they knew exactly where these acoustic detectors can pinpoint the location pinpoint it look at this they gave away the game here with this this is how we also know that MH370 didn't crash into the ocean three

(1:04:19) different detectors didn't detect it this system would have detected the plane crash they would have known exactly where it crashed exactly this is why I talk about CNN brain where people don't think critically about their own opinions is that you you watch too much CNN and you watch these oxygen counters on TV and you're having cognitive dissonance go off they knew exactly where the Titan sub popped they knew exactly the moment it did and they didn't tell anybody about it and then 5 days later they tell everybody oh yeah

(1:04:50) we heard that we're going to go pick it up now it's not that they didn't know they knew right away this is a tiny Submarine that's only holding five people tiny submarine tiny implosion compared to a 777 crashing into the ocean and there's two other hydrophones as well that would have detected it guys uh I don't want to give up my favorite football team right now we're in redo right now uh I had to delete the first part cuz I accidentally I accidentally showed everybody all my messages it's all good

(1:05:34) though uh so if you're if you come to the stream late uh let's just say that we're making some pretty big connections with people the MH370 stuff is blowing everybody's Minds 100% agree I don't think we're talking about alien technology we are talking about um we're talking about our technology DOD hidden technology it's coming out guys it's coming out can't hide the **truth** anymore CNN brain CNN brain is going to be my new thing man it's just uh people that just believe whatever's on the TV

(1:06:11) you know is it on Alex Jones Show what is all this infowar show uh I just want to hear the shout out man that's all I want to hear is the shout out this is yesterday show it maybe it's not uploaded yet I don't know let me see here what else we got man that Tim pool thing is pretty awesome I hope he reaches out I hope he reaches out maybe we should clip that um

should we clip that you guys want to clip that uh Tim pool thing we could probably get his attention I think we're going to do that guys I just

(1:07:02) that's a good that's a smart move frankly uh let's find it where was it yeah we're clipping this if he wants to strike copyright strike it I'll take it down but he we get a literal shout out okay I think it was at 1 properly surgically implant without rejection and here's the chemical compound needed to maintain uh the device in the body without Rejection it will just be able to do it there's some wild stuff going on with AI some stuff that I can't even talk about dude let me just say to everybody

(1:07:44) listening I've talked to people in government I've talked to people in medical research I cannot say I I I I'm not bound by any conscious anything but I'm HonorBound not to not to say these things but the projects that are being working worked 156 let's say right now our Star Trek level I I love Brian's response here when uh I wish I wish we could get on Joe Rogan I feel like Joe Rogan's gonna get told not to talk about this and I think he's going have the same response as Tim

(1:08:16) right where he's going to say it's not possible Right but it is possible sci-fi 156 sorry I'm just trying to trying to to t to cut this why can't I count on man what is going on here I can't it's not let me cut this come on man right now because it's it's cheaper to rent you know inh human here we go cut it there and then when did he stop talking about it Star Trek level I just let me let me put it this way I don't know if Joe Rogan's out there and he wants to reveal the biggest

(1:09:05) conspiracy of all time all he has to do is reach out we'll make it happen whenever he wants I can say as much as I can say in Star Trek Brian lup's response here you just the look on his face is just they able to communicate with Starfleet light years away mhm okay just imagine that level of Technology like these kinds of ideas like how would that even be possible things like this things like Elum I don't really care about the copyright strike situation they're being built like I have seen the

(1:09:37) projects it is wild so keep in mind guys everybody who's this big probably has talking to with the government like he just admitted that he's he says here that he has contacts with the government and he has to be careful about what he talks about right yeah they don't want to be in the crosshairs of the military man they building I think technology ends and I'll just say I've talked to other big podcasters who you guys would know and they've told me they're concerned about the implications of the

(1:10:04) technology right the moment AI goes exponential the point of Singularity when AI becomes so smart it can rapidly expand its well I mean what he's talking about here is I 100% agree with what he's talking about with respect to Ai and stuff like that right now I mean AI scares the hell out of me Ste and then it's just 500 times 5 million times above human consciousness I gotta get I got to give a shout out real quick to my my friend Ashton Forbes on Twitter MH370 the teleportation theories behind it it's

(1:10:35) Bri wild I had him again another guy I had in my podcast a couple weeks ago just epic epic they've got it down to where I I 100% believe that we have some sort of a teleportation device the MH370 from 2014 you think it's tele they teleported the plane away yep okay 15720 oops I don't know about all that this this guy and a group of other people not you know just credit to him but they've been going through this I mean they've pieced it together um we're oppos they know the satellites that were watching

(1:11:19) it when it happened and it just they they know the guy that they think did it he was he was arrest and and and and imprisoned wait like a guy fired a teleportation no no no no these three orbs start oops what did I just do oh man I just reset it okay I'm going to try to clip this and see how how it goes um MK4 clip this okay we'll see if we caught it there the clip thing is interesting Yeah Tim I don't know if he has an NDA he might I I think he just doesn't want to say anything yeah can con we're gonna have

(1:12:03) to shout out to can con here tonight guys that's pretty huge man tonight is a big night man every night we have huge stuff happened this is wild man shout out on timcast shout out on Alex Jones we had we had we talked to somebody who's pretty big pretty damn big today who we kind of BW up their spot or whatever our Bounty 8 hours ago 23,000 views 23,000 views on our Bounty post holy moly holy moly yeah that's okay just him giving the shout outs big enough man he says he talked to him after the fact too and he

(1:12:45) wants to have us on the culture War so I mean if we if we can get on Tim p in any respects and convince him I want to convince the world I want to convince everybody okay this downloaded let's take a look bound not to not to say these things but the projects that are being working worked on right now are Star Trek level scii Brian's on X I'm going to tag him for you guys Star Trek level I just 500 I through this I mean they've pieced it together um this clip is amazing holy they know the satellites

(1:13:14) that were watching it when it happened and just people they know the guy that they think did it he was he was arrested and and and and imprisoned wait like a guy fired a teleportation okay that's that's the clip we got the clip should we call it breaking update I think we have to call it breaking update can we break the internet tonight guys what do you think I don't think this will be that big but man we are we are uh got some big posts

(1:14:52) for what the what was that pressed the wrong button there sorry guys I got to focus for a sec then we'll look at that yeah we're posting this let's let's break the internet every night my friends taking my shirt off let's break the internet we're taking our shirts off yo we're getting serious on this yeah hit the thumb like button guys this is this is uh going to be wild here get ready for this yo the mainstream media I can't wait for them to try to discredit us you know it's coming man you know they're

(1:15:32) going to try to andrate us the Matrix is coming like this is getting too big they're they're not going to be able to contain this man they're attempts to have me on podcast and try to vilify me backfired spectacularly they must be panicking man they must be panicking can you

just imagine how much they're panicking right now hold on yeah we might need to update we might need to update our picture here we might have to throw some more faces on here Melo I love you but you might have to get replaced by a few people we might

(1:16:07) have to put uh Brian Lup on here we might have to put kim.com over here we might have to get serious with this yo it's getting meme it's getting meme tastic now yo this is what happens when mainstream media comes for you guys when mainstream media comes for you guys sorry guys I just I gotta gotta meme a little bit I just got to meme a little bit guys stop talking to MH370 here's the FBI right now trying to keep this quiet this is I'm trying to keep this quiet right now yo we're meme Warriors out here yo

(1:17:08) FBI right now FBI is on suicide watch right now guys they're on suicide watch uh let's see where's the fourth orb uh we don't know the fourth orb could be anywhere they can send it Direction where do I put my stuff Let's uh I think we'll leave the medical healing stuff out I think the medical healing is a little bit too much woo for people to understand at the moment for

(1:19:22) for seems pretty good right yeah it's basically magic I almost put magic in there yes they did try to put me up in N cono Lodge that's when I realized that that I definitely got played that you got on a price line yeah guys we got to take politics out of the equation here my man the fourth orb was at Diego Garcia if I'm being honest I think the fourth orb was somewhere near the MDES because of the mald sighting I don't know exactly what but yeah could have been pretty much anywhere Edward C Lynn is Edward C Lyn like his

(1:20:27) middle initial how does this sound guys for seems pretty good I think right H we

(1:21:36) talked to redacted I'll talk to anybody guys I'm not I don't care I do I think it's interesting that it seems like the right wi is more open to this than the left wing Politics the United States I think a lot of people would have thought from the disclosure aspect that people on the the right that are more religious would be the ones that have a harder time with this actually it's the opposite the religious people have less hard time with this because what this means is that we live in a construct that there's

(1:22:05) a Creator right I find that the people on the left wing have the hardest time with this because they have the CNN brain that they can't believe that stuff that more than what they've been told is true right this is huge guys you ready for this here we go we're posting this let me just take one more read boom let's do it make it go viral guys make it go viral make it go viral well I do Rachel matow uh okay you guys are pushing the limits okay you guys are pushing the limits it is the **truth** moment though it's not

(1:22:53) about left or right um I'm not sure I'm going to do anybody who's on mainstream television let's uh Kim uh Matt Kim who really helped us Propel this um told me I should still do mainstream television just for the exposure but I'm not sure it just mainstream media disgusts me there's no other way oops mainstream media just disgusts me I I don't know how to I can't put it any nicer wow 17 likes in one second in like one minute yeah this is this is going this is big

guys um the fire deliberate or

(1:23:41) accidental there's definitely still a situation when there is where this could be a deliberate fire I can't rule it out I mean I I think about it a lot I'm not sure this could be a situation where they this was all set up from the beginning I don't know yeah you probably should make a Twitter account just to follow this honestly I the reason I already had a Twitter account so it made sense that's why my Twitter account looks like it's from 2014 is that I never really used it yeah old old mainstream media is not

(1:24:09) needed anymore we've got more Impressions than mainstream media does good questions let's take some more questions before I go to sleep tonight uh I want to I didn't get a lot of sleep last night so that's why it took me a while to get online today uh we're not not going to get a lot done today but we've got a lot going on yeah I definitely need to look into the mezer effect you guys want to watch some magic let's watch some magic man let's just show Tim P what magic looks like and I respect Tim P I respect

(1:24:35) everybody who's willing to give this uh case the CR the the time and evidence and the open mind that it deserves if Tim P believes in faster than light communication then I think we can convince him I didn't think he was even that far like open-minded I wasn't sure of course but yeah you know if you're that open-minded you and you know that fashion like communication is possible then you definitely definitely uh will believe that this is possible I also want to give a shout out to uh PL uh um investigate Earth podcast

(1:25:10) they have been on our side from the beginning man they've been with us they have given this case EV uh a platform let's watch Magic let's just watch some magic in real time this is a a rock that is floating suspended in air because we're looking at flux pinning here I believe we're also looking at the mezer effect look at this rock floating suspended in the air just to prove there's no string they pull a little Loop out the magnets on the side guys the magnet's on the side the magnet's not

(1:25:51) even underneath it look at this how does anyone look at this and not realize that we're looking at room temperature super conductivity wow man when I saw this it blew my mind we're looking at a floating Rock just amazing man just to prove that this is a magnet and that it should stick to it they take a they take a screw just to prove it at the end the reason why this is happening is that part this is in impure the flux pinning means that part of this is super conductive and part of it's not which is

(1:26:30) why the magnetic fields are flowing through parts of it and they're wrapping around other parts of it and then what happens is it gets stuck suspended in the air just like this welcome to Magic guys welcome to the Future this is really all you have to understand to understand that all those things I was talking about become possible with room temperature super conductivity like we're going to live in Star Trek world yeah it's meme magic time guys let's let's go I'm hyped up man I am hyped

(1:27:06) up and what we learned from talking to Dave Rossy and Bob Greener and Salvador Pas is you don't even need meta materials for room temperature super conductivity yeah how is this doing this without liquid nitrogen that's the question El because it's a metamaterial that has room temperature superconductive properties this is Magic and what we learned is yeah we don't even need uh meta materials to do this that this can high temperature super conductive properties can be achieved with the right electromagnetic uh um I guess

(1:27:42) shapes and uh forces I'm I'm saying it very crudely but a lot of it comes down to toroids yeah this is just we're just looking at magic here it's wild man I look at this a lot of people tried to claim that stuff like this was fake because I honestly I think the United States government and governments of the West are keeping this hidden from us because of the implications because if you extrapolate the implications of this then you get to the point where we got here where you know like what are the

(1:28:15) implications guys we had to say we're not suicidal that's that's how big the implications are I on our on my interview with Bob Dave Rossy I had to say that we're we're not suicidal and that we won't we won't suddenly die if you get my drift wow just wow guys I and it's funny that somehow the reason why all these people have reached out to me I'm just going to be speaking off the cuff here is because I guessed it from looking at the videos early on I thought we had to be looking at superc

(1:28:50) conductivity because of videos like this that I had already seen and then we start getting Engineers reaching out to us being like yeah dude you you nailed it I didn't know for a fact I just in my mind it's only thing that made any sense and now that we understand it that's what's blowing my mind that's why just to be 100% honest with you like I talked to my parents way early back and I just asked them like am I living in The Truman Show are you is this a big hoax you're pranking on me

(1:29:19) because the reality is I guess the reason why I sound arrogant is because like I literally guessed most of this stuff correctly without having the science background and then the scientists are talking to me being like yeah you got it it's like holy crap yeah all the evidence is there man Jesus has some refined Ikk99 in his pocket you know and and honestly Faith religion is not inconsistent with science that's one of the biggest mind blows to me as well I used to be an atheist when I was younger I just thought that no everything has to

(1:29:54) be I had CNN brain right I thought that everything has to be simple or whatever it's the opposite of what Tim P said people don't want there to be magic it's the opposite people want the world to be simple and then when you break that open and you say no the world is not simple the world is much more complex than we think it is that's what opens you up to everything that's what says wow we do have a Creator potentially we live in a universe that you know even if it's a simulation whatever this is a situation

(1:30:25) where I couldn't be happier to be on this planet with you all I couldn't be happier that's why I say I'm in the most Happy State I've ever been in my life we should appreciate the

time that we have on this planet you know this might be heaven so to speak right religion at all science is not inconsistent with it anthropological shock is huge I think even Tim P will have some because Tim P understands one part of this faster than light communication I was on board with faster than light communication back in like

(1:30:57) 2008 and that's where my journey probably began 15 years ago and ever since then it's been an unraveling of what I thought was possible learning about time dilation learning about time dilation is is huge right um I don't know if this is heaven maybe I misspoke a little bit but this is not heaven but an area this is a a universe that is probably created for us to some degree for life to exist I don't know I mean that's how I think of it um let's see this is going to be hell if this Tech is weaponized it could be we have

(1:31:43) to be careful we have to be careful guys you know what I talk about with all these podcasters and stuff is that we have to be careful about this last one here doomsday weapons doomsday weapons yeah I I think that there's the Bible and other um stories of other religions actually line up very well right yeah and even if we're one in a trillion even if this planet's one in a trillion that means there's tons of other planets like ours out there right that means there's tons of other planets like ours out

(1:32:20) there holy boy holy holy moly well you guys are doing your job it's been 10 minutes we've already got 2,000 views you guys are doing your job yeah enough potential energy in your hand to decimate a planet EJ Vasquez you've been paying attention I can tell uh was that Dave Rossy that said that enough potential energy in your hand to decimate a planet you know just extrapolate extrapolate what Tim P said about faster and light communication guys we are on the precipice of a whole new world the younger generation the people that are

(1:33:18) just being born now will live in a world that we don't even recognize and what I want to say on my soap box right now is that we can change the circumstances of billions of people on this planet people that have nothing people that are out there that have homeless it impacts their mental state I've seen it firsthand I'm sure you guys have as well is it's not just that crazy people are out there that are homeless is that being homeless and having nothing also leads to having additional mental breakdown people should not have nothing

(1:33:52) on this planet we should be able to provide for people if we have the ability to have free energy there's no reason for people to be living on the streets in the cold we should be able to take care of everyone and I think that's part of the major reason why I am so adamant about this information this technology getting out despite the implications is that we just we can help so many people with this so if it leads to our ruin I'll tell you what that's on us that's on us we need to be responsible we need

(1:34:28) to be intelligent we need to put safeguards in place we need to make sure that this technology is used safely and correctly and I want to go ahead and thank right now as well Brian Lup can con he's a real one he's a real real one he came out of Tim cast he gave us a shout out guys gave us a shout out he gave us a platform he helped us reach a whole huge audience of

people some of you who are with us right now probably don't realize that a lot of this can con was the first person from you know this

(1:35:10) sphere to have us on and it was huge hey Jimmy hey everybody appreciate it flat times thank you very much thanks for being adult in the room of children thank thank you for your constant intellect and composure in the face of crybabies yeah let's not bring ourselves down to their level although we will share the memes again guys it's coming it's coming these guys decided not to release their video as far as I know which was a smart move on their part that was a smart move take it easy easy slave we're going

(1:35:47) to log off here in a few minutes so I can get some some sleep and then hopefully I can be rested tomorrow where we can stay up a little bit longer we can do some more work but man this thing is getting huge man yeah this one Jamie mous he's a good guy too man he's a good guy I talked to him on the phone uh we had a zoom call he gave the case evidence he spread it to an international audience early on and he was he wanted to know about the the evidence he wanted to know about the facts um yeah this is from The Game of

(1:36:19) Thrones The Battle of the bastards I think is is what it is uh yeah pretty awesome yeah I talked to Jamie maon yeah I've got direct lines to people that are very very connected guys that's how big this thing has gotten yeah as far as I know they stopped the release of their video they didn't as far as I know they didn't release it which is probably the smartest thing they could do because I'm sure they talked to these guys and they realized how bad it was going for them and decided to stop the damage maybe

(1:36:50) they'll come out with something else I don't know but if they do I hope they uh you know I hope they look at the evidence now a lot of people have bad reputations guys and that's why we don't judge anybody because I think that we are seeing here that there is disinformation out there that is trying to discredit people right and we're not going to let that happen we are going to vindicate as many people as we can vindicate that's what that's what this m this uh movement's all about we're going

(1:37:18) to vindicate people and I don't even mind Alex Jones does a thing on us if they want to try to they want to try to vilify us let them let them try let them try every time they try to vilify us they just Elevate us further we will bring this evidence to the world and I don't care who we have to talk to to make that happen I will convince everyone on either side of the political Spectrum yeah plain and simple people need to realize that science is not like fiction when we're talking about Star Trek here

(1:37:54) we're not talking about dematerializing the plane like teleport or like teleportation where they dematerialize stuff in Star Trek we're talking about teleportation like warp speed travel and a lot of this like EJ Vasquez seems like he's pretty connected in our chat I can just tell from the way he's speaking he knows information the papers are out there guys the science is out there that's how I was able to find so much of this stuff the science is out there yeah I think that a lot of people have

(1:38:27) bad reputations and maybe they do know that but you guys we've seen what happens if we go on people that try to discredit us right we've seen it I'm not afraid do I seem afraid I'll talk to anyone the secret is coming on and being open and honest and coming prepared right the reason why I made this evidence list where is it where's the evidence list give me a sec this is why I made the evidence list because I come prepared I come with the evidence hard evidence and we'll update this list

(1:39:06) tomorrow if we have some time we'll update this list I want to do another evidence review so if we do another evidence review we can update this even further because we've you know I think the biggest part this changes our understanding of the science right the science side of it is the part that's that's changed the most and the reason why I added this time dilation thing on here is because when I did go on um Julian's podcast he didn't even know time dilation real I mean how is somebody going to talk down

(1:39:41) to me when they don't even know that time dilation is a real thing right and I don't mean to disrespect him in that sense cuz now I realize that a lot of people don't realize time dilations real and that's very important to understand a lot of this yeah I'm just going to keep going on like we've been going on guys and yeah Thomas bricks you do need Mass reduction and that's what part of this is as well Mass reduction what we see in these videos we're looking at Mass reduction believe it or not

(1:40:22) what I've been told and again I tell you guys everything I know that I can talk about without damaging my sources and stuff like that mass reduction is what's being held from us that's what's being held back I've already seen the the stabilized footage guys I appreciate it but I like to look at it without stabilization when we see this orb come flying in like this it's completely ignoring gravity it's not just that it's pulling forward it's ignoring gravity entirely these orbs are already

(1:40:57) experiencing Mass reduction what we're looking at here is the nonradiating boundary so when we're looking at this field here we're looking at the field where the field is intersecting with space time that's what we're seeing here with this this orb the reason why the smoke doesn't stick to the plane when the footage is stabilized is because you've stabilized the footage you not edit the footage and then claim there's a discrepancy you can see from the real footage there's

(1:41:26) nothing wrong with the smoke the smoke is perfectly consistent so a lot of the **debunkers** or whatever they they modify the footage they change the frames around and then they try to make claims about it well you've edited it right so again the only **debunks** and and Robert sleep well man thank you very much for your donations and your support and everything the only way to **debunk** this footage is to find the hoaxer collect the \$145,000 by bringing forward the uh source files and I forgot to mention this but let's just go ahead and talk

(1:41:59) about this as well um let's finish this this looking at this as well and we see this heat signature in the orb as well which Bob Greener has explained to us is that we're looking at toroid

and what's Happening Here is this thing is able to in essence capture the electromagnetic field and potentially amplify it whatever is happening there to a point where it can break SpaceTime it's wild stuff man yeah the moment you edit the footage then you cannot use that edited footage to **debunk** the footage the **debunkers** got pretty lazy

(1:42:35) there now I want to talk before I go to sleep real briefly on the Bounty okay so where's the Bounty come from \$145,000 Bounty real guys \$100,000 from kim.com he is a real one I spoke to him personally uh we had a big space with kim.com we went over the evidence he put in a \$100,000 investigate Earth podcast they they've had me on three times over a million downloads of the evidence they threw in \$220,000 \$20,000 on this and then just today I spoke to a wealthy follower who has run for higher office okay I

(1:43:26) confirmed all this they've run for higher office this means they've run for something like um you know uh Congress or senate or one of these things they throwing in another \$25,000 towards this okay so right now the pot for proving the videos to be fake for finding the hoaxer and providing the source material is \$145,000 wild stuff wild thank you guys for all those people and I'm I'm going to keep the last person's name um quiet because I don't want people bothering them or anything like that but I have

(1:44:13) confirmed it I have talked to them personally over the phone and yeah they're real so I want to thank that person I want to thank investigate Earth podcast I want to thank kim.com for coming out of the woodwork as well um I appreciate you guys you know they believe in the evidence so strongly that they're willing to risk this now I don't think that we're this is we're ever going to have to pay out because I think the reality is these footage is real this footage is real right and because the footage is real no

(1:44:46) one's ever going to be able to find the source work no one's ever going to be able to find the hoaxer for this this is why we were able to find we found the leaker right we already found the leaker Edward C Lin like he fits all the he checks all the boxes so yeah take a look at this guys this has been awesome guys it's been an awesome night tonight going through all this with you guys um we gave our shout out back here 5,000 views already in 30 minutes it's legit if we can get on Tim pool I think

(1:45:32) that'll be a huge huge huge way to to get move forward yeah and it's not just enough to be able to recreate it cuz realize whoever would have made this footage would not have had the luxury of being able to look at the footage and recreate it you need to find the hoaxer and bring the source files whoever would have made this is going to have a computer hard drive full of their work it's not like you can just produce the final product and hand it over you would have a a whole hard drive full of work

(1:46:05) from when you were trying to produce this right like I have a real job so I know that when you work on something you have like a whole thing of when you're putting it together right it's not like you make the Marvel movie and the only version of the Marvel movie is the Final Cut you know thanks Jimmy Kim of the king of the norm I appreciate it man I'm one of you

guys um but yeah so for anyone who wants to go out there I think you know Corridor crew they're irrelevant no offense to them but they're irrelevant if anyone

(1:46:35) wants to what they should be focusing their effort on the **debunkers** is trying to find the hoaxer trying to find their Source material there's no way that they've deleted it come on if you make something this good you're not deleting it man you're not deleting your Source workor you're going to still have it this is why we've thrown the GOL it down and ghost 915 motorcycling yes this is the only way for disclosure they are not going to hand it over to us guys this is the opinion that I threw out there I

(1:47:01) talked to the leak project **leaked** project once again tonight I SP I did do two podcasts I don't know when they're going to come out um but you saw from the government they've already butchered the UAP Bill they're never going to admit to this stuff they have contingencies already in place is what I'm being told to make sure that this stuff will not come out through the official means because it's National Defense right you don't want to give this information up to **China** and **Russia**

(1:47:26) which I understand but we shouldn't have teleported MH370 if that's the case right this was too this was a huge risk and it's not my fault that they did this and they filmed this so they need to admit the **truth** here guys they need to come out and admit the **truth** okay let's see if there's any last questions and and thank you Bernie I saw you in the chat as well man I appreciate you I I appreciate J jemy Reese as well for having us on I think that watching the Jeremy Reese interview as well is

(1:47:55) shows people what we can do to convince somebody who's a skeptic right um somebody who came into it with a with you know an open mind but skeptic View and then they looked at the evidence and went huh yeah there is something here right and I think we can do that as well with people like uh Tim p as well you know if he believes that faster and like communication is possible we can convince him the reason why there's a lot of people that saying **debunked** is that for a lot of people no matter how strong the evidence is they

(1:48:24) won't be able to believe it it's just too much for a lot of people right it's too much so what our goal is true disclosure on our terms not letting anyone set the narrative uh that's the only way that this stuff will happen we're going to make it self-evident we're going to get the word out the evidence out into as many people as possible as many people as possible does the bounty include someone recreating it no that does not recreating it is not good enough because you already have Source material to work

(1:48:57) with you already have something to compare it to right so you can't just recreate this you need to actually find the person who did it and get the source material realize that if somebody created this they didn't have something to look at while they were creating it so reproducing is not good enough talk to Tim Brett that's all I'll say the ontological shock is too much for people guys um yeah we can set up another one my uh my calendar is getting really full but yeah we can set something up for like a

(1:49:38) week or two for sure and I'm going to have to remember to take some time for myself it's been a lot but uh and and for anyone who I've already set up stuff with if if something huge comes along where I have to go out there and you know can't miss it then uh you know I'm going to have to like reschedule some of that but we'll see I hope that doesn't have to happen Mr Jay I appreciate the kind words man uh yeah I think that it had to come to Diego Garcia I think that that's the only place where this plane could

(1:50:10) have gone it just it makes the most sense that's where everybody expected it to be and when people lie generally there's this element of **Truth** out there and that's what I think has happened with this as well yeah this the person who fake this is going to have to have knowledge of physics that most phds have a hard time understanding right and not just phds from physics but Engineers a lot of the people were talking to are Engineers electrical engineering is where this is all being this is where this all comes

(1:50:38) from electrical engineering right accepting this stuff to be real is tough man it's really tough yeah remember I'm not suicidal I'm going to have to say that pretty often I feel like more and more as we go forward as we get bigger and bigger not only am I not suicidal I'm as happy as I've ever been in my entire life I have made connections with people that I never in a million million years would have ever thought I would be connecting with so it's pretty wild right now I would never be changed by Fame

(1:51:16) never there's no chance of that happening to me I'm not somebody as well to gets Star Struck by people that also doesn't happen to me I don't know I just I just don't and I won't change with Fame either if anything if I became famous all I would want to do is give back to other people I would just want to help other people that's it and I'm going to name drop somebody who I'll probably never name drop ever again in my life but one thing I respect about some famous people so like let's

(1:51:48) just take like Taylor Swift for example example one thing I respect about her from seeing like I I'm not like a huge Swiftie or anything like that but one thing I respect about her is as she became famous she still respects her fans the people she gives back as much as she can and you can tell that it's comes from a place of earnesty that's the kind of famous person I would want to be if I ever became famous is the type of person who doesn't forget the little people and I don't mean little people as a derogatory

(1:52:18) comment but like the people that have been on the ground floor with us from the beginning you know the reason why I'm replying to people is because I want that same mentality when I go through my notifications I'm not just looking for the people who are like the biggest people out there right I'm out there looking for people who I don't know that are just true they're honest people and so you'll see me replying to as many people as I can because I want to you know just be able to realize that

(1:52:43) everybody matters doesn't matter how big or small you are so anyway you don't have to be a fan of her I was just name dropping her there um who knows there's some pretty weird

conspiracies out there regarding some of the stuff that's going on but we'll see anyway guys I appreciate you all I'm going to go get some sleep let's let's get on Joe Rogan let's get on Lex fredman Let's Get on um Sam tripley let's get on Tim P let's get this to go viral let's make the world know about

(1:53:15) the story and I want you guys I want you guys to spread the evidence okay this is the last thing I'm going to say and I'm going to go to sleep spread the evidence we have the evidence listed out here when people ask for Stuff feel free to go ahead and spread the evidence that you find is relevant I think the thing that people ask about most is the debris that's the thing I get the most about so the plane didn't crash in the South Indian Ocean I see a lot of you guys talking about it now and I can't thank

(1:53:43) you enough for this and for the debris debunking The debris out there you know so we've got the evidence it's ready to go um one last Dono from Flat times again what are the chances of the Drone being out there the Drone would have had to intercept they have 1 hour and 20 minutes to intercept it we believe the Drone was deployed from somewhere in the car nicobar area so because you gave this donation I'm just going to quickly go do this as well before we go to sleep and if it came for the card nicobar area

(1:54:14) then it could have gotten there in time I have a picture here I'll pull up so oh yeah here it is okay so we think that it came from probably over here where it says Vox X there's joint India and United States bases here so we think it came from one of these two locations so they deploy the Drone drone flies down here our plane comes this is where it goes dark it follows the green line to panang the real reason why I probably can't land here is cuz the lights are off on the land on the runway if the lights are off

(1:54:44) on the runway you can't land the plane safely you're going to crash the plane it's going to blow up so then you rendezvous and intercept over here where the Drone intercepts with the plane and this is actually from the same relative direction of travel that plane is to the North or Northern is direction or the Drone is and our plane is turning West and then South and then East again one thing I still struggle with is I I don't know if Kate T was telling the whole truth about her sighting I I kind of think that maybe she did see the

(1:55:18) plane disappear and doesn't want to say it I'm not sure or maybe that her memory is just blocked it out it's hard to believe that she didn't see the plane disappear really hard but either way I don't want anyone to bother K T so that's why I don't harp on that just in case anyone's curious so thanks again one more time uh flat times for the donation greatly appreciate it man I'm just out here trying to get the truth for everybody that's all I want to do wow lots of followers and viewers

(1:55:47) right now so thank you guys have a good night we will talk talk again tomorrow and we've got more stuff coming guys and we will definitely get more work done tomorrow and make sure you're looking at the pin tweet have

Hard Truths #3 Dave Rossi & Ashton Forbes - Advanced Propulsion and Engineering Principles - YouTube

Transcript:

(00:00) are live oh there we go let me see what just happened here did that work something just aired out let me just make sure we're good no problem hey guys are we live can you guys hear us in the chat there I got an error here oh yeah we're live here okay I think they can see us chat let me know oh okay yeah here we go they I think they're seeing us now hey Chad just let us know if you're seeing us here we are live with this hard TRS number three with Dave Rossy the purpose hard truths is to get to

(00:40) those hard truths that no one wants to believe the science that we don't understand and so we are trying to get to it down with the people that are the experts the engineers and the physicists today I bring you Dave Rossy defense engineer Tech uh works with experiments in advanced propulsion Dave thank you for being here sir Ashton thank you so much for having me it's it's an honor and a pleasure to be here yeah so first of all let's just dig in what is your background Dave how did you get involved with uh you know

(01:09) defense Contracting Advanced propulsion whatever you can tell us I don't want to push too deep and you know get you in any trouble but whatever you're free to tell us go ahead no problem long story short um I started a uh podcast uh which led me about two years into doing that podcast maybe year and a half into wanting to essentially not so much study and analyze uh information and data as much as I loved it but said to myself why not try and build something and more of an intuitive sort of notion and so

(01:36) ended up assembling uh a couple of things that got the attention of some uh some interesting people out of the United States in particular um it probably didn't help that at where I was at the time was relatively close to a military base that was in in Canada uh because I'm from Toronto Canada but uh got the attention of some individuals uh presented to various individuals at the um the dod this is a couple years ago at this point uh from there moved into establishing my own company that does Consulting and Contracting for um

(02:07) basically the I guess you could say some of the more alternative or Fringe physics that mainstream science would like to call it as such but um in my opinion is physics that's sort of been uh hidden in plain sight if you will uh for quite some time that I think people should understand and grasp more and more because it's really creating a um cognitive dissonance in my opinion with respects to what people see on the phones and what they see in person and the the the topics of debate in that angle have really swayed from what the

(02:36) science has been able to do from my experiments and experience uh whether it's in the laboratory um theoretically but of course experimentally would be the most important thing and so when I saw for example the um the MH370 footage I I said to myself I know there's a lot of people out there saying it's it's not legitimate or what have you but I'm of the opinion that um it very well is legitimate based on experiment ments that I've conducted on much smaller scales and so I kind of have one foot in

(03:05) the uh uh the defense Contracting area on a sort of small to middle level and then one foot out in the in the public because I think that there needs to be a way to get this this knowledge out there um without to a degree without um I guess you could say permitting people to understand how to build these things and then weaponize them but perhaps gain an understanding to realize that there's a responsibility we have if we're going going to be discussing these types of Technologies and the consequences they

(03:34) have so long story short made some various presentations to some individuals that DOD was sort of thrown around to some different Departments of it and then from there decided that I didn't want to be an employee but rather a contractor consultant and so from there I've been gracious enough to work on certain projects that uh again are sound extremely out there but we see if we look at the literature for example science fact has outstripped science fiction for for quite some time time it just becomes quote unquote unbelievable

(04:02) when it translates from you know a physics paper to an experiment in the laboratory but that's sort of the the general abstract uh background story of how I got into all of this I don't have any uh actual degrees um I'm self-taught and I think that's perhaps in the humblest way I could say is perhaps what impressed some of these uh DOD individuals the most and then from there uh I tend to have a knack for it uh still work very hard but at the same time want to try and bring some of this understanding and knowledge out to the

(04:34) public in a simplistic fashion so it becomes very easy to understand which is hopefully something we can do here today we can sort of jump between the complex elements of it and translate that into a a simple understanding for The Not So scientific individuals yeah the people like me so I guess what I got out of that is you're Canadian we'll give you a pass on that I'm just kidding uh no I love I love all our Canadian brothers and sisters out there but uh no I think the real important part there is that

(04:59) you actually work on the experimental side you know the biggest thing that I heard is that you've done experiments that led you to when you looked at the videos thought oh wow you know this could be consistent with some of the work that I've done which is really what I'm hoping we can dig into a lot today in terms of going through the science aspect and I know you're super smart much smarter than I am especially when it comes to the science aspects here so you know any of that stuff you want to

(05:23) name drop the uh you know scientific papers and physicist etc for our academic uh academics who are following that's great and then for our Layman you know we can kind of talk

about some analogies about you know what this really means on on the surface level cuz I think the big takeaway that you just mentioned there is the advanced scientific Concepts that people think are Fantastical but the reality is we are just we are on the verge of changing the world and you know I think that some of the experiments that I've seen that

(05:51) you've shown me um will help prove that so let's jump right into it sir um where do you want to begin in terms of which scientific aspect would you like to dig into first sure well there's a few different things that we can start with one of the things that I would like to say if I could is that sure the audience in general is we want let's start with some simple Concepts we want to realize that a lot of these effects that we're seeing whether it's out of the MH370 video or whether it's out of um you know

(06:17) a UAP or you know even paranormal experiences a lot of this has to do with the notion of curving SpaceTime essentially c not viewing things as a straight line but rather as a curve now what becomes very interesting there is that this was discovered and I'm not claiming that anything that I had developed was actually a novel Discovery per I would dare to say was a rediscovery um I know there have been many individuals before me even before my time that discovered the same things and were suppressed unfortunately um but

(06:48) we want to focus on the notion of curving SpaceTime and that the idea of creating either a curve in SpaceTime or creating an X if you will whether it's using light or whether it's using electromagnetism begins to detect and transmit and also emit some very interesting phenomena now a practical example of this curving of SpaceTime if you will has to do with the utilization of for example ligo the laser interferometry gravitational Observatory we see that through the intersection at the point at where the lasers intersect

(07:25) it's been claimed we can detect gravity waves now what's interesting is that we see the notion of intersection is very similar to sort of a stacked books example and that that is that we have one laser beam and then we have another beam that interferes but that second beam we can argue is in a sort of superos type we could say setup that is over top the first beam which gives a hint perhaps that a lot of these effects that we see whether it's through the orbs in the M on the on flight 370 or uh we through other uh you know UAP and

(07:58) paranormal phenomenon these effects may be of what we call in science second order so in other words one must meet certain conditions electromagnetically for example to then give birth to this second effect now giving birth to this second effect is what has been privately referred to as something called phase conjugation essentially that's a fancy way for saying that the particles make love instead of fight if the particles fight or Clash they create what we have known for decades to be called explosions but if at the plank level

(08:34) using things for example like um uh interferometers or using things like uh superconductors or even as Mr pza said room temperature superconductors if these particles can actually entangle or hug themselves if you will what happens is once they do that and I'm using my hands to give hopefully a visual I can what happens is they start to become self

assembling and they start to curve into each other in a toroidal fashion now on the theoretical side we know that Einstein's theory of general relativity

(09:09) permits for the curving of SpaceTime and essentially permits for torsion and it's in there but it's been vastly dismissed for a number of reasons we can dare I say we can say this has been the case for diabolical reasons point being is that there are certain Concepts that exist within particle physics that don't exist Within electrical engineering and this ultimately has to do with the fact that certain institutions like the National Science Foundation and other groups pass down these models to these

(09:38) new smart students who are very smart yes but they're not going to be questioning the status quo and they're definitely not going to be questioning the current models that are given to them now these models that are given assume a flat SpaceTime not a curved one so this is why for example when we see uh for example ISS footage um that that sees that has speculatively seen craft that seem to have a sort of concave bubble around them that makes perfect sense because from my experiments and others what you'll find is that the

(10:11) laboratory Observer if he is not within that curved SpaceTime at best even if he's say 5 feet away from that experiment at best he is going to see the flat intersection of that phenomena he's not going to see that phenomena in curved SpaceTime and in order to see it in curve space time on for my science friends we need to assume a three U three spatial dimensions and one time dimension in a I grangian form for those that may be interested in understanding the real theoretical side we then use what's called Stokes theorem to induce

(10:44) contour integrals to then essentially create a second order effect that can actually go all the way up to uh to 12 space with so 12 spatial dimensions in one time Dimension these theoretical uh Concepts whether it's landow and left shifts whether it's it's myON Evans whether it's Terry Barrett whether it's Tom Bearden whether it's uh in to to a certain degree Dr halud whether it's Sal pz's superforce these are all in my opinion saying essentially the same things which are that when you include

(11:12) torsion and the curving of SpaceTime you can get the effects that we've seen for example in a Vortex like manner uh very much akin to uh the 3 the MH370 footage now what's very interesting about all of this is that this gives rise to something that many University students should know about particularly in Optical physics which is something called um spdc stimulated parametric down conversion and it's also been called second harmonic generation as well as spu stimulated parametric up conversion what this is essentially

(11:48) doing is it's taking the curvature of SpaceTime right using the magnetic a field the magnetic Vector potential which is a fancy way for saying basically the empty space empty space quote unquote of the vacuum or ether that the magnetic flux has allowed for you to have and then it is combining that with a dielectric curvature essentially that then creates what's called a gradient which allows for a second effect to occur now what is that effect the second effect that occurs after electromag um uh magnetism and

(12:21) light need a certain condition is sound sound is what we now call phonons with an N instead of photons for light we have phonons with an N now what we're seeing is we're seeing that same concept with the laser beam sort of beam 1 and beam 2 except now these are not beams in this case we're doing phase conjugation second harmonic generation using uh in this particular case uh electromagnetism and light so after the sound concept or the sound particle is reached the question becomes what comes after that

(12:54) yeah now it's very interesting because publicly phonons have a are a spin zero particle in my opinion they should rather be a spin 1.5 or a spin two because they give rise to the effects that we see in for example the MH370 video um with that said if I could just sort of wrap this up oh yeah going the we in terms of us humans on the surface level uh whether it's with our cameras or with our uh you know detectors or what have you we can only collect as good of as good of the data as the detectors that we uh deploy and emit

(13:29) in C in these instances so when we see the sudden disappearance of this plane craft for example uh with these orbs creating a a Vortex like what seems to be dare I say Wormhole effect uh depositing energy at a particular Point um the camera is only going to pick up the flat effect of that because the camera by definition does not know how to render something that is topologically stable in a higher Dimension literally and so that is what will also create the effect of things that begin to pixelate for example uh

(14:04) certain uh whether it's a software editors or cameras and so on because when one can bend a gravitational wave using these second order effects you begin to bend light as well and we know we notice that light and gravity tend to be very very close to one another and so if you can bend the light using either refractive or diffractive properties you can not just make yourself invisible you can then induce a state that has an anti- Photon path meaning essentially the neant Tropic uh version of what we normally see as linear time neg Tropic

(14:42) means time reversed yeah and we know through for example out of Los Alamos hasberg and viser proved that the throat of a wormhole is all one needs to both make and understand an engineer such a traversible effect or a wormhole itself because when you tap that zero point you tap essentially the oscillation or the zitter buong of the local particles and those local particles if certain conditions are met where external interactions of those particles make love or entangle with that zero point which could be anywhere in SpaceTime

(15:17) that you pick literally you can begin to induce the effects that we've seen both in the video and otherwise and and we know for example that if if we look in the literature with respects to uh Vortex Dynamics or vortexes are seen in in super fluids and super conductors the literature is there all one has to do is essentially scale that up in their mind now to wrap this up I'll say I'm not asking for anyone to blindly believe me but listen to what I'm saying and do your research you'll find that these

(15:45) vortexes tend to appear over and over and tend to give rise to a lot of what we're seeing um whether it's in the 370 videos or otherwise and those effects will create what's called a lens

thing frame dragging effect the same uh the same way for example that if you take your mouse on a very old computer you pick up an icon on your home screen and you drag it across the screen really quick you sort of see that delay of the mouse kind of going back and forth that would be the same type of effect that we

(16:12) would see um when space time is curved just from a simple curving of SpaceTime instead of thinking of SpaceTime as being linear and straight so wow so yeah that that's awesome man I have a couple follow-up questions on some of those points so first I guess I want to talk a little bit about ligo I've heard ligo get talked about a lot um can you elaborate on exactly experiments cuz my understanding is that the ligo experiments have had to do with looking at neutron stars and detecting gravitational waves coming from Newton

(16:40) stars that are enacting with one another you know what more can you teach us about the impacts of what the Lio experiments have done and what they are sure well not not to be a conspiracy theorist if you will but I think that there's a lot that ligo has not revealed when it comes to detecting gravitational waves and detecting various other things in um uh in in our even within our own atmosphere let alone within you know neutron stars and all that kind of stuff and the the reason I say that is because we find that um all of our telescopes

(17:08) today have convex lenses rather than concave ones and so it's of my opinion that when ligo whether they publicly State this or not is a different conversation but it is of my opinion they are seeing far more than they let they L on in addition to um I do believe that ligo if they if they shifted their detectors to looking for high frequency interference events they would see basically craft all over the place and the reason being is because the second and we we know this from a basic double a dual slit uh experiment you can do

(17:42) with a laser beam and get a guitar string to split the beam and uh deploy some uh I believe Chris Leo did it a year or two ago um deploy some Mist if you will on the beam in a dark room you'll begin to see literally the waves or the Flux Of The Vacuum or Quantum vacuum or ether begin to occur now if you apply that to a multi-million dollar tool like ligo um I think what will begin to happen is you will begin to see a lot of gravitational waves um not necessarily perhaps as a fundamental energy but as an emerging

(18:15) energy from the curving of SpaceTime and that that curve essentially deals with the way again when you create an X with a laser beam the and the more beams you intersect say you have one beam and then two say you have a third one and then a fourth one and then a fifth one and it keeps stacking in that regard not only does that uh subscribe to superposition and topology but what you begin to do is you begin to create a cadua like curve that acts as a sort of transducer that can both in this particular case detect

(18:44) gravitational waves and I think that through that uh we can find on the high frequency side quite a bit of perhaps what our own military is doing as well as maybe others as well uh because those gravitational waves would have to be um I how can you you say longitudinally locked in with various craft for those craft to operate which would explain why for example

during cases of emps or um uh we see for example ult Ultra wideband radar tests being done and craft get close to those fields they begin to uh crash because of the fact that the

(19:16) gravitational coherence has been completely dismantled uh because these radar uh detectors or you know these devices that are being deployed and tested in these ranges these nuclear facilities or in this general area essentially untangles or um how can I say un Kinks basically the energy that would be encompassing both the warp drive or the warp bubble around the craft as well as any other effects that it could be doing outside or inside the craft as well that's really interesting because I think that from the ufology

(19:47) perspective there's this big argument that the people that are against it say is well if these craft are so Advanced how are they crashing right shouldn't they be invincible and I always thought well just because you build something for a specific purpose doesn't mean it's impenetrable from all other effects right people make mistakes and stuff but go right I think as well if I could say very quickly we have to look we have to look at the planet as well with respects to the the Tesla technology we must in

(20:10) my opinion look at the planet as uh one big capacitor and if we follow the notion of us being for example organic um particle accelerators or organic electromagnetic beings it gives substantiation to when one goes outside and grounds thems and you know bare feet they tend to find they feel more energy and not tend to come to them or anything of this nature and even as we see for example in basic electrical engineering we know that grounding rods are needed because if not the electricity begins to arc Arc means it begins to curve so that

(20:42) is already nature giving us a hint naturally that SpaceTime or the the quantum vacuum wants to curve instead of actually behave in a linear fashion now if I can give one example for those in the audience that may be interested in more of the liquid chemistry side um say say we take a hydroxide and we take an acid in the laboratory we put it in a Petri dish or what have you and we neutralize the two and what normally happens is we expect to get heat or what's called an exothermic reaction from this this uh this um this

(21:13) neutralization but what happens if you neutralize the two and you don't get any heat there's no exothermic reaction what that is indicating is that there is an effect going on that is surpassing the current flat theoretical SpaceTime model and interpretation that is giving rise to torsion longitudinally not with the x or y AIS on a cartisian plane but with a z or Zed axis that gives depth now and so what that tells us is that there's a particular set of properties within that specific hydroxide and acid that that

(21:47) stabilizes disequilibrium so it prevents an exothermic reaction and what I mean by that essentially is a visual would be uh Pac-Man's mouth basically all the devices that we use all of the things that were taught in mainstream physics and and even in general has assumed that for example Pac-Man has a closed mouth meaning that if you put energy inside of Pac-Man there's only so much you could put in because it's in a closed system now if Pac-Man's mouth opens up is it possible to use the local vacuum as the

(22:19) actual engine itself and that is what gives rise to the second order effects it's and dare I say fractal I don't think it's that far off from people who have had you know uh psychedelic experiences where they say they're always seeing Spirals and fractals of spirals and so on I would say there's certainly something there in my opinion so yeah that's that's really closely aligns with our last podcast guest which was Bob Greener and his theory of you know fractal toroidal moments right and toids as well it's

(22:48) like it seems like everything comes back to toids can you explain why that shape is so important is it just due to curvature is that with you know what gets created from curvature naturally or is there something it seems as though um one thing I'll tell you is that the more I experiment and the more I do my research even the private research especially the more I realize I don't know anything about anything just to be clear and to me that that that speaks to me philosophically as in the joy is in the journey but it seems as though that

(23:16) there is a strong indication that there is um within this structure of our reality putting the electromagnetic uh basis or pillars of it aside um from a geometric standpoint it seems as though these toroids and toroidal geometries tend to comprise everything that exists in one form or another um not that doesn't mean that we always see them as toroidal but we see for example that uh curves and spirals are quite common within for example the way that nature is self assembling or the way that nature manifests and so on

(23:50) and so forth uh we found as well that it's been shown in the if in the absence of Electro uh electric and magnetic fields in a laboratory experiment in a closed off room in the absence of e and B fields you still have toroidal geometries that are resonating there that occur which implies that this Quantum vacuum or this ether has a very strong resonance to it that may in fact have a dare I say a resonant memory that can store memory in that regard so when we look at all of these different angles it comes down to the fact that the

(24:23) Universe reality that uh that we are in uh tends to um really like the vortex toroidal geometry of this reality at the core of it I couldn't tell you why uh the same way that I must quote Mr fan when he said that if you look at um energy or Force we ultimately we don't after a certain point we don't know what things are we don't have an adequate definition of force there's no definition of what energy ultimately is and so that's when I think it turns into more of a philosophical metaphysical

(24:57) debate rather than a physical one or physics debate but I think that's sort of the beauty of all of this the the merging of these two uh material and nonmaterial world of the very large and very small come to integrate in that in that sense hopefully I answered the question but ultimately I I couldn't tell you other than what I'm familiar with experimentally which is that nature and reality seems to be toroidal even in the absence of major uh components like electricity and magnetism yeah it's why

(25:26) I think one other thing you mentioned is the Pac-Man uh analogy which I thought was really interesting cuz to me when I'm thinking about that I'm thinking is this a capability of free

energy being kind of sucked out of the vacuum state of the universe right and I think that's something that I had seen on some science shows some years back as well which I thought was very interesting that space isn't empty there's stuff going on there in space so is that what you were kind of digging at that that could be

(25:51) theoretically possible 100% I think it's more than theoretical i i i as a matter of fact I know it's engineer it's possible in an engineering sense to the point where we can make a strong argument that the devices or the craft or the things that we build um regardless of what they are whether it's uh metallic orbs or something else whether it's the uh coming from us or others if you will um ultimately these devices whether they're for generating overunity meaning you get more energy

(26:19) coming out than what you put into a device or for generating uh lift and propulsion in a in an instant inertial like sense or the not of Defying Gravity and all of that I think at the end of the day no matter which way you um you slice it you're going to have an effect that will uh how can I put this um utilize these devices as sort of um let me think uh sort of facilitators of the energy that's already been all around us yeah if that makes sense so we're we're sort of um shaping what nature shaping to what

(26:58) nature is trying to tell us yeah that's awesome so to speak yeah and uh not to rewind too much but I thought there was an analogy that I wanted to bring up when you were talking with The Radars that were you know I'm just going to say it probably interfering with uaps or other craft that are out there that are floating freely you know the analogy that I think of there is uh because I like the Marvel movies is like the or actually maybe it's not Marvel but Venom when Venom the he gets hit by Sonic

(27:21) attack right that's his weakness that makes the syot like get you know it's it's like it's weakness right or it's like it's Kryptonite if you want to think of it from Superman analogy would that be accurate in terms of what you think the interaction there is with the radar is that we don't need a weapon it's like we just the radar and you know manipulating the electromagnetic fields can you know destabilize the propulsion of some of these craft is that what you're just hypothetically thinking

(27:42) there this to a to a strong degree yes and this is where as a matter of fact I must give the credit to um Eric Weinstein because this uh in the with respects to what I'm about to say in particular I don't agree with Mr Weinstein in a lot of areas but in in this area I do which is that um this is a form of understanding science more than technology there's a difference and I I appreciated when Mr Weinstein said that quite some time ago uh in his conversation with Dr Poff which is where he said I wouldn't be

(28:12) thinking about new technology but a new understanding of science basically doing to uh to Einstein what Einstein did to Newton in terms of finding a more fundamental uh way of understanding the universe and therefore allowing for vacuum extraction and such to occur and I believe that that is uh definitely what what what is happening yeah yeah I think what's

happening as well for a very simple description is we're essentially we're seeing this basically if I showed you a uh this water bottle and I said and I covered the bottom half

(28:47) of it and I said Ashton uh you only see the top half and then you go Dave what are you talking about you just covered the bottom half and then I go no no I didn't no I didn't and then I start calling you names and attacking yeah that's basically what's happening in the scientific Community there is a refusal to acknowledge this other half of I'm not kidding whether it's in chemistry whether it's in particle physics condensed matter physics except for at the classified levels or at the

(29:13) uh you know at the levels of the military-industrial complex on the contractor side but um yeah it's unfortunate to see that that some have tried to uh put a sort of intellectual property label on science that should be discoverable for all and so it it's kind of uh it's kind of unfortunate in that sense but that's one of the reasons that I'm I'm speaking with you today as well so yeah two things I want to get in my soapbox real quick is that I always evaluate People based on the things that

(29:43) they say you know I think that what you brought up today is that you know you don't have the formal training and schooling and what have you but you taught yourself right and the things that you're saying we don't have to believe what you're saying we can verify them you know that's something that I say myself in my own investigation which I think a huge amount of faith in your statements is that go ahead I appreciate that because the um it's it I will say it's not an easy thing to do but if one

(30:09) looks at the academic literature uh from the late 1800s up until today if one knows what to pick out and what to find in terms of where to look with regards to this angle of science being suppressed it is there um the effects are also being hidden in sort of code words that in terms of modern Publications uh the effects are there and they do exist um that's one of the things that's also uh frustrated me quite a bit which is that uh people quite often say well where's the proof I want to see peer reviewed to literature

(30:45) it's been there it's been there for decades except we need to realize that these people manipulate words these institutions publish papers um in a certain um you know the same way for example that if um uh the same way that you would label something with a for example talking about instead of the word oil we can say hydrocarbons it means the same thing but perceptually it doesn't interest people and so therefore they never look at it but it is there know that's part of the reason why I do this podcast is that so much of Science

(31:18) of what I've realized is matter of uh you know using the right words it's a matter of uh uh names dropping are slipping my mind but what I was get at as well is that a lot of what you're doing you know I think that scientists have this idea or academics I'll call them not necessarily scientists of cutting each other down saying oh that can't be possible this can't be possible science is a matter of building on each other's work adding to it right right it's not usually that someone was wrong

(31:43) is that they didn't have an interpret our interpretations Advance our understanding advances right it's not that Einstein was wrong he I think he's one of the greatest Minds ever in the history of the world it's just that he ran out of time right if he had had in infinite time his own understanding probably would have advanced as well right there's speculation behind there's speculation behind the scenes the rumors that have gone around for decades that he in fact realized where he went wrong

(32:08) at a classified level and had before he died had known yeah where he looked at Maxwell's a heavy sides interpretation of Maxwell's equations and said holy I've been wrong um there's some some documents behind the scenes that do substantiate that but that that go gives rise to what Mr pz said that I cannot emphasize enough with is it makes one wonder how long has this been known for and this we can argue goes all the way back to the late 1880s basically um if I could say very quickly to give context

(32:38) to more of the scientific uh side of the audience um yeah essentially what happened was that Ma heavys sides interpretation of Maxwell's querian found an analogy between electromagnetism and gravity a direct connection between the two now it's been largely rumored that heavy side in fact screwed up these equations when it's quite to the contrary um essentially what's been what's been what happened was that there was a sort of an interpretation made by um pointing as we know named after the pointing Vector

(33:12) these days as well as heavyside and what essentially happened there was that heavyside found this incredible uh top topological effect in theory that the great Heinrich lorence also noticed as as well he understood both angles of these different gentleman's perspective in terms of interpreting Maxwell's querian lorence basically said at the time my God there's far more energy coming out of the uh the generator than what we're putting into the shaft of a c of a certain circuit for example he didn't know how to explain it because at

(33:45) the time you would have been violently attacked as being a perpetual motion nut so what he did was he spoke about it in in vectored angles and he said the energy this outpouring of energy that is that has far more coming out than what we're putting in has no physical significance that's basically like saying that you got a big boat on your water and you got all this wind going around you but the wind doesn't touch your boat now what if you found a way to take that wind and bring it to your boat so it could push your boat but it but

(34:16) instead someone on the boat goes no no no it's not touching our boat so it can never be done forget it that's basically what happened and then it later on got the the the equations and all of that got um got classified we see for example even in the 1980s under the setup of the direct energy weapons uh um SDI Strategic Defense Initiative under Reagan with NORAD Edward Teller went on a show I forgot the name of the show um not uh not dick kette he went on I forgot the guy's name shoot but anyways

(34:47) point being was that it was more of a show that had more intellectual discussion and even Mr Edward Teller talked about how even in the 80s those that were not privy or given

access to the the classified equations that proved that these direct energy weapons could be possible thought it was nonsense until they were a lot of these professors were brought in and briefed on it and Teller said he felt even in the 80s that there was far too much secrecy being driven to classification in North America he he said at the time

(35:14) which he was right he goes the Soviets have access to this literature openly and in North America we're classifying it so it's been there but I mean I can no I can I can give example after example so I'm loving all the knowledge honestly and I think the chat as well and everybody who's listening in as well is enjoying it I think that the word I was looking for earlier is the syntax right is that the syntax that we use is so important in science and it also develops over time you know as part of

(35:42) the case that I've been doing I've been developing my syntax we moved away from like black hole Wormhole and now we're talking about macroscopic phase conjugation and potentially the unification of quantum and macro which I I want to discuss with you here in a moment as well I think that one thing I wanted to ask before that though is when you talked about the uh I don't know if it was the photons or the waves the particles making love and not war are we talking about the same concept as Bose

(36:08) Einstein condensate there where we are moving firion to bons or is that something different uh actually well Bose very good question I appreciate it Bose Einstein condensates give rise to those effects got it Bose Einstein condensates create the appropriate environment for those effects to occur for the second order entanglement and pass that third order fourth order all the way up to 12th order effects to occur but second order effects already induce what you've seen in the 370 video for example so let's just stick to

(36:36) Second effect order effects for now but yeah so just hypothetically what is above those order effects like how would we how would you describe that or give an analogy to what that is because I mean if if second order effects is what we're seeing in the M 370 videos we're already talking about magic in my opinion right so this well this is where again it becomes IND discernible and so this is why um we start to get into I don't even know how to describe it so a basic example of just a second order

(37:02) effect would not just be the 370 video but uh for example say I I'll give an example for the females in the audience where um imagine your purse you go out for a dinner with some friends and you say oh my gosh I forgot my phone at home instead of driving all the way back home imagine unzipping your purse and opening it and seeing a a part of your room there reaching your hand through the purse and then your hand it actually comes out the other end in your room and you grab your phone from your desk and you bring it back up that's a second

(37:31) order effect when we get into anything past that you start getting into I'm hesitant to say this so I say this very carefully uh speculatively but you start to get into some things that are seen like in the doctor strange movies and when you see the dimensional uh fractals and all that kind of stuff operate and it becomes uh ve very interesting now if you took any of that and you

took your phone and you filmed it while you're in the lab basically your phone unless you were actually no even if you

(37:59) were inside it because the lens is convex that you would essentially your phone would get blurred like crazy it would be zooming in and out of focus it wouldn't it it start going haywire basically because there's this um again if we go back to dragging that Mouse across your screen seeing the drag effect that's basically what's happening in the laboratory in the vicinity of the uh of the phase conjugation occurring interesting so I think maybe along those same lines if it's not you know correct

(38:24) me is that when you talked about the laser kind of uh converging on a point the thing that confuses me about that is that uh photons are bosons right so they can stack on each other on the same point so if that's the case when why when we shoot lasers at each other do they not just stack up or are you saying they do stack up but why are they then causing this additional order effect to occur you know why are they curving or U forming that caducous or whatever it was that you were mentioning before sure sure this yeah sure no problem so

(38:54) ideally this isn't as simple as just taking two lasers and intersecting them to be clear this has to do with inducing this effect at the plank scale at first which is why uh in my opinion Mr pz emphasizes superconductors quite often because we know for example that uh certain types of um parametric oscillators certain types of UV lasers um mixed with superconductive properties can access this plank or or if even putting superconductors aside making these lasers interact inside of a Bose Einstein condensate first allows the uh

(39:30) the plank scale to lock in with the field interaction if you will from there what happens is there is this and this caduca like effect as well is reminiscent not just within our DNA but dare I say within the overall nature of the toroidal reality that we're in so this caducous effect is something else as well that I will say is by definition not something I can explain as to why it's there except for the fact that it is part of the toroidal curving of SpaceTime in general um that seems to again explain quite a bit of the quote

(40:08) unquote um uh uncomplete or incomplete theories publicly but it's dare I say it's so eloquently simple that it's been dismissed and it's been right under our noses the whole time having to do with essentially the the square root of electric permittivity and magnetic permeability but as to why that caducous forms uh as per your question I can't necessarily say other than the fact that when we think about curving SpaceTime and then we curve it to another second order we're going to see those curves

(40:39) start to essentially assimilate and self assemble when oscillated as well but they must lock in at the plank level first so this is not as simple as just taking two laser beams and make like you know from from uh Amazon Walmart and just shooting making them intersect I wish it was that simple it's it's not that simple ultimately but um although In fairness there have been quite a few people that have uh for example I have a a patreon when uh from when I start had the show and there are some people on

(41:08) there for example that are getting some very interesting effects without having to lock in at the plank scale and so so two follow-up questions on that well first one I guess is how do we Define the plank scale so just for people like me and people who are less versed in the academic side of it like when we're talking about plank scale are we talking about just very small small scales sizes or what are we talking about there the smallest the smallest form of observable and measurable matter physical matter

(41:35) that we know of now what I'm going to say here is probably going to be very controversial but um it has been confirmed many decades ago behind the scenes in a private regard that the smallest forms of matter are cubes in nature um which is why one can make a strong argument that the force of anti-gravity is proportional to the square root of the electric permittivity and if it's if it's something that simple you can then begin to engineer things like what you see in Mr P's patents which you could see why it would

(42:04) anger other groups or factions that don't want this to come out because it shows in certain ways how simple the engineering approach is and so the idea is that the smallest forms of matter at plank or at the plank scale are cubic or cubes in nature now if you can somehow manipulate that matter to rise up those to make those cubes rise up and begin to revolve around an orbit or an axis that you've created those cubes again what happens is they start to go from having um corners and angles to surpassing the

(42:39) schwinger Limit as pz has talked about they begin to curve and those cubes begin to self assemble longitudinally and they form that Helix that or that caducous that we've been talking about and again this is very prominent and reminiscent within the 370 video we see of again a caducous like Vortex being formed around the craft before the effect occurs as well as we see um you know people have talked about um having experiences while you know with paranormal entities or you know psychedelics Etc and I'm going to say

(43:12) something here that some people may either go oh my gosh this guy doesn't know what he's talking about or they'll go my gosh this makes sense hopefully they'll go with the ladder but um a lot of people claim to have experiences whether it's paranormal or what have you they see beings or what they think are you know deceased relatives or or something like this with the corner of their eye photons in this reality are the only particles humans can see the full spectrum of now what happens is as

(43:40) we've been talking about when you curve SpaceTime you begin to get these effects we notice as well that if our eyes are like miniature movie projectors the corner of our eyes may in fact be able to reveal more than looking straight at something we we know this is there's some feasibility here because when you go into a dark room it's actually and you turn the lights off very quickly the corner of your eyes begin to adapt to what you can see much more rapidly than the center and so this goes back to the

(44:07) notion of again Optics bending gravity therefore bends light and so on and so forth so which explains as well why people for example say oh my gosh I saw a craft in the sky very

clearly but then when I filmed it with my phone it looked like a blurry sort of uh pixelation going on it's possible we have con like properties within the lenses of our eyes that our cameras do not which is why we see things more clearly and then the cameras themselves continue to pixelate in a frame dragging type effect yeah so

(44:37) it's not even just a matter of what the resolution is it's just a matter of like that we have different uh capabilities that what we're seeing with our eyes can do correct I would say and I'll be very open and blunt about this I would say that in order to for example detect or pick up some I'm oversimplifying so but if this does end up working someone please let me know but if you took two concave lenses and you overlapped them that interference Zone in the center there is where you should be able to get

(45:04) more of a clear view of the craft if you and we know for example that concave lenses are what is are um inside of the James web telescope which is interesting because again the only other uh telescope that had a concave lens to my knowledge in the past many decades was the Mr James Santilli the Santilli telescope that was called non sense and he was claiming to see craft and certain being energetic beings in the sky with his concave lens telescope so that gentleman's work is nonsense but for some reason when James Webb has a

(45:37) concave lens it's fine yeah so go to show there's Gatekeepers everywhere especially in the academics and experts Community right uh I think that's and I'm not taking a jab and just be clear I'm not taking a jab at Al lob or anybody I'm just saying it's pretty ironic when you look at the the same way that there are many scientists right now some many of which I know personally that are saying certain things are not possible publicly and then privately working on things that you would think

(46:02) are are magic yeah that doesn't surprise me at all but uh going back to the double helix again you know it starts to make me think about DNA right where it does feel like we see these patterns everywhere you see it in biology you are seeing it in physics engineering I think that's what to me gives it even more credit is that there does seem to be this underlying factor of curvature in everything about our it um 100% if you search up for example even on Google Quantum curve SpaceTime you'll now begin

(46:33) to find articles that say my you know I'm paraphrasing but mysterious phenomena shown when SpaceTime is see it's a slow drip feed of what has already been known and worked on and engineered and dare I say perfected to varying degrees for many decades now okay so here's another topic which I if you feel uncomfortable talking about feel free to stop me but uh super conductivity you brought up super conductivity I think that the chat would like to know and I would like to know as well is um you know we've seen Ik99 in

(47:02) the past few months as well and when I saw alkai 99 my personal opinion was that I think that this is legitimate uh because I've seen the videos of flux pinning and we're talking about room temperature superconductivity now not just normal superconductivity but room temperature um do you think that room temperature superconductivity um you know can or

must be created from metam materials or can it also be induced via electromagnetics electr gravetics what however you want to think of it so I'm I'm going to say something that's

(47:31) largely unpopular amongst the people that I I know and or work with Etc because which is that and we discussed this yesterday um which is that it is of my humble opinion that the focus on metam materials um and the analysis of them and their isotopic ratios and all of that is fine there's nothing wrong with that but to induce the effects we are seeing whether it's the pz effect or tapping the zero point as PUD off has said in the past or uh Dr Eric Davis or your 370 videos you do not need meta materials whatsoever now putting that

(48:05) aside for a moment you may say okay what what induces these effects well various forms of uh plasmas and certain gases various forms of light um various forms of uh superconductors in addition to um and this is where it gets quite controversial the induction of room temperature super conductivity using normal metals and so it is of my humble view that the push for the analysis of metam materials and such is to not necessarily detract but distract from the fact that uh this can be done without meta materials now with that

(48:41) said I don't have something against metam materials and we think for example okay what is that well a met if we for example engineer the uh we manipulate the isotopic ratio of say magnesium bismuth and then we put a thin film you know superc conducting lay layer over it with maybe fiber optics in theory that's a meta material because it's a material that we have now manipulated and it's in a meta state if you will so I'm not against that but it's not it's also not needed that is not needed to be done

(49:09) this is something I said for quite some time and I've gotten some Flack behind the scenes for it but I think that people have the right to know in particularly when you look at the work of um uh before World War II and especially before World War I this notion of airships and compressed air these pneumatic form forms of transportation that were clean and it was just using compressed air forget anti-gravity forget generating gravity waves uh just using compressed air so um you know that that brings me into a

(49:38) whole rant as well as you know for example the common home heat pump uh in everyone's homes for example technically have the ability to allow you to uh induce what's called cop coefficient of performance over one meaning you can use the the you know the empty space or the vacuum uh and the ions from it to compress air but there's been a diabolical design globally um where when it cools off outside you're back on Resistance heating so you're stuck in a closed loop system instead of an open

(50:09) loop one so essentially one of the few reasons that we're still building cop coefficient of performance less than one is because uh closed current Loop circuits restores Lorent Symmetry and doesn't let you use the ether or the vacuum to the type of energy that we would see to power homes infinitely or to do the effects that we've seen in in the 370 videos so so say the Pac-Man mouth is closed instead of being open yes exactly exactly yes yeah that's pretty cool um so what I was gonna say uh which sorry if very quickly

(50:45) from a visual sense the Pac-Man's mouth when it's opened is looks identical to Maxwell's querian on Wikipedia by the way so it's just an interesting visual to correlate because if you do the math it translates to that visually um so and just real quick for my chat um people want to know what lk99 is so LK 99 was um I was just going to say you know and you can feel free to correct me here is a recipe that was came out of Korea and I think also **China** but mostly Korea that essentially said you can take copper and

(51:16) lead and if you heat it under the right uh using the right recipe that you can produce a super conductive room temperature super conductive uh element metal however you want to think of it is that how you would describe it as well um certainly it is of my knowledge certain things have have been done privately I know for example there was a paper published all the way back in 2001 that indicated um a combination of copper and gold for example that when melted to a certain temperature created room temperature super conductivity and

(51:47) then it later got retracted as per usual those are the ones you're going to want to look for for for for your your lovely audience um with that said do I personally two things I'll say about lk99 in particular I haven't looked into it enough to say for certain my surface level analysis is that it is purely diamagnetic and not room temperature super conductive I could be wrong with that said putting lk99 aside I know for a fact that R room temperature super conductivity does exist and has for quite some time one can make an argument

(52:20) that uh without jumping all over the place here these ancient um uh cathedrals that seem to have very peculiar geometric properties and organs inside of them with piso electric bricks made out of them may have in fact been room temperature superconductive buildings that were used for healing uh etc etc but anyways that's really cool I think that the idea yeah go ahead keep going the idea is that if you have a resonance within the vacuum that has an ideal state of your cells in a healthy manner sort of like going back to our

(52:50) stacked books example if you're on book number 10 and you're you know your your cells are cancerous you can then what this this resonance does just by being inside of these Cathedrals ideally is it takes essentially uh your body when it was at say book three in a healthy State and brings it up to book 10 and you are now essentially very healthy um we've seen this been also be promoted uh pre World War I um for those that have the really old magazines and that kind of stuff uh you know with using cathodes

(53:19) and you know Ray tubes and all this kind of stuff putting it all over the body but of course you know interestingly enough we didn't hear about any of that after the war so yeah yeah well and just for my audience too I want to go back to something you were saying about some other met materials bismuth zinc and magnesium seems to be a common combination that I hear a lot about in ufology um so I I just think that there might be something there I'm just curious as to if you have any just quick thoughts on that yeah I'll be super open

(53:47) in one sense I know for example that certain people have done certain things to bismuth and when bismuth was put into a concave like shape it began to exhibit properties said it

otherwise would not have um these are people just like you know melt melting it and applying a couple of other things to it electrically in their homes um so I don't want to give away too much but I do know for example these were people taking bismuth from shotgun shells so what I'm trying to say is there are components to a lot of these elements uh

(54:13) and materials that we um that are right in our faces that we are sadly not familiar with and I'm familiar for example with a certain group that had to uh that found some very interesting things using just resonant frequencies and they themselves had to uh were very frustrated because they could um they could not publish these results um they were able to induce there I say a form of uh Alchemy using the polarizable vacuum approach which is again the curving of SpaceTime and then using the positive and negative electric charges

(54:43) to uh dare I say birth something out of the phase conjugate curves that were induced in the laboratory on these materials yeah and I'll repeat for people that are out there that are are thinking that you know this is just blowing their minds or what have you this is why this is hard truths guys this is why we're in here these are the truths that people are going to have a hard time accepting and you need an open mind to get to them um Dave this is awesome do you want to take a look at the videos with me real quick and we can

(55:10) just I would love to hear your opinion on the science what you think is happening I know you already kind of have referenced them multiple times um so I'm going to go ahead and share my screen here so that we can get this officially in the recording um let's go ahead and record this okay so I'll full screen this as well so this here is what we refer to as our MH370 stereoscopic video which is this side by side video that's actually two different perspectives it's not a duplicate video here and it starts off

(55:39) pretty normal you know we're just as normal as a satellite video can possibly be we think this is the cers system that I don't think a lot of people even knew existed before we started reporting on this um and we can see this mouse coming into play we can see this perspective change with these coordinates the main action starts to come into play here about 15 seconds in we see this orb coming in we have estimates coming in at like Mach 3 you see how fast that comes in sorry Ash I'm not are you not seeing

(56:04) it I'm not seeing brother sorry let me uh try this again hold on let me get my zoom up here where' my zoom go interesting you're not seeing it let's try active speaker view let me try this again I think I I think I did something to it here where is sorry I'm I don't know what I just did to it no no problem uh what's going on here give me one second here yeah no problem let me see if I can figure this out sorry chat hold on I don't know what I just did here as long as the audience can see it I can

(56:54) see us but I can't see I don't know what I just did to my there we go okay don't worry about it man I got I just pulled up the stream here yeah I'm trying to just correct what I just did to us here I did something to us in the in my videos oh there it goes side by side somehow I just I'm not sure what I did yeah so I will uh I guess we'll try this a little bit differently CU I think I

screwed up the the recording somehow here but should be fine um wait is that where's the op if you if

(57:27) you want to play the video again it should be fine because I can watch it from the stream side quickly okay yeah I'm trying to revert back to where we were just at on my recording here I don't I don't even see the option anymore so bizarre okay so hopefully it's still recording and hopefully I didn't mess it up um I'm going to pull up the the video here the side by side it says it's still recording on my end so yeah and uh I can't even pull it up anymore more right now oh this is

(57:56) what happened I see it's on my other screen that's what was going on guys sorry gotcha um okay that's what happened here let's go with media player share this I'm recording my screen I okay there we go yeah oh you just saw it there oh I just saw there let me try that again that was what happened guys okay so we're going to fix this okay can you see it now Dave yes okay so here we go we got that technical difficulties resolved so these orbs come flying in right away and the first thing

(58:24) that I noticed that I'm curious about your thoughts is that it seems like it flies past the plane and then it kind of it looks like it's trying to look for it here I don't know this isn't necessarily like super in-depth in the super conductive or science perspective but to me it looks like it's like tracking or looking for the plane um what are your just general opinions on that when you see this come flying in like this and I say this in a speculative manner assuming these these orbs are in a um

(58:51) sort of detection mode if you will the what I would speculate that what is occurring here is there is a sort of that orb is looking for a resonant lock in with respect to the other orbs it relative to the mass that it's looking to transfer or reduce the weight of or again uh perturb the local SpaceTime metric around it that's normally what I would uh this is again without the actual data itself that's what I would speculate and of course with regards to the vortex like behavior that is um all but very familiar to a lot of my

(59:29) experimental work uh to a like to to a te so I can say that for for those that again um think that it's fake or something like this we also have to keep in mind that the video editing software that it gets put through again by definition of not even having the code embedded in it of understanding a higher symmetry effect will seemingly try it's best to sort of render the effects that it could in a flat SpaceTime assumption or presumption and this is not to say that uh VFX software is the only thing that assumes a flat

(1:00:06) space time we can say arguably that all of our cameras assume a flat space time uh which create which is what gives rise to the pixelation and therefore the inability to see past a particular point of that curvature which would then be another dimension uh directly above it and so these effects that we're seeing and that I see here yeah are vastly vastly um similar to what I'm familiar with and so I think what we're seeing as well is that uh we're seeing a a Depot dare I say um a focusing of energy that

(1:00:39) uses literally the entire uh space-time metric or vacuum or ether around it to induce the effect that we see and this this triang this also speaks to by the way the breaking of uh the breaking of local symmetry we we see for example that lean Yang won the Nobel Prize for this back in 1957 um this is not anything that is out of the ordinary if you will we see that ET Whitaker in 1903 and 1904 showed that using partial derivatives you can in fact and the z-axis um in a longitudinal sense you can induce these effects and

(1:01:16) stabilize uh disequilibrium so the idea would essentially be that you'd have very similar to like a tree trunk for those that are that are not so scientific minded you'd have the trunk that controls the other branches of the tree as we know or as stands as sort of the supporting point but what we're now being told publicly is that there's no trunk there's just the branches so we can liken the branches to the X and Y axes respectively and then we can liken the trunk of the tree to the z-axis or

(1:01:46) the Zed axis that is not seen unless one is actually up close in that effect which is why I keep saying at best when you're away from from it you're going to see at best the flat intersection of that phenomena and or the flat intersection through either your own eyes or the the cameras that are filming such yeah so what is your thoughts then on on this pattern that they're doing here it's it's it's bre it's breaking the local symmetry of the SpaceTime metric uh to induce what hburg

(1:02:17) and Visser showed in out of Los Alamos in the 1980s to induce what seems to be here in in my again specul speculatively a traversible wormhole essentially it's using resonance to uh break the local SpaceTime metric around the object in this case the plane that it's looking to transport and it is essentially building that resonance up um in a Vortex like manner to then create at the zero point a uh a curvature in SpaceTime that again will give the effects as we've seen here that induced things like again uh you

(1:02:52) know non-locality spooky action at a distance um teleportation which we know has been done at least fundamentally by transferring Quantum bits or Quantum information why that hasn't been proposed to be scaled up publicly is is another interesting thing but yeah yeah so you think then that there it's not just a matter of scanning or mapping the plane here you think there's some type of electromagnetic or other type of force at play here while they're actually doing this spinning they're interacting with one another the ORS are

(1:03:21) probably yes the orbs are probably super conductive what they're essentially doing is they're locking in at the plank scale with regards to the local SpaceTime metric around the plane and then inducing uh whether through lasers that would come out of the orbs or whether through um certain pre-programmed uh let's say electromagnetic and harmonic decibel frequencies make the plane uh go through or experience the effect that we see where it suddenly just disappears but I would say lead up to that is a resonance

(1:03:56) type of buildup very similar to um uh sort of like a z pinch if you will so they're not even being pre they're not even being remotely controlled then they would be pre-programmed

is that what I'm hearing is that okay as I understand it can be remote controlled but it can also be pre-programmed absolutely to find a particular if it's pre-programmed with a set of you know to look for a certain mass that then has that mass dare I say transport or make it disappear um or remove the weight or the internal mass

(1:04:28) of that object from one point to another uh I I certainly would say that it can definitely be done okay well that one was awesome let's take a look at the second video then and I appreciate all your insights on that that's really helps me a lot as well can you see the second video yes okay awesome I'm going to full screen this so this is the second video guys and this is the mq1 C Gray Eagle where we can just see the nose of this drone right here right off the bat and somebody actually in one of the

(1:04:56) comments of one of the recent podcasts said that their friend works for General atomics and that this is what one of their drones would look like as well now in this one the leaker is uh taken this multispectral Electro IR camera and added this thermal layer in over the top of it and again we can see these orbs just ignoring gravity here and one point right away I want to point out once we get to this orb that we see I want to snapshot it right when we see it is that you mentioned something about the cameras not being able to pick this up

(1:05:23) in correctly in 3 dimensions and it would look flat to us do you think that may be part of the reason why the orbs look just kind of circular here or is this just naturally you know actually we're still seeing them in three dimensions or what is your thought proc that would be that would certainly be a factor you see do you think we're seeing the non-radiating barrier here around this or do you think that this is a solid object then I think it it again um I would speculate that it is a solid object that

(1:05:50) has created a uh alteration of the local SpaceTime metric around it using plasmas and Bose Einstein condensates so it is completely voiding space and time therefore not having to abide by the gravitational rules that you know fighter jets would have to yeah and um it's a sorry for it's like if I can give a quick example for you it's like if you were in a swimming pool and you took uh a small pocket of a little bit of water put it inside of a um put it inside of a container of sorts or a balloon if you

(1:06:24) will and then put it back in the pool that water that is inside of the balloon is not touching the rest of the water on the outside and the balloon therefore allows for that water on the inside to push and pull the balloon in ways that it wouldn't be able to if that water in the balloon was immersed with the rest of the pool did you ever uh you're probably a little too young for this there used to be a toy called ballzack and it was a it was a a ball and there would be like a water ball in it and when you threw it it would just like

(1:06:53) move around super super weird for some reason that description that you just gave me kind of makes me think of that I I know what you're talking to what you're talking about and that would be a very nice example about the way that it kind of just jerks around in that regard interesting um the next part I want to talk about you can already see these lines these dark

Trails uh we have another version that shows them a little bit more clearly which I'm just going to switch over to really quickly um because

(1:07:18) this is the next thing I really want to ask you about here is when we see these Trails they're in front of the orbs I mean this looks like they're running train tracks to me you can see these trails are actually in front of the orbs here what is your thought Theory hypothetical about what is causing it when I talked to salvator Pius the impression I got would be that these are like a pulse that is um either breaking down the SpaceTime vacuum and creating their own geodesics that way or there's creating a vibrational effect that is

(1:07:46) allowing this breakdown of the um you know local SpaceTime vacuum to create these train tracks I'm going to call them for lack of a better term that is their own geodesics that they are just being pulled along what what is your thought you remember I completely agree with s if you remember what I said at the beginning of this regarding second harmonic generation that is what gives rise to this effect right here yes I would I would say I would just add simply the second harmonic generation allows for a gradient in the local

(1:08:14) metric that when induced with a dielectric um current capacitor Etc can start to do some very interesting effects and when combined with for example example lasers in a directional sense um Can can Emit and absorb the uh and rather induce the effects that we're seeing here so if I could stand on Dr pz's shoulders humbly I would say in other words it's giving rise to the macroscopic quantum effects that are done via phase conjugation through second harmonic generation that induces a gradient within SpaceTime that that

(1:08:50) creates these effects here through things like Bose Einstein condens that can then again do things that would otherwise be considered impossible with solids but can be done with plasmas yeah um and maybe this is a little bit redundant to what we were just speaking but how is it you think that it seems like the center of mass is the plane itself do you have any theories on how they're like staying stuck to this plane in this pattern that they are cuz they come in at M three speeds right so they're coming in at

(1:09:20) unlimited speed but then they kind of match the speed of the plane perfectly here you essentially what you want to do is in this particular case if you're looking to do whether what what we're seeing here um you want to make the plane your Center axis of symmetry in terms of for example instead we talk about you know uh relative rotation but in this particular case what we're looking at here is actually something called absolute rotation where we are essentially create allowing the orbs to resonate and lock in with the the

(1:09:49) internal mass of the plane that comprises the plane and so that resonance combined with the effects that the orbs induce allow then for the very focused amount of energy to interact at the plank level with what we can call the zitter buag gang or what's in German translates to in English the uh the the jittering thing as it's been called because in quantum mechanics and I'll come full circle with this it's been shown that for example if you push a kid on a swing and even after the kid gets off the swing and the swing is what

(1:10:19) looks to us as staying still at the plank level it's still oscillating it doesn't stop and so if we can lock in with the oscillation of the not of a swing but of a plane then we can see and we then create a form of absolute rotation around the axis of the plane lock in with the resonance use a Bose Einstein condensate to induce its own Geo uh geodesics in front of itself you can then have the exact effects that we're seeing through the curving of SpaceTime and the second harmonic generation that's awesome man thank you

(1:10:51) for that explanation greatly appreciate that no problem I think we'll get to our main event here you know so if we let this go in here first thing I noticed is that if this was fake I wouldn't expect to see frames like this where the plane is out of view this is because they've zoomed in and they're you know manually trying to track this right um I was listening to Matt Gates uh on the UAP hearing and one thing he mentioned was that there was an incident that he had seen where the operator had to use

(1:11:16) manual tracking for some uaps that were out there I just thought real quick do you have any comments on that do you think that there might be a situation where due to what we're seeing here they can't be tracked automatically due to them being you know separated themselves from SpaceTime yes you can basically there are um uh there have been this is actually nothing new this has this has been around long in the defense field long before I was even around uh you can make um fighter jets and things like

(1:11:45) this either see multiple objects that are not even there see things that are uh that would otherwise be in other different places um and essentially manipulate the radar to the point where you would need a human behind it um to to look specifically or know what to look for these things can because they void the local SpaceTime metric they become completely undetectable in any way shape or form the only way to detect them is to then use the same technology that it is emitting but this time you use it as a detector instead of

(1:12:19) an emitter and this goes back to what we discussed about things with concave lenses and so on and so so forth and uh I think cuz some of the people in the the chat want to know as well and I think I know the answer already but do why do you think that there's three of them I I think the assumption is that's the minimum required to build a uh geometric shape in two-dimensional SpaceTime that's the minimum amount required to break the local symmetry of any metric okay you need so we need to it's as simple as

(1:12:49) thinking back to the X and Y AIS on the cartisian plane but then we need a third axis the z-axis which is some of the papers that I've sort of tried to hint to your your lovely audience in the past hour and a half about um in terms of there's an entire comp when I gave the example about covering the bottom half of the water bottle or the trunk of the tree not being acknowledged these are all practical examples of what I'm trying to describe uh scientifically relative to what we're seeing here the

(1:13:16) if with two orbs this would not have worked you need three you need a minimum of three and then three corres responds to essentially the broken symmetry of a particular particle

or an event or um SpaceTime metric if you will so three is very uh very crucial interesting okay well I think let's jump to our main events about to happen and that's what tells me I think that based on those answers that to me what we're looking at here is an operation this is already something I've speculated but if

(1:13:48) these are things that can't be manually tracked or automatically tracked and have to be manually tracked and we're zooming in on them here as we see in a second and then we're zooming out right before this event happens and we know that this is some type of uh pattern that has purpose then to me this says that whoever was filming this knew something was about to occur they're trying to get as much information about it um and this goes to one of my questions before we start talking about the zap which is do you think that the

(1:14:12) military films in these Electro IR cameras to collect data on exactly these types of anomalous events because I can't understand otherwise why we wouldn't be using optical cameras for this type of things the multi spectral cameras seem like they're intentionally designed for this so I'm just curious of your opinion on that I think yes to a certain degree I think this is where it gets a little bit not complicated but complex in the sense that whether it's certain Departments of the military or

(1:14:36) of the Contracting field or a mix of both in a hybrid sense I do believe there are much more advanced forms of detectors that can see these things more clearly in every way but I do believe that the viewing of such to relative to those Sailors or soldiers that do do not have access to such technology and Equipment this would be probably the next best thing yeah that's awesome so okay I appreciate that now this is just some uh close-ups and this is actually part of the original reges side and non video is they actually do these close-up

(1:15:08) slow MOS of the orbs that you can see here and you can kind of see them distort a little bit and then we get to the slow-mo of what I refer to as the zap but I think the more accurate term is the macroscopic phase conjugation that's happening so I would like to hear your opinion because you just mention that you think these orbs are having purpose here you know they're they're interacting with one another they're breaking down the local pH time or SpaceTime metric and do you think then that when we're going to see them

(1:15:34) converge here and I think we're going to see I don't know if the monopole is the right term but they seem to be focused all their um relative important part you know Focus towards the middle of the plane they're they're essentially what they're doing is they're creating uh um how can I put I sorry I have to watch my words here they're inducing they're inducing a quadripole moment essentially and what I mean by that is uh a quadripole or multiple dipoles laid over each other but the reason that you a

(1:16:04) quadruple quad meaning four you'd say why is there not a fourth orb then if that's the case that's because the fourth potential has to be left open the same way we talk about opening Pac-Man's mouth via the a field uh the magnetic Vector potential to induce in this particular case uh if there if this is a trans Transportation effect uh to allow for the fourth point of that

quadruple to be in the place where they wanted to transport the plane if that makes sense when you say they wanted to transport

(1:16:35) the plane are you saying that's where they want to induce The Singularity or is this also some way of determining the direction if sure if you're let me simplify it actually in a way that I think I probably could do much better if you're looking to teleport an object let's just say right or transport it from one point in space to another point but very far away in distance what you would do is you would have three orbs surround or three of these orbs with this ability surround the object that you want to teleport

(1:17:03) speculatively and then you would have the fourth orb at the location that you want to bring it to really and this is this would be your Einstein spooky action at a distance you do one thing on one side of the planet and it immediately occurs on the other side of the planet as well it's those same type of Concepts essentially so that's really interesting because we have been speculating part of m370x investigation that are there other orbs on the other side what I heard from you is that you might need just one other orbs that is

(1:17:30) essentially entangled somehow well it speaks to completing the full quadruple which would be the squaring of a circle if you were to visually look at it which goes right back to the square root of the electric permittivity of the local vacuum in addition to these plank cubes that we talked about it's pretty it's it's not that diff it's just different ways of looking at it but it's not I do agree with Dr pz when he says that um It's A New Perspective on something that's been right under our noses for a

(1:17:58) very long time yeah I like when you put that too because it goes back to that idea that we're just building on Old science and we're taking another look at it looking at it differently but we're not cheating the system in any way right we're not um changing how science operates we're just building upon it B basically if I can say very quickly with regards to I would I'm not a betting man but if I had to bet money there's there was a fourth orb uh that would be stationed at the G um the

(1:18:21) geographical point in which this plane would have wanted to in which certain people would have wanted to bring this object towards and an example of that is very simple the way people may say okay how does how is this connection made between the fourth orb or the potential fourth orb and the three that are around it think about an elastic band stretching between the plane and where the fourth orb would be that induces through that longitudinal component that z-axis that trunk of the tree that we cannot see in flat SpaceTime that

(1:18:53) reduces the tele at minimum light speed the ability for matter to appear from at one point and then appear on another Point simultaneously so you're essentially creating a uh a non-visible elastic band between the plane and where you would want to bring the plane and the way you do that is you break the symmetry of the around the object of the local vacuum that you want to teleport if you will and then you have the fourth and final point of that quadrupole inductance which is the second harmonic generation effect you

(1:19:24) would have the fourth point at where you'd want to bring it wow the same the same way you have cell towers basically it's the same concept yeah and does would this direction of travel does it matter that the plane is focused on a certain direction as it go forward backward can it go any way they want it to go as long as the orbs as long as the orbs induce the resonant effect around the plane and they fit to the plane's um Pro uh uh direction of propagation and so on no there's no doesn't matter

(1:19:50) awesome and so um the next question then is this frame that we're looking at right here we can see the plane blur in this Frame we can see what looks like gravitational lensing to me on these orbs which this is the part where I'm like nobody faked this guys like this is uh way like it's too natural here the other part that's interesting is that the planes gets a little bit smaller compared to the frame rate before this so do you think this is indicative of some acceleration effect that's

(1:20:15) happening here the gravitational effect beginning D I say it's a combination of infolding as ET Whitaker and David bow were uh big proponents of uh bomi and mechanics but it AI also an indication of the local metric being warped and perturbed uh sort of like jello to the point where it becomes the the solid objects don't become solid so this is like the beginning of the phase conjugation occurring and we're just kind of seeing it and this is what you think it would look like essential if essential I would I would bet yeah yeah

(1:20:46) and then from this effect that we see here what is your thoughts so in the satellite stereoscopic video we see uh some illumination happen from this event but we can see from this video here that's an endothermic cold event why do you think that there is illumination happening you know this light that illuminates the clouds what is your theories behind that that is very similar to that of um uh this so I have to it's a lot more straightforward in my opinion than many may think this speaks very much to um

(1:21:19) uh very quick laser pulses uh particularly within the ultraviolet Spectrum interesting um I I so I need to forgive me I need to be a little bit careful in that regard because it's quite um the let's just say that certain and not just in this case but in other cases there have been people that have claim to and forgive me I don't mean in this case but certain people have claimed to see certain colors when craft take off in a light or in a photonic sense that correspond directly to what we know in the laboratory to be an

(1:21:49) UltraViolet pulse and so when we see this effect I think what we're seeing essentially is the residue of um how can I put it uh sort of like if the if this speculative Wormhole had a uh an hourglass like shape to it but we cannot see it in its full 3d form going back to our main topic of because everything's assumed to be a flat SpaceTime with our detectors and so on um what we would have essentially is that sort of light that's that illumination is sort of the indicative of the sort of tapering off

(1:22:22) uh resonance that is closing up that temporary uh we could say pocket in SpaceTime or uh opening in SpaceTime that was made W the same way that the same way that you pulse a

laser basically okay well I appreciate that that's really amazing um so I think we've learned a lot here now one last thing I have on these videos and then I just want to talk to you briefly about just some of the implications of all this technology um so let's just say hypothetically there's a lithium ion battery fire on this plane just let's

(1:22:52) just assume that do you think that this event could absorb the energy out of those batteries do you think it could I mean it's cold as well I know I know for I know for a fact that it can transfer the mass of that of of that those batteries either into the orbs it can transfer the mass let it dissipate into the into The Ether or the vacuum and then um I know for a fact that it's possible and very feasible to do uh using lasers and and pulsed uh pulse laser effects and Optical bof frent uh effects um and if you had a certain

(1:23:28) types of um phase conjugate crystals that were put inside of lasers and those lasers were put inside of the orbs you can definitely have these effects yeah yeah awesome that's uh that's huge thank you very much for that I think that helps us to understand what I specul no problem the idea would essentially be we have to keep in mind there's a difference between mass and weight of an object and if we think of we ultimately publicly we don't know what mass is if we think of mass being simply the

(1:23:54) internal Resonance of an object we think about the ability to then if we can transfer that resonance from the plane to then where the the outer shell of the plane is still intact but its internal Mass has now been the same way that if we take that water in a balloon example imagine you pop the balloon and then the water just naturally goes into the rest of the swimming pool and it just kind of embeds itself into the rest of you know life or nature if you will the same the same thing works with mass in that sense

(1:24:23) so that's why when a lot of people say for example you know things like cold fusion are not possible because Mass behaves in a certain way I would say very strongly that mass behaves basically you can you can you can make any object warp like jello under the right conditions of phas conjugation manipulating that mass the internal mass of an object which is why for example I think we've seen ancient you know uh structures that have been so precise ly cut our current modern you know laser beam Cutters couldn't even do

(1:24:56) it and that's because in my opinion there was such Precision with regards to the Resonance of the toroidal nature of of life if you will that lockin Resonance of that making that phase conjugation allows for The Cutting of the stones the transportation of large OB objects to be literally as light as a penny in terms of its internal Mass if you can dissipate the Mass from it and therefore again open Pac-Man's mouth to let the Mass leave an object and then again you can essentially make it as light as possible while still having the

(1:25:30) outer frame of said object very intact that kind of blows my mind because I've been sitting here wondering as I watch stuff like Graham Hancock's uh Arch uh anthropology archaeology where he's looking at these structures and formations that were built tens 20,000 years ago yeah and they just seem impossible especially if we're dealing with hunter gatherers

that were not organized you know it does feel like maybe they weren't necessarily more advanced from an iPhone perspective but they at least had some concept of these

(1:26:02) Advanced geometry Advanced uh science physics and Engineering that we are still to us you know for them you know maybe they were more advanced in some ways and we are more advanced in other ways you know so that's just kind of what my current theory is so I thought that was I'm this is why I really appreciate the conversations that you have with people like Sal payz because the one thing said many times over is that if any form of our ancestors had any uh interaction with this type of science um as we said earlier about

(1:26:32) science versus Tech they were not running you know Stokes integral theorems and vessel functions and all this kind of stuff for them was very simple they maybe didn't even call it this but we understand electricity magnetism light sound simple what can we do with it clearly this is a very simple approach that unifies everything once one begins to see the perspectives that uh that can be taken in a sense of not needing these overly and this is no jab in anybody to be clear but not needing overly complex um uh mathematics and

(1:27:02) things like this it might be so eloquently simple that it's been put right in front of our face whenever someone may have discovered the effects that lead to these things if scaled up maybe they've decided to just call it you know things like uh inverse Faraday effect or you know very basic uh the London moment for example and just kind of leave it there right no don't extrapolate on it but I think that I I know rather that these effects are very feasible and this is when the cognitive dissonance mixed with the lack of

(1:27:33) ability to detect the appropriate data that would give rise to understanding this science in physics comes into play and that's when the unfortunately the system has done a very good job at that so yeah so I think that just again to repeat what we said multiple times is that you don't have to believe what either Dave or I are saying you can verify this information yourselves as long as you have an open mind the answers are out there the stuff that we've been reviewing today is not Science Fiction it's science fact people

(1:28:01) should look into this if you're somebody who's an inquisitive mind out there uh you want to dig into it realize you don't need to have any pedigree pedigree doesn't matter what matters is you put the work in you figure it out you dig into the science the papers are out there um and and you can kind of come to the same conclusions that we've been coming to here today now I want to talk a little bit about I think we've talked about a lot of these Concepts but but if we bring it all back together in terms

(1:28:24) of what does this mean for this technology what can be accomplished we've already talked about teleportation although I think that's a crude approximation of what we're really talking about here but when we mean teleportation we're mean moving an object at the speed of light potentially faster than the speed of light similar to quantum teleportation uh according to the double slit experiment um I think we didn't dig into it too much but Annihilation as well of just completely wiping something out with Bob Greener he

(1:28:50) and I talked a lot about the Perfect Defense mechanism where we could annihilate a nuke annihilate any type of missile that would be coming at us would you agree with that very much so essentially using the same effects or concepts we've discussed for the past 90 minutes and essentially it not have it say for example have the mass transfer and reorganize elsewhere which would be a form of teleportation but rather have the mass just completely dissipate whether it's the mass of unfortunately a

(1:29:17) person or the mass of a metal object size is not of an issue so yes I strongly agree with Mr Greener yeah and then some of the other aspects we talked about we definitely talked about free energy in my opinion we're talking about Pac-Man opening his mouth up pulling energy from the vacuum State I think that's something I already questioned before but really what you're I think that your uh takeaway conclusion was that if you open your system up instead of making a closed system I'm making it

(1:29:39) an open system now you can open yourselves up to this idea of sucking energy from the vacuum State and you know having there be a release valve so to speak in terms of my layman's terms any other thoughts on that sure one example I can give and this is I want to be clear this is a crude overly abstract example so and I'm not a I'm not speal I don't specialize in the uh in in CT in the in the medical area of this type of work but one thing I can give an example of is we talk about you know people talk

(1:30:07) about things like over Unity or open systems or which would therefore open Pacman's mouth and extract this energy or give and take that you know receive and transmit this energy in and out of your object or your setup relative to the local space time or vacuum we have to think about the possibility that these craft or these orbs May in fact be nuts and bolts versions of what we already are and what we already do what I mean by that is think about and putting aside the con you know the angles of remote viewing and whatnot

(1:30:35) think about for a moment when you wake up in the morning and you have breakfast for example and you have such a busy day at work that you don't end up eating lunch or dinner but you still end you're still alive you can still survive you arguably have uh exerted far more calories than you've consumed by definition one can make an argument that's over Unity you are a per perpetual motion machine so why it cannot be done when applied to various other you could say solids elements plasmas Etc again is largely been for I

(1:31:05) would say political controversial bureaucratic uh BS um particularly with how long it's gone on for but I I think that in addition to that you this gives rise to things like uh light speed or faster than light speed communication uh this definitely gives R to things like medical healing uh particularly things like linguistic wave genetics Dr Peter GV who unfortunately mysteriously passed away a couple years ago and mysteriously had his Nobel Prize retracted for essentially using the polarizable vacuum approach what which is what we've been

(1:31:38) discussing for the past 90 minutes to essentially do the Stacked book example of healing people whether it's uh PTSD mental health or actual cancer uh he has website the

linguistic wave genetics should be pretty easy to find um but all having to do with again the same concepts of applying resonance in conjunction with this phase conjugation at the plank level uh that create that permits these types of interactions yeah it seems like there is a lot of mysterious deaths in science you know and I'm just going to go ahead

(1:32:09) and say right now that I'm not suicidal I have perfect mental health I think from my interaction with you you seem like you are also not suicidal will have perfect mental health as well I'm good man I'm good I don't think either of us will uh you know just be dying I or anything like that so you know it would be suspicious if that happened that's all I'm saying um but you did mention uh faster than light communication which is one of the things I wanted to touch on appreciate that the medical healing

(1:32:32) aspect of it as well I think that is well we're talking about force fields here right we're talking about this non-rating barrier so one thing I think about is cloaking you know this idea and that's something that's been out there actually that's probably the least controversial aspect of all the that's pretty that's pretty that's pretty simple I think that's actually been on lockheed's website they've subtly admitted to it for a while I think it's Lockheed don't quote me on that but

(1:32:53) that's that's that's there are multiple ways to induce that you don't necessarily need to bend uh gravitational waves to bend light although that is one way there are many other ways that it can be done as well yeah yeah um and sorry we just got a big donation I just want to thank dop very much wow thank you very much for that that that's really huge and everybody in the chat and I don't know if you've been able to see it Dave but people have been going wild in the chat they are really

(1:33:16) appreciating this conversation right now oh I haven't unfortunately I haven't seen I will take a look back after this and and to to everybody I I honestly I hope that I can uh even stand on pz's shoulders next Sunday when we do this to to give more Credence what we're trying to do here today at least what I'm trying to do is lay the groundwork and then next Sunday we'll perhaps uh get a little more sciency if you will in in discussing that lingo and all of that but you just spoiled it for everybody I

(1:33:42) was going to tell everybody so hard Tru number four is coming no you're fine Dave I was about to drop it hard **truth** number four next week with Dave Rossy and salvator P at the same time it is going to be amazing guys if you liked what we're talking about today you're going to love next week we're going to have two heavy weights kind of going at it scientifically talking about the videos talking about the science like we were today building on everything we've been talking about um just a couple other

(1:34:09) quick scientific Concepts I want to talk about fusion power you know if we can have electromagnetic fields similar to what we can do with making something invisible then I see no reason why you can't create fusion power within some very powerful electromagnetic fields as well would you concur with that assessment 1 trillion per that's the there's been an old saying I think uh I'm paraphrasing here but you know they talk about things like cold fusion and they

always say you know cold fusion is

(1:34:34) 10 to 20 years away yeah it's been like that for the last 60 years so yes no it's it's very feasible very possible um I I say it very confidently because if you can read between the lines you and your lovely audience uh it's very feasible with whether it's with uh low energy nuclear reactions or anything of the sort um it's why I also I kind of laugh when I remember pz saying on his first appearance on Kurt J mongle show that uh he initially tried to file some of his room temperature superconductor

(1:35:06) patents his high temp ones because hopefully it would have went through a little easier but it is it is feasible we have to remember as well this is the um it's it's it's purely political as to why this stuff won't come out at this point purely political yeah and I think that's my last piece is the politics side of it so it we've talked about a lot of amazing stuff where people go this has got to come out right and I am 100% in agreement with that but we also have to look at the dark side of it too which is when you

(1:35:32) have nuclear power you have nuclear weapons right if you were to weaponize this type of Technology we might be in my mind dealing with stuff that I would call doomsday weapons stuff that you would talk about super villains creating in movies right um Bob Greener mentioned when I said you know one of uh Salvador P's paper on high frequency gravitation waves mentions destroying an asteroid or Planet a planetoid which then I just scaled up and said okay well what about destroying a whole planet and Bob Greener said no what about I talking

(1:36:01) about destroying a whole sun right and you can even scale it up even further too so what are your thoughts on that and how we should be responsible or cautious with this type of Technology because my opinion is the people that are hiding this that's the number one reason right granted the societal impact's huge as well but from a national security perspective of giving an individual the capability to cause massive damage that's the part that I think people would be afraid of the most so this is something that I'm actually

(1:36:27) conflicted with now I want to be very clear in saying that although I do know that this is a very serious concern it should not be the reason that at least the the knowledge of this should not should be hidden that that should not be the Forefront now with that said there is a very strong concern because of the fact that here's and I I've been saying this for those that have known me for quite a while now which is that when you tap one aspect of this of this fundamental energy or Super Force as Mr pz calls it you tap the rest of it what

(1:36:56) do I mean by that it doesn't take much after you tap say an anti-gravitational component to say my God I can apply this to powering my own home or I can apply this to if I turn this sideways and with another five six hours of adjustments to the device I can turn this into something that I can go and very unfortunately if I'm angry at my ex-boyfriend or girlfriend go shoot at their house and now they've their all the houses will fall like dominoes it's a very serious concern it's a very un um

(1:37:24) this is where in my opinion I think the element of dare I say moral-spiritual maturity must come into play the notion of simply not think for me personally I never think when I go into a lab or even if I'm Consulting on a contract I never think how can I weaponize this that's not that's not the thing now there are people that certainly do I'll be very honest with you and that's unfortunately the concern because yes in not just in principle and not just in theory but as a matter of fact it's been shown by

(1:37:55) whether it's Richard feeman John Wheeler that there's enough energy inside of a coffee cup to evaporate the world's oceans there's enough potential energy within the local space-time metric the size of your hand to evaporate a planet and if that can be done through compacting enough energy inside of a highfrequency graviton emission I completely agree with Mr Greener you can do you can destroy a son yeah yeah and that's why I think go ahead sorry I don't claim to have all of the but I think that by divulging some

(1:38:23) of the conceptual framework as we have today we can then perhaps discuss some of the more uh practical elements and I say that carefully because imagine for example with pz uh you know God bless him with his approaches and his patents in a fusion-like sense imagine you can do this with with solid state electronics and that's ultimately where I know we talked about this yesterday I tend to specialize more in the the solid state manufacturing of this and what I mean is essentially small chip-like devices that can

(1:38:54) essentially induce these effects equivalent to uh pz's work and and otherwise and so that's what it genuinely becomes scary um it really does I'm not going to sit here and say it doesn't so I agree that's why I think that from the political aspect if we were to reveal this there is a lot of you know laws or whatever we have to put in like kind of um safeguards right to ensure that we are going to use it responsibly and we might even have to rise to the level of collective conscious where we are not going to

(1:39:23) destroy ourselves right um and so I am conflicted just like you're conflicted Dave but I think that we are both people that come at this from the right attitude and from a good place and I think all the people watching as well I hope that they would as well and realize that this isn't something we can take lightly this is something that we do have to heavily consider when we are bringing this technology to the world and making it public and that's why I want to have these adult conversations that we're having talking about it

(1:39:46) making sure everyone understands it I want to thank you for your time here today and before before I let you plug whatever you want to plug I'm going to go ahead and make you an honorary member of MH 370x Dave I think I am uh thank you I really appreciate all of your insights I think that you've given us so much here today but also in our past conversations I consider you a friend MH 370x will come to your side come to your Aid anytime you need it all you have to do is let us know and we will be there

(1:40:13) for you sir I I appreciate that so much and if I can add one more thing uh for your you and your lovely audience which is that um we g i we talked about this yesterday on the phone

and I'd love to leave this as sort of a thought experiment to leave your audience with which is that imagine you're inside of for example and this can also this uh subscribes to the Stacked book concept even when people talk about higher Dimensions or higher dare I say even Consciousness but imagine you're in New York City in an apartment with your uh

(1:40:40) with your window open and it's freezing it's December or January and you have one blanket on you for example and you can feel the cold because there's only one blanket on you and it you only have one layer which is not that much and then your your partner comes in and says here are another three or four blankets to put top you so you stay warm we're basically at the point and this is one of the reasons I wanted to come on your show where there is an element of the military-industrial complex particularly

(1:41:06) in North America that is trying to B that is attempt that's doing its best to try and convince us that the other three or four layers on top of that first layer is not even there and that is ridiculous the fact that they're trying to get people to not think becomes a very serious problem and so that's one that I just wanted to leave you uh in your audience with an example like that that's basically what's happening and it's something that um I know a lot of people on the inside cannot won't stand

(1:41:31) for but their hands are tied with regards to the things they can say publicly uh in fear of unfortunately losing not just pensions but even members of families very sadly so if I could very humbly speak on behalf of some of them I can say that it's just getting way too it's getting too much and people deserve to at the at least have an understanding of how this works and so I I want to thank you so much as well for making me a member man I I really appreciate that and uh for those that are interested because as as you

(1:42:00) may have heard for those that were here at the beginning of the show I did have uh I did start this before I got into the science side um uh with a with a podcast and so uh what we do now is a couple times a week for those that I that support me I I put out extra content uh and extra papers um that Ashton has some of that I don't really put out publicly and it's um patreon.

(1:42:21) com SL generation Zed no spaces no capitals uh you're more than welcome if anyone is interested in terms of a sort of Consulting your Contracting uh side of side of things uh please feel free to reach out to me uh directly um even phas phas helix.com is the website that is used in addition to the uh the Consulting that I have for salt as well and um two different companies depending on what needs to be done depending on the the contract and what have you but I want want to thank you again for those that are interested I also have a

(1:42:53) substack Dave z.s substack do.com uh Zed is Zed both in generation Zed and Dave Zed but yeah that's also podcast Zed no space no capitals on Twitter and um yeah I want to thank you so much Ashton brother for having me on and I really look forward to our conversation uh uh with Dr pz next week yeah I'm looking forward too and if you ever want me on your podcast all you have to do is call uh we'll definitely be in touch and we'll be talking soon we're going to we're going to set that up 100% yes yeah

(1:43:22) I've been very quickly for those that may check out the generations at public side I've been far less far slower in releasing content because I'm much more in into this uh into the Contracting field of things but I want to thank you so much for allowing me to even promote that because there are videos I've made in the past that uh that nowadays because of certain things I can't comment on but at the time I didn't even realize I was so accurate about that maybe on even for those not interested

(1:43:49) in the patreon can still see public and may give more hints to support what was even discussed here today and ultimately support uh the 370 case overall that's huge man I I think I've been making so many connections with this I am so grateful for everybody I've come across I don't know if I would have ever met you without these videos and it it just it feels like there's another higher Force bringing everybody together uh greatly appreciate it you know this was hard **truths** number three Ash and Forbes

(1:44:16) Dave Rossi giving you guys the information the science that is hard for people to accept but it's the hard **truth** so thank you everybody uh have a great day go ahead and close this recording stopped okay guys thanks on the live stream everybody who was watching here today uh appreciate all the love in the chat that we had uh really awesome awesome love I mean it was amazing everybody putting the comments in just want to thank you guys and uh just say that we are going to have hard TRS number four next week so

(1:44:48) come check it out with Dave with Salvador Pas it's going to be amazing if you like this week you're going to love next week uh come check it out thank you guys very much okay just ended

Transcript:

(00:00) Twitter who doesn't remember that doesn't recall that uh and then in that moment like R you could take it over like things got a lot more complicated it was a little bit more yeah and I want to reiterate too that's when we really started looking at it and that's when we realized like this has been going on for years and deeper thought happen him in 2020 and we had a space where he was kind of telling us and we had never really heard the details of his experience and it was like Cookie Cutter bar for bar the exact

(00:25) same thing like probably Tia could say that Ashton could say has happened to them that they've experienced just ation of like the most horrible things they've accused Tupa of being a pedophile with his own child they've accused Ashton and and others they do a tactic where they

just look up somebody with the same name and then attribute that crime to the person and one thing I want to reiterate for the room is like these tactics and they they get away with coaching it in drama or like you know what I mean but

(00:49) these tactics go back to the 40s you know this is how they've discredited people since the beginning of the cover up about any other thing not even related to UFOs like this is just what they do and now it's just online and the person who does it is named milk fart you know what I mean but it's the same kind of tactics going on um yeah and so and like that's why I kind of wanted to reach out to you guys both too just in the event that let's say you were getting influenced right like people

(01:16) like go in on it and they don't even realize it you know what I mean and that's kind of why I did that thing sorry julian I'm not trying to like bust you down or anything but I saw a lot of people that I respected like retweeting your thing who I know probably like who I've never seen retweet you before you know what I mean and for Ashton's credit like he had done like what like 20 or so podcasts ahead of that one that didn't really have any issues so when I'm seeing like everyone kind of just go in

(01:40) on this and even Tupa said right when you're were watching the L reviews of it it was just like a total flashback to L reviews kind of going in on uh your takedown right dupa yeah that's the strange thing I think uh one of the benefits uh that some of these Trends Setters and influencers have uh early footing in UFO Twitter um is that they can like they can really execute some of these like things like very very well very very effectively and it makes you think that it's like a monoculture right that it's part of the culture and you

(02:13) think like oh okay so we all we all hate this person okay all right whatever let's make a meme oh someone did make a meme okay cool moving on moving on and then that's what like that just and what I want to add to you real go ahead real quick is what's helped us right is we kind of already had um established reputations in euphology right and that's probably what helped John Green W and even L reviews but Ashton is kind of like a total Outsider so he doesn't really have many people who's like can

(02:36) be like oh yo I've known Ashton and this isn't really like true about him you know what I mean he's like it's very easy for people who are like outside like that kind of like Moran learner right he didn't really have a a built-up reputation so I feel like they were really able to paint certain narratives about people in that sense so that's why I do feel like an extra sense of urgency to kind of combat this stuff that I'm seeing I know the fake gofund was fake I know the fake rape accusations are

(03:00) totally fake you know and people won't take the time to like look into that right if like it's a monoculture spreading it so that's just kind of where I'm coming from um it's also presented swep up yeah it's presented in a way that like if you speak out about certain people you're now speaking out against disclosure you're now anti go these guys and it's a very strong thing to point it's a strong finger to point at anyone that you want to kind of silence or or get out of the

mix and you

(03:28) just see it happen over and over and over again then it becomes this thing and it's the same exact style of stuff it's like hazing lies um accusations and it just kind of repeats until that person's gone and there's a gang of people that are just gone from a single person and you watch like well how could that happen how is that happening like what's the process here like and you look oh there's a support group and you interact with it and you see like oh okay well you call somebody out all of a sudden

(03:56) like you get swarmed by like you know the next tier they come in and they go no this guy's great this guy's actually really cool why are you guys why are you guys talking about this guy are you are you guys harassing him very strange Behavior Uh very reminiscent and an easy way to kind of quantify is they're they're acting just like scientologists I I still think that we're gonna find oh no oh no oops like Scientologist I I still think that we're gonna find out that all these people are scientologists but I've never

(04:32) I've never seen regardless if they are I mean I have no idea but I removed my speakership the behavior so suspicious if you've ever seen any documentary on Scientology you ever seen a video of something called um fair game where someone is basically swarmed and harassed at an airport swarmed at their house all by people and all and this is you now what gone online now it goes into their yel to their Facebook I mean the amount of people who been after interacting with these people I've never seen anything like I can't

(05:00) suggest I've never seen anything like it like it just goes on and on like okay starts talking about like every single person in my family their criminal record every single person I'm I mean like dude okay so photos of his brother's house to his brother yeah that was that's a strange thing wen't you like dead like your mom post that you were dead or something do their own thing oh so um we're talking about you know every single thing like you could think of and again this is the only the

(05:35) only people I've ever heard report this type of treatment so if you want to catch up they've been asking them whether or not they've been getting inadvertently used try to bring I'm not claiming that they are I'm just saying can't wait to answer if you've ever seen any documentary about this if you if you know who Leah Rini is if you know who any of this stuff is David Miskovich like if you've ever seen any kind of documentary on this Behavior this cult-like these these harassment tactics

(05:59) fair game policy put on people if it's not them it's a it's a play right out of the got just destroyed language is identical but I warned him ahead of time that you shouldn't put any exp whatever knowingly accuse somebody of rap online knowing for that and you look I didn't say anything about it stuff only people think yeah and they pay for websites too for people right so that's like a monthly fee that these people and they they've made websites for multiple people buy my stolen hard

(06:28) drives did they do that that's what they're saying they are yeah so I guess we should maybe open it up now TBA to to the guest right but uh that's a lot of like I just wanted to make sure you guys know kind of like before anyone gets up and I'm not even saying you did maybe you did actually see some behaviors from Ashton that you thought like be called out or something I think honestly I've I've seen Ashton interact with people I saw his interviews with Julian and Danny I've seen him present his ideas Ashton

(06:58) you're in the room I've seen you do it you know the the passion is there the you know what I mean like the the research is there the personalness or personal ask like some basic questions muchar this weird space I can see people disagree the way that you react to people being considered very combative and not helping with their impression of you whatsoever um so there's goes way getting hit from all sides can make people we've seen how it makes people bitter look at L reviews that's another

(07:28) thing you've done a good job not super bitter that's a that's a great Point like they things in a vacuum they can never be connected they can you can never be retaliating against three or four months of harassment where you're you know and threats and all this you can never that can never be in context for how you react which is another push push push push you know you push somebody over or whatever now you have a thing you can say now you have a huge you know cross and nothing they 14,000 views

(07:58) can ever matter to it right it's like it's it's bananas to do it in public in recorded spaces in my opinion can let I want hear jul speak strange things I've ever encounter you know the straightup Clint denial I've never did that then you played the Clint they definitely overestimated the situation it's nothing them it's more of a game than reality and playing with researchers in that way I think is very interesting to come into a community the reaction he sensitive a lot of the people in this community are

(08:26) reaching out looking around for but sh came across so many people who were looking into this who've had an experience of them of their of their own and now they're in a community with a bunch of people pretending to care a bunch of people pretending to uh to look into it as well and really what they're doing is engaging in strange narrative control is what it looks like to the degree where clip real quick too I'll play it after your thing and then we could get finish up to but my bad that was perfect

(08:57) timing I have one thing to say also which is just to let people know that I posted in the net uh basically it's a guide that it is supposedly a leak document unknown Providence but pretty useful either way that just kind of goes over some of the tactics that people will use to just a lot of time good out the most was he oan who just like I guess a little bit defended Tupa and then got a fake only fans made of her and like the police called in her and all these crazy [REDACTED] and honestly it makes me like yeah the de thing from cor

(09:34) cre could not have gone better like I need clips from that I got to post clips from that thank you for that Megan and that's important and that's what they want right they want

people to be intimidated to not even because you're right doesn't have a channel doesn't do anything she just didn't go along with tu's cancellation and for like a year now they've been throwing like all this different crazy stuff at her and real quick before we go in who kind of one of them talking about

(09:58) specifically how they need to get rid of Ashton from these videos I just can't wait I jul respon yeah straight up he's he's going and now he's getting publicity so I don't know if the followers are fake but he's getting publicity he's going on some pretty decent podcasts who are not doing their homework so I think if there's one thing that we can do as a community is make it be known that Ashton does not jul topic oh TJ's on here and if it's real the whole [redacted] video is [redacted] like

(10:34) we can't we'll never be able to get to the bottom of it because of him so we have to separate Ashton from that video this was this my this space they got recorded on probably did more damage to us disinformation complex than any other space ever in history World getting them all admitting This and like I said Danny wild julan thank you guys being here I don't want you guys to feel like you're on trial or anything like that I just wanted you to know exactly be honest kind of deserve feel like they're it be

(11:01) pretty much just they to me I'm not going to be mean to them I think um like that little education I got from Tupa last night on like how deepest Twitter [redacted] goes Illuminating and me and Julian Don't Know Jack [redacted] about Twitter so like I guess some of these scumbags were in a room that Julian was in and maybe Julian you can explain but oh here we go yeah I don't know who any of these people are I barely use Twitter like that I think I've been in a space twice in my life I use Twitter for news I

(11:41) don't even tell my followers about my Twitter as far as like on other platforms I've never even advertised it's one social it's kind of like my own so the last couple days especially like Visa V Danny talking with Tupa and getting all the background on this that is this is a lot of damage control huh shocking to me I I don't even know what to think cuz I almost shouldn't have an opinion on the different parts of the communities within UFO Twitter because I'm not a part of it so I don't really

(12:09) have I don't really have any room to talk with that and I'll let you guys kind of handle that amongst yourselves that definitely doesn't need my voice in it then so I guess for me a question is just like um because I did like the interview and I actually thought the interview SP the whole last week to all these almost as it was like advertised probably in both cases his def tweet about like 300,000 was there anything like going into it was it just his behavior or like had people been telling you like yo this guy's like piece of

(12:41) [redacted] like du I'm just curious oh yeah this is a good question no and I mean we we have Ashton right here so this is this is the first time asht and I will have talked since two days after the interview he did text me the other night should I read Julian's text everybody Danny about something and I was on the phone with Danny when that was happening and we were kind of

running through that but no I he doesn't want me to read this text I thought that there was going into it certainly a difficult

(13:12) case here I felt that Ashton had done a lot of very impressive research on it there's no doubt I was very about my opinions on the videos and I don't want to get into a whole rehashing of [ ] but I have done this for like four years now I've had a lot of people fly in from around the world to talk with me I have loved every guest I had um I don't know what happened but Ashton began defaming me publicly and privately in the days leading up to the episode brought to my attention other people who were listening to him in

(13:50) spaces I don't know if it was on other podcasts I don't know if I heard anything about that but I did hear some of the stuff he said in spaces I also he doesn't say anything about Dan Danny told me about that entire conversation when he got off the phone with him and I didn't like the claims there I did not appreciate the hotel claim that left me livid I'm sure Danny can back me up on that and how mad about the hotel he didn't pay for it man the very last thing I said to Ashton and I wish I had

(14:17) my producer Alex I'm now but he not on the very last thing I said to him before he's buing himself they left before Alexi took him to the to the hotel was if you have any problems at the hotel call me he never did that he never texted me and Ashton obviously you're listening to this but I don't I I would be very very suspicious of the idea that that was your plan to use this as a chit against me I did not after after you made that phone call on Saturday I chose to give you the benefit of the doubt and

(14:49) say okay he won't go say that publicly he never said a word to me about this this is ridiculous but then you did and and before that you were saying a bunch of other things as well you thought I canel the booking make look bad guys on I set him up never ever imag jul Dory thinking that I set him first episode came out on Thursday but I have you guys are so delusional man that incensed with any guest in my life set me up for a total by the way en podcast one one thing I would like to clear up right now that is he's never done to any other

(15:17) guest before is selective editing that podcast was edited by alessie alaman not by me it was not selected in any way we we put the entire thing out there on Tuesday night the podcast came out on Thursday on Tuesday night I did take back the intro and I said I'm going to do the intro now because I was pissed and so yes the intro was hindsight if that was too much I I will accept that but and that definely honestly the best I could is just jul not say anything the dude is he's just fully self-destructing ask the way you handle

(15:54) yourself on Twitter I was nice on the podcast when I gave that viice towards the end of the first episode anyone who questions anything was ni unsolicited advice for someone who wants to get to the truth you know I've sat with a lot of people who would say the same thing and I believe them a lot more than you completely disc think you have any ability to look at the idea that this case is in fact complicated and you don't have to be right about everything I would have given you a ton of credit if you were wrong about a few

(16:24) things here and there I could just recognize it I would if I just admit that I'm wrong of my guests by the way have all gotten chronic online redditor syndrome you chose not to go that route Andor system I chose violence guys I chose violence jul don't stop guys and this has been let keep talking just a complete annoyance and I you know what I think something you get what you ask for you it's a giant cover up the US was probably in some way involved with it and so the funny part is I'm with you on

(17:00) a lot of stuff here but if you're going to behave you are you're discit all the great evidence that you have uncovered in this thing because No One's Gonna [REDACTED] listen to you and you're gonna be talking to yourself well thanks for that um response and I we'll get to ashon right now and yeah that's one of the things that jumped out to me too because like you guys both had a lot of like conspiracy people on right who I feel like probably some of the stuff they're saying is less evidence back than

(17:24) Ashton's kind of MH370 uh case he's building so that was just that stick out to me so for you I guess it comes down to the interactions regarding the hotel which I think would be good for the room to get both of your perspectives on that we could get ashen's take on that too because I know that is kind of one of the things that's like out there like did he did he did he steal a hotel or what put a kabash it sounds like a miscommunication with that but Ash please respond to this uh and yeah I

(17:49) mean you guys my video feed in the best way possible you know what I mean like thank you Julian for sharing all that man I appreciate it yeah thanks Julian for being here thanks Ashton for being here thanks Danny for being here it's obviously like bit of a spicy combo right so hopefully we can continue and get some good information from everyone oh yeah hey guys hey hey Julian Danny nice to see everybody out here and like to nice to see Tupa and red panda uh what allegation the oh the hotel I mean I don't even really care about

(18:16) paying for a hotel I've been trying to get just the word out right so I've spent thousands of dollars just uh on MH370 stuff uh on you know U baggage fees on hotels Ubers whatever I've never asked for anything back in that respect um the reason why I didn't reach out after I knew right away when that was my credit card that I was going to be the one paying of course I didn't cancel the reservation uh whatever I think that it's extremely hypocritical to think that I was I was setting somebody else

(18:45) up after the hit job interview that I got uh from honestly one of the worst podcasts I've ever been on there was no hit job in that but you know that's okay you have anything else you want to say well uh if I could um so what I would say is that you know I I clearly got put in like probably the crappiest hotel I have a feeling then uh when you when you brought on when you brought on uh you know like mitaku I have a feeling he didn't put him in the eono lodge I'm just guessing um and so when I saw that

(19:12) I was kind of replaying the interview over my my head and I and I realized that like this was clearly a situation where either you were you know had talked to some of the people

related to these people who had been attacking me you per you reached out and told me that you talked to James Fox ahead of time and told told me that you know he believed that the videos were [REDACTED] so I was replaying the whole in the whole situation through my head and I realized it was definitely a setup job that you've never treated any guests

(19:37) like this ever I was completely nice to you the whole time there was no reason to be mean to me at all even afterwards I was nice to you um and you know so from that perspective like I just figured that there's I don't care about the hotel I'm paying for the hotel anyway you know I just I didn't want to talk to you anymore from that respect so um I just thought it was funny because I told you that I was going to have to come out against the false claims that you made about the witnesses and stuff

(19:59) and you gave me permission in the text messages so you shouldn't have been surprised by my message that I came out you know and I mentioned that you talked to Jim diorio who you decided to put on speaker phone in front of me which who who's a literal spook and I'm literally revealing the largest conspiracy of all time so everything I said was just factual on you know and and so I honest largest conspiracy of all time Ashton do you hear how you say things do you hear the last thing I would say man is that

(20:24) you're probably the last person on the planet that should give anybody else advice or unsolicited advice especially about your interactions on social media um you know if you want to delete your video like that I'm just giving you free advice right now is it I I would delete the cringe video that you made about me like it doesn't make you look good I think in your mind you think it does but um I don't know man that's just my advice so I think that should settle that I was honest I didn't re I didn't

(20:46) cancel the reservation or anything like that I think that a good person in that situation would have if I was you I would have just apologized and said I'll give you the money for the hotel that would have made you look really good coming out and making a video and saying that I didn't pay for it that I like canceled the reservation like it just looks petty man that's all um real quick if I could Ashton you and I have always got along right I never had a negative interaction with you but I have heard a

(21:14) lot uh from people I trust and know and have known for a long time who say like [REDACTED] dude this guy's difficult you know what I mean and this you're I will say this your candor here you know and I mean this in all honesty I can see what people are talking about right and I just want to ask like also and you did I don't know how the I don't know how I heard about the hotel the first time but it might have been from a tweet from you and it sounded like it kind of was a big deal and it became like part of it so I

(21:42) can see how that kind of but it you know it was put forth and played upon by both parties and it became like a distracting point to the whole situation that was my that's my perspective and so I think both seems intentional to me right you see like I literally put it in a footnote and then of course instead of addressing all the other stuff I mentioned it's like oh yes I

paid for the hotel and then when he found out he didn't really pay for it instead of retracting it right like you should have like somebody would you know made it all

(22:10) about that okay so but you're putting you're combining that with a lot of other factors right which it sounds and I want to ask this question um Julian did say that in the in the interview or the pre-interview that you guys had talked for a while before uh the show started and in that time you guys had you guys bumped heads what was the vibe at that time yeah remember do you do you remember what you said to me right before we went on camera and it's not going to come as you just said in the last one I want to know what bug so when

(22:38) Al when alessie picked you up from the airport Lessie is my producer everyone who was the other guy on camera for every people for everyone else out there when he picked you up from the airport as he told me he told you all about in the car how he was down in Brazil in 2021 making the moment of contact documentary with James Fox and how we're both friends with him we then discussed James Fox in our conversations leading up to the podcast you knew very well we were both clear friends and so in an effort to not be gotcha to be right

(23:08) there and upfront and honest with you right before we went on camera I said okay I am going to start off this podcast with a little monologue where I'm going to do two things I am going to rehash the very basics of the case to bring people up to speed so they can follow along list and then I'm going to give you my stance it's just my stance I'm being honest just as red panda was honest in the beginning of this space about his thoughts on the video red that's exactly what I did with Ashton I

(23:36) said I do think the videos are fake and I said I I did give my friend James Fox a call this morning and he did think the videos are fake and I'm gonna include that in the monologue and you looked away like a scorned little person and were like well James Fox is a [redacted] idiot James obviously picked his team in this race and you know what it's a shame that he did that but we don't need him we're going to prove this all without him and he could say whatever he wants and it was so the tone of it was so

(24:02) dismissive and arrogant and off-putting even a I is probably the nicest kid I've ever met in my life was looking at you like do you have any self-awareness like you don't have to agree with James that was never the thought I had so much about what people think I disagree with James on things too go watch my podcast with him which obviously you had so much about what people think no idea you know my style or anything like that any guests I told you about you yeah I'm not trying to make friends guys I'm trying

(24:31) to unveil the biggest conspiracy of all time that did that's it right I'm just if you look at it and you remove the intro from that episode that we put on there which was from by far the most bling heads moment of the entire six hours we were together so I'm difficult because I told him trying to go get you help you trying to help me guys when you would dig your feet in say phrases like I found this person highly credible according to my investigation and then person like hey maybe you should think

(25:02) about this you could not admit that you were off in fact you couldn't even do it in the text messages after why is all 100% with these guys when you sent me an article that quite literally rephrased my argument as if I had written it thinking it was going to defend yourself and it's funny that was the last time you didn't really answer me again after I pointed that out like I I don't know what uh thanks Julian and not to like absolve like what ashon said right like if that's your friend right like if

(25:34) somebody's like [redacted] that guy it's like yeah it's like a popularity contest for them your convos with James kind of helped forment your thoughts on the case he brings up James Fox ahead of time tells why would even me that already to be clear I already thought that they weren't real that was he was already he was already into he already knew that I was going to mention that with James again James is a highly credible guy in the Space Jam James Fox is a highly credible guy and I let a he does third party alien interviews in

(26:06) South Africa South America whatever let him just H let him keep going I don't even want toist since you started talking personal dud what has your experience been are you on edge for any reason do I mean when you when you called that out with Julian did you have reason to believe how do you have experience with this type of behavior where have you seen it before let us know why you know what I mean what's your take on this like it sounds like you're very defensive is if you come up against people who do work

(26:37) in this fashion uh you I know that you're you were on Reddit your subreddit got you know deleted I don't know if it was yours but the subreddit got got deleted uh what's why are you so on edge and if and if that's only if my read is correct here no I'm not on edge I hope I don't sound on edge honestly I don't care and I'm have nothing against these guys either you know even though I I definitely feel like it was a little bit uh you know both interviews felt like a setup for sure and and if anybody's got

(27:03) it person like taking it personally it's definitely not me um you know I actually remember the James Fox comment which is like why would you even bring that comment up why who cares what James Fox thinks like oh I'm best friends with James Fox and he thinks these videos are totally fake that's pretty much what he said so it's like and I I of course I'm dismissive of it because James Fox doesn't know [redacted] he doesn't know anything about the case he was one of the first people to chime in and say it

(27:26) looked as fake as a \$3 bill so like why would you Poison the Well like that right away you know's a credible name but is that really do you hear the arance as he's a credible name now why do you think he doesn't you guys care so much about popularity you know that's upsets you guys like I don't care about that and I I'm honest about that like let me just talk real quick like James Fox has been making these documentaries since he was like 30 years old 21 okay man goally the guys like the

(27:58) as a filmmaker videographer I would have learned a lot if I was in james' shoes working on those pieces alone let alone what I probably would do on my own time so I think a lot of people

in the community kind of impressed with what he's done he's not just a figure with the crazy haircut you follow believe it or not you know what I mean he does put the work out um and it's very respected right so I think a lot of people would find that troll from the other chat from Danny stream also do of reality today huh did help turns

(28:31) out that the world's not like who one of these other guys like false dmca a documentary that was made against Lou Alando so it's like he he he already has kind of had ties with this kind of Greater narrative control you know I mean so that's what when I heard that name I was kind of like that is an interesting name to hear so much you know what I mean and I'm not I'm not shocked I wish I was shocked you know but it's already come up in this whole kind of Greater narrative control takeown thing we've been seeing yeah

(28:56) they're talking like James movie or something like he's got so much credibility he guys he made a bunch of movies reaching out to James Fox like yo you someone who featured parts of your film here he's about to get canell for boom like you know can you you should probably stri totally agree toate they get good people to do what they think are the right thing I care at all based on how it's framed you know I'm sure James hisf the AR like help help me walk me through like CU he's a smart guy right how could how

(29:30) could someone like that be like you know manipulated or like you know accidentally used in in such a way like I thought they wanted to ask me a question I I would need to find a little bit more to see that but I do believe here in this situation right like probably not a great jumping off point for for the interview right to say this guy doesn't believe you this is GNA be time you gotta you got that's going to cause a lot lot of arguments right I mean you got you you can see that just by but in the context the other way too

(29:59) though right I liked James Fox too before he on deed Jam Fox the videos without SE a negative vibe on the case or you know I mean was conect not anyone but like we're talking about like remote viewing we're talking about hav then I lost all also his weird video about him being a victim or whatever of like getting his career taken away was keep it all on the table to to look into I'm just saying like you know I'm just reading this kind of seeing seeing this for the first time uh real quick ashon feel free to reply

(30:30) but I do want to welcome TJ Allard to the space for those who don't know TJ he's the producer of uh secrets of Skinwalker Ranch welcome to the show man glad you're here thanks thanks this has been a an amazing like just listening to this this has been one of the troubled areas of this uh the whole UFO Twitter world I guess where these Cults of Personality follow you know just kind of crop up cult personality F I'm literally not in part of UFO Twitter guys weeks back do you hear his arrogance y'all so angry the fake explosion you

(31:04) know there's just a lot of fake footage and it's just objectively fake and I just watching this kind of take a life of its own on um TJ has got issues no evidence of anything still to this day the only evidence we have is there Skinwalker Ranch talking about what evidence we have we don't know anything else everything else is speculative and aston's admitted that like he doesn't

know either no one knows right but it would just be nice to hear people say they don't know this is the this is the producer of

(31:30) Skinwalker Ranch producer of Skinwalker Ranch talking about evidence I look for these types of stor and talk to hundreds of people so cringe holy [REDACTED] in this kind of Realm oh he talks to hundreds of people no evidence is just too many red flags right so I walked away from this early on um walked away from this we we didn't let him get involved because he tried to make it all about himself on a space this TJ guy is a freaking joke guys I still think this is an interesting story I I'm not sure what the story is anymore I feel like we're

(32:01) watching a he's making it all by himself right now dude I'm I'm going to tear this guy down in front of you be created right in front of her eyes where there's no evidence people are putting these thoughts together that there is and it's fascinating to me and this guy Ash's done incredible work man I mean like I have never seen this kind of so personal man to the point where you're like so personal my god dude like kudos to him and in the marketing campaign sorry I don't have the credibility of skin Ranch

(32:28) appear on everyone's timeline all of a sudden all at once when you say work are you only referring to the marketing or do you are you referring to some of the research um and like what what are you referring to I mean well there's both he still trying to make it all about himself the marketing part of have to listen to this guy whatever why is this guy on here that's beyond me um yeah the cult of personality hey guys go cult of personality and don't forget to watch Skinwalker Ranch anyone can pull

(32:52) information off the internet and put them together and make no I want to listen to this this is going to be fun the one thing the through line in this whole project these guys just keep hanging themselves Man evidence they think that like normal people think like they do right I still don't know what we're talking and so you're not counting the videos as possible evidence no no those are they're evidence of what of a plane flying all right we don't anything else past that is complete conjecture

(33:14) like it's completely this is coming from that guy who does SC Walker Ranch everybody correct correct TJ TJ I agree you're the voice of reason got Skinwalker Ranch everybody I'm just saying I I'll play this audio dat scientist here's dat scien thoughts on the on the videos is so funny dude this sh is cracking me up not along the way I think these guys like just live in a different world man into you in the Navy from what 95 to 2015 is what it say no this is just Straight Up Entertainment man cool

(33:51) thank you for your service and then so me and a bunch of other people guys I do Skinwalker Ranch I'm the I'm the voice of d incity everybody I'm curious about your take on one The Disappearance of the and he tried to take up the space for over an hour emerg of these videos that were posted in 2014 yeah so um I've been involved in search and rescue before he made it all about himself for an hour on one of my spaces and I told uh my buddy Melo demon though he's not allowed to do that anymore it's it's a scary skinwalker

(34:28) we lost someone in the Persian and one thing that was amazing was to see almost every Maritime force in the in the area of responsibility which waser Ranch he wants us to do a video like Skinwalker Ranch that'll bring a lot of credibility to the cas go to search and rescue so we're talking Iranian Navy IRG CN which is their their hokey Coast Guard that messes with us all the time qari and a boat was helping it was amazing they not say anything moving to um I I can never MH what was the the hell designation again mh70 I sorry 3 370

(35:04) right so that that that whole thing is obviously it's a mystery okay and um the search and resue rescue efforts we're we're incredibly disappointing I think all of the Stu that our technology pardon me our surveillance capability should have been able to pinpoint that and give the family some Solace and I think that we also know that the United States government's reticence to share their technological abilities may have like some producer on Skinwalker Ranch or something of what you're next up the guy

(35:34) from finding bot and I'm open to hearing when we want talk research I I took a detour off of that because I wasn't able he said there's no evidence the data we were looking at was said there was no evidence our case has you looked at the pin no evidence so I kind of got off the more evidence than any court case of history of the world I looked at those videos and I analyzed them in in the manner that I'm able to the technology I have and I did find some very interesting things going on with temperature um I thought that if it was

(36:05) edited the CGI someone was very knowledgeable had read a lot of the DS I grill should I gr jul poror crew so I find it very confusing major Studios gonna make the videos oh yeah that cool so the reason I show that is because that's uh Chan K if anyone doesn't know he's kind of been he's definitely in the loot camp and I want to attribute like all the hate group stuff to him I don't I'm not saying us is definitely ability goes up second like right hand man right T you back me up on that yeah

(36:40) they're very close but that's a good segue earlier today when we were talking about this kind of the harassment the hate group this crazy amount of narrative control I did see TJ throwing up some hundreds and I kind of want to double back to that um because this MH370 you know I mean it's it's a highly debated topic right and I still don't see why though T I just don't get it I honestly honestly I don't get it why is he here then everyone toe on someone told me someone watched that video way

(37:10) was like oh I believe it I'd be like well great I don't I don't trust it's not this isn't this space isn't about him that's a crazy why is this guy here I'm gonna believe that I need a bunch of other evidence I need to see how kind of I need to read talk about cults of Personality like why you even on speaker d and honestly that's where I in this at all is that the weird happenings keep on coming when it comes down to this case the videos themselves I'm not a video analyst I'm not a forensic video analyst

(37:39) I've never seen a video from a drone or a satellite I don't know let these I play that clip to show that people trying to take down they think the video is real and like the L crew thinks it's

real kale kahill's opinions on that I think are totally influenced by alzado and he didn't come out and say like oh that's fake as [ ] they can be real right these videos can be actual of AE this all over the place that part of it that's nonsense these context videos this is coming from

(38:09) the guy who talks about portals and Skinwalker Ranch match these clips and we don't have for we don't have this from the guy who they talk about portals in Skinwalker that are so accurate that it's like oh my God this guy thinks that we're looking at a VFX from 90s a design of back in the 90s is almost like something ex have you I want I want to put a pin on I would to get I would love to get some more experience done this for too long everybody drone knowledge and all anything but for now I do want to dou

(38:41) back done this for too long dude it's funny when you when you have a guy who's when you have a guy who's done this for three months trying to tell people who've done this so angry what isn't isn't real I just find that really understand the amaz I'm enjoying this so I want to say something real quick to reference to what we said before off the deep end man yeah I'm just going to let you guys hang yourselves um on the other side though I just want to mention that like I've been

(39:07) clear that I don't respect expertise and there's no such thing as I've been doing this for so long therefore what I say is true um the reality is that what you say is determined your credibility is determined by what you say the facts and evidence you present I've got 12 pages of evidence pinned to my profile which TJ you might want to take a look at which ad you didn't read the rebunk I feel like at least you should know the rebunk in and out if you're the evidence of though herebody tell me is they

(39:36) supporting about you bud it's not about you man and you produce a show called sker Ranch where you language you're using Ashton do you see I'm not here to make friends with people either and I'm not yeah Julian you care so much about what people think of you man just you got to get over that dude no no I don't you hear the arrogance in your voice you you are one of the most arrogant people I ever met in my life you are so [ ] smart man not dude that's the worst part about this you have a brain up there

(40:07) this is not like oh this guy's an idiot you are a very smart guy I've never seen AR I don't know what happened to your in life man but I'm sorry that happened to you because the arrogance that you speak to people with and the way that you dismiss people is so upsetting it's horrible it hurt my feelings it hurt my feelings get to some hands let's get to Darcy and then Randy they're so mad dude all right hey guys hello everyone out there on the Twitter space uh couple things so I just

(40:40) want to like say get so triggered I've spoken to Ashton directly on you know through DMs and uh I'm curious about this video too I have been since the start and I was working on building a chronological history of what's going on in terms of the story um but like Ashton this is not to slate you this is just straight up feedback when you come in to a UFO I didn't ask anyone's feedback and you say you don't want to be related to UFO people I still UF people

example why I don't want to be

(41:16) asso UF people and these are UFO videos clearly you know 100% if it's just a straight up post UFO video or if it's a um you know what you're assuming is American Tech um but it's a bit of a bull in a china shop approach where you're going to get you're going to attract negative attention when you say that and these videos started as UFO vide in 201 too entertaining for me dude yeah this is Middle School cared about this it it had no American Tech attachment to it until this year um so that's one thing the other

(42:07) thing is Panda like I appreciate you but when you listen to Sean which you recorded uh you know massive cognitive dissonance it could seem a bit like confirmation bias because he says the videos confused him you know it doesn't mean that agrees that they're legit you you have to listen to everything he says Kean I want to listen to Somebody not I get that and he said that if they were CGI the person would have had knowledge of the dirs which I think is important like he's kind of saying if it was this I'm not arant

(42:45) which I think is and something else I wanted to say real quick for the they're mad because I don't agree with them right like the way this work if they don't agree if I don't agree with them then I must have a right like it's classic gas lighting it's syndrome dro the caline photo yeah I dropped that evence with to much Aston and he's put in a lot of work is just kind of telling of something like he's very clearly been targeted by this group that targets people care targed by people um I just think that's worth

(43:16) noting it's just you arrogant intelligent really at the end of the day him in this case is no different or even Skinwalker Ranch in a Skinwalker Ranch I tell them to watch My Stream later know I mean no there's there's something very there's something patly different here and it's it's like skin walker Ranch why is he even here dude you know what I mean like I'm sorry why is Tj even on this panel dude here's the issue just so that he talks about might be a dick but his research is his research the numbers

(43:43) are there the research is there to look through to debate honest that's the one good thing about it these guys are just super as doesn't represent those facts his his you know they don't realize like normal people resonate with been disagreeable hard to get along with downright combative you know read a book about any genius read a book about anyone yeah I'm just saying Jack sarati is a really good example yeah it's classic cogni distance well not so much cognitive distance but projection a

(44:09) great example right well maybe that's I don't know as's done enough oh that was on Danny's podcast too right it was amazing it was amazing Ashton I think has done enough work that I can SN my teeth into the work itself and that's a good thing he's not saying I'm the only person who could ever know this say [ ] or not or research or not and that's the good thing but you know not a great salesman get along with I've seen it myself here and that's not we got 300 people listening right now

(44:36) you D that's just the facts right you know that like straight up calling some you know these figures am I co-host even if you think they're nothing like you know say it and I'll add to what Darcy said though too right so angry like I feel like Ashton came on the scene and was trying to get help from people like was trying to get help from Greenwald about Foya and he kind of just got like [ ] on so he's kind of got this like [ ] you all this is an interesting I don't think about is that there's a mixture of

(45:05) people responding naturally to Ashton behind kind of like they should have jumped on it man they wanted the case they should have Jive or whatever right so B bam but also we have recording we have a recording of these guys saying they want to take the narrative away these guys happen to also be behind or next to terti this uh year of hate this amount of like this directed targeted harass talking where do you have evidence of that that like the same people that targeted you and I'm not discounting what happened to you I'm

(45:39) happy to happy to answer we I wanted to get back to this thing TJ had his hand up and TJ was emoting right with hundreds early when this was being talked about I want to know from his hear from TJ man why of the show like you're looking down on UFO Twitter almost as an alien as well right like we're all just researchers we're all just kind of like it's just haters dude copium and haters I honestly just love it it's just so funny dude people want to believe so bad looking for something from TJ Allard

(46:07) of Skinwalker tup you were in the first the first time got mad met you were there right and I think he muted me in the space and ashon you're like I think someone just said or Julian was just saying you're a smart dude man like I muted him the space guys after he wouldn't stop talking for like 4 minutes we got to get to a Top Line 45 minutes great story here and I didn't know what I was getting into or just looking into and I really wanted to help and I still think that there was a story there and I

(46:34) was like former mainstream media everybody I don't I don't just connect with people randomly should we just let TJ cook here I couldn't do that doing it all day this guy can't help but make everything about himself all he has to do is sit and listen that's all he has to do right and all he does is make it about himself nonstop why is this about this guy and tell people who have been doing video and television and Tech their whole lives don't they're talking about that's just that's just disrespectful to people and

(46:59) if you want you know you're not going to push your narrative across because you need help getting any I'm not going to say anything you have to work as a team you die as an island in this business in particular um I will never work with TJ Allard I guarantee you that I talked to the guy who I'm actually working with and we both agreed this guy's a phony and we're never working with this guy much I can't stand people that try to make everything about themselves these are exact kind of producers that you

(47:25) never work with right he gets so emotionally invested question someone he works at skiner Ranch even now you're making show respect okay great you know you can have your

opinion one you know one of the biggest shows on television but you can have whatever one of the biggest shows on television guys I wasn't attacking you personally it's one of the biggest shows on television but you want to downplay my work great but this isn't your work right your work has been awesome this guy just tried to

(47:53) downplay my work you started looking into something now he's mad that I'm downplaying his work dude this is your words right you said you started so angry dude not my words yours he's just making up fake quotes for me now like you don't want help you want these are your words you can be right all alone you're right you're right TJ we don't want your help I don't know why you're on the panel and we don't want your help let me be clear TJ if you're listening of hatred and people angry and

(48:19) you said the wrong things like okay this is too much for me um and I don't know I love you this summer of hate or these milart or I i I don't know any of that drama I want to hear from shy Keenan so I don't know the context when you guys she might not even come out that favor me because I was you were you were getting negative attention for going against the narrative that these are real you're saying that you were getting dm' and so it's like how is it now they're the victims somebody who goes

(48:49) against the narrative is getting you know what I mean Tupa like I don't know I don't know any of that like I didn't realize this was a thing like I didn't realize how big this quote unquote thing was I was like oh this is a cool story it just appeared on my timeline this how did this get under my radar because I usually you knowed by somebody some kind of cool appreciate it appreciate coming out checking it out to explore to look into about you know take down that development Road a VFX professional Oh

(49:15) you mean the corridor crew I just got attacked I'm like okay you this is only crew hey everyone else knows the person who I dismantled every fake argument just read Walker ran and and I you know I love thank you Randy DJ yeah uh TJ done talking I hear what you're saying um you have this guy loves to make everything about himself that's hard to follow this space has nothing to do with this guy somehow he's turning himself into a victim guys I didn't look at any of the evidence and I get attacked is a

(49:51) continuation you obviously he should be the real victim again uh fall back on the research that's where I see the value of interactions with with Ashen for most people I've had Pleasant interaction I love how all these people it's all about their personal emotions and feelings right it's not about EV just about their feelings and how they've been hurt come out ofwhere TJ said you know this is like legit entertainment right now we have count is better than the OC and any other Housewives of whatever going on

(50:20) regardless of what people want to say that's why I'm listening to this right now I know Absol absolutely yeah they haven't even brought the evidence they haven't brought up we haven't even talked about the podcast yet today uh the skin walker Ranch guy is upset about this and undertone disrespected disrespecting the UFO perspec we're in the mix I'm

disrespecting the UFO TV show want like you talked about that people want to believe right in the M Nar want to people want to believe from

(50:46) the guy who makes Skinwalker Ranch everybody and I don't know if you can't make this stuff up you know I don't know if I'd be the first person to bring this up but there have there there is has been a combative nature with UFO Twitter take look at how skwalker Ranch is doing here 6.

(51:06) 4 on IMD 60% of Rotten Tomatoes 1.5 one out of five on Common Sense Media it comes up in Center figures of of this community itself and that's in the mix so I'm not sure like if you've noticed it this is what we want to Tire our case to the level listen I just want some evidence here man if we could get some evidence I just want some evidence says from this skin walker Ranch guy man as right now it's this there a whole bunch of stuff like none of TJ do you get me though when I say that like where was this energy when Corbell was dropping his

(51:37) videos this year you know what I mean or when media I don't know I'm not like recognize something about this this case and this become all about tjing how did I predict that theast years sense am I two cents I don't I didn't know maybe this did happen about Corbell stuff because that is that's very it's different right I don't see him attacking he's a professional he's not someone who started doing this in August something else his whole life like he's an industry professional

(52:05) understand guys I've been working in healthare it for 18 years and he does a really great job at that nothing but Stell from everybody I worked with scene like he had no media training ashon doesn't know how to communicate with people in the way that would be required to push this remember when TJ minute ago was talking about how it about how he didn't ever attack me told you person attacked I don't think it has anything to do with media training it has to do with human being training I don't think I've ever had a person on my

(52:34) podcast or like like talk to or been involved with upset man are who Danny just burn Bridges the way he does especially like so the way one of the main reasons I wanted to get into this space was to like basically number one put this whole thing behind us I think I can speak for Julian when I say that I think me and him are both very over like all of this UFO Twitter [REDACTED] and you know all of the drama that's involved with Ashton and the hate group and all that like all that sucks I don't really have time for it or want to pay

(53:10) attention to it I've never complained about when I saw post saying that like it's a sop like could this be a scop pay attention to who they what they say and why they're saying it this is not guys and app whatever means do you think me and Julian were somehow like tipped off about Ashton and that's why we sort of attacked him where the ra on this show Julian I talked to Julian the day he did the podcast with Ashton I kind of got the vibe of what happened and then I talked to Ashton maybe the next day or two days later

(53:40) when Ashton told me about the hotel debacle which I was like that's very weird like why

wouldn't you say something to Julian I've had I've flown in probably 75 guests into Florida from all around the country we're still talking about the hotel thing thought we we addressed that and I've had that happen to me at least a dozen times about theice will not charge my card they have on file and they will accidentally depending on who the clerk is at working the desk that day they'll Char the guest a big clown every single

(54:07) Julian and Danny are best friends by the way Char open they're best call the hotel and have them switch the card so that was that's why Danny was defending you guys should have seen the live chat ripping Danny for defending Julian Twitter and his own podcast it's just like I've never interacted with with yeah why I need a Twitter troll in a human form and like even when ashon was in there in person we got along great like it was a good podcast we disagreed on some stuff we agreed on some stuff these guys are like

(54:39) they have zero self-awareness your question they have no self-awareness whatsoever no there was I talked to Julian the day he did the podcast like this with trolls his first reaction is fake this is bfx and that's kind of like guys it's always how treated Julian and then talking to Nico how I treated jul I kind of like yeah it's always like this if you don't believe what they say this is the same as the people on [Reddit](#) exactly he just admitted he wanted to prove it wrong sort of like you know it's always like this with

(55:17) these with [redditors](#) right if you don't believe what they say then like you have some problem right you tical whatever it's always the same no one was pushing back on anything so I thought that it would be a good opportunity to present present him with some evidence that Nico put together who has been doing visual effects for 10 years Nico and and that's that no we weren't James read their comments their this if that's your question they should read their comments from their own uh from their own videos honestly well yeah

(55:49) thanks for clearing that be also also to also to be clear um visual effects Emily yeah like a part of this whole [Music] debacle I can't hear what he's saying uh Danny you're cutting in and out is that happening to anybody else or just me yeah it's happen yeah sorry Danny uh you're fading it out you might need to make sure we make sure we uh clip these guys on some of the stuff that they're saying it's hilarious let me ask TJ real quick they sound likeed crying about being harass the whole video fake or

(56:26) like just the orb like they ban me and then they cry about me harassing them and ban me some more how I treated jul exposition that just kind of looks yeah exactly they just want me to bow down to them that's exactly what they want right it's the same as [Reddit](#) mod syndrome right that they want you to bow down to them they want you to kiss the ring or whatever weird [\[redacted\]](#) that's interesting orbs floating around is this keemstar airplane that's super interesting um maybe that's real that could be legit

(56:55) was weird keemstar was in here looks like you know a 9s GES another it just becomes insane um and I just don't know how people have like kind of believed in that which is just crazy and I know that just so we're should I be rude to TJ because I'm kind of tired of listening to this

guy is like streaming this out on YouTube and as we're talking he's talking over us to kind of just like mock us as we're talking so just put it out there he's listening I love it TJ why are you on the space TJ podcast at one point or

(57:25) whatever it was one of you guys where he was like typing while you're talking guys I'm typing while talking of course I'm streaming this it's hilarious man this is the funniest [REDACTED] I've ever seen well I'll just say real quick maybe TJ will leave finally still got these guys here literally making it all about himself I love it dude UF one characters right that's kind of been they love you like involved in some of these take uh James Fox about Julian Dory I just found kind of random another

(57:56) Darcy we who's been in here and talked and I enjoy his conversation but sometimes I and he had said that like uh he had warned Julian about like how Julian and Danny should read the comments into their own videos these guys are just digging arm or something like that would come for him or something like that those syndrome where they don't realize the reason why I have a bunch of followers real I res with real people not with children and redditors who get hurt about saying it's from your experiences and if that's valid that's

(58:28) valid that's what you guys experienced I just wanted to clear the air on some of those things is I am I still breaking up can you yeah I mean Julian's completely full [REDACTED] this guy's lied like five times about major stuff like I've had a lot about the hotel Li about the corridor crew a little bit more or and I like this thing with Ashton was a little bit personal for me because of the thing that what went down um I won't deny that it's obviously personal for these guys yes we knew it was personal

(59:00) that's why your chats are that's why your comments are ripping you apart man a comment about never personal I don't think those videos are obviously fake at all if you're a podc think that those look very real just as real as any of those dood videos the go fast or the gimbal I think I think this is right on par with all those videos not the videos themselves being fake that what I'm saying the vide real videos of why is he still here the explosions and these orbs that's what I'm that's that's what right

(59:25) F the the orbs the or the orbs and the explosions to me are not obviously fake I think I think those look just as legitimate as any of those videos that the Pentagon has released just to be clear I agree that's very nice of you Danny I want to hear from either shy Keenan or keemstar who I've see joined how welcome keemstar this we got drama Central going on here I hope you enjoy as I heard there but I I don't really know what the what the drama is can I get a quick what the [REDACTED] is keemstar doing here he should be like commenting

(59:54) on tfue like no no he's setting up our UFO Twitter boxing matches it's UFO it's UFOs today no if there's any UFO stuff I I'm definitely right there but uh yeah I I don't know the current drama though can someone give me a quick recap oh let me do it I want to do it a you're no we can't do this oh you can't let me do it okay you do it you I'm too biased I'm too biased okay T you do it I I let you do it MH370 is an airplane uh supposed TJ expert dude guys he's been

in TV for

(1:00:24) years iow down to after a couple months after the video went down or the plane went down this just gets better and better so Ashton's been going a lot of this might be their favorite and explaining the case from his perspective and his research um from the **Reddit** uh sub**reddit** getting canceled and whatnot he's experienced a lot of push back but also forth with it anyway and getting a ton a ton more exposure he he was recently on Danny and Julian's podcast and he was very combative there was they have words during it I was com as bad

(1:00:54) like when you watch it it's like okay this is just they're just going back and forth but a lot of stuff happened after on Twitter wait wait real quick um are you talking about the disappearing video yes okay well that that was **debunked** it was a very old um it was **debunked** guys spoking facts program I seen a whole video on it there's a m there's multiple claims about different uh sources for that right from old video game to in the ni did aent one the '90s video game team Stars waiting guys he saw the **mcwest**

(1:01:23) video he doesn't even know where he saw right so he didn't use the video game thing so there's so far two different that's my favorite I think that's what I took away from it so I don't think that that's necessarily **debunked** but no matter what the video's actually Aston stopped thinking differently they don't like that that's really what this all boils down to to believe that right away would be crazy right there's no doubt but the research that Ashton put forward

(1:01:47) keemstar are you familiar with any of that research uh I seen a video on it um and where it was like **debunked** according to the creator of the video I didn't realize it was still being debated I thought it was a done case yeah you got fooled by a guy named **Mick** West so like his old job is to put fake **debunks** out there and the guy that made the video there the person has not come forward in fact that's the only way to **debunk** the videos now is that we need the person who theoretically made these Perfect

(1:02:13) videos according to the corridor crew to come out and and show us so that we can see their Source material and prove it because every **debunk** has been destroyed to date uh even just the podcast that Danny Jones just put out there you know at the end I think he was trying to trap me and Julian had uh you know had a claim that this major studio is going to reproduce the videos which never of course happened instead uh this guy from Nico from the corridor crew just uh repeated a bunch of metabunk uh stuff that I already had heard everything

(1:02:40) beforehand right so I had already had everything prepared to refute every single claim and uh you can check that out at the end of it so they are definitely still open to um you know being looked at evidence and despite what TJ uh falsely claimed if you just read read my profile TW tweeted my profile it's one of the longest Tweets in Twitter history has all the evidence listed out Broken Out by category for anyone to just kind of absorb in fact Anonymous today evence of what Aston evidence of what as so Anonymous today

(1:03:08) uh tweeted actually made a video about it infow Wars made a video about it um

yesterday and today Anonymous with their 3.2 million followers made a video so it's definitely heating up and I'm not sure why so many people are so personally upset and invested in all of this but I just find it really entertaining I don't have much knowledge on this I know little bits just like any normal person that spends a lot of time on the internet but did didn't they find pieces of the plane like wash up on

(1:03:35) shore a couple years ago or is that that's in my that's in my uh list as well so **debunking** the debris no official search found by the debris above or below water the debris that you're talking about was found by random people they searched with 42 planes and 32 ships didn't find a single piece the evidence that they found actually had fire burn marks on a couple of those pieces of debris uh um that some of the debris that they found with burn marks actually had a honeycomb pattern of Boeing uh there was a b77 fire

(1:04:01) suppression device washed up in the Maldives was never looked into even though we've presented a fire scenario the flapper on that you hear the media say that they match to a unique serial number actually wasn't match to Unique serial number the unique serial plate was missing and that there was a if equivalent copy of the plane purchased by GA tesis in October of 2013 that is potentially connected to US government where that breed could have come from that plane so there's a lot of stuff out there that really cast doubt as to

(1:04:27) whether or not they really found any significant portions of this plane this is awesome but that's not evidence according to TJ this is great I'd love to just see one piece of evidence about teleportation that's yeah you should listen to my Bob Greener or salvator PAs interviews and then you can learn listen to anything SAR email chain you might you might hear a lot of I don't know I'm just saying get some of these hands out some people a lot of people are trying to get up here and speak I know Randy

(1:04:58) had his hand up for a long time let's do Randy screen shy Jules and thanks for being here totally I miss you all guys you know I just want to say you know certain parts of planes they're taking out uh fixed and then resourced back into another plane actually some plane Parts what happened to it is we have an ability then put back in the other planes and then had actually some paranormal actions in those uh so you know so we we shouldn't always just go extreme think it's always conspiracy and you know my son always

(1:05:33) says God you guys are always conspirac I said no son but I think I do have all the receipts a little bit in the middle I mean we're just enjoy really crazy but you know this was the most extreme search ever should look somewhere in the middle guys world history look somewhere in the middle it's like that's pretty crazy why would they do such an extreme yeah TJ anyway I miss you guys thanks for letting me get a chance to speak love you guys I'm not everybody Al you guys are all course but that's not what I'm here

(1:06:06) for I love everybody nobody's looked at the evidence and they all just know it's yeah man I tried to I try to stay neutral in all this right um most of the time I agree with y'all right and uh most will consider me in your camp and uh I think think tank him wanted to separate Ashton

from the video is this this guy because when it was bubbling he's the one riding that wave you know he's getting a lot of attention that they're not um you know um personally I think it's a conspiracy that it's

(1:06:37) getting so much attention right so like just like y'all think it's a conspiracy that way I think it's the other way like I can't believe this video is getting lit but we're it gets it gets tough because it's like we're always battling perspective I say this all the time um but at the same time like uh you know I've had issues with Ashton too and just being cool after he comes at you at that point you're like okay well [REDACTED] this guy you know so then you go at him and that's

(1:07:08) you know it's just like a never ending thing it it seems like but when I look at that video I see Spar and all the other Spar stuff uh you know the Spheres don't move like that right that's number one for me the fact that they're saying kind of like a video game kind of not that's a video game from the 9s that it almost looks like so it's like everything for evidence submitted for evidence you can you can put some on each side of the fence so it's really irrelevant and it's just

(1:07:41) like when they talk about the science and those things they talk around a lot of it and that's the issue because people don't really know how this stuff works so then they can like get tricked or be open to all these other wild ideas and stuff like that you know um get into like if the video is real get into the spears what you know where are those at what are they doing all that type of stuff but I've never seen them linked to portals um just kind of doing like relay cloaking type stuff but uh yeah you know

(1:08:11) I try to stay neutral about it and uh I can't this guy's just super loud tired hear out he's just super loud guys yeah you know what you posted something like a what five days ago the video of uh what happened in Spain a year before MH370 disappeared and it shows the exact same phenomenon right the three spheres orbiting the plane the triangle formulation 100% it was help that exact same phenomenon is the mic isn't better now there's a lot I didn't do anything but some people just quieter than others and these spheres

(1:08:43) I've seen yeah Aaron I don't know why it's so entertaining man the UFO drama is just so damn entertaining I definitely have seen it like that um yeah he tries to stay neutral he's literally talking crap all he was trolling alien scientist chat with nonstop like one message a second right the experience I think the reason why we highlight this you know what I mean the reason why we highlight it I think is because the actions taken to separate him from this regardless if you think be the one talking about it or if

(1:09:14) he's you know whatever however you see fit right as a viewer yeah it's better but that's just because that other people Areo loud podcast you know what I mean that this this well squashed they didn't get along you know and Ashton felt under attack for his own reasons and for reasons that I can see kind of happening to him as well does it excuse his behavior and and I don't know the idea though is that like the they they they were absolutely in line I can't remember I think he some kind

(1:09:46) of people noticed it right and we're talking about straight up like false uh false sexual assault allegations you know what I mean like straight up like a fake sound like ason as for \$5,000 to get to Washington DC to push this stuff like it was written 100% to to convince the audience and to convince UFO Twitter that this guy was out there grubbing for 45k just to get to uh just to get to DC and eventually got taken down you know I mean that's that's a serious effort right it's not just that like okay this guy's I honestly believe

(1:10:22) right that if Ashton like so bad right sh and people don't Vibe with it people won't VI with it the evidence I realiz is the one who got banned from the chat you gotedit what credits do here right like this is why I don't un people can be like oh look at all this this is why I don't unblock people and do that work but does he deserve and should we as a community excuse those extreme actions taken and should we just not investigate who did it even though they're in a recorded spaces saying they

(1:10:51) did it or saying that's what they're going to do and they've been like what you know who's it going to be next and for what reasons right who are we letting our community with such Extreme Measures right space for this stuff let for his own behavior that's how I feel but again yeah it's just physics more speakers in here we're gon to cycle some new people up I think that if you're part of Skinwalker in she might not be familiar with the topic can we get another speaker come right guys just kidding

(1:11:19) it's cool I think people should make whatever shows they want I used to watch Ghost Hunters think fun you yeah I think there's ghosts out there hello how you doing hi T hi red h exellent space by the way did Danny leave yeah Danny took off hi Ashton how you doing are you still in one piece jesz um okay so yes I'm not going to take sides and pretend I know anything I am a cged in other words I armchair do that and so I was talking with Ash when I first met him when he first come onto the scene and I was trying to help the

(1:12:00) argument he was having about the way all worked and tried to the video up I got some of the most extraordinary DMS and I'll put it back down again because I I didn't want to really be involved in all of that but I do look I understand this um he's not a bad salesman I'm sorry you're wrong about that is he rude well I don't know he's never really been rude to me um but everybody's talking about it and so is that a bad thing okay that's a good that's a good point that's

(1:12:32) a good point drama I just want to say everyone really is so don't stop saying he's a bad salesman because just stop it it's not true and then and then say and then say you know is that evidence controversial that he's um a whistleblowing out on yeah because it is it's got all of the elements in it and he's asking everyone to dig through it but um I do not get TJ Em wants to hear what you have to say I know you're watching might not be happy with the whatever absolutely unnecessary and it

(1:13:07) really just muddies the water and obviously we all know about the lies that have been told about him gez Christ um I love shy by the way I've gotten some great spaces with her she's

always been super respectful ask really smart questions I would join her spaces and there's only like four of us in evidence it's just evidence that the evidence is true or true I'm simply saying wow don't you pick on people who are trying to um it's not my evidence I just put the evidence out there anyway pack it in

(1:13:34) your big GS be nice play nice and I'm going to shush oh oh Ash you's on block Jewels because he's a sweetheart and just not a not a bad but if you can I know that how do I find Jewels which one's just have a good Daye everything bye thank you sh just real quick did you say say you were a CGI I am got blocked because she was liing and whatever def video so I was trying to explain an element of the video that completely went off the rails and actually ended up looking like I was trying to entirely

(1:14:12) **debunk** him and I really want not him sorry see I even did it you lot got me out tried to do some of the they're not even discussing the um that might exactly should hurt my feelings therefore he's wrong that's really what a lot of this boils down to like I don't know man reditor syndrome dude I'm not a scientist oh you never got to see the donut a knower of everything sry guys it's all and I do that for fun and that video perfect match that video can be made 15p that's really not this is too close the

(1:14:45) coincidence the the rest unfortunately I think we part of it can be made turns out it wasn't a VFX it was actually and you also can't just make up the data that goes along with it so well shy even I don't know if you watched the video uh that uh put today with the with the Nico statement from Corridor crew you know he was like this don't feel stupid for looking at this and wondering if this is really Alex it was is very well done it's like nearly perfect he goes there's just a couple things that I

(1:15:13) see in here that could you know that tell me that it that it's most def like most likely you're most definitely you know CGI or whatever and that's you know to uh hammer everything there TJ for president so I don't I wouldn't expect any I wouldn't expect him to be like hey man I call I throw the towel in I'm not good at my job this is the best drama guys you don't you don't even need real housewives of uh whatever County anymore you just watch this shy Keenan she got a shout out on

(1:15:39) today's uh podcast with Danny he shouted out so yeah good time yeah see oh hell yeah congratulations sh that's that's that's dope um dope so yeah keemstar and then Jules yeah I just wanted to say real quick uh previous uh speakers were it wasn't just for their likes they were supporting like some of these story making up fake stuff about me like that's what they were talking about I just go look at who's liking it and then I they got blocked that's fine I'll blocker not whole world major issue

(1:16:12) n of the coral crew is an expert guys that the same guy they tried to **debunk** the real DOD videos when I saw the video it reminded me of uh the the videos where orbs are making crop circles I didn't see the or behavior you know being weird or I mean it looked like typical we need to spice it up a little bit more let me think that's all I had to say Hermes you crack me up

buddy they got chat wants me to spice it up a little bit more we don't we don't have any like video evidence of orbs like really ever like

(1:16:43) um performing like uh like this right so when you looks fake what are you basing that off of right we don't have anything to compare it to you know what I mean this reminds me of I find the Jubilee orbs kind of doing a similar little thing when the queen cook joke where here's the wife and the husband arguing about jelly um if you want to know about orbs creating crop circles you need to talk to Shai again because she was actually involved in the investigation to that a number of years ago um but um

(1:17:10) no my take on it is I'm really unsure about the videos did she leave where came into a space with us terms and then a lady called um Cindy Henry who was Tom in the original investigation looking at satellite footage joined us and I was hoping it was going to lead to some healthy debate but it ended up in a scrap and Ashton blocked me so that's I I think we need to give Ashton a little bit of slack because there is obviously something very strange about the MH370 case um and I live in the city in the UK

(1:17:47) rollsroyce based and there has been absolutely no heads nodded towards the fact that that their um engine management system um was recording about the rollsroyce stuff kept Hing on the rollsroyce I can't do anything completely sep system to all the other flight controls it goes straight back to there might be some jealousy Jimmy where I in the I don't know I don't really care and everybody had their opportunity man it's been around several decades if you listen to reli AI addict today I mentioned that and it was developed

(1:18:19) partly um to protect roation TJ's cry because get a shout out on Danny's podcast um so they can I'll be honest I never thought about DJ never thought he would be on the space the other thing that um I sort of find really strange about Dan self-destructed today there was a battle Fleet in it was wor than thought actually I watched it and it is roughly 10 years encounter and shares a lot of similarities with description and I told him to make this don't make the space the name of the the video like

(1:18:51) controversial like with Expos or whatever but the encounter I think was some kind of um prototype testing and that is why people came onto the ship to take all the data afterwards um and I think by the time MH370 10 years later um there would have been a working prototype or several oh we're listening to uh drama Central we got and there's also the fact on the plane and Western yeah we're we're in the Middle School drama level of the stream right now we **China** um talk about what happened with podcast today

(1:19:34) and why these podcasters are so upset and talk about people feelings and stuff like that was shot for was it 24 or 48 hours or something like that we're actually talking about the case now which is interesting um I think Ashton has um a problem because he's not terribly confident at dealing with people people and it comes across as aggression so maybe we need not confident with deal with people and let him develop his skills a B I mean I don't necessarily agree with the the videos but guys you'll never hear me

(1:20:05) telling other people like situ I don't know how why people are so judgmental about everyone well said and thanks for being here appreciate that and I agree this is a this is weird and there's a bunch of strangeness surround I went on two hostile podcasts for a total of 10 hours straight being interrogated break a single sweat who's next we're going to get over to UFO intros yeah these people think they're The Gatekeepers of **Truth** U intr and then crypto junk all right everybody thinks they're

(1:20:35) the gatekeeper that's why I don't even want to comment I just want to listen and just commentate for a chat here um I just have been viewing all this from the sidelines for the past um Ashton seems to have some serious research chops on him who's this but uh yeah I just I really have been like viewing this from afar and honestly all the passive aggressive comments yeah it's so wild dude crazy people whether they're aggressive comments wild amount of crazy people on this platform it is not the way that he's reacted to that

(1:21:16) and um guys how have I reacted just I don't know I don't know what to believe I really don't how have I reacted I've like near story resurfaces and uh someone else talking about it you know I just keep doing my thing man I'm like Kobe Bryant on the cover of Liberation times I like when Tupa said that that's what their goal me I hope that the podcasters learn lesson from this that's for sure which is you're gonna get roasted by your own comments if you come at me with hostile intent what I predicted umast

(1:21:47) the orbs on jul UFO intros crazy toxic there's been some wild all these people have their opinion on someone they've never met before wild and Meanwhile my comments are I don't judge people by supposed expertise I Jud them based on how they act toxicity seeps out into a lot of things that's that's a strange aspect of this community R Kobe man he was the greatest level while you might not be engaged with it immediately affects you if you're involved you know at the spaces level oh Danny deleted that PO we showed

(1:22:20) it on the uh itly starts to nudge certain yeah because it was so contrary to the comments we showed that poll on the alien addict uh stream today I was talking with them for like three hours those guys are legit of control Danny Su his own Battleship supposed to appear guys I gave Danny so much good advice in the most friendly way possible he kept asking me about I told him not to post that poll about should I Del should I release the video too I told him name research an aspect of this that kind of has to be Kobe was a bit **arrogant** but

(1:22:54) he just got his job although I don't think that takes away or J's experience rough right but let's put it in context of the timing of everything I mean maybe that'll help us understand right but uh go ahead crypto yeah that video I don't know if did he show all the Winks that he gave me to before he showed me that that Corridor crew video just a few Quicks here he like winked at me like a bunch of times too like I knew something was coming he had smile on his face I'm pretty sure he didn't show it

(1:23:25) in the videos but I looked at him like something's coming I knew something was was being uh I don't have the poll in front of me but the poll came out with 54% saying that the

videos were real and this was people that were like in his in his chat years before James Fox went back to look into what Spielberg told him about the whole Virginia case um so you know it's not that I'm not sure how he could have a such a an imposing position at the time when he hadn't really Emily you're my favorite right

(1:23:56) now Ash is so rude and aggressive that's why he's just sitting here listening quietly to five people dog pile a concrete position but have a lot of respect for James fo trolls don't really realize that like I'm unshakable I'm sure that most of you know this is like nothing compared to what I've had to go through before once you spend time on the internet you just learn to like let nothing affect you looking into it so the lik of the oh yeah Jimmy I'm ignoring we're just here for the entertainment my man

(1:24:24) we're just here for the entertainment this is great I'm loving this the Virginia documentary no the one before what is it called yeah I've seen the flight radar stuff on MH370 I don't think there's anything to that I think it's just like a glitch James Fox's documentary all right the anonymous videos pretty we got anous a video about us we got Infowars post a video about us to show people like an introduction into the whole subject um to be clear I like Dan I think he's a good guy but they jul

(1:24:53) aded that they were super biased and yeah it doesn't come off great when you bring somebody on to try to **debunk** them like that's dishonest intent what do you want man all the weird part about Danny thing when he did the fake breaks did you guys notice that he said hey let's take a break but they just kept rolling the cameras going that was weird man that was the other we have the US Navy that's coming out behind Sal Cesar p with his um pents correct if you go and check what's been going on with him over the inter

(1:25:31) are they working on it I hope they keep their Source material let us watch s removed from search lists there's a lot of stuff going on there people should probably look into um so there's a lot of stuff going on but uh going where do I think the plane went uh if I had to guess probably Diego Garcia military base best place to it Coast to Coast I actually gave the wrong time I'm going to have to update that coast to coast is actually going to be on Sunday at he just straight out and said 3M Eastern

(1:26:05) why he was starting that way and what it was about man something about what happened 40 minutes before but can't stand by a Laker fan well I'm not really a Laker fan anymore after Kobe died I lost all faith in the NBA after Kobe died I don't know I mean it just and you could see the him ason struggling with that convincing people with his personality but that's not to say the facts that he's putting up aren't aren't true or you know so people need to sort of look at that and take away from that you

(1:26:35) can't believe the personal person behind it over the facts that being put up on why am I ignoring the space I don't know do you think it's like really that important right or wrong fun one way or another I actually like to listen to these spaces while everyone's just trying to hate on me I think it's nobody yet to come up to be able to prove they can replicate it and in my or

probably made it disappear to a place on Earth yeah they're not UFOs it's probably our technology I mean doesn't that make

(1:27:05) sense you think that aliens are teleporting to plane to another dimension oh yeah he's Redeemer of the people doesn't it make a lot more sense that the plane was doomed they're saving the plane and saving the people on it himself something's going to come out out in the future and I definitely think there's a lot more behind that [ ] uh I want to put some yeah neither Danny nor Julian or any of the debunkers on Reddit can understand that you can't just copy the video you have to make it from

(1:27:32) scratch there's nothing to copy very much like you know something like you put in a Marley I saw you in the in figure Pat were kind of just circulating Danny's chat now like eventually uh his first appearance when people first saw his name was on theories of everything podcast with Kurt J mogle did an amazing interview and he came out to be very person are hilarious seems pretty chill right and uh recently he's done some more Julian here recording this Jeremy Reese I believe right of um alien alien scientists on Twitter now before

(1:28:07) that though he should look into the motive guys maybe I'll pull it up for us while we're go Flash Forward now salv on yeah everybody's just going to talk about their feelings deny if you're not familiar with the UFO Community then this is pretty much how they always play out on his own it's always about it's always about personal feelings with these guys every single time as pay attention you know I don't have ADHD that case and then you know he says like and I want to say one thing Ashton and I are

(1:28:35) not suicidal that's an that's kind of a was a very extreme thing to say like you know he was I found it to be very interesting again everyone's gonna have and just here's your Mo Guys like trying to crucify me or anything I'll say the same thing Ashton you're probably getting a bunch of people too like hitting you up just always got to be careful like who's telling me what even us even me talking to you ashy me talking to you Julian everybody I don't trust how feel about certain situations talking to

(1:29:02) these people you know what I mean especially if this is a real thing you know there's narrative control be deployed I'm sure you've already exper it's always good anybody in this this UFO space to just want want chat wants to hear from you we I know you're listening buddy real quick back got get back to TJ gu guy that was those horns and stuff he call he was on one of those last Emily TJ says I hope TJ makes us Netflix series about all this and calls it Skinwalker space but he had been through a whole string of things

(1:29:39) Ashton refuses to listen guys refuses it's not normal for an adult Paul's got redditors talking sh if Ashton doesn't agree with me he refuses to listen and he's arrogant it's called being an individual I'm thinking for yourself the the the back story no we don't want TJ to be removed the very when it was released through the drive TJ is so mad you didn't care about cringe Watcher Ranch on I mean nothing one photo that had been raced not long before cringe Walker Ranch then there was a flood ofation

(1:30:11) then it was all removed it seems to me like there's I'll be honest I've never watched a single episode of cringe Walker Ranch conflict within the government the never watch it's should it be a sop or what I don't know but yeah he's a bit of a shadow he's a bit of now real quick [REDACTED] I want to say thank you so much I get over to j at the mic interview with Keith was really good s23 you should check it out get any like thoughts yeah yeah I just want to say yeah I'm raising my hand too but I can't because I'm on

(1:30:42) computer but hand also yeah let's go ahead and address that real quick uh Megan is on the computer so she can't raise her hand and she's been trying to uh we'll get right back to you we get yeah I'm gonna jump I'm sorry but T you know know me for a while like I don't go into these spaces i' I've never had disagreements or but heads with people right I'm always I'm trying to help like I'm trying to help TJ yes TJ yeah and offer my my my help with everything I can um to elevate he's always trying to

(1:31:10) help yep nobody asked just never experienced this kind of attacks or anything I mean he's got to be he's the victim somehow this help me professionally doesn't have to be in here just to kind of put it out there when I pitched this like Skinwalker five six years ago I was literally laugh literally making all about himself right now the Runes of discover too funny dude you know and he eventually picks it up but that was it's professionally expensive to talk about this topic um but I've been doing this 20 years this

(1:31:40) is why I'm not in UF UFO Community guys never done any kind of shows in that realm before right so this was all kind of j dude I'm trying to literally comes in makes all just like you did in my other space where I didn't ask didn't want it is that there's it sucks a lot of the air out of the room and people have been focusing on just this for so long and this is to me I'm talking to oh George naps on co co because all the stuff that we're talking about Richard Sil on or of anything else speculation and

(1:32:13) that's fine you can call it another space TJ didn't care about because it wasn't marketable enough I'm telling you there's nothing there in terms of evidence right can I ask you can I ask you a quick question TJ TJ the guy from Skinwalker Ranch is saying there's no evidence there guys sker Ranch incredible of Skinwalker wrench in terms of like you know just TV versus there's not enough evidence for TJ focusing on a topic within the community right a topic within the culture now like this is too funny man

(1:32:43) that the you know the kind of mythical next we're going to hear from the creator of Ghost Hunter guys about how we need to treat him with more respect Ashton's kind of uh seemingly Grassroots right like personal solo marketing campaign and and and uh you know publicity um is that side watch Ranch in the energy triangle never seen anything like this does he have to abide by those rules in the same way and you know does what does that represent I have nothing against Skinwalker Ranch I think people should watch whatever they

(1:33:12) want to watch but I think it's pretty hypocritical for a guy like this to claim that we don't have any evidence when he won't even look at look look what we're looking at here guys

is are we trying to get this bigger because they want a show they want movies they want TJ listen to anything I've ever said if he listen to anything I've ever said he know exactly what I'm trying to do I I say it on every single podcast I've done 30 of them my estimation I think that's crazy impressive why is this even about

(1:33:38) him at all why is he give advice why do so many people give advice when they don't get asked I don't go around giving the Skinwalker Ranch people advice imagine if I went in there like okay skwalker Ranch TJ here's some advice for skwalker ranch just in terms of like you know History Channels History Channel TVs you know these networks are huge right so that's what I meant by the myth thing I want to do is Market these videos for money I got you I got you I don't think there's in or out I want to get the answers for

(1:34:05) the families who got no answers for the pilot who is vilified for the leaker who went to prison for the witnesses who were discredited that's what we're doing this for people who have the access to give you exposure will trust you because you have a track Rec of success trust if you're coming in I can't believe he's still going going trust that like you may have the greatest story in the history of the planet but if you can't play the game and when I say the game I mean you have to operate within the

(1:34:36) system what is this my Manan has zero evidence literally zero evidence rules and this is this is our evidence two videos 19 Witnesses think of how actors come up right actors come up they start tons of evidence we figured out how system works no one even knew how the satellites work before I started doing this it's the same way with television it's the same way with any kind of media you have to instill trust in those who are going to be yeah they want to control me that's what it comes down to right if you can't do that

(1:35:04) they want to be able to control me ju you figured it out they're not going to take I'm uncontrollable nobody goes and gives a reality1 million and you're like hey go shoot 13 episodes I hope you come back with something great no it doesn't work that way they just ignore the facts right you need to have that track here's why I didn't crash the South Indian Ocean here's why it's one of the biggest conspiracies of all time TJ hold on hold on TJ hold on like on your show would you say any of the

(1:35:30) video clips or evidence of anything are they evidence of anything I think they're yeah they're evidence of you're seeing objects in the sky evidence of whatever is being told they're not evidence of seeing objects in the sky that have this therefore that right you see objects you have cooperating evidence you have cabby Ranch mul wow if I had any respect for Skinwalker Ranch before this it is out the window now folks out the window these people really just love to destroy their creditability just let them go man pieces of data that

(1:36:06) continue to re re I'm studying actual physics they're going to set up a pattern and so by doing that you can say if this then that because it's happened this time this time and this time yeah I'm dangerous to their narratives that's after Ranch times it can this is great no I agree how many follow how many almost 300 people in this what do you know do you know what it is no is

someone saying it's XYZ I'm dying guys this is too funny I feel like there's a there a big you guys know TJ Works in television he knows

(1:36:37) actors that someone claim wow he's literally never mentioned it before because of these things that somebody who doesn't know what those things are guys saying those here's the science folks these Telltale science here's the science folks we've done more science than four seasons of Skinwalker Ranch only months and say hey you know what yeah maybe I should talk to somebody who knows better than I do I've only been doing this three months maybe I should talk to people but instead this guy does

(1:37:05) nothing but talk down to me I mean listen I appreciate the time should TJ TJ real quick before you go because you were one of the people I wanted to talk to uh we had talked about this a little bit before I'm not sure I like Megan uh but you message me and if you want to like talk via Discord or TJ's a producer we had heard say were talking yeah yeah we have some different crazy hair guy from mind it seems we're still to some extent at least from my perspective in the middle of investigating a lot of

(1:37:34) this stuff Ashton has done his own investigation and is a little really nothing to listen to there just but I think that looking for like getting paid for their Twitter group therapy sessions that's what these are honestly red panda and Tupa need like to be getting paid for this like these guys are thing I would say is that you can talk about you know he changed his name to succeed or whatever and I'm here to defend Ashton's approach in all of these things he's been kind of a jerk to me too no offense

(1:38:04) as we're cool but like he did go from like you know 30 followers to 50,000 followers in a c month I'm with you clearly yeah see it see it Tupa and red panda deserve a lot of credit for like group therapy in these guys on a daily basis to bring something like this TJ who's I mean I didn't approach it as hating I approach trying to help and I know no no no no hold on hold on hold on real quick having a meltdown dude melt criticism interaction negative negative interaction happens all the time we

(1:38:44) can't conflate that right I'm not hating I'm just trying to help har or something like I love the like the backhanded compliments like like Julian's like you're a smart guy but you're so arrogant to me because you don't agree with me yeah I'm sorry for this is a part for a I have to talk to the Hollywood actors those are totally separate dick just don't be a dick I don't I think people are addict to you I feel like that's a great way to live life TJ telling other people not to be a

(1:39:14) dick to anybody this guy is just literally ranting about his own himself for like the last 15 minutes scale that Ashton truly believes what he's talking about and he's headstrong here that's what I think that's what I think I'm seeing and his execution while criticism is warranted in a lot of cases right but that is still not done I can't tell if this is lar or if this is real Joe I don't know what's happening right now this feels like it's scripted what we're talking about is a microcosm of a

(1:39:47) microcosm feels this going outside of this world this is already been going up outside side of this to what where's ke so much hurt feelings was here right so much hurt feelings Keem you know refers refers to them as the normies so people outside of this world are already well aware of this whole Theory and all this and there's people who are doing deep Dives and again there's two other shows like that you know you you'll see made off of not not fullon shows but episodes or segments within about this topic that

(1:40:17) is and maybe it has to do with Ash may this trying to hate of you ever um but yes you'll see more of this outside of UFO Twitter or outside of all of this this realm but um listen I appreciate you know sorry TJ before you go can I ask some questions please sorry it took a while to get up here so please don't cycle me down so quick um so TJ something about this um came up a few times that you were specifically talking this stuff is just better than I mean I would watch Netflix but this is just better man and I'm the center of

(1:40:48) attention touch this and a few people have commented on that how resist this what exactly brings about such a thing before we've actually had this go anywhere because a lot of people are like oh I was interested and then this happened I was interested and then this happened but none of it is really seems to be around the actual evidence of it and then we'll get evidence because there isn't any evidence of teleportation the only things that I see are like fake explosions and that right there just immediately throws me out of it I

(1:41:19) couldn't get behind that why is TJ at all no one cares no one wants you on our side TJ I never asked for your opinion this is the guy skin walker Ranch and he's crying about teleportation they show portals in sker what makes you say they're fake um what makes you say they're real because we can explain the science behind them but you can't I could explain the science behind why they're not I wish you would hold this level of skepticism for your own TV show TJ you're too funny man my chat loves you

(1:41:53) again as I've only said complimentary things about you you've only said complimentary things about me chat wa you're let me finish I said about the work you've done here and how you've done a incredible PR campaign I I think that you're just now with your smirk and all of this again you're just you're just showing you're revealing why people are probably doing these shows without you right because you you put this out doing the shows without me it's unfortunate that it's going to happen

(1:42:19) with or without you so spoiler I don't want to make a show and definitely not with you ever TJ but have a great night right I know because I already told you I wasn't continue talking with you because you were saying talking about get a lawyer this guy's so mad dud ason why did you tell Danny you had a producer around shopping a documentary for this i' I'd like a response on that yeah so does it matter I think I just that's self-explanatory right you just said you're not trying to

(1:42:48) do that I said I'm not meing in a TV show that's correct should we play 20 Questions with you Julian because I've got some for you knock yourself out it's okay ask a question Zay

Megan appreciate you this space is directed at a specific topic and we do want to give priority to that topic when when we can when we can ask everybody questions we definitely will but as Julian and Ashton this is a thing they're in the they're in the name of the space we got to give them the stage when they you know when question come up

(1:43:21) like this if we can respect it that'd be really cool and then we'll get right back to you Zay Meg can't wait for your questions thank you for being here too by the way appreciate you guys okay first question for Julian if you think this is all a **scam** why did you send me a text message um stating that you think I'm hurting the families and that I should feel bad about this shouldn't you delete the videos if you're you're the only one profiting off them first question no I I said you're hurting the

(1:43:49) families because you refused news to not take all attention on this K see I do a podcast every week right I do multiple podcasts a week I move on if it were up to me we'd be moved on from this episode right now secondly you also accused me of censoring you ahead of time which was hilarious so I can't win no matter what I do and it's two podcasts with you it doesn't make that much money and it seems to me like you don't want them out there which is highly interesting to me so that's not even an issue but for you

(1:44:17) to make that for you to look at all these pieces of evidence and only listen to the people who agree with you I mean I you even cited that guy Victor on my podcast I don't even remember his last name he hit me up on Twitter in the comments and was like yeah I tried to explain to Ashton that this was wrong and he wouldn't listen to me so you are even citing people out of context on this stuff with the evidence that you find to support your case so when I say you're hurting thees my reporting on Victor because you are drawing all your

(1:44:47) attention to this for you you enjoy this man like this is is a re there are real people in the middle of this and you know what if you want to accuse me of also being guilty of getting into the middle of the case with you and actually hurting the families in that way maybe there's something I have to accept there as well and look in the mirror and say maybe I should never have **[REDACTED]** gotten involved with this in the first place which I will take full responsibility for so then delete your videos and stop

(1:45:11) profiting off it honestly don't mind if you don't delete them or not I think you look like a jackass and your own comments sh**redded** you to pieces so it doesn't matter to me yeah the the the comments are your whole bot campaign pal I was warned about this my camp or two hour or two into the thing let's talk the first time I love how disconnected you are from reality that you think that I've got a bot campaign that's the problem you've got you got online **redditor** syndrome let me just

(1:45:35) finish you've got online **redditor** syndrome where you think that like you're in the majority when reality is most real people see right through you that's the problem and I tried to I tried to explain it to you ahead of time man uh you know I warned you about it just like I warned Danny about it when he put his fake uh you know like a description of this video like he

called me this morning and we talked about what the description should be and he I told him don't put Exposed on there man it's

(1:45:59) going to look bad for you he didn't listen to me he lied to me told me he wasn't he said I was going to put revealed on there sure enough you go look at those comments those aren't Bots man those are real people so I mean yeah they're MH they're MH 370x people absolutely they aren't man I didn't even retweet it I didn't even post it told you that who who seated that like that that you're gonna get hit with bods because they buy bots for people so I'm just curious I had multiple people in my DMs

(1:46:25) and I will I will put one name on it the guy Darcy who was here earlier he hit me up about that's interesting an hour and a half into the video and said I hope you know what's coming next and I said what are you talking about and he explained it to me and it was right on Q real quick red red will you break down the Box situation that's been happening notice he's not going to delete his videos Del buy bots and then like falsely attri he's the only one profiting by the way and say like look at this person's

(1:46:56) buying Bots no Bots those are just real people should we read their real comments guys um but yeah so that's just something they do so I just find Bots don't get upvoted 100 times guys it happened to right I have you we'll just ask you for the room do I buy bots no I've never bought a single bot I've never canceled a hotel reservation I'm 100% honest everything I state is the **truth** and the whole **truth** and that's just all there is to it if that hurts people's feelings that's just the way it is I think it's

(1:47:24) safe to say that I've seen a lot of interest in this case and a lot of people feel very strongly that this might be the Pinnacle right the video that needs to get found out it's presented in such a way by Ashton that it's fact and I could see a lot of people naturally you know falling into period and people the Mystique grew after the finally leave I'm sure it um was a catalyst and it solidified right a a perspective on this for a lot of people could that be the bot Army we're referring to is that is it a natural

(1:47:56) thing or you know could it be you guys actually think that they were Bots that were hating on them I think there's natural but I'm sure that they also bought Bots for him because they like hyped it all up right and their I just wanted for the room and for Julian like all these little so and so told me so told me why like they do eventually add up I think to and I'll be honest to Ashton's Behavior kind of like he is kind of like leaning into the troll angle of it right because he's probably

(1:48:17) just annoyed with everything no I'm leaning into it because it's hilarious is why like the episode did have a different feel I feel like than previous episodes you know what I mean it is something to consider not asking anyone to out their sources or anything but you know and put it all in context do some research again these tactics repeat they're repetitive they're rhythmic they keep happening it's the same same thing so certain keyword certain key players they always seem to cross it's like a

(1:48:40) VIN diagram continues and continues to cross only in specific ways that's definitely one not bot so it's something to look out for but yeah just real quick though it's not Bots uh go read the comments those are real people I think that when people live perpetually online they don't know what real people sound like but real people or Bots aren't getting voted up like 50 or 100 times guys it's it's real people and I think the podcasters that had those negative reactions should read the comments so

(1:49:04) that they can improve in the future that's just my advice I've been 100% honest about this but let's just take it or leave it yeah and that's valid but that still doesn't there there is still the fact that even before any of this he was kind of like told that you know what I mean like that was already kind of seeped in that that fashion is crazy dude who buys Bots and does all this stuff you know so he's going into it with that yeah I think that might have clouded his judgment a little bit I totally

(1:49:28) understand that but you're right on that front like I think that people should be careful about what people tell them in the DMs I think that a lot of this and a lot of the issues with ufology in general that people think it's a popularity contest right the **truth** is not a popularity contest it not decided by popularity either it's decided by the evidence right so Ashton and that that's actually a fair point I hope you can understand me having some pause then when you tell me for example that the friend of a nephew of a

(1:49:57) general told you behind an account in a DM that you know the general reacted this way to seeing a video and I found that highly credible do you see how this works both ways yeah man I've posted that a lot of people here actually saw the general thing and it was one of my most upvoted or one of my most liked comments ever back when I had a certain number of people like you know I think that from your perspective why are you trying to be so harsh on your guests you never acted like that against any other guest yes man so that's the second

(1:50:21) question I was I was no well first of all when we were in the studio and people were coming up because we were sitting in the studio for three and a half hours before this podcast started and people were coming up you had no I'm gonna run through the list right here you had no idea I had ever had in sha Ryan you had no idea I had ever had in James Fox you had no idea I had ever had in mukaku who those three are important because they're right at the top of my page when you go on YouTube so for you to say I've never treated other guests

(1:50:51) a certain way which by the way I won't even say if you're right or wrong there I'm just saying in general you can't make a comment like that when you have not even reviewed my content that makes no sense yeah to be honest I never looked at any of your stuff Julian because again like I said before I don't judge people based on their credentials and I don't do podcasts based on their credentials either so I just took you to hopefully be an honest person and I came in with honest intent and that's and

(1:51:11) that's exactly that's exactly what I did and you chose violence after the podcast was open I don't understand and obviously I had an issue with things before but I don't understand

resorted to doing those things I've never and I mean Danny said it better and I could even say it earlier about how we ended up feeling about you but I have never felt the about someone I had in when you left that day don't you know who I am I didn't feel that way did I have a lot of skepticism and was I concerned with how

(1:51:42) you present some of the case and did I think like I chose violence I don't know if this guy's the best men of that so dishonest man but I had zero issue with you and and I would have never titled it that way I would have never done an intro like the like the one I ended up making you did that based on how you then behaved over the next five days and you got me see this it got to me it got me it got me more pissed off than I have ever been in the history of me doing this podcast this is like domestic

(1:52:07) abuser discussion right now you made me do this to you hold on hold on you made me do this to you no I think that was I think that was a hell response but you're just a bad person dude I don't know I thought he kind of was being very fair there Aton and kind of like admitting you know exactly what you know where his head was at during that process but that my take on it I respect take AST I don't know I don't know why you suck so much dude but I I just you are Your Own Worst Enemy you are going to be your own downfall if

(1:52:45) you don't get your head out of your ass dude maybe if you stop being a dick to everyone as Rober was saying earlier I'll just say it like that maybe if you stop that and you actually looked strictly for you chose violence what does that show from maybe you'll end up be the biggest guy ever on this stuff I don't want to be the biggest guy ever that but the way you're going right now you are to quote Danny from earlier You Are Burning Bridges dude and it's really really sad um sorry can I just ask Julian I

(1:53:19) have a few questions for you on me um you seem to be new to the UFO space and stuff and this is post interview with Ashton has this ever happened in any other sphere of that you've introduced on your show or interviewed on your show and then had to spend so much time after the fact talking about the interview never never ever ever I have amazing Interac brought on I for so disappointing I used to have a line before last used to have a line I would say to people when they ask me about my job you know and about how the

(1:53:58) people who came on was I used to say I'm so lucky thought it was Bots this guy's like he's just like and now I can no longer say that but to answer your question never he thinks Bots everything's fake that's against him right everything's fake people just railing on him in his own comments are all fake him not paying for the hotel fake you can do that I'm the one point and be called real people man that's America called real people I never said anything mean to this guy that's the

(1:54:26) best part so angry dude find it's like a little like embarrassing that like you went through all this like you don't have to be here right now talking about all this and airing like personal stuff out but you are and I feel like you're being like a little bit vulnerable and and honest in doing so and do you feel like that's being reciprocated for you what do you mean is

that being reciprocated is is Ashton like kind of meeting you halfway in terms of uh being vulnerable and trying to communicate

(1:54:50) honestly I I don't I don't want to be the judge of that i' like people listening to be the judge of that it's not fair for me to judge that yeah and I just want to read it for the room I'm glad both these guys are here talking it out too funny man get some hearts in the chat for them when we get to the next hands I saw we'll go to you you a comment and then we'll get to okay so I watched uh Julian's podcast first watched the whole thing through and then uh saw the should I just read

(1:55:18) comments from real people to Julian that would be like the best right you knowem he had a bad interaction prior but let me see what Danny Jones comes up with and in between Julian and and Danny's podcast I saw Ashton's video like quote unquote **debunking** everything prior to Julian's podcast even coming out and once juli I just got done with Julian's podcast and uh you know he or uh Danny's podcast and Danny started pressing you at the the end about basically your **debunking** video especially the the one with the video of

(1:55:56) the quote unquote implosion exp call thermal event um and it just it blows my mind that you don't understand that that video can be scaled you know you're saying pixel by pixel if you scale pixels they will never match so the scale would have to be absolutely perfect so if it was a bfx people talking about how cropped or compressed so bad that it didn't have certain aspects into it and scaled differently and inverted and recolored like doesn't make bridges you're you're and the corridor guys you know like they

(1:56:35) spent their time just saying it yes I do understand your point of him kind of skipping over some certain things and I do get the whole you know if if if it's fake then just recreate it well then ask you should be putting up the money put up a bounty saying hey if somebody creates this within a certain time frame here must be this this this this then you know use your platform since you're rising up through a Fame well you rised really high and then now you're just burning everything going back down burning everything doing

(1:57:11) what Danny said and collaborate with the people competing against you to come up with a resolution I I just I want to hear what asy has to say about that oh I got to respond oh um we had a bounty man that was months ago we're past that now uh I have offered for a few people to try to do it but I mean Julian told me he's got a major Studio that's going to work on it they so they get it done in a couple days but turned out they just read off metabunk um so I don't know kind of weak the reality is I think I already

(1:57:40) resolved answered all those questions on there the reason to more specifically why that is if you were to make that VFX which doesn't match as a statement of fact once again try to match our visual effect on the one frame that it's similar to you have to realize the person that would have done that doesn't have the luxury of comparing it to our video so they're not going to be able to sit there and move it all around so they would have had to accidentally make it change that VFX that is a white hot VFX

(1:58:06) with little lines coming off the side of it they would have to accidentally turn it into exactly what we see in there that's probably the best **debunking** possible do do you do you understand what Danny said by or I guess Corridor crew said by stock footage like do you understand stock understand that if you put stock footage in there you're not going to modify it you're just going to add it in there without having to modify it and most you might change the color of it but we can see that the pixels don't match which is why

(1:58:31) my counterargument is how many pixels match end of debate that's not that's not true you you would you could and would move it around if it doesn't necessarily F even when you move it around it doesn't match you want to change the you would you could and would change more things than just the color I just want to see that as a video editor of course that and it still doesn't match they that's what they did they actually did that they changed the size they changed the color and they tried to

(1:58:57) line it up to the edge as best as they could and even when they do that it doesn't match again as a statement of fact and all you have to do to prove it wrong and it's only one frame get the croor crew out there have him stream it pull up his computer from 2012 have him start moving the pixels around one by one but he has to do it without looking at the original he just has to try to change the pixels without looking at the original like a key like a monkey TR typing on keyboards until they create Shakespeare right so if you can do that

(1:59:22) I would love to watch I keep saying that nobody takes me up on the challenge in fact nobody still to date has answered how many pixels match use some of your Advanced editing software tell me how many pixels match exactly I want to know and then everybody gets so mad at me like why won't you just believe what I say or why won't you just believe what Nico says he on the corridor crew you're ar**rogant** for not believing it we we don't want it's not that we just want you to believe it man it's that we want

(1:59:52) you to take it into consideration that's all that people are saying I take things into consideration of what possibilities you're bringing this whole story to us as a possibility right people bring possibilities into their into the conversation you should be thinking of those things yeah ashon what is your stance on those videos exactly are you are you specifically saying that those what's happening is something what's going on there exactly according to you I mean I think you can you can take a

(2:00:23) look at my uh my a lot of work or you can watch any of my podcasts I mean there's a lot of content to go over you know you can even watch Julian's you know we just spent six hours in interrogation going through it I mean it's all pretty much been laid out there so I don't really want to relitigate the whole videos here on this I just I'm in here for the entertainment tonight and so now you're shutting down because you're saying you studi this for three months and you can't come up with your

(2:00:49) opinion on what you think the video is you just want the high level sure no sure that's fine yeah so I think there was a lithium ion battery fire when the plane went dark I think the

plane flew for 1 hour 20 minutes flew over panang was Rond Vu probably had communication with the US government they reported at the nicobar islands where a witness sees the glowing orange plane which is consistent with the lithium ion battery fire then we see our videos happen we see smoke coming out of the back of the videos we see two identical videos we

(2:01:16) see three what I presume to be us probably reverse engineered but whatever advanced technology showing room temperature super conductivity showing what we would call teleportation but which is really macroscopic Quantum conjugation or macroscopic phase conjugation which is essentially taking the waves and being able to connect them to a degree where they can obtain a macroscopic object can obtain the properties of quantum which essentially seems like magic because what we live in is a construct the

(2:01:43) simulation of sorts and essentially magic like magic too you know what I'm saying yeah pretty much is honestly so you're saying a regular size object that you can see and touch would obtain the qualities of a Quantum object and we've proven that quantum teleportation is real and we've proven the quantum teleportation is real if you just look at the double slit experiment realize that time dilation is real I get it quantum is a Quantum is a big word right so I just want to make sure like we're

(2:02:09) talking the same thing so in the quantum level that scale of things things at a probabilistic sorry a probability state where they wave they're neither pretty you know they're just kind of loosely hanging around where we at any place some weird [redacted] like that right it just these weird properties can you kind of dive into that a little bit how does something obtain those qualities how a regular sized object and you know and how often is that used who developed that technology you have any kind of

(2:02:39) ideas Behind these things yeah it's a lot so I that's why I've been starting my own podcasts because otherwise I would never do my own podcasts too much work but that's why I interviewed Salvage oras why I interviewed Bob Greener who explained fractal toroidal moments why I plan on interviewing Bob Rossy which people don't or Dave Rossy sorry sorry Dave who people don't know but who's incredibly intelligent and when it comes to the science side of it um some high level things that all come down is that a lot

(2:03:08) of has to do with changing electrons when electrons are driven from the equilibrium State they will self-organize into a matter wave under the right conditions solid state objects can achieve macroscopic Quantum coherence um low temperatures can allow the electrons to couple and move as one the fractal orbital moments can create a unification of forces that allows for the induction of the phase Singularity that we see that black endothermic event the properties denote the behavior this is what Roy de Herbert physicist repeats

(2:03:39) on if you just go look at his Twitter Quantum properties may include Mass reduction if you can reduce the mass of an object then it doesn't take a lot of energy to move it around actually takes a very little bit amount of energy time is a fluid symmetry of itself so a faster relative flow zero inertia equals zero gravity this allows you to ignore gravity like we see with the

orbs after the phase transition this object can theoretically be placed anywhere and while it still technically adheres to the laws of conservation

(2:04:08) momentum you do not have to adhere to it going in a specific Direction and it can essentially just be set down somewhere if necessary uh that's pretty much my best understanding of it right now and every day I'm learning more and more oh lastly also room temperature superconductivity could be induced by metamaterials such as YBCO if the recipe were correct or repeated pulse vibrations from transducers so the idea here is there's two ways to achieve superconductivity you can uh increase the rapid spin of

(2:04:37) the electrons the other way is you can increase the vibration of them apparently vibration according to Salvador Pius is the way that we are able to do this at least for room temperature superconductivity and these are used in quantum computers and Quantum microchips which turns out the 20 free scale semiconductors on board may have been involved with okay is that good enough cool yeah and I don't know this space forever so maybe like 30 more minutes 20 more minutes if we could just get through your questions just you

(2:05:02) could ask it real fast there's a lot of hands and then uh yeah probably around like 20 minutes or so I think well Z let's get your last thoughts and then we'll get to oric Thomas Smith and thanks again Ashton and jul being here okay I have two last questions um where's TJ TJ please verify julian specifically you touched on it TJ touched on it as well um this Cockiness or this attitude that people don't seem to like um not only within the UFO space but in general there's some people who

(2:05:35) are cocky AF and people seem to tolerate that for whatever reason are we saying that it's because these people have X number of years experience nobody can question they can never question the science hon say they have this uh qualifications and because they're cocky then we can take that but when somebody does something and they don't have those pieces of paper they don't have X number of years experience then that's something that we brushing against is this what's happening it's a

(2:06:06) bit confusing for the rest of us who don't follow how y'all are doing this as to when this I love this lady and abrasive and when it's not and I have a few and I have another question inspirational speaker scientist no that's a great question and I think you know one of the points of this interview wasn't just to figure out you know uh what the standard of etiquette or whatever it should be I think it was to kind of figure out the you know I hate to say it like the the not the drama but the interactions between

(2:06:34) Julian um Danny and Ashton you know it's we trying to humanize it because it was getting to a fever pitch wasn't helping anybody you know became a thing of of got a little mythical and hearing it now you know it's really easy to see where the wires got crossed in my opinion and it's also easy to see that there's there could be at points of this you know not necessarily julian and and Danny here but at points of Ashton's research and presentations there have been some very interesting interactions very

(2:07:04) interesting efforts made um that like you know kind of add to the Mystique of this I think the the case on a basic level but yeah as far as etiquette goes kind of comes comes secondary to the evidence that's my opinion uh if you're you know I'll add Cor was on stage like totally [REDACTED] on Stan fredman you know and like people don't never talk about his etiquette you know what I mean wait what are you talking about on stage and he like it was like Stan into like last interview before he died and he was just being kind of a

(2:07:34) dick to him uh I don't see like those yeah I think people learn about Quantum and macro seems pretty sweet to me hey LTB hey everybody in chat welcome totally TJ people want to know are you in here but also Julian is kind of could have been nicer to julan I could understand why he'd be like uh [REDACTED] this fake niess you know it's too too funny I thought would go ahead and explain something to like I think Ashton said something that just kind of flew over everyone's head it was really scientifically and like probably just

(2:08:07) seemed like nonsense so like most people like me uh that were listening but it's um uh I don't know should I break it down I don't think Julian invited keemstar I think he just drama and then Logan I would love your breakdown it's like we hours of the morning and I was actually going to ask you to record that that I can listen to it when I'm awake yeah Zay I I wanted to answer the question I I didn't entirely understand can you just rephrase it a little bit for me sure um within this field and

(2:08:39) other fields there seems to be a very high level of Cockiness early on WE dismantled this idea of experts the way people speak to other people people that have authority right I learned early on that how many letters you have the next to your name whatever supposed credibility is doesn't mean anything at all as is I don't know I don't know anybody I'm not defending the evidence you present the way you present yourself and how you present that evidence that's how I people's credibility I'm very good at it you've

(2:09:09) even come on this show I have any special abilities telling people phon people come spoken about the evidence they just talking about what he has done so at what point is that acceptable is it when people have been in an industry X number of years is it because they have some sort of qualification piece of paper so what what exactly is going on because the rest of us really don't understand and we're just here for the uaps yes there's no experts in this technology if they are they are owned by the dod you should shut people down if

(2:09:42) they don't have a ton of experience or if they have a ton of experience I think you should weigh too afraid to ask uh am I following you on Twitter tell me what your Twitter handle we can try to work it out I'm pretty busy but we can figure out as far as like Cockiness goes I think it's a feel thing and I think it's to the extent of where that goes so if people start attacking people this guy Julian still profiting off of the tragedy while sending me messages about how hurtful it is to the family never

(2:10:13) ever ever in the history of my he's the only one profiting and I've you know we've had videos that go viral and then people make you know response videos that are attacking on it

how we stay do I have awareness of my error rate you know people are talking about it that's cool I'm sure I get stuff wrong agree with things said on the show but then I correct I've never dealt with it where get better in terms of the science is probably the thing I'm the worst about and and I think that there is a I good

(2:10:37) news is nobody really knows how the science Works sure sh is a horrible feeling that happen and to have to respond to it in public and that I mean that's always too busy upd includes tonight's space all watch football and stuff people first notice so it gets ugly but I mean he brought it on himself man I think cockiness is not a good trait if people aren't being a dick online then yeah I mean yeah so how can there be light there's an endothermic event most likely because the electrons around to

(2:11:13) get energized but Bob Greener was kind of presenting the idea that if it was annihilation the elect julan and maybe you're notw million Subs doesn't that mean they're experts somebody other your Dan yeah we got I have another we're gonna make a bunch of memes today guys it's not a monolith of a thing there are many of us who are here for the uaps so just to put that out there and many of us don't engage in some of the activities that have been said so that's it but what I'm trying to get at is we're

(2:11:47) having a conversation here your podcast was X minutes or X hours long it took whatever amount of time to put together and whatever we're having a conversation with Fuller than most rooms when we talk about the UAP what his name TJ are talking about the behind the scenes of the behind the scenes and spend so much time talking about it you yourself have said this is come out before when you've been dealing with other guests that you didn't get along so with the UFO and UAP space this seems to be common ground and

(2:12:23) I'm just trying to figure out like is maybe this is part of it maybe the **truth** coming to the surface maybe we have to there are things we have to examine before we're ready to examine uaps but like even this is why every is melting down look at this holy crap it doesn't really make sense to somebody like me who's not involved directly or has a thing has uh has a dog in the fight so I can't respond all these messes holy crap there a lot if Ashton's information is incorrect it's going to come out and if

(2:12:52) ashon you're going to see who I Ming there I didn't even see going to come out so why aren't we just focused on freaking finding out if it's correct or not correct and move on from that this lady is smart that is exactly that is exactly what I think we should be doing and and also I want to retweet something you said there you said this is not a monolith someone who is very much outside of this and is getting a crash course on it from Tupac Abra and some other people explaining all these different communities in here I can tell

(2:13:23) you just on hearing those conversations it's obvious it's not a monolith there's negatives and there's positives and what I don't want to see as a Layman here someone on the outside is I don't want to see something that I am very in in this case being UFOs and uaps and seeing where these disclosures or whatever they are go I think some people do want to say I

made the videos which is really silly that's almost the silliest claiming I'm Russian and the community explode I mean I think a lot of example

(2:13:54) and something else happened with crypto I think you can't pay for this level of entertainment crypto Community became Its Own Worst Enemy and actually destroyed a lot from within rather than even just the many attacks that were coming from the outside obviously and so I don't want to see this fighting I don't want to see people making J stuff and selfishly I don't want to deal with this in my job I got more important things to do you know you know I I I agree I think we have to let facts win and if it were up to me

(2:14:24) that's that's what we would do I I I normally would never cre could beor crew I think cor crew might be better feel a need to defend myself and I'm sorry that that that happened and you know hopefully this never happens again yeah quarter crew for the last one thank you for could you get your last I wanted to put their pictures on here as well but seems like it's too much work just on the monolith topic if you ever want to come back just maybe interacting with more of a diverse group of people to understand

(2:14:56) better what is and isn't happening and maybe focusing on actual uaps and U UFOs and the information so we can actually get some answers I think the majority of us are just here for answers and the UAP and the understanding I think that might help a lot of us thank you so much well said well said Thank You Z next but hand ra I can't wait till they they watch My Stream and rage about my stream thank you okay so first thing I want to say was I think this is kind of answering AI news a little bit and some

(2:15:31) other people uh and this is in terms of the vsx debunk uh so well I appreciate aston's like how many pixels match thing uh that personally to me has never been super convincing the thing that I find more convincing is that there's four frames in the regon videos that show the explosion there's eight frames in the VFX pyro asset that they say matches the one frame you see all the time that matches really pretty well two of the frames match reasonably well one of the frames just doesn't really match at all

(2:16:05) so if you are going to say that that asset is what was used to fake that it can't be exclusively that asset it has to be some other things as well I think it's very possible to fake that asset or to fake that effect but I don't think that the asset that has been presented fully explains it despite that one frame matching I can't P so in my mind that is a better rebunk of that particular def Fair Point yeah great points Megan thank you um and then the last thing I say just real quick is just that um to Aton I would

(2:16:43) love to talk about the stereoscopic 3D thing a little bit more I my experience with action was that he was like maybe a little bit of a jerk to me when I first brought it up but understandably so because he's been bombarded by people from all sides I get that [redacted] um but that I did make some Headway you know and that he was open-minded about that so I think that this idea that he's not at all open-minded or whatever isn't really fair but you know that understand bombarded so it's sometimes hard to get

(2:17:13) to but I would love to talk about that with you more Ashton I'm working on a document it's taking a long time okay that's the answer oh real quick Megan did you say that like the asset was only four frames but it's eight frames in the the video the asset has eight frames and the video has four frames of those four frames one of them the one you see all the time matches really well two of them match reasonably well and one of them just doesn't match at all and how many frames is the is the explosion hor it's

(2:17:47) just video it's for frame frame in the regon thermal videoon yeah in the regenon video it's foram in the asset that they're saying cre it there's eight yep one time I had a friend uh he was convinced his video online yes yes Chad sorry what you're really muffled too F everybody else a little bit okay my bad only people don't want to be fooled they don't want to be fooled period and people will look for any reason to look at a video and go okay I don't need to believe in that I'll write that off when

(2:18:29) you're looking at something unbelievable it's super easy that's the natural reaction you want to do right so you know I I wouldn't blame anybody for seeing some seeing one frame of a lot because it right off the bat it's almost like a meme itself take this picture it becomes a reason not to have to make your mind go there right and that's not I'm not to say that's something you apply to every single case are every single **debunk** but that is the natural way right if you see something it's

(2:18:52) unbelievable you immediately look for the the wire right the reason you go but let's get over to is it oric and then uh we'll go from there guys I'm cracking Thomas hey so like it's it's so hard for me to frame this in one way where I'm like immediately not tuned out by the other person I'm just going to be like completely honest and and obviously my perspective is not the ground **truth** um Julian like I've been listening to your your podcast for a while and I'm going to keep on listening to your podcast

(2:19:21) because you have interesting guest you know that's not a good start and um I I I like what you what you bring out of people and I saw the one with with Ashton and first of all like both of you are in a in a really difficult place here right because like Ashton still needs to keep the possibility open to this video being **debunked** but then you also need to kind of keep the video up to maintain like your credibility that you're willing to like deal with the evidence and and so like both of you are in a tough spot and I want to say like

(2:19:55) what's what's unusual about the UFO space we're making mes we didn't really do anything seem to be more capable I'll be honest of tolerating uncomfortable conversation this to me like stands out compared to other spaces and and and Julian this is just my perspective I need to be honest with you like I I can totally understand what some people say like oh yeah Ashton looks like an **[redacted]** but I can't possibly imagine that I wouldn't come across exactly in the same way because most of the things

(2:20:26) that I've witnessed is Ashton saying all right well I disagree with you you're entitled to your perspective and there's two types of **arrogance** **arrogance** used to mean expecting

somebody to treat you higher than your status would like justify but nowadays the the definition the actual dictionary definition has changed there's a new one it's just somebody else viewing you as arrogant and if you actually are comfortable with other people disagreeing you or viewing you as an hassle no other words when you

(2:20:56) don't expect anybody view you certain way that now is included as the new definition of arrogant yeah exactly and I just need to say yeah this guy is legit Julian like please keep the videos up I'm Gonna Keep On listening to your show and I I personally like I'm not trying to collapse into he's never delet those videos guys truth regarding like never deleted those videos is this video legit or not I think the evidence deserves and also on right now like how debunked or how debunked is the debunk of the debunk

(2:21:29) debunk video because for me it's not what Ashton is doing or what Ashton is suggesting or presenting is not just an alternative aams Razer Truth for me it's more about the dark data we some of us might remember the Donald rosfeld quote of like there's no knowns unknown knowns known unknowns but we're living in an age where we're realizing it's actually about the unknown knowns it's it's the thing of like 590,000 people listening actually been in our face the entire time that's already proven not

(2:22:04) necessarily is the truth but about a lie we absolutely St G I don't know who you are but you're gone that's that's something you can say about the entire UAP space and that's something concern trolling is like the worst you f that you care about something for me Ashton's evidence already proves in a scientific sense From perspective what's the guys what's the uh the null hypothesis what's the sentence for arrogance that this plane just ran out of fuel we lost tracking of it around you know 1840 UTC

(2:22:33) and it's somewhere in the ocean now people can disagree with that perspective but this moving Target of evidence kind of like intelligence or AI has been a moving Target for a hundred years is is is kind of like the hypocrisy we see with Neil degrass Tyson or when people say like oh where's the evidence of the UAP we only have thousands of years in EMP evidence that there's something that's more than just like a psychological thing in somebody's head that there's actual evidence and all posting this to my Discord you know

(2:23:05) this is I probably won't post on Twitter and I think these conversations are important but we shouldn't just focus on like if you don't invest in the you know aam's razor truth that that ashton is suggesting this guy look more confident while being 100% wrong this is likely what happened with these orbs there's still in incredible evidence saying like we can't accept the regular the part he says you the part where he says that you shouldn't feel bad about being wrong with this is like godamn man people of

(2:23:33) your long time podcast wow and you know I'm I'm honestly ciding more with with Ashton here but I'm not going to close my eyes if something comes out that this is debunk and we all need to keep our eyes open if this if we end up really finding like we may never get proof of this video but if we right now crowdsource and reverse engineer this Tech if it really is just a

rearrangement of maxwellian equations like many people have implicated over decades then we might end up saying like all right maybe the video's legit maybe

(2:24:03) isn't but clearly Tech is possible and that changes the whole story as well got them those are some great points oric I recommend everyone give him a follow if especially if you like spaces I've heard him only give like pretty solid takes on things yeah thank you for that that was awesome man thanks [REDACTED] sweet and we're gonna try and close out here sooner so if we could kind get through kind of quick guys I'm sorry Thomas Thomas feel free to go a little longer I a while we're gonna go Thomas Smith Fletcher mistress Sonic can

(2:24:34) y'all hear me yeah yes coming through hey uh I think the first thing why Ash's getting so much attention I genuinely think I know this is my opinion and speculation but I think it's an anomaly and I think evaluating it with VFX and everything like that it's great but it's when something is an anomaly it's difficult to be able to view when you've never seen it before uh the second thing is with the whole VFX thing and trying to use that as uh you know someone that's an expert speaking you know for marine

(2:25:04) myself I had first sergeant and staff Serge seen firstand in combat expect them to DARE expectancy what to deal with the situation and they failed and we had lower rank people get I know it's an extreme situation but all I'm saying is is don't always expect people who have position completely competent and everything this is only beginning and third thing is is um uh Ash I wanted to ask you I thought was really interesting um the individual who leaked this footage um do you think it's even possible in the future to even ask

(2:25:39) this guy if we can ever find him uh about this whole situation uh that's all I got thanks Thomas yeah if you watch I think a lot of the podcasts I've revealed that I did reach out to him actually so we were able to figure out who the leaker was so again if you're a debunker go ahead and figure out who the person is who faked these videos bring the source material because you should at least be able to do that we we were actually able to figure out who the person was leaked them from the evidence

(2:26:05) and I did call him he hung up when I called him um I didn't want to harass him I don't think anyone else should harass him uh I did contact his lawyer as well and talked to a clerk from the lawyer's office on a Sunday weirdly they called me back uh but they didn't the lawyer never called me back instead what happened was they sent me a email which looked like marketing email but they haven't sent me anything else uh actually they sent me two total emails but the first one was from like a

(2:26:32) seminar that happened like a week and a half before I before the email came there was about court Marshals and the implication of the new law that was coming through for whistleblowers which I think just got nixed actually like today um and that's really sucks because maybe that law maybe that was a message on them saying like hey this law could have changed the circumstances but I think the reality is the only way that that person is going to be able to speak if they even want to speak I mean they spent six years plus

(2:26:59) in prison if they're the person who **leaked** these videos right imagine the psychological toll on somebody um that they need a full pardon from the president that's the only way because because they had that uh prison sentence that plea deal that they took there's no way they're legally allowed to talk about the videos and based on the fact that they came out with a statement saying like how damaging it was for their country my personal opinion is that they thought these were UFOs that they were looking at you know aliens non

(2:27:25) human intelligence and that's why they thought they weren't doing damage to the country and I think that later on they were told as they were being charged that no you didn't just leak UFO videos you **leaked** our highly classified technology that could put us at risk to **China** and **Russia** Etc which is why I've had my own qualms about disclosing the videos in general because if they are real then I might be damaging my own country which and you know risking a lot frankly not just not me like for me

(2:27:50) personally but like for the country for our safety um and so yeah that's kind of the long and short of the answer for you there good question Thomas Ashton you should include or I don't know if you have is that included in your Congressional letter like just a blanket uh amnesty from the president for whoever the leaker is it came after so that's why it's not in there I was thinking about doing a different version of it because a lot of the information there's out of date actually even the

(2:28:15) science is out of date I was still referencing a wormhole back then um and that just again shows goes to show how much the evidence and the investigation has progressed um we have found so much more evidence since that letter was put out that basically proves it has to be Edward C Linn the time frame now is like one month he was assigned to the Squadron February 2014 he got reassigned March 25th 2014 right after MH370 investigation began April 2nd 2014 he was caught with the flight manifest from search and rescue operation in May with

(2:28:47) which is just a month after that his next assignment after he gets reassigned is the brig so they reassign him probably because they dis suspected him right because he got caught from a citric session so they knew somebody **leaked** it and probably didn't take them a long period of time to narrow down to him I mean that time frame of just a couple weeks is exactly what I would have thought from somebody who recorded this on a citric session and then they have to build a case against him they catch him with the flight manifest

(2:29:11) probably from MH370 um and yeah I mean I think that it's I I can't imag imagine it being anyone else like I said on Julian dory's podcast I said that if anyone out there can come up with somebody who fits the bill better than this guy please do I think it's impossible so I think that that I think that that evidence of Edward C Lyn if you were gonna if if there were **truth** here and something were **leaked** that was the most impressive find I personally that I heard from my seat I mean that obviously there's a ton there um that

(2:29:46) guy would strong evidence if we were looking at it that way I think that's a good find thanks Julian appreciate that I love that and I love that interaction hell yeah so last hands and

then like I said I recommend including that in the updated letter because that that just has a bar in itself like we're requesting a pardon for this dude like it got it just got real all feels up in here guys I think Smith then now I don't want jul Smith and then yeah so Smith hold on quick Panda are we gonna um stop

(2:30:13) letting people up should I stop approving people are we just gonna this going to be it the rest of the yeah we want the **truth** and we can handle it guys um I don't know I guess we my disc currently closed it's by invite only so if it's somebody I trust let them in go ahead the anomaly is why people get so bu13 Eastern Danny Jones Julian Dorian Ashton Forbes MH370 chat with Tupac Cabra with your host red panda koala UFO history of news documentaries free on YouTube click that link hey repost the space it's recording

(2:30:46) Ed yeah I wanted to say uh I was listening to the space earlier and uh enjoying it and then I'm like what is this going on because this concrete podcast which is like number one podcast they listen to okay so I run over there I'm listening to this guy and I'm like what this guy Ashton man he's like King of the normies and I mean that with so much respect I ran to his Twitter I'm like dude okay I followed him well he followed me I'm like why you follow me bro but thanks so I followed you back

(2:31:15) and then I was like okay that came full circle with this this other guy comes in here with his Emmys and **[REDACTED]** and I think it really speaks to like the future of media news act info all this stuff right like the amount of work you've done as is really impr we should listen to this I think that no matter what people agree there's something fishy and you know uh there's some you know it's super interesting stuff good conversation and it makes for good content so it's really good for the community it came full circle for me

(2:31:46) back here here to the community I kind of scred around the UFO Community U this gu's nice uh I'll catch you out there thanks for listening hell yeah thank you Smith thanks SM we get to that was amazing by the way nor my new uh thing um thank you guys for allowing me to speak um uh you know I just want to just make a few points just a couple of minutes so uh look I have had a look at um Herm ready for the YouTube size of guys Ed and it is um I I have to admit that it is very thorough um I I personally think that the way he's gone

(2:32:25) about it is is that I think he's been the most the biggest skeptic about this he looked at the videos and this is my mindset he's looked at the videos and said look um you know in order to um so soal U make sure that the the this is accurate he's gone back look at the timelines the evidences I think I think he's been been the biggest skeptic more than **MC West** as well but what has his investigation has led him to actually join the dots and actually I the way he come comes across the conference comes

(2:33:00) from the fact that you know all the evidence look at the evidence on his um the timeline on his thing I was very very pleasantly surprised that the person done such thorough investigation um and I'm just purely looking at from an investigation perspective have a look at the investigation I think he's been the biggest uh critic uh critic of of you know the so-called

timelines and trying to piece together systematically um what actually happened right so this is not something he's conjured up or something and I really

(2:33:31) respect him for that again uh and I also looked at Julian's thing um his podcast as well he's done a great job and I think uh we all need to agree just by looking at one VFX or something uh you cannot look at it in isolation you have to look at the holistic U evidence that U which actually makes sense so I personally think looking at I've actually spent trust me I've spent hours and hours and hours and just want to add one other thing before I um uh uh you know give up the mic um is I understand

(2:34:02) the science um and the science makes sense that the uaps are real um the the orbs that were um identified in that particular video um you know it obeys the laws of physics and um I think we want more information I think salvator Pas is the um you know is the one theories closely match the technology uh so have a look at that and um um have a look at the look at the evidences from a holistic perspective if any doubts you've got look at the systematic points that he's uh you know been the biggest skeptic I

(2:34:38) think bigger than M **MC West** as well but then he's actually gone and and actually done the research to **debunk** or just to make sure that he's covered all the basis I think we have to respect him for that and I I personally want to salute him for the the amount hours he spends selfless he doesn't earn a dime from this but he just wants to get down to the **truth** so I respect him for that thank you thank you Levi I think those are some really uh some I mean honestly great points nice words the data that

(2:35:07) Ashton has produced is I've never seen anything like it we look at these cases like I've been in spaces for so long talking to people who like live near cash Landrum and you know who know people who know people all this stuff and that's great but never have I seen an investigation into a case where you get this many points of data it's all just based off somebody's book from somebody else's story from some other anecdote and it's like okay but here we have something in the modern our time

(2:35:35) our time it's modern time the most modern I got you you know it's uh question you can if you don't want to have your thing in the chat you yeah that's what I like to want to celebrate too about as you not to be like totally like dick riding or anything but he's put in work that would be great to see other people do on other cases you know and we have seen some targeting going on and I just want to forget to other people Julian I I probably came off strong to you with my post I I just saw a lot of people

(2:36:00) retweeting it my tweet even me having this discussion with you or like bringing this up like this and anybody who's and any kind of content creation let alone like UFO like **[redacted]** where it's been covered up forc PO there's gonna be fishiness that goes on and anybody who's trying to make content just needs to kind of be aware of that and not saying like you this is like the first day post content so and so said this to me right before and that put you in a head space and I'll be the first to

(2:36:28) ITP you know I think he owns it too but uh I I don't **I want you** to know that like I'm not trying to like tear you down Julian by any means like like genuinely is coming from it's all on the game yeah hell yeah and I mean I want to address the elephant in the room real quick before we get to the hands obviously this isn't my my normal account why do I have to face under this random ass account because my first one was uh struck down with a false claim very weird that would happen you know nothing false about it nothing like you

(2:37:01) got permanent band or what tell us about it tup Carlos did the claim Carlos thanks Carlos you outed yourself again so yeah um it's a claim against the post where uh there was a recording of king milk fart admitting that he made up a a false accusation of a **sexual** assault using just a random someone with the same name as his Target and posted it and his excuse for it was well the guy didn't deny it you know that was up to him and uh I I commented what was my comment exactly falsely accusing somebody of rape just to smear them

(2:37:38) publicly is crazy that's what I said and that's what got that's what got struck down and I think it is crazy I stand by that I don't think I think what's crazy is your obsession with I actually think that the Striking that down calling attention to something like that right is important especially in this community and to strike it down you know with a false claim is putting more people at risk of this Behavior if you think accusing somebody of right falsely online just to smear them is something that should be done I'm sorry

(2:38:08) I'm not I'm not GNA **[redacted]** with you I think that that's crazy I think there's talk takes it on the we've seen a lot of people get with that same thing and they just leave and think about all the good work he's [Music] done might be like that could have all just gone away if he didn't have such a strong where team team you know he never called Heed you know yeah I was told don't judge anybody time meisten I thought that was just hater **[redacted]** and then yeah came out come to find out strong chin is really important here

(2:38:47) and staying the course kind of like what you're what you want to believe if if people are going to come at you hard it becomes part of the shield you have they Mass report it too and if it if it if it encourages more research and more open um conversation that's great right but if it shuts it down G is talking about stuff that's very similar to especially in public forums when this is being presented you know that's what I think feel you know they want to feel like feel yeah that's that's about like

(2:39:18) that should be the tagline forace people want to feel exciting for everyone to see this happen lot of feelings up in here and having a little say it gets people kind of going and it really helps with the support right but again the evidence should should fall where it falls right curisma and charismatic leaders is not NE not People based on followers we have enough right let's just get to the to the data and I kind of like that you have um real thorns on you Ashton to a degree that's reasonable but still offensive but reasonable it's

(2:39:45) not **[redacted]** crazy no one's going to strike you down for this you know what I mean you're just kind of hard to get hard to agree with I think to a certain degree and um but you are here

taking on the chin yeah I am genuine though but yeah I just wanted to say that and I just want to rate a beautiful we had was uh you know Julian saying like that stuff about Edward Lynn was very compelling and was hard work and as being like thank you for that like it's beauty of spaces right I feel like hopefully that even just that one little

(2:40:10) interaction was will help make their little whatever relationship or not they have kind of back I don't know mistress than Sonic gravity yeah uh thanks for letting me up to speak and I'm an of your podcast actually saw the stuff you did with uh uh James Fox and um yeah info I wonder if it's still the thank you brother nice to meet you too yeah you think for a guy doesn't who thinks it's all fake like why is why is always here with someone who was also in contact with Ashton and we had a conversation last

(2:40:53) night talks about me every really in relation to a bunch of things um she was kind of drunk at the time Inc pixie um Ashton and I we both know her her real name um the military and a bunch of people within the Pentagon they know her real name thank you very much and we always been able to Super Chat uh I set it up like a few days ago I didn't know what it did but allows you guys to donate money so that's pretty sweet I heard mention appreciate that man hey shyen hell yeah which I just want to let you know I appreciate the stuff you said

(2:41:34) I've always enjoyed our chats and I said that in the chat while you were talking that she was very scared and she said she knows where mh37 he is and uh yeah she was so emotional that yeah thank you Sean again very appreciate the donations to the ground we're using that money to upgrade our production she was in absolute tears so he was I'm hoping she's okay but the the thing that's worrying me is what was I goog that I feel like we're going to get you guys got me sidetracked **truth** but I

(2:42:17) I don't feel like uh that is going to be someone joined the panel ask TJ career indry we'd s here for like an hour and the the the other thing that she said was uh you know she's worried for everyone CU you know like Tupa you've spoken about this how people are being you know targeted and harassed and accounts to getting banned left and right harass of the wazu ridiculous tactics illegal tactics oh we're still at the top see it in real time we still at the top of infow war from two days ago still

(2:43:01) training top crap good you two days ago we're still trending we're trending above the the fake terrorist but around the wo who want the **truth** and damn we're still training feeling you know like that's wild that cut has been made in the military it's going be hard to keep quiet now guys and it's going to start bleeding out and and uh it's not going to be pretty is that Alex Jones and I I just worry for everyone involved because yeah you know like you see it as kind of like an in this isn't too bad I

(2:43:42) mean it's rightwing stuff be kind of well yeah yeah to borrow a word from luel zondo you know it's going to be somber brid a great that was the impression I got yeah once again Sean thank you very much for that I that way that's a really good point to leave that on I want to get over to the rest of the hands before I do I want to mention that I shared a link I just want to

repeat that need their money you don't need to give it to me you don't need to give it to this case we'll make it work without

(2:44:13) it but I do obviously all the donations no dude I appreciate you the work you do like it's crazy who you're talking to and it's also like just refreshing I like yeah we're spending our Fridays in the conspiracy world of topics that I think a lot of everybody in ufology should Vibe with UFO Twitter definitely Vibes with was the motivation for the appearance and yeah so there's a link up there with the you know we've talked about we're all conspir I didn't even think Dan was that bad actually I

(2:44:38) was kind of surprised by how netive com you guys don't follow it I did not think it would be that do to be in this I was I was confident I knew we weren't going to get dunked on people who talk outside of oh ghost 915 motorcycling this isn't a good brother you're on the right path than much we get the more ideas we get and frankly the more we have is good never going quit people start canceling each other for thinking outside the box when they start to um utilize tactics that show clear lack of character right then

(2:45:09) it's like oh what are we doing what the hell is yeah you have to be pretty open-minded to accept all this especially because lied so much about this case not going to run it was kind of surprising how easy it was to uncover the definitely be able to keep it open and make sure that we can you know on is about on fire like it really broke the Paradigm with how this was being controlled online through 280 characters at a time and through this kind of inclusion in the Inner Circle Outer Circle thing I got to do some work

(2:45:43) it just memes it was nonstop salt and spaces people can really hear you podcasts like Julian's and Danny's people can really hear you the production quality you guys put into it the ping you guys show for it it shows it shows I saw you just got like a new studio like everything's like it's well deserved you know what I mean you guys really put your heart and soul into it and the same I think the same thing goes for I hope I never get a big head about this stuff presentations differ you guys's presentation style yeah I put

(2:46:09) Ash's Channel up in the nest too and so did I put Danny's stuff in there so go everyone listen to the space go like and follow all yeah I don't know how it is also there's a guy I don't know if he's in but he he commented there in the thread he said I'll put 20 grand on soal Julian friend or friends in CGI that can replicate I guess the video and give give him two years instead of five months to do it I mean I that's true serious that's a long time we only need 70 days though I honestly think that you

(2:46:36) know it's a betting on the corridor crew is really smart because of their the work they put into stuff I me honestly but TBD TBD some of Flawless they're going to create something some of it's like you know it's getting there that's probably what they'll do next they TR to create something lot someone brought up earlier that not everything they do is like to that Perfection but we'll find we'll find an error in there you should get them in a space that would be so good as long as it yeah as long as it you know

(2:47:03) stayed cordial I think it'd be super dope those guys are classy he not listen to those the two guys that's the crew sorry not two guys but that's the crew I would have picked to to look at this video there's a couple other ones and I think didn't you say like they were still kind of even after it all they were kind of like these are pretty interesting videos right oh yeah yeah that's right Nico said that he said uh look these don't fault yourself you know he said you know if you wanted

(2:47:29) to look into these or or you were not not even take he didn't even say if you were taken by if this is the level seriousness you take these are real like these are very real videos there just a couple key things level seriousness I'm not really interest CGI you know and hey look we're looking at real videos let's make fun of them with the movement that sells it right say what Logan it was like the movement he says like the movement that's like that's what sells it or guy the clean movement of the the

(2:47:57) plane yeah yeah let's see here watch videos and make fun of them and pretend like we everyone sees it's compell it's like you know we just want to we just want to either and then put stupid pictures and videos and stuff they don't have to think about it how that's my op super super weird this is this is the people this is the major studio and then we'll probably wrap up here y yeah I was gonna say there a qu Crew episode coming out shortly I guess next week or something like that where you know this case kind

(2:48:24) of continues continues on through there yeah let's go yeah unfortunately they put picture of the Bigfoot and ghosts cartoon ghosts let me raise my hand um actually I just want to tell you that I your video and everything convinced like I believe it 100% these were already authenticated when I hear you talking about of the video I think and I'm not a CGI person or anything so right to hammer everything's a nail I'm not really convinced like by those kinds of analyses because like I think if I no

(2:49:00) one's GNA find the physics and everything has to follow the picture and I don't think that anybody would fake as crazy a picture of that you know the way it just kind of flashes and it's gone you know with like no debris when I think about like you know free body diagrams of the physics of like you know what happens to the you know the the ailerons and all you know the little you know parts of the plane that are how does everything like implode like that one thing that I'm concerned about when I listen to

(2:49:29) your like I think we like I believe it's 100% real um but I think the proof is in sort of the metadata of the capture like you know whoever you know capture obviously this guy's in jail or something I mean like to me that that's like okay it's real like you know what I mean like nobody nobody CGI yeah I don't do the drama guys just the drama is boring to me when I listen to your explanation like what happens like if you know I mean the has to be observed so when aces like that U videos you'll find it it's right

(2:50:02) top they to **debunk** had to go somewhere where did it go no that's exactly it man soals MC squ right so that's why it's not cloaking because we see the smoke Trail stop right if it was

cloaking still the smoke trail behind it it can't be Annihilation because equals MC if it gets annihilated then we would see a lot more energy right it's a nuke yeah exactly but a bigger nuke because it's 777 so it would be destroying part of the planet so that's why it has to be according to science at least as we know it right now

(2:50:32) it has to be some form of teleportation it has to be going somewhere else if as long as those videos are real that means that mass has to go somewhere so that's why we've been digging into that digging into that side of it talking to physicists engineers people are doing engineering experiments to try to prove that they can create gravitational waves um and that's why I created my podcast is that I want to understand that so that's the hardest for me to understand and wrap my brain around right I can understand the double

(2:50:57) slit experiment I've seen it you know I've watched it I've actually even done the experiment in real life when I was in high school but I want to understand okay how can we do this to a macroscopic object how do we do this to a 777 because to me that's basically magic and if that's real that shatters my understanding previously of really our entire reality is that you know to me now we live in a simulation where essentially magic can exist I mean moving a teleporting to 777 having it seemingly revert to some kind of wave

(2:51:27) function where it can just be moved and set down somewhere uh I would recommend listening to my interview with Bob Greener and Salvador Pas um they're a little bit long two to three hours but man they are very smart and I am not at their level with that yet but the last thing I will say is that from the people I've talked to the secret seems to be in electrical engineering um if that's the area of science you want to get into with this kind of quantum stuff Advanced scientific propulsion electrical

(2:51:54) engineering is the place to be um it all has to do with currents and creating uh room temperature super conductors and having these fields get kind of Trapped uh around toroids and other unusual shapes that can trap these fields uh very interesting stuff that I had never considered or thought about before hey if you want to DM me I'll I'll tell you how I think that happens I'm actually putting a DARPA proposal together because I created an anti-gravity generator and I turn it on and I got about a half a pound lighter

(2:52:25) there so if advise people about this if you guys invent something like this or an engine that runs on water just keep it to yourself you know what I mean no man you got to tell everybody like I don't know get KNC CU like you know because because you don't want anybody because just like you're talking about like that that person said I'm not feeling SU I can't tell you how many people even Ross Kart said hey thanks shobi thanks every careful and so that's why I don't think the arm are acting

(2:52:52) like eyes all out on my podcast experiment hi it's not like you can shut me up by you know just like you know send somebody to the house you know so I mean yeah sweet well thank you Sonic we're gonna get over to that's weird now great points and I hope you guys hit it up in the DM just F like Sonic is a uh he's a structural engineer he's like a genius little guy right

he's like a retired army ja pretty he's pretty dope sorry go ahead oh this was the one I used to watch hey Sonic to that point uh

(2:53:20) same reason that uh Eric Weinstein I like this one because this is this really explains it right you shoot through one and what are you going to get on the other side one one it right for publishing so he couldn't get two what you get two slits right this is what we would expect published it that's what You' expect what really happens anyway I it's funny I got to this thing Ashton tons of credit dude I got to this thing with project unities video instead we get a wave pattern like this old or new to this case it feels

(2:53:50) like old in some way for some reason when you shoot the through two slits it creates a wave P follow when I followed you when and I I fell down a rabbit hole since then your uh your video with Salvador Pas was great but I really like the the Bob Green Greener one that really clicked yeah me too man Bob Green click after that I went back and watched Jesse Michaels video with Hal put off and Eric Weinstein and that's where what Sonic was just saying so creates the wave pattern now what happens if we watch though and really what Bob Greener was

(2:54:29) saying all kind of click together so if we if we put a an observer here to watch and try to figure out which one it goes through what happens is Material Science pattern changes that's what's been going on if You observe it clearly says it right there there says it within the video I've got two patents and a company forming around uh we think the way he says it it is topological physics the act of observing breaks down the Wun watch Jessie Michaels video with pal put off and Eric Weinstein watch the

(2:55:07) first 30 minutes of Sal Pi doesn't like these videos anyway check out if you want to know how this all works observation changes the way function the **debunking** part which strikes me so weird is that it's the very end and like oh it's a it's a 90s video game image well wouldn't that be a great way to cover up what actually happened with just a 90s video game image F or a frame or two or whatever else if the rest of the video was perfect but then just that one spot is off I mean and mck West it's a great smear

(2:55:47) it's a great smear it's a great headline smear that's the easiest way to write it off oh it's a of getting tired we're going have to go to sleep here soon this has been like what three hours sitting in here ridiculous they they just salted that very end piece and that's what's so interesting is that that's what's being **debunked** I don't even care what I'm really yeah appreciate it Sher Jimmy James everybody in the chat thank you guys greatly appreciate you guys made me understand Eric Weinstein who

(2:56:17) I've listened to and been following since 2016 and it takes super hard to follow him but I'd love trying to figure it out Bob Greener does purp I I agree I agree and I fall forward I dig it but listening to Bob Greener talk about it and then going back is put up and Eric do a little dance if you watch and if you look at my Twitter I kind of I kind of put it out there check out Bob pretty spicy videos because I think the science side of this this needs to go it's scientifically it's Poss because what Eric says and

(2:56:55) what Hal agrees with it's not rewriting uh general make sure you guys like the stream I don't know what that does gr into the next phase gr still works but this is the next pH phase and and Hell say kind of related he said like U soon as you snap a picture happen you see one state we're not really sure no one can adequately explain the double extal Dimensions I think that the best explanation of Double SL experiment is the universe is aware of itself we can see in front of us really hard damn near

(2:57:29) impossible is to think we can use quantum teleportation quantum teleportation is also known as quantum entanglement non one those ideas with with Joe Rogan I think but yeah thanks that's weird we got some more hands up I know that Red's probably got to wrap this up I don't even know what time it is on the East Coast right now um so who's next was it Fletcher producers for probably a lot of people fell for the debunk man all right a lot of faith in a lot of people one of the things I want to say about this this

(2:58:00) you UFO space is like really esoteric you know the the only information comes from networking with each other there's not really anywhere else to get it other than just bits and pieces here here and there um and it's really easy um also there's there's more disagreement in this kind of field than I've seen in almost anything else um so who's this Fletcher and I think that's just part of part of this whole thing um one of the things that I would like to see is I don't know maybe it's already

(2:58:33) been done another independent so some people actually argue they could be in super position and all that other stuff geter really really good one that can dive into the code of this video and find out exactly what background going on thank you guys though for being here what exact has been done to it you know Project Unity in here I don't think so you know to the uh you know that crew who analyzed it maybe um maybe part of the stuff that they were seeing that wasn't um they said could be CGI that could just be part of the AI system of

(2:59:12) the camera because you buy a new camera these days um phone you take a picture of it phone does tweaks to it right after you take the picture um so it could just be part of that um univers the main thing for me is that this kind of Falls in line with everybody else that's been talking about all this stuff government whistleblowers Anonymous or non Anonymous where is this analysis going other dimensions uh Robo good question the analysis is going you know back TJ wondered like why I'm doing this these other really credible people

(2:59:52) we're trying to get the truth out we do that get as many people as possible we force an answer from media analing I think I think it falls in line with everything else that's going on so I mean if you're going to just write this off as nothing kind of have to write everything else off because it falls in line with all the same same conversations um yeah that's pretty much all I got no thanks man I don't think you're the only one who think okay so we'll get to Jon then robit then Carlos then end with Zay yeah

(3:00:28) the space was healthy Ian this was good uh guys yeah I'll try um this is probably more for Ashton um so I was listening to the Dan Jones podcast today and when they went to the part

where they uh they were showing the video of the VFX guy **debunk** um they kept talking about the cameras and all the cameras work but as far as I know all the camera Tech on the mq1 Drone or the satellites it's all classified it's all classified um technology right so how can we compare that to uh the civilian the the the technology that we have on the

(3:01:02) civilian side and say that oh it should act that way uh it's to me this is not a one-on-one because the thermal camera on the mp1 is probably far better or can catch more information than we can with any thing that we have on the civilian side they were they were saying oh you can't see the smoke on this thermal camera but what what tells us that we cannot that the mq1 camera cannot see smoke on it so I don't know Ashton if you went over that point yeah no I mean I I did mention that like you know what

(3:01:32) we were looking at there was not a thermal camera it's an electro IR camera multispectral targeting camera that had a thermal layer added over the top which I think they missed um and I I don't know we're in a good spot so I don't really want to dunk on any more people or anything like that but reality I think is that if we are if people are going to try to put a **debunk** out there like at least look through the evidence beforehand right um a lot of the stuff that was mentioned on there the reason

(3:01:53) why during that podcast I was taking notes in the middle of is because I already heard everything um so I think that people should go out there and look at the evidence if they want to try to **debunk** it I've been pretty clear that people should go and attack the evidence not attack me I mean there's all out there pinned to my profile I mean you are a fraud though so I mean it's hard not Carlos I try to give you a chance but yeah just just some people have mental issues you gotta leave them be you know it's it's disturbing um but

(3:02:21) yeah so you know I think that uh like like I was saying that the the cameras you got to look into what the cameras are right and a lot of it too is classified so interestingly enough though a lot of what we revealed has come from the **debunking** side of it like people would claim that oh well the the satellite can't be should be moving faster right and then we find out this whole video about cbers that's just available out there on locki Martin and explains everything about it and it actually is corroborated then by the

(3:02:47) fact that we have this low frame rate six frames per second because what we're looking at isn't the satellite looking down and we know too because we see the coordinates moves which would be pretty much what we would expect from a Google Earth right when we look at the coordinates if you're just looking at a satellite looking down that's moving you're probably not going to be looking at the coordinates you don't need that because you're just looking at wherever the satellite's looking right but if

(3:03:05) you're moving it around that's essentially telling us that we're not moving the satellite around what's happening is we're looking at a Google Earth that's taking satellite data from all over the world all the time um and that's why I'm really appreciative of kim.

(3:03:18) com posting that and reposting that I think that we were able to uncover stuff and technology that most people weren't even aware about you know so that's part of the most interesting thing about this case in my mind very true I don't want to give this any way first of all I think thank you Jordan Perez you're bringing some compelling data to the table as we appreciate your dedication of the subject learning something new every day uh so obviously I mean you posted a video about I don't even want to give it credit but you posted video about that

(3:03:44) Global Network of satellites let's not dunk on Julian he was he was nice at the end talk about Flat Earth well that's kind of important to because that's messaging we see coming from Matt Ford and Bangkok Ford so that's totally part of their like is to tie him is a flat earther yeah so it's like bring also bring sorry what were we saying Tupa I'm sorry uh yes or no flat Earth what's going on I'm not a flat earther I believe in okay okay I just had to I mean obviously we had I did not know

(3:04:12) that though red like red panda said though I mean a lot of this is to try to discredit my position and make me seem like some sort of woo woo type person right which is you know part of the reason why I don't dig into anything esoteric it's not that I want to hate on esoteric stuff like psychic stuff remote viewing it's just that you can see already how the attacks form right they're looking for an angle to try to discredit me from whatever I can whatever they can do right I even heard like the Russian propaganda thing come

(3:04:40) from one of the more prominent UFO accounts that have been against me it's like dude I have a literal security clearance for the US government I'm not a Russian spy and this is not Russian propaganda I think if anything you want to call me king of the normies I'll take that I'll take that uh whatever characterization hell yeah so then robit and then Z and then we'll close it out thank you Jimmy quickly thank you guys thank you Jordan Perez again appreciate those awesome hey I know we were

(3:05:05) chatting last we actually finally talking about get too heavy in the questions but yeah I'm with you man you know that stuff that you're bringing up sure it does fit right videos people it but no it kind of fits the bill because you know I know I know that flight one thing happened over onec and it lost radio contact and sat calm and it starts turning around but you know why didn't it land it it started to go somewhere else you know and then it's going over some other ocean and it loses radar contact and then somehow it re R

(3:05:39) tried to link up a satcom so it disappeared for three minutes you know so maybe the some military people's you know moved it out of there or or some UFO stuff moved it out of there you know like a Teleport because they did move it but yeah it was in trouble for quite a while it's like they were attacking it you know once over one ocean and then again over the other ocean it it almost looked like that one of those orbs kind of say it came so close to the bottom of the plane maybe it ignited the lithium

(3:06:08) with all the energy that it has you know because it sort of looks like it almost balanced

off it and then there's a little Puff smoke in that video that you put out so that's cool that's real cool Ashton yeah so yeah maybe on you know like even the old guys like me that listen to coast to coast and stuff you know we've we've listened to it before and but that this kind of just adds a whole new you know cherry on the top right so right on man hey thanks for all let me come up thanks robit appreciate

(3:06:35) that and uh yeah I'll be on Coast to Coast on Sunday morning I guess I got the time wrong I'll probably most the updated thing if so if you want to listen live I think it's 3:00 a.m. eastern I'm going to be on with Richard cyer CIT he is really good I did a podcast with him um so I hope to not let you guys down and present some strong evidence there as well so thanks a lot for listening man sweet and then Zay and then we'll get some last words from the panel Zay uh thanks I'll just start with a

(3:07:02) comment and then the question um Ashton you talking about esoteric stuff and things like that a lot of what we're dealing with is not actually esoteric it is actual physics time space physics it is it's the science of existence and our science actually understands the beginning of it and for me I speak for myself I don't deal in W what I talk about is actual physics and there's somebody else called uh L Luci's Labs he also has produced books and YouTube videos explaining the physical yeah great so he

(3:07:44) has and there lots of others and they probably don't hang around UFO Twitter for now obvious reasons my only issue I had with those guys podcast is like that's not how they treated other people Le I only found that out afterwards maybe if you can just summarize where to next both within the interactions of what has been spoken about and in general with the work that you're going to do related to that missing flight or other that would be great to know thanks you can take it Ashton if you want to start yeah um so yeah I

(3:08:21) appreciate that and I didn't mean to offend anybody like again I'm I'm not against the esoteric stuff I think that if the double slit experiment's real and you know essentially magic is pretty much real if we can teleport something then it's really hard to judge anyone in terms of any type of uh esoteric stuff psychic readings things like that it's just a matter of I can't tie to the case because you will have people attacking me over I just can't leave there be any more Avenues of attack uh it's already

(3:08:45) big enough it's already hard enough to believe in that front terms of what comes next um the purpose here is to try to make it self-evident self-apparent so if you get I think the evidence is so strong that all we have to do is get it to enough people where then it becomes impossible to ignore right right now the media is ignoring it as you see it's getting bigger and bigger we still have the number one article on Infowars for two days straight Anonymous re made a video that they posted out there that's

(3:09:11) pretty much just highlighting my work etc in general but again this isn't about me I never want it to be about me if other people want to take the evidence run with it come with their own stories please do the more people that do the less heat is on me and I don't mind that

at all um so yeah that's really what the the purpose of this is and maybe one day we will make a documentary I would love to have a documentary because I think the point of that is that we can make one way better than the Netflix one that's out there I

(3:09:35) just think it's crap I'm just going to [REDACTED] on it and uh I think that as well that our documentary will get to a bunch of people and I think it'll resonate with people and people will enjoy it I have a lot of people tell me that I would never listen to something for two hours but when I listen to you talk about the evidence you know they can get through the whole thing which I think is some of the highest praise I can get so that's my uh final thoughts thanks everybody yeah I I I think I probably

(3:10:00) shouldn't have swor there that's going to get me and this has been be like a dog in in this entire space here but the official story and huge air quotes that we've gotten about this thing is obviously total [REDACTED] and something crazy happened here what I guess is still up for debate and I I yeah never giv up man love to get to the bottom of that it's yeah the new headset's more comfortable 10 years now but in a weird frh it's not like the JFK assassination so many years ago people are dead like

(3:10:32) the people around this are alive today so it's it's fascinating yeah as far as like the issue I had with those podcast they just didn't come into with an open mind personally haven't made any plans for that um you know I'm kind of focused on getting to my next episodes with stuff and staying up to date with the with the case but if there's an opportunity that presents itself is it about this that makes people so angry Bea the podcast where we can look through evidence and I think it's I'd love to see

(3:11:05) Ashton Julian Dory one day I feel like that would uh solve all the all the problems and that's how you get disclosure but do I know both you guys have uh podcast do you have any guests you're excited for coming up you want to talk about oh yeah I have uh Brian I I have Brian keading coming on next week um great guy just recorded with him so that that was a really good sit down um I got did you guys touch touch this I'd love to hear his take on these videos no no because I we did not get to that we did

(3:11:40) get to some UFO stuff but we didn't talk any mh3 370 unfortunately um got Lawrence Krauss coming in I have Nick pop won be talking about but we'll see desk in Britain um I got Paul rosley I also do not like being a Schism in the community I think that's just what happens when the evidence is this strong Ashton oh yeah so this Sunday uh at so I got a double header I'm GNA be on that Coast to Coast early in the morning and then at 1M Eastern I've got Dave Rossy who is going to talk about Advanced

(3:12:15) propulsion and some of the experiments that he's been doing and we're going to talk about the videos and what he thinks is going on the videos because I think that I've talked to a lot of different engineers and physicists and everybody's ideas are very closely aligned but it feels like everybody's got their own kind of take on it um and so that's why I'm trying to reach out to a bunch of different people and so I can understand it in totality so yeah check that out at

1M Eastern hell yeah and let's get some

(3:12:38) hearts in the chat from everyone for Ashton and Julian and Danny who was here earlier Julian I feel like we kind of got on a bad foot because that post but I was just I saw so many people quoting your thing who I know hadn't ever quoted you before and I do think wor yeah we have to prove how the video made or we have to we honestly have to get Edward L is really the only way we're not going to Pro where the went you know we're all getting influenced by certain things and we just got to be aware of that [ ] so hell

(3:13:03) yeah thanks for being here guys Tupa Logan you guys want to say anything close it up I'll make we down here for this 250 mes the fact that we have people with the caliber of Julian and Danny in here at all addressing this with this speaks stuff that we could do things out in real time going to happen I'm going to throw TJ I think it just speaks to every to right to come and everybody uh got to learn who everybody is and the takeaway is follow everybody bro like the research done on this panel the stuff legendary stream

(3:13:45) this was a good one guys glad you guys enjoyed this glad you guys joined my commentary TJ no personal feeling no hard feelings we love you so check out his jul Danny no jul against you sing on you guys dur this not my too much but I think it helps at least it's not my intention to divide you know I just try to break things down with humor so hope you guys don't take take it personally it's good it's it's good to talk to out same with Corridor crew as well nothing personal against you guys uh I hope you guys can

(3:14:18) find you know the person that made these videos then put it all cool guys well I got something to close out the space uh thanks everyone for being here hopefully check out everyone's stuff check out Julian stuff okay we're gonna close out of there um and then so yeah thank you guys everybody for being in here tonight um talking about all this we do have a big uh big podcast on Sunday tomorrow is going to be a very very busy day guys uh we're going to be be probably trying to get this video pushed out which I I was

(3:14:47) supposed to do today but I had some emergency stuff happen um had a flat tire that I had to take care of had to cancel a podcast spent three hours with the alien addict guys um we sat and we watched the Danny Jones podcast and reaction to that and then you just saw what we just did here for the last few hours as well going through all this um and it was it was a long day so tomorrow we will get back to some content probably I will most likely be streaming and we're going to be preparing for the interview and yeah digging into the

(3:15:18) science it's going to be fun man it's going to be a lot of fun thanks everybody who's been joining recently if you want to get caught up on what's going on uh you can find the evidence Link at the top of my Twitter profile here alternatively you can dig into some of the recent interviews I think that if you want to just hear about the drama side of it you know alien addict and I had a good discussion that wasn't really about digging into the videos it was about talking about about what's been going on

(3:15:44) and everything this is a good one to listen to and then if you want to get into the sci uh you know the story of it what's the best one to listen to chat uh probably at the mic with Keith this one was really good if you want to get caught up recently so you can listen to my space on my podcasts I'm also going to be publishing the list of all the podcasts for the hardcores that are out there that want to listen to everything I mean there's a lot you can see we've had a lot a lot a lot going on so thanks

(3:16:11) everybody thanks all my bots out there yeah that have been that have been fighting you know bringing the word out there let everybody know about the videos be courteous to people a lot of people are going to have a hard time believing in the videos so we can't attack them if they don't believe in the videos let's just try to reach the people who are open-minded who are willing to look at the evidence and so yeah I think that's it everybody have a great night we will talk tomorrow peace everybody

(3:16:43) if I can figure out how to close the Stream

MH370x Working on Storyboards - 11/23/23 - YouTube

<https://www.youtube.com/watch?v=7baGK-HmD3Q>

Transcript:

(00:29) for for for for

(02:09) hey guys damn you guys are really quick it's pretty fast hey everybody let's uh let's get this going hey let me get this ready to go here hey everybody Welcome to tonight's stream uh I want to get going pretty quick on this and actually get some work done tonight since we kind of were just chilling last night yeah Happy Thanksgiving everybody Happy Thanksgiving to All American and also to everybody else in the world as well so tonight I want to do work yeah smack that like button careful with the all caps I'm GNA have to probably um

(03:05) do something about nightbot because nightbot don't play Hey red panda thanks for being here thanks for supporting red panda uh doing all that you do out there appreciate it so we need to make a storyboard for satellite video explainer see how we're going to do this um okay we need USA 229 Minister say yes yes sight video stereoscopic Pro what else we're going to need here it's already a lot then we talk the science orbs moving mock

(04:13) 3 orbs making the field around themselves what is it called nonradiating boundary how did we might have to look at how Salvadore Pas explained the other way that you can do can you can create the super conductivity can't remember damn hey everybody uh I haven't found a Motion Graphics person I mean there's some people out there who are following me who are

into Motion Graphics but um nobody in particular at the moment so if anyone wants to help one

(05:22) thing that I need is well torsion physics I'm probably going to save that stuff for the second video the hard part is trying to explain the science correctly I'm not as I want to be sure I get it accurate um it was something about maybe it's from a total pattern I need to be able to explain it correctly give me a sec thought I took notes on

(06:28) here guess not oh there we go yeah was something like that overcoming the swinger limit thanks Big Pooh uh think I need something slightly more accurate than that yeah maybe that's how we'll explain it so the coherent matter wave let me look at my notes Here maybe it has to do with getting in

(07:48) Phase not sure we might have to avoid some of that if we can't explain it something about the swinger limit might be it I might have to go back and look look at take a look at it hey everybody you guys are able to see right yeah okay yeah the stream with Keith was great I would definitely recommend checking that out so how are we going to start this I think we probably start with this video we're also have to show the cers video right maybe we put cers first we're not going to be able to show

(08:59) everything what shines drone images yeah I mean a lot of people are just going to instantly believe it's fake there's nothing we can do about that teleport not really time reverberation but there's going to be time dilation for moving at the speed of light yeah 100% wait somebody just hit something right there phase conjugation definitely phase conjugation sounds right something like

(10:23) that doesn't sound quite right I wish I was smarter we will get smarter though um the science part is the hardest part because it's like there's like no public sources for a lot of this stuff and there's a lot of theories that are all very similar but not quite exactly the same yeah you need to check out time dilation yeah theory on the zap is it's uh a um macroscopic Quantum con or Quantum conjugate ation or macroscopic Quantum coherence however you want to think of it give me a second macroscopic phase

(11:28) conjugation oh thanks big poo give me a sec appreciate that people send me a lot of stuff that is interesting like launched air vehicle system a lot of this stuff's just kind of like I don't know uh big poo I didn't get your DM if it's on Twitter I didn't get it at least you might have sent to the wrong person poo Okay so we pulled this one up and then we need the other clip where's the press conference I'm gonna have to turn off my

(12:34) music hold on I'm going to need sound for this okay Hermes yeah the vacuum is fractal okay let's see I want to try to get most of this done if we can it has the more you force its rotation the more the fulcrum there is forced to spin we might force it to increase its angular velocity and in doing so uh it's going to push the thing that's in front of it if it's repelling it away from it and kind of force it into an equilibrium position which would be 180° out of Fae which is kind of what you need to

(13:32) produce coherence in electrons as it tilts as well um it forces rotation and spin together so one is forcing energy concentration which will then be radiated as it is here and one is forcing bin in the other orientation where is my thing for the minister oh here it is phase coherence and this Center Point here we are looking at is the center point of a topological monopole this is the point usell regions are we in we are in tou Reed dat from theine manufa yes yes okay we need that for the first half of

(14:34) that and then we'll go into the cers video probably going to move these into another folder to make it more clear to figure this out new folder satellite and subers okay let's see what we got here this got that stereoscopic proof [Music] just didn't have

(15:47) sound I might have to clip this somehow people really say it's not stereoscopic huh it's pretty weird how do I clip this oh I know what I'll do I'm G to clip it the oldfashioned way that's what we'll do start it there take our snippy guy

(17:05) is that long enough that should be good I think that's solid right yeah save that okay uh maybe we should make it a little bit longer how long was that yeah I think that's good enough save that guys we're never going to know the full reasons I can't Divine things that are I I don't know right can't know why people do stuff we can we can speculate which we've done we've pulled the evidence

(18:09) together already the bunkers just don't really matter at this point unless they go find the person that **leaked** these there's nothing they can say or find the person that theoretically made these I guess we already found the leaker so I don't mean I don't know they don't even have equivalent amount of evidence as to we have who who **leaked** it okay that's those videos and then we can jump into the satellite video what should we do first that's probably a long enough explainer right USA 229 fly over we're probably going to

(19:06) have to cut the fly over as well let me grab that I'm learning how to video edit guys we're learning together so I think the move here is we cut it like here a little more like here let's see if this works see how that looks that's pretty

(20:12) good let's look at it again okay that's solid okay save that over Mr saying yes yes probably I think we do a quick snip of the Wikipedia I just close that see USA 229 oh man I hate when I touch the other thing there and it just changes the size of this it's

(21:18) annoying how's this look right now okay I think it looks fine uh guys please don't bring up mh17 in here we're not doing that is there a way to make these hyperlinks go away maybe we'll just use both it's fine let do snip this

(22:57) highlight let save this okay USA 229 sign intelligence like

(24:11) this and steal this and look at this guys I saw **Mick** West yesterday trying to say that cers can't take video like what in the hell man how are these people exist in this world I can't tell if he's just 100% a spook or if he's just really that incompetent it's un delusional the cultist of

**mcwest** are some of the weirdest people on the planet for sure they're basically people that think nothing can be

(25:18) real um there's uh there's no way the plane crashed in the South Indian Ocean guys they have the plane running out of gas there's nowhere else for it to go it doesn't matter how big the ocean is can't go anywhere else you know how like fuel runs out they searched everywhere I really it's like weird how people just can't think logically the ocean's really big guys yeah and so is fuel is limited it's not infinite you can't just keep flying forever I wish people just think

(26:02) logically for once in their lives sometimes it's funny because like people on **Reddit** it get so offended like Ashton's so mean well you know your arguments are bad it's not my fault people think that like being right is based on like being nice it's not how it works it's certainly not based on popularity either okay um we got that we got the minister saying yes yes let me look at this again sorry I'm making a folder that has everything in it we're gonna have to clip the cers thing too oh if I saw tired it's cuz I've had

(26:59) like two thanksgivings today I've ate so much turkey and food I'm just full I think we clip it like here or we could clip it back here somewhere we clip it here or do we clip in the beginning imagine looking at this and thinking we don't have full 3D video playback of the world or just video playback in the entire world like what the hell what do you think these satellites are doing man what do you think per persistent monitoring means I swear man this is why **MC West** dodged uh dodged debating me although there's really no

(27:52) point in debating them anyway because they'll just continually repeat false assertions as if they're true that seems to be as only go to I think we're going to clip this in the beginning okay let's just like this it's probably good maybe this beginning is too much yeah I think it needs to start a little bit later

(29:00) it's honestly really good yeah what the heck man why does it do this why did it just do this there it goes uh okay let's pause it there let's do that ah I waited too long when does that start 12 seconds so we want to catch it about five to 12 seconds okay 7 Seconds should

(30:07) be long enough like this start stop it right there jeez man oh it's cuz I pressed the thing in the bottom left that's why okay I see close that I think that's pretty solid yeah okay that's what we want let's move this over here okay okay let's see what we got here I guess you guys are just talking to one another it's fine yeah all the **debunks** have been

(31:15) **debunked** every single thing you can think of has been **debunked** there's no **debunks** out there that have refuted these so it's mostly a matter of just getting caught up to speed with them but if you watch pretty much any live stream I do we've **debunked** them all the only way to **debunk** these videos once again is to find the person that did that's the only possible way there's no other way to **debunk** these videos doesn't matter what people think looks like doesn't matter what they think can be

(31:40) real none of that matters only way to **debunk** them is to find the person where's my other video where I put that other one H click links is in here and I had a good one where is my clip did I delete it notes well I had a better one but this one also shows it so if the two frames were the same this picture would be all black so the two frames are not the same the problem with **debunkers** is that they speak in absolutes but they're stating opinions and what they mean when they

(32:43) say two things are the same is they look vaguely similar but this is after they modify it and try to reduce the contrast and everything else and you can still see that the plane's not a match you can see that the reticle is not in the same place and you can see the interference pattern is not the same either this would be all black if they matched so I mean words mean things that's I think that's really what it boils down to is words mean things and the VFX doesn't match you can see here this is not a match they're

(33:16) similar yes lots of things are similar that doesn't mean they're the same it's really just basic logic like first grader logic I mean this middle part's not even remote the same like that's the weirdest part it's not even remotely the same in the middle I don't I don't get it so yes we've refuted every single **debunk** they've all been refuted I don't mean to be rude or anything it's just it is what it is and uh here's one more for you for things people that think the two frames

(33:51) are the same if you take two very small samples of very homogeneous compressed videos then you adjust the contrast and the brightness and the scale you'll get pixel patterns which match you've crushed all the data to such an extent that anything will Trend towards the settings that you've applied the two original frames are not the same the noise patterns are not the same the orb placement is not the same the reticle placement is not the same the IR sensor overlay is not the same his **debunk** is quite literally ignoring the forest for

(34:20) the trees which is hand selected and called until only identical trees remain here are the two frames without the alter I want to point out this person is not one of my followers I just followed them because I saw this if you go through here they're actually replying to **Mick** West who's had me blocked forever because facts hurt his feelings or something I don't know I don't really care frankly he's free to block me if he wants doesn't matter to me I think it's funny that people that cry

(35:02) about me blocking them I have no problem blocking me there was one person in one of our spaces where he was like it's so saying something about how I I'm treat people badly by blocking them and I'm like but you blocked me first he's like and then he was just like oh well it's okay if I do it but it's different if you do it like what it's ridiculous man okay so what are we going to say I think that's enough to make us short here we've got that so we let's run through our Clips make sure we

(35:47) got so I think we'll do USA 229 USA 229 Wikipedia Sig yeah that seems like a pretty good amount and then we can write a thing up for this let's just see how long I think this should be enough time should be about right so we come in and say we were able to use amateur

astronomers

(37:01) something like that so we start with this put this here something start with this right see something start start with that then we can roll into the Wikipedia right and we pull up this show

(38:26) this we can mention we could even mention the Trump satellite picture here I think we probably will okay let's see here for

(40:13) we might move this down I'm not sure probably will move this down then we'll show Sig there was a Black Vault somewhere this one's going to be pretty complicated to pull off I don't know how I'm going to pull this off man SIG Black vaults here it is can we search I don't know where someone told

(41:22) me about triplicate in the satellite videos yeah Happy Thanksgiving everybody and to everyone in the world everyone in America Etc oops did I just just kick the camera Jesus should be fine yeah happy holidays the flake the fake block outrage is hilarious man yeah I want to know gush's thoughts as well I think I have a way to figure it out but the problem is a lot of people are being misled by the fake uh fact checks check the link what link okay give me a sec looking for my oh there he sent the video okay ni effect that's the ability of of

(42:24) the of of the superconductor to actually I believe it actually forms a magnetic field of itself of of its own some sort of Edie currents that actually form on the superconductor and something called the London penetration depth see a magnetic field will actually penetrate the superconductor interesting unlike I thought it worked around it see that's the beauty of it it actually goes to the London penetration that but what it does it forms Ed Cur which talk to a magnetic field opposite that repels the magnetic

(42:56) field that's put upon the superconductor so yeah but there's a Landon penetration that and and you can I actually I remember maybe maybe I don't know there's pretty much no way we're going to be able to access cell phone data guys it's 10 years ago and it's private companies we don't have that we can't make private companies give us information h

(44:45) we do the Sant payload as well Sant payload okay we got second payload um for

(46:06) yeah there's malde sighting early in the morning problem with this malde sighting is the time 6:15 a.m. local time but yeah if the plane was there that's pretty daming we got a lot of images for this one damn which press conference was this day five I don't remember which press conference this was from we may have to go look back at my Twitter profile for this one when was this coordinates indicate nicobar Islands we need

(47:10) that coordinates indicate nicobar Islands for let's move this

(48:23) up designation this we need the image of Enola 22 as well let's grab that oh here I finally found the the **debunk** image here's the other one this one's a little better than the blue one

easier to see I'm going to put this into my **debunk** folder hold on

(49:27) was in images no wonder I couldn't find it what the hell man images okay this should be easier to see if this would be all white if they were the same frame so the duplicate frame **debunk** is also dead like every other **debunk** it's also very lazy like every other **debunk** just in case you missed that I went kind of quick this would be all white if they were the same frame just ridiculous people fall for this stuff because they just desperately want to believe the stuff's fake we did the uh what was it the

(50:17) reality perception test yesterday 40% of the people couldn't tell the difference between something was fake and something was real they were looking at something was real 40% of the people thought it was fake and those are people who believe this stuff's real so people that think stuff's fake probably be like 80% 90% of them would think it's uh fake just goes to show that what people think is fake is not very accurate where is man we did a lot also we have a whole list of all the podcasts look at all

(50:53) this and this is only since this is the only the one since my first there's like probably another eight that were in my first compilation and I think a couple are missing on here as well it's a lot of podcasts man I got to find the room 2008 link as well let's see what we got going on here Bob's guessing the orbs are plasma um yeah I think it's more of a non-radiating boundary is the best way to explain it the mouse yeah the Mouse um let me pull it up so you can see the mouse come onto the screen like right

(51:50) over here pretty much wait for it see the mouse Mouse comes off the screen to the top there's your mouse the mouse is moving at 24 frames per second the background is moving at six frames per second for

(53:19) oh you guys are fine the mald sting 6:15 a.m. I've already looked it all up when it comes to these videos there's not very much you can catch me on that I don't know about already there's the Matt Kim thing CL locked Martin locked Martin's trending where did we catch him it was a while ago huh it's been two weeks yeah we're definitely overdue to post the videos way overdue do we get Sean Haslet on this list

(54:31) I think through a through a glass Darkly is Sean Haslet right yeah threw grass Darkly has okay here it is we are in touch I don't remember why I was even coming here though oh we want to know the day press conference did I say I don't remember what day this was hey actual X Files episode OBD

(55:45) thanks a lot man that's really generous of you uh I appreciate it m370x appreciates it hope you have a Happy Thanksgiving oh is it cuz grush called locky Martin out makes sense we play the super short video

(57:03) probably need to figure out what day that one was thanks again though yeah for that actual X Files episode new the early I don't know the X Files episodes kind of weird some of

them are pretty uh preminent but other ones are pretty miss the mark pretty heavily imagine if they did want bought the plane that would be wild uh I haven't talked to Kate in a while but I could if I wanted to think I'd rather leave her alone and how are we going to figure out the day press conference so it's not going to be easy

(57:54) huh how we going to figure out what day that was it's not that one to turn off all of this diagnostic information that it regularly sends out is that is that actually technically possible that it would disappear from the radar but also all of this diagnostic information that's routinely sent out would yeah you my description nice day five press

(59:01) conference okay we'll place the short persistent surveillance where did I put that from yesterday think we can untweet this only reason why I retweeted that is cuz I think that that reply is like way hidden at the bottom yeah it's not even like down there we definitely need to thank Elon mus though sure Ashton the white why do these people so so salty about why did you block me guys guys why did you block me it's ridiculous man these are the

(1:00:05) people that get mad when they get blocked probably true yeah I won't block this person cuz that that one's not coming from a mean-spirited place they're just coming from a skeptical Place bit different bit different a lot of people just come from like really salty uh places and then they get blocked and then they rage about why they got blocked as if they don't know damn it's got 135,000 views okay I really didn't think that one was going to get a lot of views that's why I didn't post it last

(1:00:46) night I just figured to post it in the morning 168,000 got to part my hair a little better in this uh what was I looking for man I'm already getting super tired the trip to fans kicking in from the turkey yo it's kicking in hey Brody are you on Twitter if you're on Twitter um tell me your Twitter tag so I can and follow you and then we can talk about potentially adding you to the Discord otherwise the best thing you can do is you can just State your information in the chat right now whatever information you have to

(1:01:46) share oh I was looking for the global persistent monitoring where is that one here it is global persistent inter hey oh what does this button do there's like a one next to it and balloons I don't know how any of this stuff works but thank you very much AA for the \$5 appreciate it just watch the podcast with the the L Lodge yeah yeah L Lodge was pretty good although I'm I'm going to have to say I think there's no chance this plane was shot down over the South China Sea that's uh just no chance of that you

(1:02:24) have to you have to basically ignore all the evidence in order to think that the plane was shot down over the solid CH toe which doesn't really work too too well but I think everybody can believe whatever they want I don't really care um serice system which is global persistent interference milance Global why does infrared not look right two L's right what doesn't really matter I guess I'll be reading it but yeah I appreciate a appr appreciate everybody who's who's donating was donating yesterday

(1:03:06) Etc um yeah all those donations will go to helping the case and stuff like you know having a better camera like we just got it was an expensive investment but I paid out of pocket and uh yeah I think it's worth it I think the case is worth it especially if we can make more videos like we are working on this satellite explainer right now so then we go okay so we sign payload then we we switch over to Sig payload then we switch over to this then we switch over to cers short and then we need the satellite designation I don't think I pulled that

(1:04:09) up yet oh I want the admission um we need that admission here it is I'll show you guys in a sec

(1:05:12) sorry I'm just saving saving these into my folder so C solved o this is incriminating this is pretty incriminating um so where are we going to put that so we'll play the C short we'll just copy and paste this right like can I just I have to retype this I guess since it's an image

(1:06:50) I think I'm just going to take a snapshot of the snapshot [Music] okay s Sal pay Trump satellite where where do we put the Trump satellite satellite

(1:08:02) yeah this is definitely going to be enough I don't know if we're even going to have to go into the science of the stuff okay let's see what else we got here I don't think everybody survived no I think it's pretty hard for people to survive the situation that we're dealing with here keep in mind we have a situation where there was Engineers on board this plane the plane was on fire Belling toxic smoke out the back probably for a while um they were low so they might could have succumb to hypoxia

(1:08:44) because it was probably um uh situation where plane was also depressurized uh we're not going to do a space tonight it's a little too late uh I want to work on this I want to get this ready to go and I'll record this in the morning probably uh I've got the day off so I'll probably record this in the morning push this out tomorrow and we can work on some other ones tomorrow maybe even do a space I have two podcasts tomorrow to do though so I'm going to be pretty tired yeah the free scale semiconductor

(1:09:18) and employees were on board that they're probably the reason to save the plane they're connected to defense maybe even this room temperature superconductors uh but yeah the people surviving is pretty tough but I think some people probably survived just hard no way to know for sure I can only follow the evidence guys just like you for

(1:10:30) better just double check I'm pretty sure USA 184 and all 22 Yeah 2006 oh la identifi as the first this is the first wow wow we might have to snapshot this wow this is the first one not even just question not even presumed I think we have to snapshot this too so got USA 184 which is n

(1:11:53) 22 okay actually we're going to probably put this up here for

(1:13:36) this is looking pretty good I haven't got any push back yet other than the massive amount of personal attacks and fake things people have made up about me but yeah yeah

tomorrow we're going to have to work on uh hard TRS number three I'll probably have to watch some stuff on the side I've got a number of things and papers to read which I probably won't understand but we will certainly try what did I find I don't know you guys are pretty dark man I I really don't think like the part about executing people like who do

(1:14:08) you think's executing them you think they're just like telling some foot soldiers to go execute a bunch of people and they're just keeping that quiet like if I told you hey go kill like a 100 people would you just do it I don't think it's quite that easy man right that's the part about it is like a lot of people think that like life is like the movies right that they like the military is like super villains like I think they'll do bad stuff but they're doing it for the sake like in their minds they're doing it

(1:14:39) they're thinking it would be you know a good reason so I really doubt that they would just execute the people I think the more likely scenario is that some of them probably didn't make it and some of them maybe did and the ones that did then you just got to keep them quiet but again there's no way to know for sure and yeah I think we do want to be thinking of the the families you know let's be respectful as much as we can given the situation okay let's look at the videos and see if there's any more information

(1:15:07) oh yeah we want to mention for for

(1:17:30) we could play see it's probably a little bit much I think that maybe what I do here is clip this okay stop it let's see it's probably pretty good okay how are we going to do this how are

(1:18:44) we going to fit in the satellite video in here so let's just time this out a little bit I just want to get an estimate here so I'll play this let's say the mq1 C greaty Eagle drone that is taken the second video second MH370 video okay let's see if this works pretty well the mq1 C greaty Eagle that is taking a second MH370 video is cropped just out of field of view in the satellite video just cropped just out of to let's try that

(1:19:48) again wait I can't it's hard to do this without seeing it okay I might have to move this over here or something how I I do this like that okay so we start this up see the mq1 C greaty Eagle drone that is taking the second MH370 videos cropped out of field of out of the field of view this is why I have to practice the mq1 C Great Eagle drone that is taking the second MH370 video is cropped out of field of view at the top of the screen in the satellite video the mouse is moving at 24 frames per second but the

(1:20:31) background is six frames per second indicating a citric session logged into the actual spy satellite database the mouse moving off the screen and multiple directions and at six frames per second is evidence of a large field of view on a computer generated Battlefield map unlike the Trump satellite image the MH370 satellite video we don't need this again satellite video does not show any Shadows when the zap happens we'll talk about the pattern I don't think we need the 440

(1:22:16) volt um hey simu thanks a lot appreciate it um yeah I'm pretty much streaming so that everything's open source so that you guys can see everything that I do and so you can see how this is all happening just in case people were to think stuff like you know that I'm working for the government or something like that or this is controlled disclosure whatever you can see that okay you know this is just a real person doing work this is how I do it I just chill here plus I like to interacting with the chat

(1:23:18) so we've been having a pretty decent number of people on yesterday we had like 250 viewers so thanks a lot simu appreciate the donation very much hey hey chat hey uh Gap welcome welcome probably won't be streaming too much longer uh once I finish this we'll probably be done for tonight I did want to get some work in tonight though because yesterday we didn't really get much done hey hwl thanks a lot um Happy Thanksgiving to you too man yeah yeah last night yesterday things just got wild man we had so much

(1:23:56) crazy stuff happen yesterday we had kim.com share a cers video we had Dom uh LC luch luch I don't lre how do you say I c Luc LC I don't know someone help me out I would definitely like to be able to say his last name anyway we had Dom are retweet somebody who said to follow you know me and he did follow me actually he's following me now and uh which is good cuz I've actually I think some of his work is really funny like he he tries to expose liars and hypocrisy and conspiracies and stuff and then we had

(1:24:33) Infowars Infowars was featuring featuring our Work featuring it just wild like honestly I'm just going to check it out and to be honest I hadn't been to infow Wars in probably like long time 10 years or more look at this top hit trending it's it's us the very first thing it's us trending holy crap right at the top it's wild I like how he didn't say aliens either unknown forces that's fine research points the most sensitive cover Sensational cover up in history that's a good way to put it most

(1:25:18) Sensational cover up in history pretty pretty wild man yeah that was pretty cool pretty cool this is probably going to be long enough I don't think we're going to go into the science on this one what we'll probably do is we'll do a different explainer with the science where we just showed the videos just because like I want to keep these kind of short this one's already probably pushing how long it's going to be okay so let's try this is the part I'm unsure about everything else I can

(1:26:11) time almost because it's mostly just like things are either very short or just still images I'm not worried about it this is the part I want to time out a little bit I might have to Speed it this up that's probably what I'll do so let I'm just going to practice this one more time God this is so annoying how do I do this better maybe I do it like this okay so show the satellite designation I think it better better to flip this around like this is probably better wording right it's a little bit less so we start

(1:27:07) this we say in the satellite video the mq1 C gry Eagle drone is cropped out of out of view at the top of the screen the mouse we see is moving at 24 frames per second but the

background is at six frames per second indicating a citric session logged into the actual spy satellite database the mouse moving off the screen in multiple directions and six frames per second background is evidence of a large field of view on a computer generated Battlefield map unlike the satellite image Trump satellite image the satellite video does

(1:27:42) not show any I70 satellite video does not show any clouds or Shadows the second orb appears to come from the water and shoot up through the cloud the orbs form an equilateral triangle consistent with 120° 0 point sinyal pattern the zap we see accurately illuminates the detailed volumetric cumulus clouds then we move it that's pretty good I think that's solid that's pretty good right let's practice that one more time I just want to see how we do I'm trying to think if there's anything else we need to add to

(1:28:20) this okay I'm going only practice one more time so you guys don't get bored here I'll practice on my own tomorrow okay in the satellite video the mq1 C gry Eagle drone is cropped out of field of view at the top of the screen the mouse we see is moving at 24 frames per second but the background is at 6 frames per second indicating a citric session logged into the actual spy satellite database the mouse moving off the screen in multiple directions at six frames per second and six frames per second

(1:28:45) background is evidence of a large field of view on a computer generated Battlefield map unlike the Trump satellite image the mh37 satellite video does not show any clouds the second orb appears to come from the water and shoot up through the clouds the orbs form an equilateral triangle consistent with 120° 0 point sydal pattern the zap we see accurately illuminates the detailed volumetric clouds we're going to change we're going to add more the pattern changes orientation and becomes vertical roughly halfway

(1:29:51) through something like that that probably will probably work out pretty well this is going to be a little bit longer guys oh wow hey 1 foot n5d thank you very much for the donations you guys are really generous man I really didn't expect any of this and I appreciate it for sure though we're working hard here we are working hard uh Grandmaster UV be careful um if you do all caps the nightbot gets you nightbot does not like all caps it doesn't like more than three emojis and what other stuff it doesn't like if you

(1:30:44) put too many periods as well so if you're going to do dot dot dot don't do more than three dots in a row it's some weird stuff I'm not sure how to fix it all but yeah thank you guys very much for the donations very very greatly appreciated all donations will go to helping the cause of MH370 terms of getting the case solved whatever we have to do which I don't know at this point we'll see okay one more time and then I won't bore you too much with this I think this is going to be pretty legit

(1:31:19) though in the satellite video the mq 1C greaty Eagle drone is cropped out of field of view at the top of the screen the mouse we see is moving at 24 frames per second but the background is six frames per second indicating a citric session logged into the actual spy satellite database the mouse moving off the screen in multiple directions and six frames per second

background is evidence of a large field of view on a computer generated Battlefield map unlike the Trump satellite image the MH370 satellite video does not show any

(1:31:48) Shadows the second orb appears to come from the water and shoot up through through the clouds I'm going to probably switch the orientation of these the orbs form an equilateral triangle let me just back it up the forms for an equilateral triangle consistent with 120° 0 point signal pattern the pattern changes orientations about halfway through the sequence and becomes vertical showing purpose I'm not sure about the showing purpose part the zap we see accurately illuminates the detailed volumetric cumulus clouds so I'll probably I'll

(1:32:21) probably speed this up a little bit to match the speed of that that wording and then that's good for sure unless I think of something else and then we'll flip into the next one which will be this is by far the longest one I've had to put together in terms of Graphics this is going to be tough for me to switch through everything I'm going have to set like all these shortcuts but I'll make it happen won't be a problem it'll probably only take me an hour or two to get it down and then stereoscopic proof we'll

(1:32:53) play this we'll say the r side and on side by-side videos have been proven to show the Regis Aon non side by side videos have been proven to be stereoscopic with clear Parallax we have even been able to convert them to actual 3D and then the 3D video will play we have even being able to convert them to actual 3D and then I think we end it there right maybe just say and then I could go back and say something like this has been an or should we just end it like that seems kind of weird just to end it right on that I think I think I'm going to move

(1:33:52) this stuff up if I move this up here and do that first and then go into the satellite video seems a little weird but I might move it around I'm not sure so I the r side oner side by side has been proven to be stereoscopic with clear Parallax we haven't even been able to convert them to actual 3D and then I go in the satellite video and then I switch over to the side by side video right I say in the sight video that was because I think I want to end on the zap part here and then close it out I think that's I think that's our

(1:34:56) explainer guys what do you guys think seem pretty good did I miss anything what do you guys think what do we think folks the smoke is almost certainly due to the 221 kg of lithium ion batteries on board the plane almost certainly 10t NSD or n5d any other questions I can answer for you I appreciate the donation oh okay never mind I saw your next message yeah okay no need to acknowledge well in that case thank you very much sir uh J why is it called the Trump satellite um because he's the one who **leaked** it we would have no IDE we might not

(1:35:46) even be able to solve this case without Trump leaking this image I should probably clarify that that's good call did was it Twitter I think it was Twitter you showed it right so I can say USA 229 is a pair of Sig signals intelligence satellites launched in 2011 the same year as the Trump satellite picture he posted on Twitter of USA 224 right I think that's fine take a look yeah the pattern is pretty cool wow everyone you guys are donating a lot of money man hey Robert thanks a lot for jumping on thank you

(1:36:50) very much for your donation we are preparing for the next uh explainer video it's going to be a good one it already feels really good the next video is going to be uh the satellite video here plus cber system and Sig putting it all together it's pretty pretty spicy pretty spicy let's do Trump Twitter satellite Trump tweeted an image of a spy satellite I wish this wasn't from NPR but sometimes times you can only do what you do with what you got I have to move some of these words around the same year as USA

(1:37:48) 224 which took the Trump satellite picture he posted on Twitter in 2019 okay let me just I'm going to read this out just so to see if this makes sense I almost certainly this comes from our video comes from the same system that took this image almost certainly and they the people that deduced this wondered why they they couldn't believe it was real same way they people couldn't believe our stuff was real because they thought there should be atmospheric Distortion well you know how you get around the

(1:38:40) atmospheric Distortion it's a computer generated Battlefield map so USA 229 is a pair of signals intelligence sign satellites launched in 2011 the same year as USA 224 which took the Trump satellite picture he posted on Twitter in 2019 I think that's good it's a lot of years though I think it's fine though I mean what is this like huge header thing do I Jesus these I mean Google's just the worst man how are these articles can we get some actual articles with substance so it got Declassified in

(1:39:29) 2022 when are they going to declassify the MH370 videos how many apologies do you think we'll be getting when they these videos are proven real OD zero Hey new world new order MMA and thanks again Robert appreciate the donations really do um yeah Bob greener definitely thinks that we have this technology I I I agree as well yeah I wasn't going to it's Thanksgiving and I was actually go to sleep I was oh boy I was wiped out after the uh after dinner tonight uh with my family um but you know what I felt bad

(1:40:10) because we didn't really get much work done yesterday uh but we got work done tonight we I think we finished the whole explainer I just got to record it now problem is this one's going to be a pain in the butt to record because I've got one two three four five six seven 8 nine 10 11 12 13 at least 13 different things yeah 13 different things I got to arrange we could even add this part about the orbs moving Mach 3 but I think I'd rather do the science part in a different explainer video okay so before I go to sleep I'll answer

(1:40:58) some other questions if anything else um yeah no the USA 224 image doesn't have anything to do with uh Malaysian Airlines you're correct the reason why this video is important this picture is we can see the huge Shadow on it oh so maybe I should I maybe I need to clarify that that's probably a good call thank you where' I put the shadow unlike the Trump salot image the MH370 salor does not show any Shadows meaning this video is likely shot at nighttime using a false color IR I like that I

(1:42:02) like that a lot thank you very much whoever reminded me of that thank you that was that was a big ad right there we need that okay yeah people can believe whatever they want

about the why it was targeted so if you're curious and you want to know anything more that I haven't been able to answer best thing to do is go to my profile right at the top all per event 442,000 views click on this everything you want to know is in here every single thing you want to know probably needs to be updated but still pretty damn accurate the only thing I

(1:42:36) messed up on I forgot to separate part of this somewhere I don't even remember where I forgot to separate it here's the motive for you 20 free scale semiconductor scientists and Engineers 20 people flying on the plane from the same company breaks company policies plane was doomed couldn't land or maybe didn't land is a better way to phrase it Landing in the ocean would have broken apart the plane 2005 NSA NASA NSA report on Commercial superconductivity development references free scale semiconductors

(1:43:08) nine times free scale semiconductors launched a major initiative dedicated to serving RF power needs for us Aerospace and defense the a andd sector um possibly preventing the IP from going to **China** possibly preventing loss of the IP related to technology deployed so these are your your options or possibly Tech testing the technology on a doom plane this also seems reasonable or whatever else you can come up with I'm not trying to gep the what what the theories are and then the reply has some of these other ones in there as well I want to

(1:43:48) clean up some of these for let's see what else we got here do I have a table of contents no but could we could make one I suppose I mean it's not that long I guess 12 pages is kind of long though

(1:44:55) uh in my tweet though I messed up and these two sections are combined which is my bad that's my bad um it could be also because of the cargo but we just don't have any connection to the cargo right now and probably what we'll do tomorrow or this weekend and post on Monday on on the conspiracy sub**reddit** it is we'll update this list and add images and sources as many as we can which is unfortunately is not enough we can only do I think 20 images and 20 links for uh conspiracy sub**reddit** so that means we're not going

(1:45:34) to be able to add a lot of stuff here feels bad but we'll add a bunch and we'll turn this into something that's got a lot more uh images in it yeah I have uh several repositories of everything as well stuff's on Google Drives I've got discords that have information in them I have a backup Discord with information in it I mean I probably shouldn't be saying all this but yeah stuff's stuff's pretty well secured there's no way all this is going away no matter what not to mention all the people that have already

(1:46:09) reported on it that's shared the information as well on top whoops trying to do yeah everybody sleeps on Thanksgiving oh wow somebody just cloned most of my media as well yeah the kim.com space is one of the best I mean I think that was really good over review I didn't even I mean I don't know for being having 3,000 people listening I thought I did a pretty good job I've just gotten to the point where I'm not I'm very comfortable public speaking as well and I've done I've weren through

(1:47:07) the evidence so much now too okay it's looking pretty good I can make some adjustments tomorrow but I think it's pretty pretty solid so somebody else just saved everything as well they they saved all our content as well so our content is being saved by a lot of people which I appreciate by the way I appreciate it and again I appreciate all the donations today I mean you guys have been very generous giving us donations for all this stuff let's do uh let's let's look through some notifications

(1:47:46) together see if there's anything we like um oh is this from the yeah should should we watch this wa am I going to get copyright tried if I listen to this listen ride out me glory for ran for Rohan guys for your people o sun is rising sun is rising he remembers he rememb my coming at first light on the F at dawn look to the East look to the east yes yes yes look to the east the Horn of Helm hammerand shall sound in the Deep I love this scene man one last time yes

(1:48:51) I'm just pausing it cuz I want to make sure I don't get copyrighted let this be the hour when we draw swords together you musk that's for you buddy that's for you if you need us we'll come to your Aid gimly goes up and deeds awake I don't really know what the point of blowing the horn is but it's pretty pretty sweet and the come in yeah how all those horses get in there how do all these horses in here all of a sudden guess it's all [Music] [Applause] [Music] good they just start wrecking all the

(1:49:46) Orcs I love it love it gim's like uh I thought gimy was going to start wrecking things but he's just sitting here blowing the horn while they all do the [Music] work I love this part where they're just knocking them all off the [Music] bridge as long as you get commentary it's fine as long as it's just a scene I think it's okay yeah old rack I'm glad you enjoy it Gandalf Gandalf the White just sitting up here stand oh [Music] yes this is I think my what Jake what man you don't you don't

(1:50:51) need to be donating that much man thank you so much Jake just tell me if that was a mistake if that was a mistake Jake I I'll I'll give you the money back but thank you very much wow holy crap that's a lot man wow thank you very much man This Is Us charging into [Music] battle I love when the light hits [Music] them yeah I love when the light hits them and just makes them like turn their heads away and then they just just wreck them that's going to be MH 370x running into

(1:51:54) battle wow thank you Jake that's means a lot to me Jake that's it just means a lot man a lot of people in this community have shown huge amounts of generosity and uh yeah I mean I didn't expect any of the stuff that you guys have been doing I think that it's hard for me to even believe we have 50,000 followers yeah everybody give Jake a you know big praise greatly appreciate it man you're really helping us out uh 50,000 followers blows me away guys uh I just never thought we'd get this big we have more followers than

(1:52:44) than **Mick** West has than like lots of people that are been been on TV many many times and all I've done is been doing podcasts and it's because you guys have looked at the evidence you've believed in this evidence you've helped work and get me the evidence and I've

helped disseminate that evidence to you the purpose of this evidence is so that you guys can take this evidence and you can pass it on to other people so that we can make sure that we get the answers that we want uh sorry j so that we get the

(1:53:17) answers from the government that we need here careful with you guys careful with the emotes too many too many emojis will get you guys night pooted but anyway what the reason why we're doing this is so we can get the answers from the government so that we can get true disclosure on our terms on our timeline um and that's what we're doing this for that's why we're spending the time doing this that's why I got online today so that we can put together this next storyboard here I should call it

(1:53:43) storyboard and then tomorrow I'll record this yeah I think we're going to change macroscopic Quantum coherence to macroscopic Quantum conjugation or macroscopic phase conjugation although it is still macroscopic Quantum coherence let me write this down it's phase conjugation because what we're dealing with here is waves and when you get the waves in conjugation so that they are like in sync that's what's causing this to happen is I think the Layman's explanation and yeah again I appreciate you guys I

(1:54:23) appreciate you all the kind words in the chat yeah the some ordinary gamers person is not uh I don't know how to be kind I'll just say they're not a very intelligent person so just because somebody's a a YouTuber that has a lot of followers doesn't make them right they're literally people like don't even think for themselves they just pull up the **MC West debunk** and then they just assume that it must be real and that's how um social contagion works so just once again these don't

(1:55:03) match doesn't even match on a single frame I agree that they're similar but that's because they've modified the the VFX to be as close as they could get it to get to be and it still doesn't match if you look at the whole thing I gotta move this one to my other file if you look at the whole thing you can see very clearly these don't match this is not this VFX is not in our videos this is the only frame that's even close and they've tried to match it to get this Frame to to be close the

(1:55:42) rest of these frames aren't even similar I would argue that this donut is a better comparison than the VFX this is closer than the VFX is and it doesn't have to be modified just all you do is you got it's actually a donut guys anyway no more no more **debunk** stuff tonight it's boring wow Robert man you guys are you're going ham here I appreciate it you you're doing this right before I close on the stream too I guess I have to chill for a few more minutes um yeah thank you Robert uh thank you once again um to Jake for the

(1:56:22) huge donations you guys are awesome um we'll we'll definitely be streaming more putting more content out there I want to get this out there tomorrow I was actually going to post I was going to post this link but I'm I'm missing a few here so I'll probably have to wait till tomorrow to post the summaries of all the things so probably what I'll do is tomorrow morning yeah the dut let's do the donut again this is my counter to the VFX people no it's just a donut

guys sorry guys we're shutting down I

(1:56:55) might even do a joke tweet about it we're shutting down the investigation guys turns out the debunkers were right it was just an effect it turned out it was just a donut all along plane didn't actually disappeared just it was a donut yeah and just to be clear you guys definitely don't have to donate um I'm not doing this for money but I appreciate that you guys care enough about the investigation that you want to donate to it um so everything counts AA appreciate that donation a lot man uh but thank you very much sir every

(1:57:29) dollar matters um but if you need that money I want you to keep your money guys uh you know I we we will make sure this happens regardless one way or another even just following and liking the stream subscribing that that also helps I I think YouTube will pay us for this I I don't really know how that all works but at some point the probably will but yeah that's that's that's big donos man yeah the donut is the's the best I had a joke tweet I'll give you guys oh man I wonder if I can find it I had an

(1:58:04) old joke tweet I wonder if I just should retweet out the joke tweet man I don't know if I can find it it's going to be like a month ago there was one I did about uh the NASKA mummies which was pretty fun funny the science stuff is my favorite man we used to get like way less views on our stuff now we're getting like a lot more did I post the 1840 UTC I think I already reposted that I didn't even repost the 1840 youc oh man when I called the FBI and they they hung up on me that scared me

(1:59:12) man look at this look at this fire suppression device from the malds this is why I say you can just go back through my highlights and you find everything there's a serial number right there you can see the serial number 8219 I can read it eight there's like a four or something here like 18 219 like I wonder if there's a way we can match this to MH370 like we can see the serial number this is a this is a fire suppression device from a b777 how do they not how do they not investigate this I don't know here's my other thing

(1:59:52) about Sig look at this look at the Sig system it's got planes satellites I'm sure there's drones this here's a drone right here look at this here's the database where they're sending all the data communicating with boats tanks it's wild that's an expensive doughnut that donut is just for you Jake let me see what else I can give you what other spice I can find in here Silent Video sacrifice was a good one case of the missing hydrophone data oh oh here's the part two investigate

(2:00:40) earth oh wait I already have the link to that one in my thing wait we already did the M Gates thing I can delete that investigate Earth part two is there investigate Earth was mad because I didn't have part one or something I don't remember what it was what it would take to hoax the [Music] videos where's my old joke man it's been a long time since the first joke huh confessionals oh man confessionals was back in October that seems so much longer ago than that but I think it took them like two weeks for the them to post

(2:01:15) it damn Robert you got to chill man thank you very much thank you appreciate it said the orbs have ai couldn't yeah I'm moving away from the AI option uh now uh Robert good question um when we see this video here I don't know necessarily it has to be AI anymore oh that's the confessionals video I don't know it has to be AI anymore I think that it could just be a computer program without AI and yes it could also be like their cuz Bob Greener mentioned they could be just sticking together due to their

(2:01:49) relative magnetic fields like causing them to like stick into that formation but I still think it requires some type of kind of pattern now are these oh these are the ones I wanted are these on my list I might just grab these while we're here whole rabbit we need Noto deep one is what we need dang it I want Noto deep on here says that they see a plane that does someone not so deep was a good one too but this was early on so things have changed a lot since then where's my NASA joke must be way down here and we've done a

(2:02:52) lot of work here's the proof the passenger phones are ringing it's all the way back on September 25th man can't believe that was two months ago yeah Robert thanks again um Jake everybody has been donating I mean you guys donated a lot today man thanks a lot once again though I don't want to feel anyone to feel pressured to donate it's not why we're doing this we're just doing this to solve the case but I will put your money to get use and I do greatly appreciate it the weather and pattern analysis as

(2:03:25) well basically matching the weather at the location is like pretty damming uh I don't I haven't really listened to a lot of abduction stories honestly just to be real with you guys I'm not really not sure how I feel about abduction stories I think that they certainly could be real oh there's the shark video he flipped it around but this one's a pretty good one too we could retweet that I think we're getting close to nasam Mummy guys so then it'll be sleep

(2:04:28) time it's coming get ready for it here's the color channel change video so in this one here you can very clearly see the the second orb get ready for it if you guys want to get your minds blown thanks take it easy Jake appreciate you so much man watch the second orb here real quick quick cuz it's pretty sweet see it just appear right there out of the water just appears like right where my mouses just appears right there weird man I don't know where it's coming from submarine not sure seems very

(2:05:11) odd man naaska mummies must have been long time ago the patterns here I wonder if I want could put this pattern in there look at these sydal patterns man look at these patterns they're just too perfect this is how we know it's not humans or aliens flying in this look at these patterns man that's too exact and it looks like right before it converges weird and it's encircling the plane look at that that's wild to me kind of want to retweet this

(2:06:21) black body radiation we've learned a lot since this though is the thing it's fun to look back at this though trying to figure if there's anything good that kim.com would want he's more looking at it from like the conspiracy bring down the government side here's the hallogen lamp like this this looks just like a hallogen lamp this is what KT saw that's the bromine she saw this

glowing orange plane I haven't watched manifest yet haven't really had time oh careful if you guys are you know

(2:07:00) doing things that I don't want to mention on the chat um here was the first compilation that I did here's our Smoking Gun fire response or **Foya** response not fire **Foya** man I don't know where my Nas kamami thing is here's the stripped thermal version that Punjabi Batman put together we haven't heard from Punjabi Batman in a long time like two months I hope he's okay I might check **Reddit** and see if he's been posting anywhere people people are trying to claim that I was Punjabi Batman Punjabi Batman is almost

(2:07:54) certainly not from America just because his name's Punjabi usually I think it's like an Indian or Pakistani thing I'm not really 100% sure and uh I am American so I'm probably not Punjabi Batman guys I mean I'm not but people are allowed to think whatever they want damn I don't know I don't know where the nasam mummy thing is I had a pretty sweet nasam Mummy joke could it really been this long ago all no there's no way could have this long ago so I must have gone past it somehow yeah it's not going to find it

(2:09:00) oh I probably just didn't highlight it that's the reason why oh well we'll have to look at the the nas mamy joke another time guys it's somewhere in my profile it's probably not in my highlights that's the reason why we we weren't finding it there it's going to be way back okay any last questions before we log off for tonight uh I don't know about what happened to Diego Garcia I think the problem is we have no way to compare to any location that might have it might have appeared

(2:09:30) at you know man the one salvator Pas paper when kim.com retweet us got like over a million views The High Frequency gravitational wave generator I still have two more papers by Salvador PAs to post but I don't think they're going to get as much views as that that one that one was just a lot um I I don't know where the passengers in the plane are guys if you want me to guess I'd guess they got to Diego Garcia but I'm not psychic so I can't say I can say if we had two more videos that I might be able on the other side

(2:10:09) we could probably say where they are I don't think that's what people want to hear though so oh yeah don't be creepy man don't be creepy I already got enough creepy stuff happening the other day my internet went out when we were in the middle of streaming and then uh I got a virus right after I had to restore my computer it was not cool but yeah hey thanks a lot man appreciate it yeah it's true I did say I was going to bed 20 minutes ago but now I really want to find this nasam mummy joke that

(2:11:01) I posted I like this one too I think it's right down here oh and here's these shirts if you guys want these shirts shirts pretty sweet here's the Etsy version if you want the shirts I bought three of these shirts by the way so here's the link if you guys want it you can see it in the Discord or in the the stream if you want to go back to it what's this reference code I'm giving somebody like a ref referral are these shirts still available able they still available I bought the yellow one I got the blue one

(2:11:54) and I got the green one I kind of want a red one they're they're I'm not affiliated that person I don't know who that person is I think they're in like Nicaragua so it's definitely not me but those shirts are legit oh here it is found it guys found it sorry the NASA alien mummies have been **debunked** Mana poot found some damning evidence that the mummies are actually come from a video games in the 90s as you can see they clearly match this VFX sorry guys this is too close to be a coincidence

(2:12:30) I'm sorry anyone who believed that the NASA mummies were real I apologize obviously these mummies come from a '90s 2d lowquality visual effect look at how closely this matches this visual effect this is just too close too close to be a Quin Co incidence guys I think we've **debunked** the nas kamami obviously it was from a mid90s video game anyone who thinks otherwise obviously can't can't tell it's a perfect match of course I'm joking but this is this is how I think about people when

(2:13:05) they tell tell me that these these things that don't match match when they tell me these are exact matches that's is this is what I think of I think of the nasam mamies I think of this so what day was this if I ever to find it again September 14th man that was a long time ago so yeah yeah sorry guys should I retweet this out had 5,000 views before the hallogen lamp is not a real picture from the plane that was just K T's best Recreation of it for the h hallogen the one that's like got the bromine that

(2:14:03) comes from one of her old blogs actually it's not like a recent one or anything like that okay one last question the pilot should have ditched the plane in the Straits of Mala why did they not ditch it in the anaman SE good question so let's take a quick look at that uh let's see here so this plane right it flies over here we know the plane doesn't land at panang but we know it goes directly to panang right so there's two options two trains of thought one is they couldn't land because the plane would have

(2:14:38) exploded if they tried to land the landing gear might be damaged now the next question is this is a question one of my friends asked me is now I would have they said I would have landed like right near the shore here which sure you could have tried to land near the shore here but the plane's going to rip apart everybody's probably going to die um also it's the middle of the night and you might not have anybody around to be able to help now keep in mind if you try to land in water that's too shallow also going to be a disaster

(2:15:05) so you have to land in water that's deep enough so that the plan's not going to rip apart but I also agree I think that most sense would have made to be the land right here so and I think kim.com pointed this out when I was talking to him personally so I think the most likely scenario is they actually had communication and they told them to come out here and they said okay this is the place where you should Rond de Vu with us which is our coordinates in our satellite video over here at this location that's the only thing I can

(2:15:38) think of the top of my head if we can come up with another plausible reason why they didn't land closer to the shore here I'm not sure let me know what you you guys think anyway

let me know tomorrow though because I'm going to go to sleep I think we had a good stream here tonight uh we **debunked** the nas cammies turns out was from a video game effect uh you know we gave up the investigation because obviously it was fake it wasn't from a video game it turned out that ours was from a donut rip so uh we we'll carry on the

(2:16:11) investigation in spirit anyway you know even though it's been **debunked** as a donut just cuz um but yeah again thank you guys for watching tonight I don't think I'm going to post any more stuff tonight I will let's go ahead and watch this to close it out guys so once again Happy Thanksgiving um I posted this video because I think this video is representative of our situation with the government This Is Us MH 370x here Jack Nicholson is the government in this video colonel you snotty little bastard

(2:16:48) you snotty little bastard This Is Us investigating the case I'd like to ask for a recess I'd like an answer the question I'd like an answer to the question tell us the **truth** government judge the court will wait for an answer if Lieutenant Kendrick we'll wait for that answer gave an order that Santiago wasn't to be touched and why did he have to be transferred what happened to MH 370x government Colonel government lieutenant Kendrick order the code red didn't he who ordered the orbs to circle the plane

(2:17:21) who ordered it that's what you told Lieutenant that's what you told him Kendrick to do when it went bad you cut these guys loose your honor you you orb that plane government you orb that plane government US government did you orb that plane you don't have to answer that question oh I'll answer the question oh he'll answer it you want answers I think I'm entitled you want answers I want the **truth** we want the **truth** you can't handle

(2:17:57) the **truth** son we live in a world that has walls and those walls have to be guarded by men with guns who's going to do it you you lieutenant Weinberg I have a greater responsibility than you can possibly fathom You Weep for Santiago and you curse the Marines you have that luxury you have the luxury of not knowing what I know that Santi that's pretty much Nails it right that we can't handle the **truth** they think we can't handle the **truth** we don't have the luxury of knowing what they know and

(2:18:28) what this technology means death while tragic probably saved lives and my exist they think they're saving lives by not telling us this technology guys while grotesque and incomprehensible to you saves lives you don't want the **truth** because deep down in places you don't talk about at parties you want me up on that wall this is the **debunkers** now he thinks we're the **debunkers** he's talking to the **debunkers** now deep down at parties we don't even want the **truth** you need me on that wall we use words like Honor Code

(2:19:03) loyalty we use these words as the backbone of a life spent defending something you use them as a punchline I have neither the time or the inclination to explain myself to a man who Rises and sleeps under the blanket of the very Freedom that I provide and then questions the manner in which I provide it I would rather you just said Thank you and went on your way

otherwise I suggest you pick up a weapon and stand a post either way I don't give a damn what you think you are entitled to that's the government talking that smack back to us

(2:19:35) they don't give a damn what we think we're entitled to did you order the code red I did the job did you order the code red you're goddamn right I did ooh they teleported that plane that's what we need them to do we need to piss them off to the point they just admit it you're damn right I did I'm telling you that's that's what's going on with our situation so if you want the nasam mummies what was that back in September somewhere up here I actually have to take a screenshot of

(2:20:02) this uh Nas I got to save it because I I don't want to have to go find it every time let me just link it somewhere real quick there it is Boom we need this I haven't saved this I'm going to put this in my **debunks** there it is add this to my **debunk** list ask momies okay guys that was fun yeah we're devoted to the **truth** well guys it was a good night I think I enjoyed hanging out with you guys no I did definitely did and I definitely thank want to thank you guys all once again for the amazing donations and for

(2:20:50) the support and for just helping get the word out and hanging out with me here tonight on Thanksgiving so happy holidays everybody have a good evening we'll talk tomorrow

MH370x Work - 11/22/23 - YouTube

<https://www.youtube.com/watch?v=1YXmIPyFcbU>

Transcript:

(03:12) hello chat getting ready hold on let's see how we're looking here that's what I wanted hey how's it going everybody welcome welcome welcome welcome got some we got some stuff to work on tonight yo yo KF real person Four Doors Down Amish Creations medal Jamie hey yo okay what's up real person Jedi okay we are going to uh work on some more stuff today see what we got

(04:17) going on here's some people's names I'm supposed to look up here's some stuff we might work on we did overview the flight path I really want to do cers part two today uh I had to system restore yesterday to get rid the viruses just to be on the safe side didn't take too long though uh but I did have to reinstall Discord and a bunch of other crap so uh all these things are up here but no we're good on it uh we're not going to click any more sketchy links today uh let's watch a couple

(04:59) videos here started off hey Levi welcome so I want to start I downloaded this clip of gates in a clear diamond formation for which there is uh a radar sequence that I and I alone

have observed in the United States Congress one of the pilots goes to check out that diamond formation and sees a large floating what I can only describe as an orb again like I said not any human capability that I'm that I'm aware of so that part right there really interesting Matt Gates says he's seen something that only he's

(05:38) seen that describes as an orb and not any human capabilities that he's aware of you know what this reminds me of this is reminds me of the first time I looked at the m370 videos and when he approached he said that his radar went down he said that his Fleeer system malfunctioned and that he had to manually take this image um from one of the lenses and it was not automatic automated uh in collection as you would typically see in a test mission so uh I guess I'll it was not automated in collection so you had to use manual

(06:14) tracking this sounds a lot like our videos I mean I don't think this is what he's talking about but is e weird the information I've gleaned from this as well is that I don't think Congress has any idea what we're talking about technology wise hey Anna welcome like this is pretty big to me he's like the only guy I think that saw some of this information like even Anna Palina Luna and uh bersett and MTZ like I don't think they even saw this craft listen to it one more time in a clear diamond formation for which

(06:50) there is uh a radar sequence that I and I alone have observed in the United States Congress one of the goes to check out that diamond formation and sees a large floating what I can only describe as an orb again like I said not of any human capability that I'm that I'm aware of and when he approached he said that his radar went down he said that his Fleeer system malfunctioned and that he had to manually take this image um oh I'm not watching crap my bad guys my bad thank you good call there you go sorry there you go here

(07:33) I'll do that one more time so whatever you think about Matt Gates uh whatever he's got inside access to uaps so a clear diamond formation for which there is uh a radar sequence that I and I alone have observed in the United States Congress one of the pilots goes to check out that diamond formation and sees a large floating what I can only describe as an orb again like I said not of any human capability that I'm that I'm aware of and when he approached he said that his radar went down the top he said that

(08:09) his Fleeer system malfunctioned and that he had to manually take this image um from one of the lenses and it was not automatic automated uh in collection as you would typically see in a test mission so uh I guess I'll with grush in them so I clipped this earlier today oops the hell it's not what I wanted to do I don't know why that did that yeah that was pretty interesting I I'm I'm not sure they have the intellect to understand this concept either actually so let's now compare to our videos let's go I kind of want to

(08:48) download the one that's the higher quality one I mean the stereoscopic one's good but side by side it's kind of annoying this makes me think that huh I don't know I'm not sure what to think on it other than I think our Congress people have no idea what's going on with this stuff so we got the orb and then the Drone is cropped out of view here and the [Music] Drone he's

manually tracking on the Drone as well but I don't think it's interfering with the radar or anything like I mean I don't know a way

(09:35) to know but I'm thinking of storyboarding this video and talking through just one video at a time like how I used to post the videos like every week I haven't been doing it for a while so I'm thinking I might just do a storyboard with the video talk through it the problem is I need to know I got to figure out what to say pretty interesting closes this out I think we might talk about like the leaker information what is going on here oh that's what happened okay why is it all black I wish I knew this like maybe there's something in

(10:17) here what if there's like an encoded message in here but I think what I want to work on first is the cbers part two uh Hey everybody welcome welcome welcome we're already up to 80 80 stream people watching only been a few minutes uh we have a pretty big day here uh Dom lucr is how you say the last word right he's following us now he's uh somebody who I've been following for a while who uh mostly because I started to question a lot of official narratives and he exposes a lot of them so it' be pretty amazing if he started

(10:59) to to post any of our content hey Lis um yeah I'm pretty sure the US government cannot admit a lot of this so I think if I get asked that a lot the question of what do you do right and the answer is um yeah we are going to have to keep it at sixth grade level we have to make it s apparent right so keep this in mind we have to make it self-evident that whatever we are spreading that people are just going to have to come to terms with it no matter what and the way we do that is we just continue to disseminate the evidence it'll get to

(11:39) a point where everybody simply knows everything yeah man yeah Amanda he retweeted somebody who mentioned that they should follow me and uh then he's following me now I saw it and I was like holy sh holy crap man we have some huge huge names following us now at least on Twitter which honestly just drives me to work even harder because I want to make really good content now I think the flight path explainer was pretty good uh I think yeah I want to let the science speak but um Hermes you got to realize that the the science is going to go over

(12:22) most people's heads okay it's going to go way over most people's heads we got to really boil it down in terms that people can understand as much as possible and that's why I've been trying to meet up with or talk with so many people um like here I was taking notes so some of the stuff we want to talk about matters trapped light cold fusion can happen at any temperature matter can convert to an electromagnetic wave like I'm trying to write it down in ways that people can understand the waves cohere so this is

(12:58) something else that I think I want to talk to Dave Rossy on Sunday the the Dave Rossy oh Amanda be careful you got I think you got night botted yeah don't don't do too many emotes You're Gonna Get You Got night boted Amanda gota be careful that nightbot is a brutal y'all brutal but yeah I'm trying to figure out how long how long it took to get that um jeez what is this okay my phone wants to update you guys definitely want to check out the day rosi uh interview on Sunday I'm going to probably start promoting that

(13:40) tomorrow maybe I'll set up the thing for it it's it's good yeah I think it it doesn't like more than like two emotes so just be careful so you guys want to hear a funny story oh yeah strange planet is great uh we're going to be on Coast to Coast a.m. on Sunday uh Sunday morning but interesting story someone told me today that they were walking around in London and they heard someone talking about me and uh they literally heard somebody talking my about my say saying my name talking about the videos pretty

(14:13) funny I'm waiting for the first time I get recognized in public that'll be funny uh yeah I don't know I don't know if you're gonna be able to block nightbot you can try if you want I don't know if that'll work nightbot is brutal man nightbot does not mess around but we had people like spamming like all kinds of heinous stuff in our chat so we had to we had to get the nightbot online um but yeah Dave Rossy super smart guy I'm really interested in talking to him honestly we're gonna have

(14:47) to prep for the for the Dave Rossy interview oh really there's a m there's an economist following me Luke groman I'm I'm a bit of an economist myself that's actually where my education is in business and economics that was funny somebody was thinking um somebody was mentioning um what I would do next after this and I mean I know that's kind of far off right it's uh but the two options would be exposing the economic stuff like you know stuff in like the bank crisis and things like that like I think that the

(15:30) banking system almost collapsed earlier this year um when the like remember with the uh those bank bailouts the bank balance are pretty wild and uh like I think that it we almost just everything almost collapsed there is my opinion the other thing we would expose is NASA I we could definitely expose NASA but exposing NASA would really break the mines out of a lot of people so it's one thing at a time I think tww flight 800 I don't think there's even that much controversy over it like it was we shot it down it's

(16:01) just a matter of like what weapon we used to shoot it down is the only controversy over TW flight at 100 but that's a good example because I think that that's a situation where the government can't admit it outright but everybody just knows like yeah wasn't it just shut down right um and so I want to get to a point where yeah I think our baking system is on like it's it's not really good right now have I addressed Julian's comments uh yeah we don't really talk about that podcaster um

(16:29) because I mean they're just not a good person you know they're just a liar frankly and they they made a bunch of false claims about me made bunch of false claims during the interview so we we don't try to give like deceptive liars and stuff any any attention um let's see yeah I don't know about protests live protests I mean we're in we're in a digital age there's nothing wrong with live protests right but we're not going to get to that point we're not at that point right um this is the kind of thing

(17:04) when you're dealing with conspiracies like this you want to be very careful you don't want to get like j6 you know like if we were to make a protest it's going to be filled with FEDS

filled with FEDS so we gotta be careful yeah Chanel I uh I reached out to her so you want to hear a funny story on that too I've got a lot of good stories today so we've got the story about the London person who said they heard somebody talking about my name um do I even want to mention this whatever I'm not really afraid of

(17:35) dabbling into the politics side so I'll give you guys a background on me from a political perspective uh I Once Upon a Time lived in California and when I lived in California um I I had voted for a guy named Gavin Nome who is the governor of California current governor still and I think you guys probably saw uh I haven't really addressed rested very much but I was not all about the uh Mass mandates that were put out in California I didn't think that people who are healthy Americans should have to wear a mask in

(18:10) public and so I campaigned against Gavin to recall Gavin Nome even though I voted for him and part of this campaigning was uh going around and um you know sitting in front of like big box stores and uh collecting signatures so we collected thousands of signatures like I did it over well over a dozen times I went with a group of ladies who were really nice ladies we didn't you know our politics weren't really the same right because I I was somebody who had voted for Gavin Nome um but I got very disillusioned uh during covid with all

(18:50) everything that was happening and so I felt like I should recall him I felt like everything that was happening he was caught you know in the French laundry at this very nice restaurant with all these people when you know everybody else was locked down and his his kids were at a school where they were going to school or everybody else's kids were locked down so I campaigned against him anyway moral of the story is I'm sitting there and I met a lot of people like a lot of people when I was doing that just you'd have people from

(19:17) both sides you know and some people like there would be tons of weirdos who like take your picture and like try take video of you and stuff and I'm like what are these people doing and then you'd have people coming up to you and we got the cops called on us like I don't know how many times every basically every single time we did it but we were legally allowed to collect signatures like you're just legally allowed to in California but one time I'm sitting there and this woman comes up she's in very nice clothes whatever

(19:45) and you know she starts talking to us and she says yeah I'm going to sign your your thing and I'm not sure how it came up she tells me oh I'm the wife of the owner of O news of the whole news station o and so I started talking like oh wow that's that's amazing you know like you know that's a big news station right and they of course have been um you know a lot of like attacks on them for being like connected to **Russia** or whatever I'm pretty sure it's all nonsense but uh you know at the same

(20:14) time like they definitely have are like you know right-wing you know rightwing news uh rightwing slant for sure but it was just really interesting that you know I met her in person and so when Chanel followed me I saw that actually the other day I was going through my verified followers and I noticed she's a correspondent for o news the White House correspondent I think

actually and so I actually messaged her and told her that story and said this is such a small world like you know I I had met the actual owner of O news um or the you

(20:46) know the wife of the owner I mean maybe she's also the owner I'm not 100% sure so I just thought that was really interesting in terms of small world so I don't really mind being labeled uh rightwing or whatever honestly it just doesn't matter to me I I really don't care but the reality of my politics is that uh at least used to be somebody that voted for Democrats in the United States a lot and I even voted for Gavin Nome I I personally believe that they're going to try to make him president um

(21:14) and the evidence for that is that he went around campaigning uh across the country but I think that he's a big hypocrite and I don't like voting for Hypocrites and uh so I campaigned against this Recall now the recall we got enough signatures uh but then we ended up losing the recall election of course CU California I mean there's no way so anyway that's my politics guys you learned a little bit about it today now let's go back to MH370 stuff but yeah what I'll say is the Left Right Paradigm is is crumbling

(21:44) I think that a lot of people that would be considered right-wing have are what they really are is they're for people who are honest and open um people that don't adhere to whatever the kind of political standard is right and uh yeah I mean I think that my politics probably much more closely align on that side now than they do on the alternative but I'm uh yeah I'm free-minded open-minded I'll vote for whoever I think I agree with the most and uh yeah anyway Let's uh no more politics talk though let's uh keep it

(22:24) going oh yeah and uh creation is metal thanks for signing it would be funny if we met in person cuz I would sit there we' collect these signatures and I would meet with a lot of people um meet with a lot of people that you know a lot of people that were very very against uh Gavin Newsome uh a lot of people that you know were the weird part is we get a lot of hostile people lot of really hostile people that's when I learned that like people that watch a lot of CNN or watch a lot of cable news in general like they get in their head that

(22:56) whatever the TV tells them must be real you know got a little bit scary so um I imagine there's not a lot of those people following me but if you are I apologize I'm not trying to offend you in any way shape or form I think that everybody should vote for what they believe in okay um now in terms of work tonight though yeah people need to move Beyond binary thinking I think that's a big part of the problem is everybody thinks you have to be on one side or the other right even people in my own family it's

(23:25) really difficult CU they can't really except they're like oh I can have beliefs that aren't lock step with everyone yeah I think that this is part of what I want to talk about Unity um yeah Fabs I'll address that if you want so people want to know why I made a a tweet about um several prominent UFO people and the answer is that they're connected to a lot of the trolls and people who have been attacking me um they have been connected by following them either they have direct communication with them and

(24:09) I'm not talking about Twitter I'm talking about they have direct lines to them like they text back and forth so the reality is that and this shouldn't be a surprise to anybody that people who know each other in real life work together right they operate together and I'm starting to become more and more concerned that most of ufology is controlled by people who do not have disclosure uh at at at their heart set right that's not what their objectives are and so I think that I don't plan on

(24:42) coming out harshly against those people unless I feel like they are coming at me but I will say I think that a particular podcaster that I was on recently uh I think is 100% connected to some of these people and I think there was a coordinated effort to uh try to discredit me and you know I think that's just sad uh the reality is like if these videos are real which I think we all know they are then there's a very real disinformation campaign attempting to hide them and what I've been told behind

(25:12) the scenes is one reason why the yeah and recorded Spaces by the way of people literally trying to disconnect me from the topic my own topic um yeah and uh we'll have to talk about other stuff later on but yes maybe when we we're done with MH370 we'll talk about the banking crisis and what have you uh so there's definitely a real coordinated effort to try to hide this stuff and what I've been told about why this stuff might be hidden is one reason I hadn't considered is that people the

(25:43) amount of lawsuits that would happen from people who were attacked by like the CIA the intelligence community that have been discredited um if they were to reveal disclosure a lot of these people would be able to sue for ions because they've been covertly you know using people you know I think the reality of how they do it is that they control people people they call them useful idiots right people that want to feel like they're cool people who are like want to be FBI agents right just hint hint people that

(26:17) think that they've got friends in the government so they think they're super cool and then they just tell them to do something right and then of course they'll go do it they become their savants um one of the options too is that like if people have been uh let's say arrested and then they are part of let's say the UFO Community imagine how easy it is to make if you say hey I'm going to make your criminal record go away right we'll talk to the judge we'll make your uh your your your arrest record

(26:45) disappear all you have to do is you just have to become like my talking piece right I think that that's very easy to do and so those are the types of people I imagine would be out there doing that kind of stuff I'm not saying anyone is is but that's what I imagine it would play out so we have to be very careful on how we move forward so like any more any more podcasts I do in general first of all this is why I separated myself from the UAP Community UFO community so if anyone out there is part of the UFO Community I was never part of

(27:16) that Community if I even was it was only for a month if that and I haven't used their hashtags or anything like that in in over two months I would say and so that the reason why I did

that is because then there's no no reason for anyone in that Community to talk about me at all so if anyone out there is in the UFO Community is trying to talk smack about me it means they're dishonest because I have not been even trying to be part of that Community I haven't said that what we're looking at

(27:44) here is aliens or non-human intelligence I've said the opposite um if the people in The Conspiracy Community want to accept me sure because it's this is a huge conspiracy that we're talking about here but in terms of UFO Community those people have no reason to be attacking me any anyone in that Community you see attacking me assume that they have dishonest intent um there is no we're not distracting from anything there's nothing happening right there's nothing going on that we're distracting

(28:09) from if those people even care like all I'm giving them like in uh gambling you say working with house money pretty much means you have nothing to lose right there's no reason why anyone who would be for disclosure would be against me like I'm only working in their best interests uh because if this stuff is true and my mind this technology we see I'll pull it up again this technology we're seeing on display here with these orbs I mean look at this I can't think that we just like Gates said in our video a second ago I

(28:48) can't believe this is like quote unquote human technology I think that we reverse engineered this we saw some floating you know uaps or something and we figured out how it works I mean look at this look at this I thought this was a black hole at first this is the way this has been described to me is that the plane what they're able to do to it is they're able to get the wave functions to essentially synchronize and so that this plane can uh what's the right uh macroscopic Quantum we've got a new phrase for

(29:26) it let me see mass is just resonance so if you can get the waves to line up then you can essentially achieve these properties of quantum try it's all about getting all the waves in phase and then making the local SpaceTime metric protr like jello wood phase conjugation macroscopic phase conjugation uh careful with all your uh emotes guys nightbot gets really upset um yes okay so then in terms of what was the other part oh David grush so I'll be honest I believe David grush is telling the **truth** that's my opinion and the

(30:08) reason for that is uh that I mean to go and stand in front of Congress and talk about stuff that's like what we're looking at here takes a lot of guts and you you theoretically in Congress you are facing perjury charges if you lie okay if you're lying under oath that's very serious so I think that if anyone is testifying under oath it's going to be tough for them to lie that doesn't mean they can't be disinformation but it it makes it really tough to lie so I think David gr is telling the **truth**

(30:42) I think the issue is he's got a non-disclosure agreement so if he saw something like this he he can't talk about it there's no way he can talk about it he probably couldn't even mention MH370 even if he saw this so that's the difference between someone like David grush and myself is that for myself I don't have any non-disclosure agreements I don't really care right I'll

I'll say anything I want to say and you know I don't want to damage us intelligence and what have you

(31:10) but they need to come clean with this man they need to come clean with this um so okay take it easy Brian I appreciate that uh I'll try to get to the emails I have like 27 emails that I haven't addressed yet I've been getting hit by a lot but so the thing here with these videos really is you know this is a lot for people to take in and I think that these videos and Technology here unlike what Matt Gates said I think this is our technology I think we have figured it out even though it may have come from

(31:44) non-human intelligence and I think this can prove David gush's points and I think it can do so in a way that's publicly available now he can't speak about it because if these are still classified then with an NDA you wouldn't be able to speak to this even though it's public information uh no we haven't done a hexa decimal dump I think it would be useful to do on the stere stopic to do one of those because at the end here it's black so if somebody wants to do that here's the link right

(32:17) here somebody could do a hexadecimal okay let me see what else we got what are the questions yeah disclosure I think needs to come from the public uh if I missed your question let me know I am following I think I'm following redacted what's their their thing again let me look and see redacted I'm pretty much only on Twitter yeah I'm following redacted the redacted Inc oh yeah yeah yeah with Natalie and Clayton Morris I think I've seen some of their stuff oh yeah yeah if anyone out there's

(33:02) connected to redacted have them have them uh DM me I would definitely talk to them wouldn't pure chaos okay so this is good stuff good comments um no Gates didn't comment on this video I'll play the gates piece one more time because I think people were not here when I brought that up so let's watch the gates thing one more time I clipped mat Gates this is from the UAP confence in a clear Diamond form for which there is uh a radar sequence that I and I alone have observed in the United States Congress one of the pilots goes to check

(33:41) out that diamond formation and sees a large floating what I can only describe as an orb again like I said not of any human capability that I'm that I'm aware of and when he approached he said that his radar went down he said that his Fleer system malfunctioned and that he had to manually take this image um from one of the lenses to manually take the image automated collection as you would typically see so I think Matt Gates is a little I don't want to say he's dumb he's not dumb but I don't think he gets

(34:14) it so I think what he's saying that's I think what he's saying is he couldn't manually track the the objects there's no way to manually track it using the Fleer so again when we watch this notice here he's manually tracking it here or he or she they're manually tracking this they're not automatically tracking any of this that's what makes me think about that video clip that's why I think about this video clip and I think if if you were to show Matt Gates's video he would say this is

(34:45) not not human technology I think most people that look at this would say this is not human technology to begin with yeah I'm ready for Rogan if we went on Rogan I would I would prepare for like three days and I would just just memorize everything and I would just straight up crush it that simple no doubt it would be my my goal in life so would not chaos ensue I think that's a good question so the question that I ask all disclosure Advocates is if did we were reveal true disclosure and it meant weapons that could not

(35:20) nuclear weapons everybody else talks about nuclear weapons shutting down nuclear weapons no no no no I'm talking about weapons that will destroy the planet weapons that could destroy the entire Sun if we were to have that is it still worth getting disclosure let's do another poll here today and and thank you whoever just I'm going to get to you whoever just donated I appreciate that start a poll I want to see we we'll we'll pop it up if disclosure me doomsday weapons okay new poll if disclosure me doomsday

(36:05) weapons that could destroy the planet would it still be worth it check out the poll I want to get your guys feedback right now this is pretty scary stuff right which means you know do we still go for disclosure even if we could destroy the whole planet and this isn't just socioeconomic changes I'm not talking about wiping out fossil fuels and having the Middle East become irrelevant I'm talking about we were talking with Bob Greener and he said that this technology could destroy a sun so you know this is and again what am I talking

(36:36) about talking about this what we see here is like an amplification of energy to a degree that we are not familiar with right now yes it can lead to new power sources can also lead to potentially if you were to scale this up you destroy a whole planet with this this is a 777 right here that they're just just disappearing like it's nothing so yeah I don't know this is why I ask disclosure Advocates cuz I think this is what we have to be ready for if you want to think why are they hiding this this is there's your answer right

(37:09) so good question on that one yeah hey everybody um yeah David grush is never going to be able to say anything like that I'm disclosing never never anyone who's in the military who's got an NDA no chance in fact I think even a lot of Talking Heads They Might Have Been Told that this is what we're dealing with right imagine if they get told the same question that we have in the poll right now and we say you know is it still worth it if it's doomsday weapons I think you're going to have a lot of

(37:35) those Talking Heads are all of a sudden going to go quiet and look at this this is wild okay let me then James asked something could it be a missile defense system yes this can also be turned into a missile defense system Bob Greener was saying that this could just wipe out any nuke that were to come at us it might be a perfect defense any missile nuke anything you just teleported away you might even be able to just annihilate it honestly that's stuff talking about Bob Greener you guys need to check out the interview with Bob greener on my

(38:05) YouTube page check out the one like near the end especially where we start talking about the implications of this stuff blew my mind I'm going to clip some of that stuff it's wild

okay let's get to some of the the donation where did the donation message go oh there it is Ken thank you very much for your donation uh highly appreciate it um why are people getting night botted be careful about emotes and stuff guys I don't want you get night boted nightbot is on a rampage man um any Theory to the change course prior

(38:36) to the event uh also if the intent was to save the plane then logically the exit would be wouldn't be the Rand wouldn't be random correct not sure I'm following your question Ken so I think the answer is the reason why they change and go back to panang is if that's what you're talking about is the fire scenario right they're going to the logical place if you mean why are they turning then the answer to why they're turning then right before the event is probably because they're attempting

(39:07) emergency landing in the ocean so if you have to land like one way of Landing just going straight right you you come straight down but the the better way to land if you're going to land in the ocean is a circle that's how you slow yourself down and you descend you would go down in a circle so I think that's why they're turning in the video and I think that's supported by the um by the video and by the witness as well if Tucker if you mean Tucker if you mean Tucker Carlson I would love to tuck

(39:34) to talk to Tucker Carlson I mean that would just blow this up to a degree where it can't be ignored period why are the videos always this shaky yeah the reason why this is shaky is because it's being manually tracked just like Gates was saying so this is It's because if you're trying to hold a camera they're zooming in right so if I were to zoom in my camera it's going to be shaky as well especially because it's a PL it's a drone in fact now that you mention that the fact that it shakes like this is

(40:00) indication is real as well if this was a hoax video they're not going to have it shaking like that that's not a matter of like is it easy to fake and and do that it's just they wouldn't does the Second Amendment cover doomsday I'm not sure if the Second Amendment does cover doomsday weapons I think it does not be due to um heler I think that heler says that you can't have doomsday weapons but it does let you have like grenades and stuff I uh I might be wrong on that okay I think that generally is

(40:31) n okay and then let's see our how our poll is doing so still 61% of people still think we should have it 41% think we or 39% think we shouldn't yeah I'm still torn guys so I think that's the question if you're talking to anyone who's claims before disclosure I think that's the we the question you should ask them is if disclosure means doomsday weapons that could destroy the planet is it still worth it I don't know I'm still torn I wake up every day and I wonder now let's

(40:58) get back to our other donation how do I get back to my other donation jml thank you very much for the donation you didn't ask any questions but I appreciate it uh poke K thank you for your donation as well it's awesome I mean you guys don't need to donate I didn't even know I had donations turned on but I appreciate it very much I'm definitely going to use these donations to help further the cause for MH370 um including things like the new camera that I

just bought so that we can make better quality videos here um

(41:28) sending letters to Congress you know I was surprised how expensive it is to print out stuff and send it to Congress but it's worth it um yeah this was **leaked** intentionally I mean you look at this you look at this like somebody **leaked** this with intent they put this thermal layer on the camera they removed all the HUD data that we've never seen a HUD data like this I don't think with all the info removed like this is someone who knew what they were doing for sure right so here's another good question from

(41:59) Jason you guys are asking really good stuff tonight I love talking to you guys do you think all the recent alien evidence is just human technology the question I think really boils down to how much of what UFOs we see UFOs how much of those are ours and how much of those are something else my opinion is due to the fact that we've seen it ramping up more and more and more my guess is that a lot more of it than we think is probably our technology at this point if these videos are real and this is our technology

(42:30) which I think it is then my guess is a lot of what we've been seeing is our own technology like I was thinking about a couple sightings which I'll pull up I may even clip some of these the Atlanta three orbs video uh plane wow this is hard to find I might have to start using Duck Duck Go man there's another there's another metabunk thread on this I'm telling you metabunk is the number one source of disinformation about this kind of stuff here it is it's I love this is a random you know where I find this video

(43:10) is a random uh radio station that's where I have to find the video like you would think if I Google Atlanta 3 orbs that I should the first thing I should find what here it is this one is it not a video link what the heck okay well this is a video from somebody who claimed to be on a plane going to Atlanta or from Atlanta and you see this and I just thought it must be fake when I first saw this years back I think this was 2013 and there's a video of this where they're flying next to the plane but if

(43:43) this is real my guess is this is probably human technology right but this is the kind of thing where I wonder it's like is this human technology or is this you know non-human intelligence I think the more and more stuff do we see like this I'm leaning more towards a lot of it being our technology but I don't think we've happened across this randomly like Matt gate says I think this is a situation where we just don't realize you know how advanced we've gotten and I think that we've been

(44:12) working on this technology since the 40s since the Manhattan Project I don't think we stopped after we split the atom right and that's why I think a lot of this goes back to the Department of energy in fact I want to do a **foyer** request let's see let's see what it takes to Foy the Navy this is how you foer people guys you have to know the way you want to **foyer** them man they don't have a thing you have to actually email it is this the guy that denied me I I call this person and they never pick up man they just never pick up so I

(45:06) have to email them huh we're probably going to **Foya** the Navy on everything related to MH370 I'm pretty sure what we're looking at here is Navy on these videos so I'm probably going to send them one as well man you guys are going you guys are popping off tonight thank you let's see oh yeah shortly before it can before the plane turns South yeah so that one yeah I think it's cuz they're Landing I think that's cuz they're Landing hope that answers your question sir okay sorry I'm not going to be able to

(46:00) keep up with all the questions I didn't realize we would have be this big right now so I'm trying um oh so that's that's what super chats is I don't even know what Super Chat I didn't know that's what Super Chat was I thought that was like special emotes or something that's cool though that's cool I appreciate that has anyone measured the angles that the orbs maintain to each other yes it's a  $120^\circ$  sinal pattern so it's a perfect wave pattern someone said that that's

(46:36) equivalent to a 0.440 volt pattern I don't know exactly what that means I imagine the electrical engineers would know what that means but pretty neat they're basically in a perfect equilateral triangle  $120^\circ \times 3$  is 360 which is a perfect triangle where do I think these orbs lifted off from from so that's another good question if you watch the Bob Greener interview I mean I'm telling you guys these interviews I'm doing are spicy you guys need to check them out Bob Green your interview I asked him

(47:06) could it come from a submarine because that's where I think it comes from because if we look at this picture I'm this one I'm going to show here in a second watch this watch down here there's the orb you see that appear right there see that orb appear out of the water right there that's where the orb's coming from it's definitely coming from the water down here and it comes up through the cloud you can see that very clearly look at that so this is what they call this is a color channel change version where

(47:36) somebody switched the color channels on this so that we can see more detail and you can clearly see that orb come out of the water which makes me think it's torpedo what Bob Greener told us is that they could basically coming out of anywhere they could be they could be coming out of like these things could be self- sustaining so that they can just stay for like days on end so it could just be floating through the water and then come up and out pretty wild but to me I still think Navy ship makes the most sense um Shawn Ryan's people did get in

(48:11) touch with me but that was like or he got in touch with me he told me to get in touch with his people but it hasn't really happened I get a little worried Shawn Ryan is connected to a lot of military people so I get the feeling like he's going to have people like the podcaster we were talking about and those people that are connected trying to tell people not to talk to me thinking that telling him that this is a hoax or something like that um which is kind of weird because sha Ryan has people that believe in lots of esoteric

(48:38) stuff on so this shouldn't be anywhere outside the real of possibility for him so if he's listening or anyone's connected to him I guarantee you this is no joke this is no disinformation I will reveal the biggest conspiracy of all time potentially um let's see how optimistic am I for

disclosure I would say not very optimistic I think that disclosure is on a planned Tim table I think that they are trying to acclimate people to the idea of this technology because I think that even people who believe in UFOs

(49:11) this is like well beyond what people were expecting and that's you've heard that a lot in in UAP communities right where they say like this is you know whatever this is is huge it's huge it's huge well this is pretty huge this here is pretty damn huge what we're looking at here I mean look at these orbs and the the lines in front of them here's another one look at this look at these lines in front of these orbs they're ignoring gravity straight up if we can unify Quantum and macro

(49:39) yeah guys we're talking about magic becoming possible we're talking about blowing up planets we're talking about being able to teleport objects we are talking about um first super on a live stream I don't know what this stuff means uh we're talking about what else do we say we could do um free energy potentially could become possible it's not really free energy but pretty much is free energy like the way Bob Greener described it you could just take a faucet and you could have it flow through one of these toid toids which

(50:12) allows it to just it kind of uh I don't know what the right way to phrase it is capture the electromagnetic waves into a point where it can essentially keep the energy and store it so all you have to do is have water flowing through it and it's just collecting energy so it's essentially like free energy in my mind um a lot of really amazing stuff just thinking about it like it's hard for me like I want to learn electrical engineering so I can understand it better yeah the foas uh yeah and what

(50:40) I've learned to is we're never going to get to anything in the department of energy they're going to be able to hide it even during an investigation they have ways to get around like official investigations as well the only way we're going to reveal this stuff guys we do so publicly everybody just has to learn that this stuff is real and we they have to just believe it to be real from the way to the evidence so much so that we just change enough Minds where it can't be denied anymore that's how I

(51:03) think it has to happen and if I'm being used to that extent that's the reason why I haven't been wiped out or something like that then whatever I don't care I'll be used that's fine it's I'm not if so I'll tell you guys up front I don't know that I'm being used if that's the case the passengers are they still alive I don't know um first I want to say uh jjun thank you for your donation it's the Matrix attack yeah I you know I didn't really believe in this whole idea of like the

(51:30) Matrix in terms of like there being this shadowy group that was attacking people but now I certainly do I'm just going to be real with you guys I certainly believe that there is a I don't know if you guys want to call it deep state or just there's a group of people within the government who are in the know right and they are discrediting everyone who they think is a threat to them to people that will reveal the truth I I do fully believe that that's happening and

they can do it to whoever they want for whatever reasons they want

(52:03) you know people that are potentially have a lot of influence people that are disclosing information that they don't want people to be able to believe or that know is out there technology that they don't want revealed um anything that threatens them I imagine that that's they can do whatever they want on it so thank you for that one the passengers being alive that's a pretty that's a tough one so we're dealing with a pretty tough situation here guys most likely this plane was depressurized from

(52:32) the fire and that's why they're flying low is that this this fire explodes 221 kgrs of lithium ion batteries it's not going to blow up the plane but it's going to do some damage to the plane potentially it might even be where the smoke is coming from the smoke might be coming from like literal holes in the plane from the depressurization but I still think that the those AC exhaust vents make the most sense they're just in the right spots uh so you have to survive this toxic smoke probably billowing

(53:01) throughout the whole plane which I think you could survive you just stay low in the cabin right and you're going to be above the smoke that'll be above you but probably some people didn't make that then you also have to survive the hypoxia which means you have to have enough oxygen be able to breathe for an hour and 20 excuse me 20 minutes and then after that you've got to survive this event you got to survive this which I think you can survive but I can't say I'm 100% certain so what

(53:31) Bob Greener also said about this event here that we see this uh macroscopic Quantum conjul conjugation which is that all these the waves of the matter in this plane can essentially be harmonized to the point where they are in sync and that's what allows the plane to undergo this Quantum coherence where it can gain the properties of quantum and and essentially tele is that this plane could just be sat down somewhere it actually might not even have to obey the laws of conservational momentum which makes me

(54:04) think that the people the the pilots had no idea this was coming that they fired this off they didn't tell the pilots they just told the pilots hey go to this location we will have our assets there ready to assist for your water landing the pilots are like wait why I'll just go land in uh like here's something my buddy told me he actually saw the Infowars thing and he messaged me and I was like dude I must be getting big cuz normally I would be messaging him about my content and where it showed up and he messaged me

(54:32) he's like dude I saw all this stuff on Info Wars is talking about you why would you not just land right outside the water here right to me I would land somewhere right outside panang on the water like as close to the shore as I could so the fact that they go way out here where KT's boat is tells me they had to be in communication they had to say this is a rendezu point come out here to the rendezu point right right so they go out here they can't land for whatever reason they go to the rendezu point Pilot's

(55:01) probably like we're dead we're doomed right there's no way we can survive this um and that's assuming the plane's not being remote controlled somehow and then they get out here and they're thinking okay we're going to land in the ocean we've got boats or something nearby that are going to help us or you know the Navy or whoever is going to save our lives and then they get zapped zapy doozy okay let's see what else we got thank you again for the donations appreciate that I guess I have to figure

(55:28) out how to even collect these donations I I don't even know how that that works with YouTube I don't think I've ever collected money off of them before we'll see yeah that war yeah old rack right that orb coming from the water that's I mean there's just too much detail on all this stuff I just there's no way any of this can be fake just way too much detail man way too many small details even the even the pattern the interference pattern you see here in the background like what do they f fake all

(55:55) that too like oh they just they put a random pattern there dude it looks just like real life I mean how can anyone think this is fake I also heard **Mick** West dodged a debate which honestly I don't even think I want to debate him at this point like what do I have to gain from debating **Mick** West like I know how it's going to play out debating **MC West** will just play out where he just admit he just continually like asserts he'll just keep asserting that this VFX matches like I'll just pull this up and then he'll just keep saying that

(56:23) it matches and I'll just be like it doesn't match dude like you can see it doesn't match you can see these dots aren't there you can see this doesn't match here see the middle doesn't match at all and they just say yeah it matches you just modify it and and we'll play this game out and it just I don't know doesn't seem like it' be beneficial like our momentum is building so fast that people like **Mick** West don't even matter like the only thing he can do is he just

(56:48) has more reach because he's got all the Spooks that'll put him on TV put them on CNN he'll say whatever he wants they want him to say you know and that's okay we can't really compete with that they're not going to put us on CNN anyway and I wouldn't go even if they did what I will say is Matt Kim though told me that I should just go on CNN anyway even if they allow if even if they you know are going to try to butcher me because his argument was even if it's bad publicity it's still

(57:12) publicity but I don't necessarily agree I think that it's very important that we don't let them try to like pigeon hold me into some uh fake narrative like the one that trying to do is that Ashton thinks the aliens Za the plane that's what they're trying to do which I mean you guys know that's not what I think I don't mind if people do think that but the reason why they want to do that is because then they it seems crazy right it seems silly and if I thought that was the case I would I would admit it but I I just

(57:42) don't I think that what we're looking at here is our technology yeah it's crazy the video has hasn't been this um the videos haven't been made popularized yet right and here's the reason we needed all this stuff I needed all this stuff to even understand the videos to be

possible right and I'm probably going to change this one um might change this to supercomputers because I think that in order to process all the information that we're seeing on this especially with this part with the orbs like I

(58:24) imagine the amount of data processing this is doing to map the plane is probably very high like ridiculously high so I think that we needed a bunch of things in order to understand these videos to be real okay so we need to understand we need to have these 2017 DOD Navy videos I did not even really believe in uips before this I thought sure they could be real but I didn't I didn't think they for sure were I also had no idea what Drone footage looked like this footage I saw in 2014 I remember it seeing it I didn't know what

(58:53) the heck I was looking at here no idea idea only because of this did I have some idea of knowing what this looks like the Trump satellite picture huge Trump probably did more for disclosure just from that one picture than like most presidents before him if not just like all presidents before him because knowing what satellite imagery looks like even knowing about the cber system like we didn't even even after we saw the Trump picture we did not know about the cber system which is what I want to go into next after I address some

(59:22) messages in the chat I had noidea how satellite imagery worked at all it's not as simple as just taking picture from the satellite it's a matter of this computer program that they've built out that's doing persistent realtime monitoring persistent being the key word so we needed that we needed to advance the theoretical physics Concepts which I didn't know any idea about I had no idea like wormholes was something where like I was like yeah haha wormholes might exist I had no idea that we could theoretically unify Quantum and

(59:53) macro I mean I figured there must be be a way there has to be a way why Quantum objects act differently than macro what I didn't know is that Size Doesn't Matter What Matters is the properties what was it that I think I took this like read Roy de Herbert guys this guy is a smart mfer he knows what he's talking about I'm G to pull his stuff up real quick on Twitter wait how come I can't find him there he is let's see what he's been talking about today so first thing he talks about how

(1:00:33) time is a fluid symmetry so when you see this the reason why it speeds up here is because it's getting higher gravity I mean I I I can't even fully understand it to be honest with you the faster the clock ticks the lower the gravitational force but what is this one what was he saying in our replies today let's take a look at his replies he was actually defending us today I think I retweeted one of them but this guy is super smart and I I personally believe in the stuff he talks about here properties denote the behavioral

(1:01:13) outcome independent of scale so what this means here is that scale Size Doesn't Matter the properties denote the behavioral outcome which means that regardless of how big your object is or small smaller object is if you can make your plane act like an atom now it can have the properties of an atom something that's Quantum to me that's what we're missing let's give him a like here I think he was doing work defending us as well and this as well is interesting

when the central nuclei reaches the correct point the properties

(1:01:49) of quantum will perhaps exist invoking conservational symmetry this is like a little bit beyond what I'm capable of understanding but feels right oh and he's even got the bug here so one thing is that the example I keep giving is a fly why does a fly move so fast less Mass equals faster time and that's why I can move faster let's see well he's been busy what else you got some cool other cool stuff for look at dilation theory is a holographic information Theory it unifies the Context unifies the contextual domain of Quant

(1:02:37) with the larger scales and resolves paradoxical nature of the cosmos and it's odd phenomenon oh he wants to get on Prime video I support it I support it Mr Herbert sir I I support you getting on Prime video look he keeps saying the same stuff Dynamic behaviorism properties denote the behavioral outcome independent of scale he's talking about unifying Quantum and macro he's saying it's simple all we have to do is have the same properties and you'll get the same Dynam Behavior outcomes so definitely think take a look

(1:03:11) at his content if you guys struggle with that let's see what else we got and I I believe that quantum computers require super conductivity and so that's again why I think some of our last things is we need lk99 and really what we need is the emergence of super condu room temperature super cond super conductivity now I'm not saying that this is lk99 salvator Pas actually argued that we can achieve room temperature superconductivity without having a meta material so that we might be able to achieve it with the right electrical

(1:03:52) currents and the right configuration perhaps toroids if you go back to Bob Green your stuff uh thank you Ponder 6 I appreciate the the kind words he just says very intrigued and hopeful for the **truth** I am as well happy everyone's doing well H thank you cadon I think we scheduled our our interview kadana I can't remember and be careful of nightbot guys nightbot will get you God Dam I can't click on people just like yeah if you do the the biggest thing that nightbot gets is the the emotes so don't put too many emotes in

(1:04:31) otherwise nightbot will get you passengers may be not in a good situation but yeah we don't know um no K T's citing she did say what K T told me was that she could see the cockpit because there was illumination so might be Mis mistake stating that when when people were harping on me in a podcast about that they were being really dishonest and they were trying to find something to pick apart it was pretty embarrassing like no podcaster should act like that um you know I would recommend avoiding that podcast with like the

(1:05:09) plague if you're somebody who's thinking about going on podcasts just be careful guys be careful you don't want somebody who's out there who's like literally trying to nitpick your your theories that's not somebody who's coming at you with honest intent that's somebody who's dishonest person who's coming at you with dishonest intent so and anybody who makes a video about the person that they had on that they're monetizing that they're monetizing uh that's that's a red flag

(1:05:40) so stay away from any podcasters that do that that's my final advice on that let's see what else we got there's much better interviews to watch anyway so and I hope Danny Jones does not dishonestly edit the video I'm a little afraid that he will I hope that he does not he's given me assurances that he won't but I don't know how many people I can trust to be honest with you **Mick** West **debunk** only survives the idiot in hurry test that's about right I I should look what that what that

(1:06:13) is just try to a lazy **debunk** yeah if CNN ran with the story I'd become skep skeptical of it too uh okay sorry I'm trying to keep up with the the chat questions we got how many people are watching like 200 people wow thanks everybody for coming along and watching with us here tonight I might not be able to keep up with the chats yeah you have to be humble when you're I mean I I think I handled a situation where I was under hostile attack pretty well you have to be uh I apologize na you really have to

(1:06:52) keep it cool honestly which which I've got so much experience doing these podcasts now it's I'm not worried about it can I interview a drone and satellite expert that's a good idea I need to get to somebody who's like Ryan Graves or somebody who's really used that the real the reality is the satellite stuff is super classified no one will ever be able to uh no one will ever be able to deal with that no one will ever be able to talk about the that stuff let's see what else we got how are these people not being

(1:07:27) removed how's this person how do I ban somebody yeah okay thanks Susie how do how come I can't ban people from my channel yeah everybody make sure you report this guy make sure you report this guy I'm not sure if we can like report their whole Channel hate speech we keep seeing these same people that just need to be permanently banned thanks I don't want any more of that uh let's see what else we got let's see hide this user from the channel let's see okay you can block them I'll have to

(1:08:31) figure out how to block them so yeah I think uh oh uh olra thanks for the donation appreciate it let me make sure I give you a little emote action someone mentioned disclosures already on the way uh I don't know I'm not I'm not in the UFO Community anymore so I'll I'll give you guys my opinions on it but um yeah I'm trying to avoid all that stuff I I don't want to be like a spokesperson for disclosure I think that I will disclose these videos and whoever wants to take what that information reveals

(1:09:01) they can go along with it people ask me that's fine as well can I explain why the Trump satellite's so good yeah sorry I'm looking back at some questions I missed because I had to delete stuff uh the Don Lemon one we've got the Don Lemon one somewhere should I you guys want to listen to that one again that one's pretty funny man so damn weird let me find it where's D I got so many video clips now here it is March 20th so this is actually after the first video was what if it was hijacking or terrorism or mechanical

(1:09:45) this is before the video was like actually online published but it's after it was potentially **leaked** failure or Pilot error but what if it was something fully that we don't really

understand a lot of people have been asking about that about black holes and on and on a lot of people have been asking about black holes what on and all these conspiracy theories let's look at this uh Noah says what else can you think about black hole Bermuda Triangle and then Dei says huh just like the movie Lost and of course it's also they're

(1:10:15) also referencing The Twilight Zone which has a very similar plot that's what people are saying I know it's Preposterous but is it Preposterous you think Mary well it is a black hole is about you know a small black hole would suck in our entire universe so we know it's not that muted triangle is often weather and a small black hole would suck in our entire universe just yikes man yikes yeah I mean you guys can tell when there's dishonest people you guys know you guys know I mean I don't honestly I

(1:10:49) don't even want to send people over to that podcast but reading the we read the comments on one of our streams yeah if I ever get the comments like that that that that podcaster got from their own followers from their own subscribers that that's when you just shut down your podcast man that's why he was so pissed off I imagine he was so pissed off I was looking at the comments and I saw him replying at like 2 in the morning to every comment because he was so [Music] mad just too funny hey Jeff welcome

(1:11:22) welcome buddy uh I'm trying to see if I miss any comments we're going it's going fast now I've made a bunch of people moderators we got moderators I I don't know for some reason I click on the stuff and it doesn't I have no options for Banning my only options are remove people's comments I don't get it uh I don't know which host I'm talking to on Coast to Coast good question I'm not sure if I even should have reveal it there's already people trying to reach out to them telling them

(1:11:55) not to talk to me and honestly it happens every time I have people there was one person that uh told one of the podcasters that like I stole their work from 2014 stole their work from 2014 I was like what are you talking about whose work from 2014 could I have stolen like some people are just man not all there my dude not all there yeah I think that the disclosure efforts I think are all a lot of it's controlled I think is my my opinion uh let's see what else we got okay I think we're we're good

(1:12:45) okay uh three stacks why is somebody else different Government funding I definitely don't have any government funding oh and somebody um yeah Susie if you find people that say anything you know deeply inappropriate um please uh ban them I don't do not just remove it just ban them if you can I want them permanently banned if you see any thing saying anything hateful or whatever it's important we don't have that yeah Coast to Coast Sunday morning 5:00 a.m.

(1:13:14) eastern oh yeah this the Trump satellite okay let me find it I have a picture okay here's the Trump satellite picture while you're looking at that let me take a look yeah second podcaster was saying that this could we could just annihilate nukes with this type of Technology like you could teleport them back on a people giving new meaning to the word teleports behind you but

you could also just annihilate it and annihilate their weapons entirely it's like a perfect defense theoretically yeah I think that there's only a few small number of people who

(1:13:47) are in the no when it comes to this type of Technology what I've been told by people behind the scenes is that even within military a small number of people know about this most people don't even think this is possible and this is why I think when we listen to that M Gates piece even M Gates thinks it's aliens doesn't realize this could be our technology this it could really be our technology not just aliens or whatever people think pretty wild uh I don't think that the plane was vacuumed to be a macroscopic state it's

(1:14:17) more complex than that it's almost like there's another dimension and so the plane is able to achieve this wave function it still has its structure but it can now just be anywhere pretty pretty nuts and move essentially fast faster than the speed of light people are getting night night bottled like wild somehow the nightbot didn't catch the people that are hateful so okay um oh yeah so we're not going to send up a GoFundMe because I mean as you guys have seen people are already attacking me for legitimate gofundmes when I when

(1:14:53) I wrote a lawsuit uh that I like didn't even cover my my expenses for the lawsuit so if I if I did gofund me for this people would 100% be attacking me plus I just don't need the money for it I can if you guys want to support me I'm not going to stop you with that I'm going to put it to good use but I don't I don't really need people's money at least for now I have another job that I I'm you know well paid in that job and I like doing that job it's hard to go back to that job after you're doing like this

(1:15:21) because this is like I mean this is Next Level right I would do this for my whole life my whole career if I could not not necessarily like this but like researching into like cool stuff learning about this technology you know disclosing this type of quantum and macro technology to the world I think it's just it's huge it's huge leather jacket I'm not sure I'm a leather jacket kind of guy I would look really weird in a leather jacket I feel like so this satellite image um they didn't think this could be

(1:15:52) real people try to **debunk** this satellite image a real satellite image the reason is that you don't see the stereoscopic imagery or not stereoscopic but the uh atmospheric Distortion so if you have a satellite is looking from really far away there should be atmospheric Distortion when you try to look down but they don't see that well the answer is actually really easy this is a computer generated image it looks very legit because it's super high quality and there's using infrared persistent surveillance to actually see this

(1:16:28) imagery so that's why it's all infrared is that you can make it look however you want this is an infrared image probably false color as well but even though it's false color it still looks like you know it would really look that's the point of false colors you want to look as similar to like what you were looking at as possible but just black and white we can tell this is a daytime image huge Shadows here our video has no Shadows at all all this most likely came from video but they just took a still

(1:16:57) image of it and again that way it didn't even let our enemies or anyone know that we have video capability but of course we've got video capability right why would we not at this point um so yeah you know I think that that's the big thing uh so that's why this is so important and just to understand what this means and how it works you can just Google cbers yourself and you can find this I didn't think we'd be able to find anything like this I thought there's no way they're going to like tell us how it

(1:17:25) all works but we can deduce how it all works from looking at our video and then just pulling up the cbers video Global persistent infrared surveillance continues to be a critical National infrared surveillance let's hear that again Global persistent infrared surveillance what does that mean to me that means we've got video of the whole planet systems has expanded to include short and mid range ballistic missile uh oh people are getting night botted uh be careful with spamming messages I think nightbot doesn't like

(1:18:12) that either I don't even know what oh that it's probably the periods don't spam periods don't spam symbols don't spam uh any emojis either this is cbers here guys that that image in the background is Trump the Trump satellite picture and this is how cbers is scanning the whole world all the time all the time this is how we're able to create this video you've got cbers scan this is also why this is why there's no atmospheric interference this is why the satellites don't appear to

(1:18:47) move because it doesn't need to move but the clouds do move and the clouds are moving because the clouds are moving in real life the satellite's not moving because the satellite is actually just scanning sending data back building this 3D image the reason why it's six frames per second is because it's scanning a huge field of view creating a huge uh computer generated image widescreen image hey Ian from the UK what's up let's see any other questions I have any concern this will affect your job

(1:19:23) are your top secret clearance uh no I don't think so I mean if it did like wouldn't they just be wouldn't that reveal the whole thing if they were like Hey we're going to revoke your clearance because you've been revealing classified information I mean it would be kind of just like gives up the game right so they're kind of stuck right they can't do anything about me doing this if they do they'll be admitting to the **truth** um I already took measures before I started revealing this was my job to

(1:19:52) make sure that I'm covered and that's part of the reason why I don't talk about my job at all uh because I don't have a media clearance but I I can talk about stuff that's just public information like I and I looked up to make sure you're allowed to talk about having a clearance as well just to make sure it's okay to even talk about I wasn't sure but it seems like it's okay to talk about so um but I can't talk any more specifics in my job other than doesn't have anything

(1:20:18) to do with Advanced Tech or anything like that so this again satellite image from Trump really gave us gave the game away told us that oh this is how the ciber system is working I'm not sure if the fire was intentional or not not sure how did I get into this issue somebody

asked me about that on one of the podcasts recently or maybe was before the podcast is that um I'm trying to remember the exact thing a lot of the fact that I have a security clearance was part of the reason because it dispels so many

(1:20:53) attempts to discredit you right um so you know when they try to discredit you and say that you're a **Russian** agent or that you are crazy or whatever well I've already had the background check done on me by the most detailed government potentially in the world so it automatically dispels all those things unless I'm a spy which I'm not then I can't be a **Russian** agent I can't be crazy because they would have already caught that there can't be any red flags in my background no criminal

(1:21:22) history nothing right they would have already found all that stuff so a big part of the reason why I chose to do this is because I have that clearance like I just thought and I was like huh I have a clearance so if I am the one to start revealing this and I put my face on it it'll be really hard to discredit I mean not impossible there's certainly trying you can you can tell right like they set me up on a they set me up on a fake interview where the whole point of the interview was to try to like litigate every aspect of the case and

(1:21:49) try to find and nitpick certain stuff the same way the **debunk**ers work right they fit they find something irrelevant and they try to like focus everything in on it that's like how that worked right so when I went on that podcast that was intent it was a setup you know and I I I I felt it out right away and uh you know for lucky thing for me was that that podcaster was the one to put my name into their release like I didn't even sign the release so there's absolutely nothing that they can do at all just from even

(1:22:20) from the legal perspective like they're just they're not a smart person at all like they're not even half as smart as they think they are it's pretty embarrassing um and I'm glad that that podcaster admitted that they they didn't pay for my hotel that they lied about that um you know because finally like they should they owe me an apology over that honestly still but you know they're not they're honestly a piece of crap so they're not going to they're not going to apologize but it's

(1:22:52) whatever let's see just trying to see what other messages here uh and then well we've been I've been busy interacting with chat tonight I don't know how much work we're going to get done yeah this is getting a lot of traction so today we had Infowars did a piece on us so I can maybe pull that up honestly I haven't even looked at it myself I mean we've got we've been getting lots of attention but I I don't even go to infow Wars let's see what infow wars got going on like is it even what if it was like

(1:23:27) on the front page I doubt it top YouTube gamer calls Alex Jones NW Wars game of the year what what is that I'm just curious oh asmin gold don't care I don't think I've ever gone on this website before but huh oh whoa holy oh God dang it I probably just got probably just lost my monetization on this I got to be careful about not swearing guys holy crap whoa whoa this is like right on the front page Special Report holy crap uh hello holy crap holy crap guys Malaysia

Airlines flight 370 disappeared on March 8th 2014

(1:24:34) on May 19th this is all like basically about me a **leaked** video was published to YouTube by a third party claim to have received it on March 12th the video shows what appears to be a jet air great report here by the way being trailed by three spiraling orbs eventually the three orbs change verbal pattern and disappear in a flash with the airliner leaving a dead end trail of smoke in the sky a month later on June 12th a second video was published to the same channel that showed the ex are melting down now this

(1:25:09) is getting way too big for them to anymore the world's going to know about these videos nothing can stop them Forbes and his team have been researching these videos extensively and have provided exhaustive evidence these videos including digital we've got like another 12 to add that professionals eyewitnesses and government data Forbes and his team have successfully addressed all **debunker** claims and have on address all **debunker** claims as on Get Wrecked dekkers nobody has been able to **debunk** This research yes their

(1:25:46) research shows that the first leaked video was taken from a pair of American signals intelligence satellite known as USA D229 twin satellites capable of creating 3D stereoscopic by two slightly different views the twin USA 2 oh we're looking straight down oh somebody who asked about the satellite there you go re to so that's how we know guys this event occurred at around I'm getting super pumped right now it was completely dark the wavelengths captured by these cameras are for detail and the stereo

(1:26:23) effect allows for added depth perception the this is how we know the time guys look at the top of the screen M 1835 1837 1838 I mean this is staring right down 1839 boom we're staring right down at this spot and the man responsible for leaking these videos seems to be Lieutenant Commander Edward Lynn he was accused of being a spy but court transcripts prove that this was just spin the details of his crimes including the time they happened are redacted but it came out in the trial that the class care us to emoji moneen hey What's Going

(1:27:01) the internet and Lieutenant Commander full security clearance to the same technology us videos us B are mad and Forbes put together the final flight path of Malaysian Airlines flight 370 look at this March 7th at 1642 UTC flight 370 from Kuala Lumpur International Airport at 1721 the out SP the nearest airport all coming out a witness on an oil rig reported that the plane was on fire several witnesses reported hearing a loud bang and seeing a glow pass overhead at 1752 the co-pilots mobile phone PS the local Tower at 1840

(1:27:56) an eyewitness on a boat reported that the plane was glowing orange and appeared on fire I'm on cloud right now ping data shows the same sharp left turn that we see in the videos and then abruptly goes to zero as the plane disappears The CCP released Chinese satellite images that appear to be three orbs they first claimed it was debris and later said that releasing the image was a mistake according to Chinese media 19 families have signed a statement claiming they made calls that connected to missing passengers after The

(1:28:31) Disappearance DN the the Spooks are angry people are saying this was alien UFOs saving a from crashing but this doesn't explain the fact that three different Advanced US military surveillance Camas is this straight fire 23 of the passengers on board were related to free scale semiconductors a leading number there super conductor technology oh I'm going to get myself appears to be some type of superconductor tation which is reminiscent of what the Nazis were doing with their highly classified I might have to look at this Nazi connection

(1:29:08) luminous were first reported in May of 1940 as Germany invaded Belgium and by 1942 several people began reporting them starting in the Skies over Germany American pilots during World War II called them Foo Fighters and let's not forget Gary McKinnon who in 2002 was accused of perpetrating the biggest military computer hack of all time and you claimed to have seen evidence of an advanced offworld military Fleet that's how you do it Greg Reese reporting damn Greg Reese Greg Reese just lighting it up holy

(1:29:47) goodness here's the video that proves the time at the top so we actually did the satellite first we found the satellite and I was sure cuz we were looking at the stereoscopic this had to be the right satellite but we were thinking it was in the South Indian Ocean but it was at the South Indian Ocean too early oh I have to use browser chat that's why uh no I'm not using OBS chat though I'm not I'm using browser chat that's what I'm confused about uh Studio your channel uh uh God I don't know how this

(1:30:24) works man oh this is how okay I see yeah no still it just doesn't give me the options to ban people I don't know what what I got to do to ban people why is it so hard to ban people let me try this again one second guys I just I need to learn how to ban people real quick so I can wipe people out here I'll let you guys watch let's figure out come on what the heck let's figure out how to ban people real quick uh wait there might be private information here I'm not sure damn 75,000 views it seems good oh

(1:31:07) comments here we go okay comments this is Banning [Music] comments I don't get it I don't get it whatever we'll do with that later just doesn't matter we'll just have to delete them bye tomorrow I'll figure out how to ban people um yeah that was pretty that was pretty amazing guys oh nice Jeff you just found out about this from watching the Greg video that's awesome yeah pretty big so yeah I have the evidence posted on my Twitter uh profile if you want to check it out um so you can you can figure that

(1:31:55) out how do I go about copyrighting my property with this investigation um the answer is that it's already copyrighted because I'm the one who wrote it like it's automatically copyrighted so if anyone he just retweeted my my work kim.com just retweeted my work holy yo my my Twitter's not even loading my Twitter's not even loading uh yeah wow I can't even load my Twitter what the hell MH370 is trending oh yeah people are posting info words stuff now oh boy here we go it's on now it is on

(1:32:54) now oh hermes's clipping it yes let's go good clip Hermes okay if you're not on Twitter right now get on Twitter start making it start making stuff rain start making it rain on twitter for

us uh I don't know how to make this go down so people can tell I'm talking to money Penny but that's cool money Penny doesn't care that people know I'm talking to her you're a good person money Penny I appreciate you following along getting involved in this early on uh notifications see there's Sig I was

(1:33:32) actually going to uh we might need to do a Sig part two tonight I'm just getting so distracted with chat I'm having more time talking with chat than working tonight so just FYI guys after last night when I I went I got went offline and uh I I just I did the the whole flight path afterwards I couldn't go to sleep I went wrote the whole script for the flight path uh that's why I did it last night so that I was already ready uh that's why I was able to get it out today so quickly yeah damn I love it yeah the show here

(1:34:11) was really good you guys should watch this um I think it's on my profile yeah uh this one here with Keith if you if you're not up to speed this is a really good way to get up to speed tonight it's about two hours I mean that's really what it takes is about two hours to get through everything you can fast forward whatever you want to do go through it um but that's a really good way to do that let's see what's up with Kim my boy kim.

(1:34:36) com uh one sec kim.com oh snap oh snap oh snap it was funny because I was about to do a second version of this tonight where it's called persistent here you guys are you even ready for this I like I had this ready to

(1:35:39) go um check this next Generation persistent IR surveillance cers Geo cers mission look how much stuff I have ready to go for tonight it's funny because I we looked at all this before but I just didn't realize back then when we were looking at how important it was damn I can't keep up with the chat now there too much yo Three Stacks chill out a little bit see three stacks just chill a little Global persistent infrared surveillance oh this is going to blow up this is definitely going to blow up

(1:37:22) wow this is getting big this is going to be really hard to ignore for people like if anybody's out there and I know you guys are watching you big people whatever you know who you are out there if you're not if you're still not commenting on this I'm just going to be honest the moment they put me on someone big like I'm going to just melt everybody who's been trying to keep this secret trying not to talk about it yes yes yes yes yes let's just go let's go go let's go let's go we got Max

(1:38:08) notifications it's we're firing on all cylinders now we don't care about the **debunkers** we don't care about the haters we we're just going we're just getting too big for this yeah I don't think he retweeted or he didn't tag us but that's fine doesn't even matter how did he how come on his it says where it came from how did he do that how was he able to pull this from my thing over what's up everybody looking for group lfg let's go we got the info Awards we got kim.com

(1:38:45) retweeting our stuff we got it's just going wild solenberger interview oh I watched the solenberger interview I I didn't get I there was nothing I got out of it that was super big yeah

kim.com I mean I talked to kim.com for like two hours that morning I had to push a lot of stuff back to talk to him CU kim.

(1:39:14) com really impressed me I I didn't know like I tell everybody I don't judge anybody ahead of time and you know I had heard like you know the negative stuff that the media says about people because they always have to try to discredit people or what have you right but um when I talked to kim.com he was like legit like he was a person who was very logical and rational he was not somebody who's involved in UFOs and I told him hey I was not involved in the UFO Community either right I bot is brutal yes I told him I'm not involved

(1:39:41) in the UFO Community either right and I went through all the evidence with kim.com and he asked me some questions he's like I I have some question as well um yeah so hey if you if you talk smack on my channel you're going to get yourself very quickly banned so you know don't do that uh and uh so I talked to him showed him all the evidence he asked a bunch of really good questions as well and you know it was good it was a good uh discussion with him and I knew that's how I knew he believed and it worked out

(1:40:11) because I had a space set up for later that day already with the X Channel alert and then kim.com is like hey I'll join and I was like oh I was like if kim.com join our our ex uh discussion then it's going to be huge there was 3,000 three it had to be the biggest it had to be the biggest space on X right 3,000 people listening on that we had Greg gutfield on there we had Scott Adams listening in Jacob Chanley the shaman from j6 came up and spoke and just dropped some like straight up UFO knowledge on everybody he knew more way

(1:40:49) more than I did I mean you guys got to listen to the the space and I just went I went Ham on that space like I went through the whole flight path everything it was it was big I was actually surprised if Fox News didn't reach out to me after that if Greg gutfield is on there and listening somebody knows I might consider talking to Greg gutfield maybe that's the only mainstream media I would consider cuz like I think he's just a legit normal guy and uh this was just a couple days ago guys so hold on I

(1:41:23) mean I'm not going to be a keep my notifications now there's no chance so if we go down here yeah this has already got 600 views in just five minutes so if you go through my profile I mean there's a lot to go through but this is why I was hoping kim.com if he would retweet this oh boy if you R tweets this it's going over a million it's going over a million if he retweets this but don't worry we'll do more we'll do more I probably won't do much content tomorrow um because uh it's Thanksgiving I'm GNA be

(1:42:00) hanging out with my family like all day tomorrow yeah qan Shaman guy was a I don't even like to call him qon Shaman but I just like to call him Shaman because he's a legit guy he's a very nice guy I can't believe that guy spent four years in jail that's that's just messed up man yeah whatever he did did not deserve four years it feels like they forced him into it uh I used to be a wild player Once Upon a Time actually used to be a wild player [Music] Drew you know Drew if you're a wild

(1:42:29) player you probably know what that is uh so if you want the space that I was on when was that last weekend wasn't even that long ago scroll down a little bit till you get to oh this is probably where kim.com pulled it up from yeah why I retweeted this he probably didn't retweet it because I had all this stuff about radiant physics in there but this is where he got the image I retweeted this the other day I actually showed this to kim.

(1:42:57) com as well Shaman's running for office I thought he was joking if he's in my area I'll vote for him screw it can't be worse than what we got going on now um we actually re-uploaded the space so here's the recording of the space so um somebody from my oh W 42,000 views and this is one when you put YouTube links in there it like butchers your your views even my Salvatore Pas oh no this was the this was the Bob Greener one only had 26,000 definitely check this one out I'll put the link in the chat for you guys this isn't even my YouTube this is

(1:43:35) uh awkwardly animated YouTube but he like fixed it up I think let me look so I think he got rid of like some of the after chat yeah so this is just the flight path uh maybe you want the full let's just do the show the whole thing damn yeah notifications there's no way 42 notifications I can't keep up with that I'll find the space link here so this is the one with the space link okay 231,000 views on this post 58,000 people 59,000 people listen to this space 59,000 I mean this is big numbers if you want the space there it

(1:44:20) is yeah just to be clear uh since we have a lot of new people um I have a policy that anybody who trolls condescends me condescends the investigation you just get blocked No Remorse so and also if you're a **debunker** you're also getting blocked I don't give a crap about the **debunkers** just to be clear the only way to **debunk** this footage at this point the only way is you need to find the person that made it and you need to get the source files they they should have them these are apparently incredible works of art that

(1:44:55) they made and you need to show it to us right that's the only way nothing else everything else falls short I'm not looking at any BS where they have modified a couple frames like they did with the um this like here I'll show it it's just ridiculous oh look we we modified a bunch of frames and the interference matches this is an overlay over the two if the if the interference matched this picture would be all white this picture would be all white the reticle would not be in different spots either the frames

(1:45:31) don't match like I'm tired of this lazy **debunk** crap the **debunkers** have just lost the plot they've lost their minds they're desperate at this point because they're wrong and they just can't admit they're wrong these videos are real okay these videos are real like this is like the same crap they pulled with the dod Navy videos where they try to **debunk** real videos like there's just people out there that like they can't accept reality and I hope they get the help that they need because they're going to

(1:45:59) need a lot more help when we uh prove these videos to be real a lot of people are going to owe me a lot of apologies and I'm not going to go nice on people that have been going hard on me it's going to be bad for you guys I mean I've given you guys chances to to turn it

around lots and lots of chances so yeah I'm going to go hard on the haters let's just be honest about it so you guys want to see let's let's look at this I don't like to like whip it out and measure 13 million impressions 13

(1:46:31) million this week that seems like a lot of Impressions we're getting more Impressions than CNN so just want to point that out um anyway that's enough gloating it's not even a matter of recreating at this point because the person that would have made these to begin with wouldn't have had the luxury of recreating them right there's no way I don't know how people can look at this and think they're fake like the only reason you can think they're fake is because we don't have this knowledge here to

(1:47:02) understand that they're real but if we've seen all this stuff we we can look at this and go these volumetric clouds are super detailed the clouds are the biggest giveaway in my mind but then when you start to look at this like all these details we see here like you can see this background shows accurate atmosphere these Trails there's no basis to even begin to think about how you'd create these Trails they're in front of the orbs there's nothing ever been seen like this on the planet before not in any publicly

(1:47:30) released videos the video the the uh excuse me the plane goes off the screen if you're making a fake video the plane's not going to go off the screen the plane's going to stay in the middle the whole time it's certainly not going to be like zoomed in when they come over here like it is like here it's just this is a real video this is someone really tracking the plane like I I don't know people have just got mad like I don't know they're weird man anyway careful on I think it's for like

(1:48:06) if you do three emoji three emojis is fine four emojis will get you night botted so just be careful yeah honestly I'm more I'm happier about getting on Infowars than I'm than I would be on getting on CNN yeah the problem with a lot of people is that they just believe too much fake stuff from the media and they can't believe like reality they just get lied to too much how are you supposed to believe the source video I mean look at this here it is right here you don't have to believe anything nothing I say you have to

(1:48:41) believe this is the same thing I told kim.com you can just look at the evidence for yourself it's all verifiable everything's verifiable you don't have to believe a single word I'm saying the science I'm saying is verifiable too here's the archive video archive video published May 19th received March 12th received March 12th now if you think that this is that they somehow lied on this you got to give me a story for how this how reeside and non why are they lying about the receive date and

(1:49:13) lying about their Source being protected none of their other videos say Source protected they say like email submission this indicates this was a real classified video and potentially they had to be convinced that what they were leaking was real right now if you think that they lied about this date here which is the **debunk**ers say well this doesn't matter they say that oh they they just made that up okay well tell me a story for why they made up this date

they must have been in on it right they must have been in on the hoax right they lied

(1:49:44) about this to like make it in on the hoax well why didn't they tag MH370 in the name of their video why does it just say satellite video airliner and UFOs so when we're looking at this stuff you've got to create a story for this yeah people cannot discern between CGI and real life and that's why they can't figure out that this is real it's actually quite the opposite so I have something that's called let's take the test guys I'm going to put a poll in the chat we're going to do the reality

(1:50:16) perception test okay what I want to figure out is how many people can tell the difference between fake video and a real video are you guys ready for this this is going to be fun so don't vote yet I'm going to put the the poll in the chat I'm also going to pull up the link if you've already done it you know I mean I guess there's no way to spoil it people just lie but I have a reality perception test that I like to do because I think a lot of people don't know that they're not good at telling

(1:50:45) between reality and fiction we don't know if reeside deleted or got got banned we're not I don't think we're sure either way where's my reality perception test I think it's in my **debunk** section we have to add to this this is going to be like five tweets long man this going to be so long we have to add to this where's my reality perception test damn 250 concurrent viewers right now hello also when we had that space we had 1,500 viewers 1,500 do you guys see the reality perception test I got so many works I

(1:51:30) can't even find this stuff anymore oh here it is reality perception test okay let me make the poll how do I make polls again I don't even remember how to make polls uh oh here we go here we go here we go start a poll is this video CGI uh okay yeah so when I say is this video CGI I'm not I'm talking about the video I'm about to show here so you say yes if you think the video is CGI say no if you think the video is real okay get ready okay here we go guys what do you think is this CGI yes is this real no

(1:52:18) what do you guys think take a look at this guys what do you think reality perception test does this look like CGI or does this look real let's take a look let's vote is this CGI or is this real what do we think I'm not going to spoil it for people I want to see if we can tell the difference between CGI and real stuff what you guys think look at this okay put in the chat what you think it is as well

(1:53:22) yeah okay we ready for the reveal this video is real this video is real if you thought this video was CGI you might have to go get it checked you might have to re-evaluate your perception of what's real and what's fake that video is 100% real this is a real SpaceX video that's not a recreation that is a real video that's a real video so again if you think if you think the videos are fake make sure you've taken your reality perception test because that's actually a real video tough right pretty crazy

(1:54:14) right pretty wild yeah people witnessed it in real time that's that's real that's what it's

in 4K it's super super high definition but that's again what people think that a lot of stuff is fake when it ends up being real right yeah the people laughing the smokes a dead giveaway you know what's funny about that is that's what the corridor crew said what Nico said when he was looking at the video and he says that one of the things he claims when we were watching it I was watching real time is he said

(1:54:45) the smoke here he says the contrails he didn't even know it was Smoke he says this is not what contrails would look like they won't do this and I'm just sitting there laughing cuz I'm like he doesn't even know that this is a real video and that we're looking at smoke right like a lot of people in their minds will come up with any reason and I I'm not trying to hate on people that that didn't realize it but I just want you guys to realize that 40% of people almost 40% thought that that was a fake video

(1:55:14) that's that's a real video so when people say oh this is so fake realize that the vast prob and this is people that probably even knew that right and people that are more open-minded realize that normal people when they're looking at this have no way to realize these videos are real that when normal people look at this they're falsely thinking that they're fake when they're not right so that's the reason why I say take the reality perception test reality perception test is a good way to show

(1:55:40) people that just because something looks fake to you does not mean it's fake yeah we've addressed the **debunker** that stabilized it the you the smok's bounc due to the stabilization again you cannot edit the videos and then claim that it doesn't look right the reason why they it's bouncing when they stabiliz is because the camera is shaking here the reason why the camera is shaking is because the uh the Drone is zoomed in and it's actually experiencing turbulence as it flies around same way if I ever Zoom a camera

(1:56:08) in and try to take picture while I'm moving around it's going to shake so when you try to stabilize it the effect that it's having is making it look like the smoke is shaking you can tell that the Smoke's not shaking the smoke is normal what's shaking is the camera so these **debunkers** like they're just so dead set on trying to prove themselves right that they don't realize that they're just objectively wrong it's ridiculous Nico's **debunk** was 15 minutes long 15 minutes and I was

(1:56:37) sitting there not even paying attention I have a feeling that they're going to try to edit it to make it look like I'm sitting there Danny was literally kept telling me to try to sit still when I was taking notes when I was trying to take notes and now in retrospect I think that they were doing that because they want to have it they they want to edit it to make it look like I'm being shook or something like that when in reality I was just trying to be respectful I'm just trying to sit there and be like and

(1:56:59) just be respectful and let him talk because I right away I cut him off and I'm like okay he's already said that he thinks it's con it contrails when it's smoke right and I was sitting there just taking notes the whole time so I have a feeling they're going to try to edit in a deceptive way

if they do I will come out hard against Danny and it is going to same thing will happen to him that happened to Julian so I hope Hees doesn't do that he's given me assurances and text messages that he's not going to

(1:57:23) do that and I'll share those messages if I have to I don't want to do that to people so that's the reason though why I did that um TS let me see yeah so some people argue like maybe they would do this to like show **China** hey like we're not messing around uh the reason why they would do that is is that um or the reason why that's not the case is that they would then reverse engineer the technology right you don't give this away this is a trump card if you have this kind of Technology um then you don't uh you

(1:58:05) don't tell people about it you save it you want to keep it hidden right you want to keep it hidden yeah I've already been edited once but I feels like that uh Danny might go for the part two I just don't know I hope he doesn't he seemed like a good guy um let's see I don't know why is somebody saying that the source isn't r i mean technically the source is Lieutenant Commander Edward C Lyn most likely but yes this this is the oldest archive version that we have out here which is this one right here which says reeside

(1:58:42) and on on and it makes sense cuz it says receive March 12th on it if someone can find me an older version I'd love it but they're not going to be able to I don't think um let's see what we got going on here uh eel Sushi update your facts buddy you're wrong you gotta be careful what you read on **Reddit** most stuff you read on **Reddit** is fake and everything basically everything on the uh that sub**reddit** you posted which I'm not even going to name it uh that sub**reddit** is run by **debunkers** that are **MC West**

(1:59:16) cultists and most of the information on that sub**reddit** is disinformation now it's gotten better recently Danny is not the host of L Lodge no that was uh Aiden L Lodge was fine um everything that I've done in in real time is fine as well the the people that are editing me are trying to do so dishonestly and they then they've chopped up the timings of everything so that they like put all the stuff where they think they're dunking on me in the front right and then because they they're just trying to

(1:59:44) be super dishonest so if that happens then we'll come out hard against the people that do that just like we did the last person yeah Edward C Lynn is out of uh prison but again the the reason why they banned my sub**reddit** which was MH 370x on **Reddit** is because they can't have people telling the **truth** **Reddit** is controlled by the feds we were banned because we were telling the **truth** this was the only sub**reddit** that was trying to resolve to trying to solve the case this is the only one there's nowhere else on **Reddit** where anyone's

(2:00:25) trying to solve the case except for the people that are my followers who have been posting my content in fact I'll I'll show you guys the other sub**reddit** I don't like to but I'll show it to you guys it's important that we expose the **truth** here this sub**reddit** here this is run by **debunkers** the mod list the reason why I can't see the mod list is they banned me they actually have have a rule so that no one can even say my name on this sub**reddit** they put a Mod rule in

that that bans anyone from saying my name on

(2:00:57) this sub you can't make any posts that mention me they were defaming me tagging they had a tag that they only used on my content that said potential scammer that's how dishonest these people are the moderators of this subreddit are some of the worst people in the face of the planet and they're all cultists of Mick West all of them are they're all debunk no one who is part of this subreddit is trying to solve the case none of them are the only people like every like maybe I don't know a month I see

(2:01:30) something on this honestly not even that much like once or twice I've seen content on here as well they have a fake tag and flare for people like let's go look at this one here you guys can see all the people I've got blocked as well um people have fake subject matter expert tags on here fake fake subject matter expert tags I'll try to find one I've got them all blocked this guy here total disinformation account just complete disinformation account there's so many disinformation accounts stop this has

(2:02:02) been debunked I mean look at all the garbage that people post on this before I started getting involved on this subreddit all this stuff would have been upvoted but now there's so many people that know the truth now that they've been getting uh just nailed so yeah this subreddit is a debunker subreddit no one's been trying to solve the case here they've got people that have got fake subject matter expert tags to pretend like they're experts no one has presented any case other than me if we go to the top posts

(2:02:30) of all time uh all time it's me at the top actually this one wow this one from bjab Batman so this one here is this guy here he's said some good stuff but this was not one of them this post he this is completely wrong what he did here this should be the top post real story of MH370 all pertinent evidence that's me right there right let's see here's another one of my things surrounded by orbs they actually banned Punjabi Batman as well though they actually banned him too they banned him too they banned all

(2:03:10) their their top content creators which is why um you know here he is again it's basically just me and Punjabi Batman and I don't have more stuff because they banned me but a lot of these people's stuff is like my stuff this Ken guy he I don't know he's just I don't know what his deal is man he's garbage though unfortunately his his work is garbage unfortunately um but yeah so I mean this this subreddit is super compromised and in fact it basically died it was growing hugely and then they got rid of their

(2:03:47) content creators and basically died the only reason why why there's been action recently is because like you guys have been posting my stuff on here yeah yeah no I want to make sure you guys know about this because I'm going to take down Reddit too reddit's the number one source of disinformation on the planet yeah they actually they called me a scammer like multiple times they don't do it anymore because I sent I literally had to send them a cease and desist I sent them a cease and assist to Reddit

(2:04:16) and then they removed the scammer tag like they were literally just trying to defame me these people are like the moderators of that subreddit are literally out of their minds and no one should support that subreddit at all yeah that subreddit that I was on they permanently banned me from that subreddit a while back complet wild stuff man and yeah every single streamer I or every single thing I go to um I'm gonna just melt Reddit the UFOs subreddit I'm G to call them out hard I'm going to show everybody the

(2:04:53) evidence uh yeah I'm going to expose them 100% I told them I was going to do it too I don't think they ever thought I would get this big and I told them I'm the more you guys try to like censor me and you try to do your BS to me ban me whatever you try to do the more I'm going to expose the crap out of you and I know some of them are probably listening or whatever oh yeah I've documented all this stuff I've got everything documented so now there's nothing odd about it guys that you have to realize they have a

(2:05:26) Discord where all only thing they talk about in their Discord is me that subreddit has a Discord and it's just me so it's pretty funny hey people are asking so mark You're Gone these people are like they're pretty mad too I think that I'm I'm just calling them out real quick so sorry we're not working on stuff right now but you know things blew up right now and we've got a lot of people in here people asking questions I want to address the questions in the chat I did want to get

(2:06:01) to working on the cber stuff but I wanted to show people the questions so if you think you're going to be somebody who's going to debunk this just get that out of your head you'll you'll save yourself a lot of mental anguish you know nobody's going to debunk this the only way you're going to debunk this is if you go find uh go find the guy who created it I mean it should be easy we found the guy who actually made it who actually revealed it leaked it we found them right so you should be able to

(2:06:30) definitely find the person who made it if it's if it's fake I mean there's no way we'd be able to find the real person who leaked it if it was fake yeah so yeah I mean if you if you don't want to like watch or whatever you don't have to watch I I'm you know just kind kind of chilling with the chat right now from a work perspective here we I want to do some cers stuff but I think more than that I want to see where we're at with this uh there's no way I'm going to be able to keep up with

(2:07:08) this there's no way I I like to respond to everybody uh as much as I can but there's no chance oh see here we go here we go yes this is what I'm talking about what oh yeah 74,000 views already in less than an hour yeah I mean I said what are we looking at I mean here it is Trump picture Trump there it is there it is right there pretty sweet right man okay yeah three stacks time out time buddy I'm not I just don't want to I don't want that stuff in my chat man yeah you're just you're kind of just all over

(2:07:59) the place bud just take take it easy man dial it back a little bit you're not even hating or anything but I just want to you know dial it pack so this this post here I don't think it's not 3D

stereoscopic imagery is most likely not shot like that from those but it doesn't really matter exactly which satellite the key point is that we've got the best satellite uh evidence out of anybody out of anybody out there this is the best satellite evidence there is we've got stereoscopic imagery right here these have signant

(2:08:30) capabilities they're staring right down at our location at our coordinates at the exact right time this 1840 is the time where if you look at the everything after this is where they T claim right afterwards that they lost contact with the plane so we clipped this the other night 370 this lines confirm that this flight NH370 lost contact with subang air traffic control at 2:40 a.m. 2:40 a.m. 2:40 a.m.

(2:09:11) is 1840 UTC GG guys GG uh I'm not I'm I might text Danny tomorrow and ask him when the podcast is coming out because the fact that it's being held up even though he's telling me they're not editing it makes me wonder what the holdup is right just release the podcast I don't know why they're waiting makes me think that they're going to do some dis editing and try to make me look bad which is what I expect but I was there I mean there was nothing I said that was bad I looked straight

(2:09:44) into the camera and I said that the VFX does not match as a statement of fact and they got so upset about it I just don't care I was like they're like well why won't you listen to the this expert Nico I'm like should we we were looking at the video of Nico trying to **debunk** the real DOD Navy videos I mean dude has zero credibility negative credibility even coast to coast is going to be Sunday 5:00 a.m.

(2:10:13) eastern time if my calendar is correct okay let's see what we got going on so look at this technical intelligence Battlefield awareness let's do a little bit of work here yo yo everybody welcome welcome to the stream we got a lot of people in the Stream right now uh what are we unearthing uh right now I was going to do a cers part two but kim.

(2:10:40) com kind of beat me to the punch kind of beat me to the punch on it yeah persistent Global surveillance Global persistent infrared surveillance guys I mean that explains that it's video right we had uh we've had a big day guys this is the reason why I'm not working as much 100,000 views on this this isn't even the top one go if we take a look at his original post look at this look who the top post is 22,000 views Ashton Forbes he retweeted this Dom did pretty amazing so we got Dom to retweet us today kim.com is messaging us

(2:11:47) today or messaging about us today he might even be in my chats I don't know I'm not going to go look at it right now so things are getting pretty big uh what's my opinion on the alien attacks in Peru I I don't know man I really don't know seems like it's not I mean I feel like people would have had some good pictures if it was really legit but I think something's happening there also in askas mummies I don't know to seem cool I'm only focusing on one thing at a time you know uh I'm going to try to follow back

(2:12:30) people to retweet my content as well but let's let's do a little bit of work uh I know

we've been chatting for a while but we needed all this stuff so you know we found Lieutenant Commander Edward Sted Lyn people want to **debunk** the videos here's the gauntlet go find the person that made these videos and get their Source work should be easy we're going to make them famous I will retweet all their content and make that person famous if somebody did look I've got 13 million views we'll make them

(2:13:02) famous we've got more impressions in CNN uh just Google if you want to know where the the cbers thing oh wait I don't want oh it doesn't really matter what people see there um they just see all my my old **Reddit** links that I for some reason haven't disappeared okay let's see here um cers literally just Google cbers press videos there it is right at the Top This is how easy it was to find that's how easy it is to find the CER stuff oh should we listen to this let's listen to this real quick I

(2:14:04) want to do some cers action I don't want to get copyright strike stands for space-based infrared system so it's a constellation of satellites that basically detect and track missile launches across the world you know cers so they only mentioned missile launches here but that's not what this is doing this is a straightup spy satellite system this is not just missile launches worldwide is always there the persistent infrared detection looking for missile launches to protect our troops in the field and to protect

(2:14:45) the Homeland and so they definitely censored this right and you can only say certain stuff uh careful about the Emojis guys nightbot doesn't like the Emojis yo nightbot gets you oh are people being banned is that what's happening is that why the chat got quiet uh be careful guys nightbot is brutal nightbot is brutal guys be careful go home and you go to a wedding and you talk about hey what do you do it's like well I'm protecting us right now it's pretty cool in the subcontract organization we

(2:15:31) are able to be excited about and involved in each each phase I bet I know which contract company she works for we get to be oh good you guys are each pH completion and through the end of the life of that Hardware so working out of the chief Engineers office I get the opportunity to work in All Phases uh that's design assembly SLU test integration um and a little bit of flight um and my focus is anomaly investigation I might have to do YouTube premium as a system test engine of tired ensure that flight software

(2:16:09) correctly competes and okay Cool's for me the end which boring this is locky Martin thing let's look at this one do you seek a life of sorry I don't want you guys have to see ads yeah I mean that's what this is right it's doing homework homework chat 1.5 million the yeah never forget who you're working for solid rocket boosters ignite to start ula's Atlas 5 rocket on its trip to orbit shortly after liftoff Atlas begins a pitch over to attain the proper flight path while minimizing the dynamic

(2:16:58) pressure the rocket experien definitely not the voters man thenes one the speed of sound they don't work for the voters that's for sure within the next two minutes of first stage flight the atlas spy rocket will more than triple its velocity following jettison of the two gem 63

solid rocket boosters fighting against the the force of gravity the nearly 1 million pound rocket better be careful we don't get uh completes the majority of the main engine then shuts down followed by release of the booster

(2:17:28) stage the rocket now weighs a little more than no caps and no more than three emojis at once care to deliver C's go6 to orbit will perform three engine Burns fueled by liquid hydrogen and liquid oxygen the first burn takes the spacecraft orbital reaching a Leo parking orbit then once the is climbed above the densest part of Earth's atmosphere the payload fairing is jettison oh wow after the first main cut off Centaur coasts around the destination argument or Celestial longitude this is going to disconnect

(2:18:02) the second burn then kicks the trajectory onto a geosynchronous transfer orbit with a maximum altitude in the Geo belt following M this comes alive for a final burn As It prepares to release the c space High customized enhanced high energy GTO orbit nearing end of mission Centaur executes a guidance commanded shutdown to complete the final burd a capability which ensures precise orbit injection huh I mean um Kim kind of beat us to the punch on this one he kind of he kind of took our Thunder on this one I'm not sure there's any other good

(2:18:43) cers videos wait this is me that's me right there what the heck how does it put my thing right there let's look for cbers see what we find okay what's this oh this is Ron what do I want to do here Ron got something man Ron and locki Martin are all over all this stuff oh what's this if Society wants men to be a delicate Little Flower what yeah space cartoons this one's only three minutes for short is an American space surveillance States highest priority space programs sprad surveillance information to the president of the

(2:19:46) United States the Secretary of Defense combatant commanders the intelligence community and other key decision makers the US Air Force said in a statement oh look at this what can Spurs detect what can Spurs the advanced Spurs provide detection and tracking for both long range ballistic missile and strategic short range ballistic missiles and is also capable of detecting re-entering satellites and space debris to assist in space situational awareness a real thing here spur is used to detect this is how they can connect to

(2:20:24) one another missile launches in real time compute the trajectory of missiles and possible impact points nightbot a moderator thing stop people who are being racist in our chat how many Spurs satellite uh there's a lot satell in geosynchronous orbit two payloads in highly elliptical orbit and a groundbased component used for data processing and control two hoo sensors were launched as hosted payloads on two national reconnaissance office spacecraft in 2006 so this is our okay so interesting sers is just using the geostationary

(2:21:05) satellites the first Spurs Geo satellite was delivered to orbit by an they might even not even need USA 29 to pull this off while the last Spurs go6 was launched on August 4th 22 doesn't matter either way though as long as they can see it SP satellite been launched successfully now Spurs system is active how much does spurs cost the Spurs program has faced massive cost overruns and delays here we go here how does spurs work is it how does SP arure

includes a resilient mix of satellites in Geo orbit hosted payloads

(2:21:43) in hoo orbit and Ground Control station the Spurs go payload is comprised of two highly sophisticated instruments a scanning sensor and a staring sensor both sensitive in the infrared wavelength range the scanning sensor provides observation and surveillance for intercal bistic missile launch detection while the stering sensor has a higher sensitivity and faster revisit to detect the low signature of short-range theater ballistic missiles the integrated system supports multiple missions simultaneously while providing robust performance with global

(2:22:22) persistent coverage they're definitely censoring what this thing can really do with this uh cers system San Antonio Spurs San Antonio cers the program I think began around 2006 which is like the same time NR 22 and up before that they used something called the DSP system um 12year design life interesting ground assets manage data from satellites payloads and the Legacy defense Support Program oh that's DSP defense Support Program DSP defense support program we figured that out Mission planning payload tasking

(2:23:19) Mission processing there we go Kaboom there it is oh we're we're we're using this yeah nightbox night Box's pretty wild yeah we've got a lot of followers guys what's my opinion on the origin of the orbs I I think there are orbs but I don't know if we can come up with that technology by ourselves the reason why I say that is cuz I've basically had been having them explained to me by people who have Engineers Engineers have have explained how they work the microphone's great this

(2:23:57) microphone's wonderful the camera is amazing uh this camera we've got here going on it's amazing uh definitely super high quality I love it but we need a new head headset this headset's got to go yeah okay let's see what we got going on here Beyond missile warning H I don't know do we make another cers post there we go I already already

(2:25:17) messed post on that guy I just like how people are out there getting the word out now that's all I really care about 100,000 views in an hour pretty pretty legit I mean I don't know why you're talking about Seth rich but sure yeah that can be figured out 100% any other big posts here yeah Las Vegas shooter I gotta like that one if you guys don't know that one that's sorry that's a that's a right-wing joke um yeah I'm just glad people are seeing

(2:26:25) this technology and seeing how this works Soh I don't know if we are going to do another siers post tonight I was planning on doing cers post but kim.com just kind of beat us to the punch man it's gonna look kind of weird if we do another one now so I think instead maybe we overlay this into a storyboard with the satellite data with the satellite video yeah I don't believe at all that just these satellites are providing the data for the cers I definitely think that USA 229 is involved oh sorry let me see what we

(2:27:38) got uh wait sobody hell Warden says he a DOD contractor for 22 years okay what did you say I didn't see that yeah yeah I'm sure the dod knows about everything moving in our atmosphere sir 100% 100% sure 100% yeah I think that yeah we're not going to talk about the

podcaster anymore too many like cringe redditors reddit's like the main source of giving people brain rot it's just the redditors are the worst the worst type of people Gatekeepers that think they know everything they don't do any research

(2:28:23) for themselves they just read headlines and think that they're informed so here's the DSC what was it defense space program was the DSP name I think oh do you guys want to talk about grush if you have grush questions or grush Rogan comments feel free we'll we'll we'll take those now if you want I mean I I didn't really watch it all yet but people gave me the highlights I think the thing about the grush Rogan thing is like let's get let's get some reveals you know like I you want to talk about something that

(2:29:02) happened to Italy that's not really that's not really doing anything for me right give me something that's juicy this is Juicy learning about this stuff is juicy like look at this like can I blow this picture up somehow I want this ground relay look at these satellites here look at this whoa look at this this is how it's working oh boy relay look at this relay satellite they've got the geost stationary ones out here the the cus Hilo payloads and then they have these other ones they don't name they don't even name these other

(2:29:54) ones they're like relay satellites or something so Joe Rogan's reaction was weird huh that's weird yeah uh about the the Rogan or the Lazar interview the Cadence maybe just cuz like he knew it was just going to be telling stories you know the thing about uh Lazar is he's actually telling information that is verifiable theoretically I mean you're never going to get the information from the government but it's information that you can look into I want to thank the people who did the super donations or whatever that was

(2:30:48) too I appreciate that just want to appreciate those people one more time where even is my where even is my Twitter stream or my YouTube stream oh there it is yeah it's probably getting pretty late too probably going to log off here I think people are starting to go to sleep I was thinking about doing a cers thing here but I I think we've got enough stuff for today anyway on our profile we don't need much more I'm thinking what I'll do is I'll make a video that talks about the cber system

(2:31:28) and then this video persistent realtime monitoring I don't think I can get discredited I'm just worried that like they're going to say that cers is only based on these geostationary satellites but I think the way to go about is just address the fact that it's persistent monitoring that they have I think this clip down here should help we could post the should we post you guys tell me what if we should post this um Mt Gates piece should we post this how come I can't hear anything uh a radar should we post this

(2:32:11) in a clear diamond formation for which there is uh a sequence that I and I alone have observed in the United States Congress one of the pilots goes to check out that diamond look this dude on the right and sees a large floating what I can only describe at again like I said not chat get somebody to stare get somebody that cares about you like this guy stares at me at Matt Gates this this is what you need in your life right here of any human capability that I'm that I'm

aware of look at this and when you approached oh okay I wasn't sure he

(2:32:48) was a human radar went down I wasn't sure he was a human for a secondar system malfunctioned he was not he was just staring take this image um from one of the lenses and it was not automatic automated uh in collection as you would typically see in a test mission so I guess so there's a few key facts here why I think this is important it's not really directly related to our case but what it tells me is a few things Congress has no idea what's going on in a clear diamond formation he says he's the only one in Congress who's even

(2:33:26) seen this so Congress has no freaking idea what's going on for which there is uh a radar sequence that I and I alone have observed in the united so only Matt Gates has seen it step step one one of the pilots goes to check out that diamond formation and sees a large floating what I can only describe as an orb second one sees an orb step two again like I said not of any human capability that I'm not of any human capability that he's aware of that's huge right that means he has no clue what we're looking at in the MH370

(2:34:04) videos could even be human technology I think this is I think he's giving away a lot of information here we might have to write this up to me this is a lot of information they're giving away here the heck um God dang I already forgot orb only he's seen uh not human technology and then at the end he says they couldn't track it they they couldn't automatically track it approached he said that his radar went down he said that his Fleer system malfunctioned and that he had to manually take this image um from one of

(2:35:03) the lenses and it was not automa in collection as you would typically see in a test mission this might be relevant to post guess think we might post this the problem is like I don't want part of the UFO Community but then I'm posting all this UFO stuff uh yeah hell word and I mean I don't doubt you buddy I don't I don't doubt you I I don't think these are uips either my man but I think the point of that video I just showed is that Congress has no idea that these are human made that we even have these which

(2:35:37) is important because it means that there's a very small select number of people that realize that we have this technology that's what I think is very important and that speaks a little bit to Bob Lazar and anybody else who's been trying to reveal this information uh king of fiction who do you think was the one who is um did it as a favor that Joe Rogan did the interview as a favor or that David grush did the interview as a favorite favor thanks 58 efd the Infowars thing is wild that's huge man this must be one of the

(2:36:11) things that uh somebody was telling me about if so then there might even be more stuff coming we had Infowars thing happen today we had Dom Luc post on one of our retweet and us out and we had kim.com post one of our things today today was a big big big day for the case guys that's part of the reason why we're not digging too much into the work right now I'm just I want to say Happy Thanksgiving to all our American uh counterparts and for all of our International uh friends and and people who are watching as well I want to give

(2:36:44) you a Thanksgiving as well uh in America on Thanksgiving we come together we break bread together we hang out with our family and we just give thanks for everything that we have so I want to give thanks back as well to all the people who are following right now and the people who have been supporting this case I want to give thanks to Dom I want to give thanks to kim.

(2:37:05) com I want to give thanks to uh Infowars Greg from Infowars specifically for doing a piece about this uh and everybody else who's been looking at the case with an open mind sharing the evidence getting the word out it's only without with all you guys this has been possible to even get to the point that we're at now we have a long long way to go uh you guys drive me to work as hard as we do uh we are going to be taking a break tomorrow probably won't be working very hard tomorrow I may retweet some stuff not sure might do

(2:37:35) an evening stream after I get done with Thanksgiving not sure just hang out with you guys but probably be watching some football tomorrow I think we'll post this Matt Gates thing though I think this is really interesting yeah manipulation of energy Fields with geodesics is that's that's one good way to put it for sure yeah hell Warden knows what's up they they already have what's the 5 five what's hell Warden what's the 256 Library what does that mean and what do icons mean if you anything you can tell

(2:38:08) us also don't get yourself arrested whatever don't get yourself arrested um we do have a Discord so the Discord is invite only right now I'm only inviting people I trust into the Discord at the moment if I follow you on Twitter and you can DM me and you can DM me I'm going to look through your content and make sure that you're a supporter and not somebody who's not but I will issue invites on a DM only basis and if you're somebody who's been retweeting my stuff then most likely I

(2:38:42) will follow you back uh I'm going to start trying to do that a little bit more following the people who are tweeting the content and those people will be able to DM me uh I've been prioritizing verified followers that have a lot of followers but I will probably switch that to people that are um retweeting in general I've got a lot of trolls following me as well that I don't want to be following back yeah the element 115 stuff I'm not sure anymore man that's weird too I'm glad you brought that up our red catchup

(2:39:17) I before I did all this I thought that element 115 stuff was like all the The Rage or whatever and that's how all the stuff worked but like now I'm not sure the element 115 stuff's even necessary anymore like I think we can do all this without ele any additional like exotic elements I don't think it's required which team do I support uh I can't give away which team I support it just gives away my location so I'll tell you it's it's a football team you can probably figure it out from

(2:39:51) the teams I don't like though yeah I'll give you guys a clue I don't like actually I don't want to I don't want to make anybody mad I don't make anybody people get very very uh tribal when it comes to their their football teams as do I as do I yeah good job everybody on on the

stuff um no the Drone I think Lynn was actually in an airplane I think he was in one of the airplanes that night there was two awx according to the French dad who lost his wife and his children who I want to issue my condolences to all the

(2:40:27) families we're doing it for you guys but also K T saw two planes as well yeah I mean there is an element 115 it's a real element I just don't think it's required [Music] to defy gravity as we see it I think Super conductivity can do that without it amazing L it has to do more with the shapes the only way you're going to be able to DM me is if you have my Twitter and I'm following you back I only allow people that I followed DM me because otherwise I would get spammed by trolls 247 it would just be non-stop

(2:41:01) trolling the people that are against this are like super off The Rocker like they're they're not stable type people I mean we've seen it in our chat we've seen it in our chat so let's go ahead and make another post I mean we've made a lot of posts today maybe we don't even need to make another post today this one was one of my favorite the videos are deun it's like okay sure then we just go back to work yeah I think you can control drones from awax yes yes yes is the answer uh yes I think you can control

(2:41:59) drones from awax they have these like on the sides here they there's there's video or um monitors and there's like 20 people on these planes so what's my reputation for the VFX I mean I have to **debunk** it like every day uh it doesn't match on even a single frame as a statement of fact not an opinion statement of fact does not match I've got all the **debunks** whatever you need to talk about I I don't like dealing with these **debunks** over and over and over and over and over again but the VFX **debunk** does not match this

(2:42:37) is not the same effects they've resized this to a similar they found something that was similar they probably ran a computer program to to find something that had a similar frame and then they resized it tried to line it up as you can see it doesn't line up exactly you can see all the the differences you can see the middle is completely different this is because all dispersion patterns look the same this is an explosion effect that they used our event is an endothermic event they're not even close to the same

(2:43:06) and then this is so they what they try to do is they try to line up one frame and then try to fool people into thinking that this means something but the moment you look at the whole effect the whole illusion just completely breaks down the the whole illusion just breaks down the moment you were to compare the whole effect you realize this is we're not looking at this effect in our in our in our thing like look at this this is not our effects if you were to take a 3d effect and put it into our video you wouldn't use an effect like

(2:43:40) this this is not even what it looks like it's not even close so hopefully that helps with anybody who's still still for some reason thinking that there's a VFX from a 9s old two-dimensional video game in our in our real videos there there's not cber system we think went online 2006 the old system was the defense space program DSP right here Legacy DSP satellites I think one of these says 2006 see DSP satellites 2001 here they are November 2006 so that's the

reason why we're probably looking at nr22 that's going to

(2:44:14) be one of our Command satellites that's why again I'm I'm very very sure we are looking at uh the cber system here oh they absolutely know what happened to this plane no doubt no matter what you think about this the US government knows exactly what happened to this plane exactly like it there's no chance they can't know we they've got two satellites staring at it on the agreed upon flight path this is actually where they claim it turned into the South Indian Ocean the exact time and location they claim

(2:44:44) it turned into the South Indian Ocean so it's like how could they not know exactly what happened they know it didn't go to the South Indian Ocean they know so let me read military icon graphics for the common operation picture I don't know what that means element 116 yeah the deers get really angry uh to be more specific every military vehicle including non-specific entities has an icon in the database so when something is reported to the user will select the appropriate icon oh uaps are one of those oh

(2:45:28) wow yeah so they 100% knew where this plane was there's no way I mean they've got the satellite right there I mean how many **debunks** do I have to I don't really want to do any more **debunk** stuff they've all been been **debunked** everything's been **debunked** we'll do a little bit more and then I'll probably just call it a night uh I do want to post the M Gates stuff though uh I think I'll post the M gate stuff in the morning we've got enough post today I think right we need something for tomorrow

(2:46:01) anyway I'll post the M Gates thing in the morning first thing we've retweeted a bunch of stuff out there oh wow 4,000 views on this anytime you put a YouTube link it just crushes your your stuff run for president oh God if I what if I had to become a spook geez yeah I think we got enough for tonight I do want to work on another storyboard as well so terms of what's coming up let's let's see I need a storyboard for I think I want to do the satellite video I think I want to do a satellite video plus cbers one

(2:47:02) right should join the Spooks for the right price I probably would have if they would have come to me earlier I bet they wishing they would give me \$10 million to not do this at this point do I think the Malaysian government knows yeah I definitely think they know I mean I don't think they know exactly but they could maybe they were told my favorite interview is the interview with the Malaysia minister of defense this dude we might have to watch it again it's just too funny man so tomorrow I'll post the Matt Gates thing

(2:47:34) and then what I'll probably do and work on my own time is I'm going to work on the storyboard for the satellite video tomorrow we've already got our first video out there of this one 100,000 views already already 100,000 views in 12 hours on this one so I'm going to do something like this just like this pretty much I've posted this across social media as well uh there's no way to track people's specific locations in real time in the in the military that would be a big problem wait what why is this nightbot

(2:48:09) deleting this guy oh uh Justin be careful about putting excess characters nightbot doesn't like that either if you put too many dots nightbot gets mad uh nicobar islands is Indian yeah and we think that the place where the we we think we even know where the uh sorry I'm just getting tired we think we know where they deployed it from as well what's this one oh yeah so let me figure out I've got an image of where we think it was deployed from so this is where we think it was deployed from so this this red line's

(2:48:58) wrong I don't know somebody else made this and they just didn't have the right locations here the green line is where the plane would have gone to panang here and then it goes up here to our location we think that the Drone was deployed from either here or here either vores or Vox Vox one of these two if it was deployed from here it's going here but either way the general direction of the the Drone would be in the right location to be Imaging the plane right here it could probably get there from either of these

(2:49:28) locations but I think this is the one that I'd be looking at where the Drone came from yeah the body count of nightbot nightbot is just wrecking people right now thanks Justin for the Happy Thanksgiving thank you guys as well His Highness live long and prosper you as well night bot's just a brutal they might be directing me if they're directing me behind the scenes then they're attacking me for some weird reason I don't really understand so the main reason why I don't think I'm being

(2:49:56) used is because they're ruthlessly trying to discredit me like ruthlessly if if they were all supporting me it would be different story and they hate when I block them that's another indicator like if you get blocked and you don't care about the content that's happening like you just move on with your life but for some reason when I block people it's like like I've just like taken out one of their family members or something how angry these people get so it doesn't really make any sense to

(2:50:22) me so I think we'll probably not do anymore we had Greg from Infowars post his stuff we gave that a retweet we had our flight path explainer today that was huge we had Dom retweet this tweet right here that has our name in it huge we had our big interview with Mike with Keith this one is really good to watch if you guys are trying to catch up or whatever good night uh Sherry Sherry on top we're going to be going to sleep in a minute as well I think our our viewers are going to sleep as well although we had 250 concurrent

(2:50:59) viewers here pretty big um then we we had our stream of course and then the big one having kim.com post our content post the cers video next podcast I think have one Friday yeah we're going to do oh that's awesome yeah alien scientists I I was actually very skeptical going into Jeremy's alien scientist thing like I think that a lot of people told him that um that like you know not to talk to me or whatever uh but like and he was very skeptical for sure but like now I think we're pretty cool now I talk to him on

(2:51:35) on DMS occasionally and I we're GNA actually probably have Jeremy on the hard truths podcast um so Friday will be my next wait did I not put it in there I got to figure out when the

alien addict one is real quick hold on he posted I didn't put it in my I didn't put it in my calendar where did we not set a time I actually have two podcasts on Friday Forbidden Knowledge news oh I I don't know if I should be saying all these whatever they're not going to cancel basically no one's going to cancel with

(2:52:27) me anymore just cuz like I'm bringing huge ratings to these people basically every single person that I've talked to for the podcasts has said that it's been taking off like there there every single person is basically like their biggest their biggest thing like I had so many requests I can't even respond to them all and so if there's people out there that I didn't respond to your request you might have to send me another email because I got so many emails I I couldn't even really keep

(2:52:58) track I better put this in my in my calendar right now though what time is it 5:00 P p.m. Eastern oh that's why the time zone was messed what's up okay o I got a double dose of podcast on Friday it's going to be a lot I don't know if any of them are going to be live I'll let you know oh wait I put it on the wrong day that's why oh I put it on the wrong day wait what day is this it is Friday okay I put it in the wrong day oops no wonder let's delete this I thought it was going to be Saturday okay and then Sunday I've got

(2:53:54) Coast to Coast it's probably going to be live on Coast to Coast so if you're up at 5:00 a.m. eastern on Sunday you can listen to it otherwise I'm sure it'll be replayed and then I've also got the hard **truths** podcast on Sunday at I think I said it's 1 pm Eastern with Dave Rosy you aren't going to want to miss that for sure we're definitely going to be talking about the videos uh with Dave Rosy he has his own company he does Advanced propulsion and other scientific expert like we're basically we're going to take

(2:54:27) everything that we've done with uh Salvador Pas and everything we talked about with Bob Greener and we're actually probably going to look at some cool experiments that Dave Rosy's been doing I've been talking to this Dave Rosy guy I don't even want to talk to him like that I think he's a really good guy I think he's probably one of my my favorite people I've talked to uh I think I spoke to that somewhere this morning here Dave Rosy I'm gonna probably start promoting this tomorrow as well and I'll

(2:54:58) set up the uh live stream for it or whatever it's called Uh the future stream so you can not notify yourselves you'll definitely want to check this out as well I mean I think I'm getting like really smart people who are Engineers scientists physicists I'll probably ask roy Herbert to do come on the podcast as well um you know in the near future and then the week after next week after December December 3D I need to set this in my calendar too we're g to have hard **truths** number four hard **truths** number four is going to be

(2:55:34) with Salvatore Pas and Dave Rosy at the same time and I'm going to let them go back and forth with the science and we're going to talk about the videos and what's going to be it's going to be awesome so we're finally going to have Salvador Pas talking he already kind of did talk about the videos um but these guys are set up they're very smart they're very connected it's

going to be awesome I just had to throw that in my my calendar as well so we've got a lot of big stuff coming up if anyone wants

(2:56:10) to help out one thing I do need help with is compiling all the podcast with links to all of them going back like three or four weeks if anyone's interested and wants to help out with that feel free to help grab the links the easiest way is just go through all my my profile posts and find like this one right and then just say yeah at the mic with Keith and then put the link uh I do need some help with that and then if you if you do that I'll appreciate it I'll follow you back whatever you can email me at MH370

(2:56:41) xpron just put in the subject matter podcast links um I am looking for people to help with some tasks uh the other thing I need help with if anyone is a graphics person I need an open card an end card uh actually for hard **truths** yes but I just need one in general for MH 370x so like in my what I'm looking for in that is something very short like 5 seconds so that when I do stuff like this I can have an intro that has like 370x come in and then just like cut away to this to to my face or whatever and then maybe be at the

(2:57:23) end yeah the Greg Reese video was spicy that's really good that's a longer one that he's done it's awesome 256 library is classified why is it called 256 is it because that's how many icons there are I might Google I might have to look that up yeah you can't find anything for this might have to use Duck Duck Go from now on guys yeah there's nothing although this is kind of interesting yeah we're going to do hard **truth** like every week we've got two more coming already and then I'm talking to

(2:58:15) Jeremy to try to get him to come on I mean he I think he wants to come on I'll probably try to get uh royy Herbert on I I really want to talk to royy Herbert about physics theoretical physics Etc any other governments I mean I there's no way I know any if other if any other organizations are using or any other entities are using teleportation technology uh Boeing stuff helps Airbus 3 30 what's up okay I'm just seeing what else we got here these are some people I was going to reach out to I'm pretty far behind on

(2:58:54) that so we're going to post the Matt Gates thing I'll probably work on the storyboard for the video satellite video I was going to do a secondary video on cers but I think the move is just do a video on the stereoscopic video with cers stuff like maybe I can do like clip this or something I'm not sure yet not sure yet thank you everybody make sure you have subscribed and like or whatever you do to YouTube videos um appreciate that appreciate everybody who's been following today who's come from Twitter

(2:59:27) Infowars wherever else you were seeing this information situation is these videos are real we know the videos are real so all we have to do is sit back and wait to see who wants to lie about them see who wants to Expos themselves and a lot of people already have a lot of people have exposed themselves and and uh yeah you know let them let them there's nothing they can do to stop us nothing they can do the only way that I'm going to get stopped is if they take me out and if they take me out then you guys are going

(2:59:57) to rise up and there'll be 10 more of me that will be doing the same stuff that's the reason why I've been streaming everything the reason why I make all the evidence available is that it protects me because then if anything happens to me you guys will know that who did it and you will also be able to take the work and run with it so that's full transparency I just keep all the cards on the table uh I'm not afraid of the government I don't care if anything happens to me and that's part of the reason too

(3:00:28) there's nothing that they can use against me there's nothing they have no leverage over me there's no one they can use against me so thank you uh vars uh Varys me appreciate you thanks for red ketchup thanks you guys we're going to shut down the stream here in a couple minutes I just want to thank you guys once again make sure you have a great Thanksgiving tomorrow guys um I will post a couple stuff I'm going to post the mat Gates thing in the morning I'm going to work on the storyboard in the morning for the next

(3:01:00) video I Pro I don't know if I'll have it done tomorrow maybe tomorrow night and then tomorrow night I'll probably stream o there goes my camera I'll probably stream tomorrow night and uh we'll work on some of the other stuff I've got a lot of other stuff out here but what I'm probably going to do from now on is I'm going to do more video content I think it just reaches more people and we can stuff that's like shorter that we can post onto Instagram and people can share better but yeah

(3:01:32) it's going to be busy so good night everybody good night fam we had an awesome discussion here in chat today it's been a great day make sure you spread all the information make sure you like all the stuff on Twitter whatever you want to do and yeah we probably will do a stream tomorrow night um I just I want to try to work on the storyboard so we'll see we may work on the storyboard tomorrow I may work on in my off time make sure you reach out if you guys have connections to any of the big people or anybody you see on this

(3:01:59) list here as well you want to have them have me on you know reach get in touch with them make sure you tell them hey I'm a good guy I'm not I'm not all the that people have been saying about me CU we do need to offset that as much as we can and yeah I think that's it and here's our hook hidden technologies that could change the world for the better or for the worst that's the hook okay guys have a great evening

MH370x Work - 11/21/23 - YouTube

<https://www.youtube.com/watch?v=Zj-F2kWJo9o>

Transcript:

(04:44) hey what's up everybody I'm going to be switching the view in a second we probably

listen a little bit of a little bit of grush uh there's some I think some people mentioned there's some uh stuff to look at there I want to figure out how the nightx works as well so we can have moderation this time I'm not really sure if anyone can help me with that be right back okay you guys ready for the reveal hopefully this works oh no it's not on hold on crap okay let's see if that works

(05:58) now it's better work there we go look at that my shirt on right way yeah this is the new new camera guys high quality can see every now now we're we're legit streamers Now set my stuff up here okay yeah hey everybody bober Professor Jake the house yeah I think the science stuff is starting to blow me away we're really focusing on that oh sound is doubled hold on o the video camera is doing sound okay that should have fixed this double sound uh sorry about

(07:03) that I didn't realize the mic on the video camera is turned on I didn't even know it had one huh can I turn this off well it should be fine for now I'll figure out how to permanently disable it later on yeah the visuals are a lot better we got a professional camera here now really nice one took a while to figure it out give me a second oh one sec we're making so many connections to

(08:10) people it's pretty awesome ah Honestly though I just I can't keep up with all the messages and stuff I've been trying hard but it's just too difficult okay let's see what we got here we'll go back to the the full face full face o laa o laa my hair's I probably put some more light on in here too it's probably a little better Okay cool so what are we doing today everybody wants to know what are we doing today um let's figure out talking to some of my science friends trying to figure that

(08:49) out and where's the Todo stuff pull this over have I seen the big big old debate on strange Earth uhoh uhoh is the sound uh sound should be okay I think right you guys should be able to move it up on your side hey oce Rams William good to see you again stream is a bit quiet okay let me see what's going on maybe something got set weirdly got the mic on Max looks all correct on this side weird I don't know uh I can increase the mic here so I don't know if that oh yeah it's definitely louder now hopefully that works for you guys I

(09:47) think I don't there's nothing else I can do on the on the sound that's all it might be because of the camera in fact I'm I'm sure that's what happening it's probably a balancing thing with the camera right that's probably what's going on ah crap how do I do this give me a second audio Yeah I switch it this is what I got to do okay that's G to that'll probably no still not fixing it God desktop audio I don't does that let me know that's better jeez man we really got people are

(10:37) just super angry at me huh good good catch on that moderators good catch uh volume's fine okay great yeah we're going to stick with the volume oh man why does it say this okay cool okay volume's fine great thank you guys yeah I switched the default uh mic setting should fix that okay what are we doing now yeah man the camera is so much better now oh my God our next uh interviews are going to be awesome this is our new starting screen and we got to be right back screen uh thanks to I have to go check and see who gave

(11:30) this to me okay can you guys read this I can't tell if this is actually legible can you guys see this what in the hell dude yeah [Music] um yeah when you get people that mad you know you're hitting the nerves like these people are Furious holy Christ they are furious at me like we we triggered this uh douchebag Jersey trash stream podcaster so much did you see his unhinged reaction I should read the text message you sent to you guys this dude is super super pissed off okay are we good on that uh I might

(12:41) have to get the the nightbot working here how do I give it moderator privileges I just don't know how any of this stuff works man sorry for this delay here uh how do I do this manage cancel Channel level settings yeah I don't I don't know I don't know how to there we go there's the participants okay where's nightbot why is nightbot not in the Stream join Channel head to your community settings oh there we go how do I add moderator oh maybe I just like put the link in there okay okay I think we got nightbot going

(13:44) I'm not sure let's let me test real quick night in here now I don't see see nightbot but I'm going to assume nightbot is in here taking care of business TCB there's my chat okay oh sorry about that noise okay everybody Welcome to the stream tonight so I think we are going to going to go ahead and get um can you guys by the way can you read this on the text message here or does it is it high enough quality that you can read the notes Here I still can't tell if that even works so let me know yeah the event reminds people of

(14:45) manifest um what I want to do is I want to work on some content so work on let's see what we got here yeah so you can read everything on the screen okay just want to make sure geez man how are how are they not getting banned why are can you guys please stop with the racism like please man like I don't understand how come I can't ban these people My Stream like they keep coming back like why is Banning them not an option huh my stream's all like I can't get the the messages to work either literal cannot read on the phone

(15:51) yeah yeah I mean I can't enlarge it I can make it wider but it's not going to make the text any bigger I'm just curious better word processor better font yeah I was just wondering if the quality is is good enough yeah they've definitely got Bots that they're sending like racist Bots at me now because they're so upset yeah they just want attention it's fine uh yeah we're we're deleting them really fast is why you're not seeing them but they're sending bots in

(16:23) that are posting racist stuff in the chat so we're wiping them out fast as we can okay no they're the same profiles from before that's the weird part um Let's do let's start working I don't want to waste a lot of time tonight give me a second is this the right one yeah okay uh I don't know why it always opens this one up I can I archive this there's our pertinent evidence I can make this one bigger yeah you you want to turn your

(17:28) phone sideways if you're watching just cuz the side the side thing what I can't figure out is how to get night about to work because it's not in the chat but I'll figure that out tomorrow I don't want to waste everybody's time who's watching here today okay so I also want to write some storyboards for some content okay so let's go and take a look at what we were proposing

let's see what we were proposing here this is a lot of views for YouTube streams when if you link your YouTube it

(18:12) just kills the the number of views you get let see what we got here yeah that Jersey short trash is a grifter 100% if he wasn't a grifter he'd take down the streams and stop taking making money off of him but he's desperate because his podcast is going broke it's funny because he he texted me and played the uh you're hurting the family's card like dude if I'm hurting the families why don't you take down your streams so that you stop hurting the families even more right these people are just so full

(19:06) of like I just I wonder is there any how many honest people are even out there are they just are they just all disgusting Spooks or what are they right just total piece of frankly sorry for the swearing I won't curse anymore okay where was my thing up here yeah here it is okay we want overview the videos overview the flight path I'm just going to copy these in here we finished the Bob Green your interview um thanks to Levi for doing the time stamps on the salvator pasas really appreciate that I don't know if

(19:50) it really worked correctly but it's there for Jay is it possible it was eradication yeah it's possible but or like 99% sure that it's um teleportation I mean I think the lithium batteries were just being uh sent as cargo so you can a lot of passenger planes have Cargo in them as well so that's why they outlawed them in 2015 so you can't send uh lithium ion batteries in the cargo bay Ashton yeah Ashton is stopping us from finding the **truth** the two dumbest arguments are Ashton is stopping from us

(20:31) fromet in the **truth** and you're hurting the families so ridiculous uh no I was going to listen to grush uh I don't know where I was teleported to man I'm not a psychic maybe we can find a psychic and they tell us where it went they could literally teleport it anywhere on Earth anywhere they want from what we learned from Bob Greener yesterday they could just do anything they want does anyone have any time stamps I really don't want to get uh copyright stried here as well uh Rogen grush is this it okay yeah I'm going to get copyright

(21:14) stri here aren't I oh man I better what what do I have to do like commentate over the top of this you guys got to tell me the stuff is landing or crashing around the world and unexpected countries have had this happen and that's why I picked that because I thought that was a interesting case and then of course the you know Pope P the 12 in the Vatican were involved night bot's taking care of stuff guys so you got to be careful I guess to FDR and that's how the US knew something weird happened in Italy during

(21:47) well right before World War II but so this was 33 was the first like documented uh that is the oh so for Pooh I think you can't use too many emojis probably man I don't know why night I got you earliest one I can talk about yeah this something that predates that might you could infer that you could infer that yeah so so I what I don't like about these people uh I like grush but like what's all this like I can't talk about it crap right yeah we're going to just watch the clip though this 331 you

(22:23) said was in Italy yeah magenta so it's uh I'm bad at geography I think that's like I guess CU he probably just has an NDA right so he can't speak about it what's the story behind it so um basically it it looked like it crashed right original shape most likely was like a lenticular lenticular you guys have any good Clips on here gag order on the Press Etc and yeah mus uh this is the one they're talking about local police officers or local farmers found it in the field something okay so found I want to know about

(22:58) so we knew where it was being stored at a particular location um after the crash and then the military came in and we we grabbed it towards the end of the war okay so we grabbed some UFOs and Italy got it that was uh and of course not a lot of the um I mean I'm not in their UDA Loop but certainly it's a catch 22 for them where if they want to redact propos I think the general if from the one the lieutenant general um that we were poos yesterday you know the situation there is that he just people probably didn't

(23:32) know where it went right he just knew that we didn't it didn't go where they claimed which is interesting they're like hey Dave you can't say these sentences you can rewrite it and resubmit unless you live with can't necessarily tell you in **Russia** what agency said to redact it but you're not allowed to say this uh they would be basically self-certifying there's a there there so in my years we're not we're not svr and Gru are now going to hit the streets to try to figure out whiches they so I'm here to

(24:06) protect National Security and I'm just trying to prot all the general topics out there for public conversation to hold our government accountable really so because I'm I'm here as a fact witness because we have a you know a constitutional oversight issue because this program has not been you know reported to Congress in the appropriate way this program has not been reported to Congress in the appropriate way you know and I can get into a senator I talk to that has died recently so I can what you know explain

(24:42) to you why I'm so sure besides what I read which we can get into the what Intel Port reports the day one press conference had lost contact at 12:40 240 during my investigation I need a that to talk to somebody at the highest levels right so and this will give C of the day one we might have to go look at the day one press conference and this is the only one I'm going to talk about using their name because they died two years ago so in Spring 2021 I actually flew with a couple colleagues of mine to Las

(25:12) Vegas and I met with Senator Harry Reid about nine months before he died and of course he's a private citizen now and I wanted to brief him on the topic and I wanted to get his kind of thought leadership on it because you know he was a gang of eight member right you know which is the top most cleared senators and Congressman he was the majority leader for God's sakes of the Senate and I knew you know he helped sponsor the assap program that I mentioned and where they looked at Skinwalker Ranch and some other things

(25:45) and I wanted to understand like what does Harry Reid actually know like why did he milon to DIA in Bigalow era space for this hey Amanda so I'm sitting there in Harry 's living room

you know right next to him with some other witnesses that were there with me and he straight up says I knew we had UFO material I was denying President Biden new this issue literally and then uh what he was telling me about assap um and it was I'm pretty sure President Biden doesn't even know what he had for lunch today no

(26:21) offense just dude has legitimate dementia it's just how it is guys I don't think we're going be getting any UFO disclosure out of Biden um let's although I don't mean that in a political I just think that like we need to have elected bureaucrats that are younger than 80 years old um let's see what we got like I said guys everybody will hate my politics um let's see what we got going on on here okay nightbot was doing its job appreciate that so that that'll take care of the spam guys moderators you

(27:04) should be able to take it easy now they going to take care of it uh quick quick note on how nightbot works as well guys is that uh you can't spam you can't spam capital letters you got to take it easy in your messages or nightbot will get you um matching frame **debunk** has been **debunked** uh do we need to really go through that maybe we do every single **debunk** has been **debunked** the only thing that will **debunk** these videos going forward is if you find the person who made them that's the only thing that's going to **debunk** the

(27:36) videos if you can find the person who made them and show the source material that they use to create these videos then I will be the first person to admit they're fake it's never going to happen though because they're real videos but if you can do that Challen challenge out there guys we were able to find the guy who **leaked** them because they're real videos so should be really really really easy to find the person who faked them good luck but let's go ahead and take care of the **debunk** right now uh at 1:30 he says

(28:04) 240 okay thanks Andy I'm going to pull it up in a minute appreciate that well we because the videos are real we can **debunk** every single **debunk** no question without any doubt very very easy this is an overlay of the two frames e this is the one the overlay the frames that were modified by **Mick** West and you can still see that they are not the same this is a a comparison of the pixels that don't match so this when I say how many pixels match this is what I want them to do overlay the two images over one at the top of each other and

(28:37) show me the differences here you can see that I don't know what is this less than 50% match this is an exact overlay of the two frames so they're objectively not the same frame and this is after it's been modified so they actually modified this in editing software to try to get them to match as much as possible remove the background and and do whatever they had to do and it's still not a match but let's take care of it more I understand there's people out there who get really really caught up in misinformation

(29:07) disinformation and they can't dispel the fact that they're wrong so let's just really really drive it home okay through Dr Dr if you take two very small samples of very homogeneous compressed video then adjust contrast the brightness and scale then you'll get pixel patterns that match you've crushed all the data to such an extent that everything will Trend towards

whatever settings you've applied the two original frames are not the same the noise patterns are not the same the orb placement is not the same the reticul

(29:37) the reticle placement is not the same the IR sensor overlay is not the same the **debunk** is quite literally ignoring the force for the trees which he hand selected and called until only identical trees remain here are the two frames with AI out the alteration oops it'd be nicer if you just had the two frames flip back and forth okay so that's not it I know I know people need more because they really just believe **MC West** the liar let's keep going to the next one here's the first set of images with

(30:16) difference blending I wholly unsure what you're looking at these frames which suggest they're the same or composited nor how a composite possibly can make any sense feels like your grass this is him literally arguing with **Mick** West the reason why I can't see his message is cuz **Mick** West has had me blocked this guy's not even one of my followers he's not even one of my followers guys this is just a random VFX expert telling **mcwest** how things work because **MC West** is an idiot so we took care of that let's you

(30:45) know what we need even more it's not enough it's not the same it's not even close to being the same frame here's another one changing the contrast does not change the patterns yes it does here's example of it you can see how they're different so no it's not identical image used multiple times so we've **debunked** that as a statement of fact they're not the same frame so once again **Mick** West gets a wrong he should be used to that not the same VFX not the same frame being used none of that's real the fact that he's

(31:37) obsessed over this means he first of all he needs to apologize for lying and trying to **debunk** these videos and I'm going to say this again if he doesn't apologize when I go onto a major platform I am going to suggest that **Mick** West should be facing criminal conspiracy charges for hiding the videos which he is still trying to do he needs to stop he needs to apologize to the families of the victims who have been lied to who didn't get the **truth** the videos are authentic they are real if you're out there listening **MC West**

(32:13) apologize to the families stop trying to **debunk** them and admit they're real Jesus okay are we done with the **debunks** for tonight guys poppy stop making up fake statements okay they don't match we just we just **debunked** it they don't match a certain madeup percentage they're just legitimately not the same it's not it's not a situation where they have to be a little bit close it's the same plane in both frames of course it looks similar Jesus man okay I'm done with the bunks for tonight let's take care of

(32:51) business so we need to find that the day one press conference I mean if he doesn't apologize then he can sit there and face criminal conspiracy charges because that's what he should face so you think you know Wicks he should do the right thing what up New Order MMA yeah **MC West** why did my sound just mess up what the hell he's uh yeah he's either compensated or compromised there really is no in between okay with that I'm going to get Malaysia Airlines group Co this morning with the news on MH 370 this Airlines

(33:55) confirm that this flight and 370 lost contact with sub Air Traffic Control at 240 a.m. this morning hello hello yatsi yatsi wow guys so we figured out that it's at 2:40 a.m. and now we've found like all this evidence that confirms that's when they look at it yeah so just one last thing I'll say on the **debunks** okay in any future **debunks** if you use editing software to modify the images you can't use that to **debunk** them and say that they match or they look different or whatever guys that's

(34:40) not how it works you have to look at the original versions unmodified unedited this is why we keep getting fake **debunks** like the VFX **debunk** which is modified like the duplicate frame VI **debunk** that's modified like the jittery contrails it uses the stabilization software you are just making up your own fake **debunks** that are not even in the videos okay good uh am I'm can how do you multicast to an xpace yo Todd teach me how to do that why is this so loud now oh so if I like start an xpace is that how it'll do that I should

(35:22) multicast to an xace that's a good idea that's a really good idea actually I think I'll do that when I do like a presentation like if I do what I'm thinking to is that I'll do another all evidence because the last all evidence has like 175,000 views on it but that's because it got like kim.

(35:42) com posted it right um let's put that up here too maybe we'll do let's see I think I have a podcast tomorrow that's one of the officials talking got yeah I can I might do an all evidence review tomorrow maybe what we'll do is we'll do an all evidence review tomorrow and then I we'll update huh I kind of want to get this done for tonight [Music] though yeah the **debunkers** like if you ever have a question about the **debunkers** just read the the Twitter post that I made the other day just read this one right maybe we need to read this

(36:27) every time some people appear to have innate proclivity for attacking something that should not really be of interest to them why would these people even bother to comment much less try to Fumble together a low IQ attack of ashen's conclusions the only way this happens is they have skin in the game they're either paid by someone to suppress the narrative or they are part of the original cover up so once again **Mick West** if you're out there you need to apologize for posting fake **debunks** about real videos it's not it's one thing to

(36:59) do it to UAP videos it's another thing to do it when there's 239 people's real lives at stake he's either paid to suppress the narrative or part of the original cover up either of these scenarios is indicative of criminal conspiracy where you should go to the go to prison for the rest of your life January 6 set the precedent for a seditious conspiracy 17 years you don't even have to be there apologize **MC West** for doing the wrong thing apologize okay let's clip this most contact with sub a traffic

(37:39) control at think we do a.m 143 maybe let's see if there's any he says anything else after this we are working to verify the authenticity of the report and others Flight MH370 was operated on a boeing what the hell okay that's not helping us I think we just do from like herein confirm that this flight H7 I think we do 125 L 12 to 145 spe to 142 okay 125 to 142 we are working to verify

(38:46) theity of the report and others7 my bookmarks on 7 sorry sorry guys hold on 125 to 147 hey synthetic future entertainment welcome N I think that the majority of **debunk**ers are not compromised but several of them are the ones that are leading the way are definitely compromised definitely again there's no reason to be involved unless you have skin in the game right if you're a **debunk**er who's not compromised you know what you're doing you're you're going and watching Netflix you're not messing

(39:30) around trying to **debunk** real videos you just don't care why do you care you have to have skin in the game so I mean the easiest way to prove you don't have skin in the game is just admit you were wrong and apologize right admit you were wrong apologize to the world for posting a fake **debunk** if you can do that then you don't need to face criminal conspiracy charges if you can't then yeah I mean I'm just telling you that's what I'm going to be recommending because that's the reality

(40:01) of situation it's a criminal conspiracy okay these early press conferences are pretty pretty spicy guys oh you just use a you just use some editing software or editing thing to to clip them no the problem with the the **debunk**ers is they've done so much damage it's crazy how much damage they can do uh like that that VFX **debunk** only has like 50,000 views on YouTube it's got a third of the views of my evidence link does but you probably reach like 50 million people that's how bad um social contagion is and how bad social

(40:48) contagion Works let's make sure we caught it 370 thises confirm this doesn't right that this flight MH370 lost contact with sub Air Traffic Control at 2:40 a.m. oh it does okay I guess that's fine control at 2:40 a.m. okay that that'll do I think that'll do should we do breaking update on this or just regular update got him again boys got him again oh I guess that's you guys aren't seeing anything that matters

(41:52) there I always forget I'm just sharing my whole screen though [Music] um yeah I mean if you guys even see like how do we combat negative social contagion yeah you can't you just got you keep spreading the evidence right spread the evidence read the evidence list that's pinned to my profile spread the evidence as much as we can when people ask you something you got to go back and you got to look at the evidence and pull up the evidence for them because if you just keep if you say something that's wrong then it just

(42:22) hurts us but if you tell them the **truth** like when people ask often like well what about the debris you know you just post it and then because what's happening is like they're using it for Community notes and stuff as well so when you see those Community notes you need to um vote them down social contagion is really one of the biggest pieces of difference information that's out there that's why I'm writing a piece called disinformation all roads lead back to **Mick** West they really do sad is it say

(42:51) **Mick** West is the number one source of disinformation on the planet that's just just that seems to be the case all these **debunks** just go straight back to him every single time it's almost no way that he's not being sponsored by the government I mean he might just be an idiot but I

think he's sponsored by the government um what do we call this but spreading the evidence is the way that we we we beat the disinformation what should we call this I need a name for this um

(44:06) I think that was ATC right 37 Air Traffic Control I should probably do another link right hold on I should probably link the old oh crap how do I do this I think the best thing too is if I link my old works like my old 1814 1840 UTC and remember guys I always bring the receipts I always never going to get me

(45:10) I always got the receipts you can also find this link here so I'm going to put this in there that's a link of all my works as well up until probably a few weeks ago yeah they changed it in like day five I'm just going to probably copy paste this again for

(46:29) why is this so long this is annoying I'm might have to Tiny URL this other thing tiny URL does which is pretty nice is that it uh takes care of like sometimes it'll like weirdly link this like link it in the bottom which I don't want it to do there there we go like that for

(48:25) okay um no Joe roggins hasn't reached out I mean he's had some pretty big people on I can't keep up with people like Elon Musk and David grush they're another level above me not even the same Stratosphere as those types of people but yeah yeah yeah that podcaster went in it wasn't just with his mind made up I have a feeling that it was coordinated with the people who were attacking us one of them even got evoked during one of the interviews I should have realized it right away um yeah I mean it very

(49:07) coordinated I mean it's just that's really embarrassing behavior for a podcaster I would never do anything like that yeah this is the time that Kate reports seeing it I'm trying to think if we need anything else hey JM hey uh Paul I appreciate the kind words uh yeah we don't need to worry about that podcaster anywhere they're just a loser we're g to move on the here's the meme as well oh and someone maybe can help me find this meme oh wait I think we found it oh yeah there it is what's it called

(49:44) though uh cometta if you're somewhere in here I need to know the name of the podcast of the uh that image I don't think the Danny Jones one is out I I don't know what to think about Danny Jones I can't tell if he's a snake or not I think he's a good guy's he acts like a good guy but man a lot of people act like good guys and then they aren't it's hard to say

MH370x Work - 11/20/23 - YouTube

<https://www.youtube.com/watch?v=UeZBzkAocE4>

Transcript:

(00:16) see what we got going on here oh I need to switch out my thing as well what's up guys I'm just chatting with

(01:59) Danny hey what's up

(04:19) guys what up yeah I'm working to try to get some defamatory content removed I'm trying to be nice to the people who are posting it see if they'll just do the right thing and take it down but seems like they don't want to you know it's kind of wild I I've deleted stuff that was way less defamatory than that what's up guys so let's do some work here today what is **Reddit** conspiracy oh on my thing there I just posted uh yeah so we can we can do that that's a good call should we do a little

(04:55) bit of that so **Reddit** conspiracy that's probably it probably looks funny uh I should have put put like that we're going to do we're going to post all evidence there I think in the morning or maybe on Wednesday just a lot of sus been going on it's probably intentional to distract me from what we're trying to get done here right I think we may fire the Navy as well we could post around the okay so if people want to help out um some of the stuff I need help with is doing time stamps for the salvator Pas interview I

(05:27) don't know if it seems like kind of boring work but if anyone hasn't watched the interview interv yet and wants to watch the Salvador Pas interview and put some time stamps for like certain events that happen through it this is the format of it I could really use some help with that so one second I'll pull it up where the hell is it oh here man people are really angry huh it's pretty wild they're like really committed to these videos not being real which is bizarre like who I wouldn't care if it was something was fake like

(06:08) I'm not going to go like try to attack people over it it's like people decide to take it super personally um so I wish I bought a new camera it's super nice God and I don't for some reason it won't plug in does that link work yeah okay so if anyone's interested in doing this I'm going to put that up uh I'm going to do I'm going to make a little list here this call lawyers is for the call lawyers for the family although it could be for other lawyers as well I called the Freedom of

(06:39) Information Act people they didn't they didn't call me back I actually called the lawyers for the family regarding the case in the United States too they also didn't call me back excuse me okay so we need for one sec guys I'm

(08:11) just trying to trying to get Danny to have uh Julian take down his defamatory stuff because I'm not sure why he's so upset he's like just really really mad yes yeah I don't know you definitely shouldn't come into your podcast with an agenda seems like a really bad approach but we can only control what we can control boys and girls so let's see I need someone to help with this if you want to help with something I'm not this is not obligatory I can do it myself of course but if you want I'm going to make

(08:50) a list of stuff up here and if you have something you want to help with that you just want

to volunteer that I don't have on my list whatever so some of the stuff that I I'm going to be writing articles about as well I can help out with um yeah a lot of these guys are young too and they just haven't grown up yet you know I don't know um so I need to add chapters for the Salvador Pi move this down uh we're going to freedom information actually we uh actually I don't know if I can do the freedom

(09:26) information act with the Navy in front of you guys cuz I have to put in my personal information there yeah bucking I think that's what happened I think those comments just made him lose his mind I don't mind if people would come out and say like you know mean things but you know when you start to like use my likeness and stuff like that and try to edit it then that that rises to the approach of uh defamation so I don't know we'll deal with that tomorrow oh yeah editing in the Bob Green year thing so I actually have to

(10:00) like redownload it the problem is it's like 16 gigabytes or something like that so he already actually fixed the sound but I think it's maybe if I plug my computer in maybe it'll go faster but it's 16 gigabytes it's like 20 hour download and I don't think I can do it while I'm while I'm streaming as well so the moment I get off I have to download the Bob Greener interview so I can upload it again it's just so it's huge and for some reason he loaded it to somewhere where it's like super slow download

(10:36) super super slow it's like dial up speed download let's do this first and then let's do the all evidence and I'll keep my list up here of stuff to do these are people I should I guess reach out to for well we already did Bob Green here delete that one make sure to buy Bitcoin everybody I'm not endorsing Bitcoin just just to be safe but do whatever you guys want to do um we could work on veritos I just want to see what we got here yeah yeah I mean I just have to say as an opinion like if anyone's thinking

(11:37) about going on Julian dory's podcast you definitely should not um just just look at the way he treats his guests make your own decision you know just avoid that guys um let's see here and then the other thing we're going to do is we're going to work on the all evidence pull it up all evidence list so what I want to do with all evidence is we can have up to 20 images and 20 links I think is what's allowed for conspiracy so I want to add images into this God that's going to take a lot of work let's do something fun first which

(12:25) I've heard okay that this guy says us hasn't come clean with the data March 19th what does this mean this is a general huh could have gone to Pakistan why would it be in Pakistan so what's his what's his sources here this doesn't seem very strong oh he mentions Diego Garcia

(13:36) hello look at this yeah you can email me or you can just post in the chat here what you want to do but yes if you finish it you can email me uh that's the best way probably to get it or if if some of you want to help out and you're not in the Discord um send me a DM in Twitter and I can get you a invite we will open it up if I follow you back and uh yeah if I follow you back and you can DM me I can uh you can either DM me the stuff you can help me with like if somebody wants to help with the time stamps or whatever um or if we want to

(14:36) help with Research into some of these topics here so we've also got salvator Pious science I need to post I'll probably take care of that one I want someone to look in the underground elevators for like either Dums or um Diego Garcia there might be something there there's ligo experiments so here's the research topics okay I'll put the research topics together and what I need from a research perspective I mean if you can use you can use AI if you want or just kind of summarize the Articles and give me a

(15:16) couple articles related to it that would be huge yeah I need sources though needs to be sources and they have to be somewhat legitimate can't just be like some blog uh so like usually like this like we can search other articles hey man hey Amanda and we can um find other stuff that corroborates it and then we can we can post that yeah I don't know if the hit piece was related to like the struggling thing somebody sent me some mess some of his public uh messages claiming that his podcast was failing um and losing a bunch of

(15:53) money but seems a little bit too personal for that you know like I'm I'm okay with like you know drumming up a little controversy right like Danny was doing with the like should I release it or not of course he's releasing it he's not going to not release it you know but uh you know when you start like take making it super personal it's like what come on now you know I was just ribbing him a little bit with his false statements you know but now I've got to be careful because I don't know who's really

(16:23) connected to Spooks and who's not so if you got do we have any other ideas for research as well if you have any other ideas for research let me know Lio underground experiments so the Lego experiments is actually really big too and we'll we'll look at this uh General this might be nothing the Lego experiments I've been told like prove like roy y Herbert's theories gravitational waves like this there might be something here I think now I need something that's like solid from that thanks Blake thanks everybody how

(17:04) many do we already I didn't even post this on Twitter how do we how do I check how many people I have watching well there's already 82 viewers wow and let's see let's see if we can find anything on this though this looks like he's just he doesn't have any inside knowledge so I mean this is weird because he's he's telling Megan Kelly that he's got inside knowledge but now he's saying Pakistan there might be some tip in here we can find he talks about dier Garcia play several

(17:57) times let's see BBC I'm not going to read BBC crap we need people we need good uh yeah what's up everybody what's up UFO nut JK Philly fan in the house we got all our peeps in the house right now where in the world is MH370 he sets in Pakistan held by terrorist in Pakistan that's definitely not true question is does oh here's another thing um so I need somebody else so if somebody here's a good one for people um we need people to look through the old press conferences you can find them all pretty

(18:52) easily so you guys saw the damning stuff I've already found right we need to find more damning stuff like that either stuff where they just like are denying evidence that's out there like

we already had let's see the M the one uh transport guy wouldn't say whether or not there's electronic data that's like transmitting and if it can be turned off which is like what do you mean of course it can't be you know um we got the piece where the the minister of defense is admitting that they were talking to us

(19:20) spy satellites and Rolls-Royce we got the one interview from the Minister of Defense as well so more stuff like that I'm sure there's more stuff in those press conferences uh and it's not they're not actually that long they're only like between 15 and 30 minutes each so basically we want to go systematically by day one day two day three day four day five see if we can find anything if anyone wants to dig into those feel free and again if you come up with anything if you are following me on Twitter just um you know

(19:49) DM it to me otherwise you can email it to me at MH370 xpron I'll put that in the chat now a problem with the email is I'm getting spammed by a lot a lot of emails um like a lot it's hard for me to respond to all of them now I just have too much stuff going on oh there's somebody just mentioned another article I just want to read like one or two more of these like I I don't see any strong evidence like I want to get this guy saying like maybe we can catch from excuse me um maybe we can get him saying something

(20:31) daming right was among the very first to say the missing plane had been hijacked and he also said it was in Pakistan and now there's even more proof this morning we know it wasn't reti Air Force pilot and Fox News contributor Lieutenant General Tom M General good morning to you good morning Steve how are you today uh doing okay you you're the first person I heard last Friday suggest that it was a a hijacking and you also tied it to Pakistan and oops this morning there is news as well that a number of people at

(21:17) Boeing apparently feel that it's in Pakistan why do the Boeing people say it's in pakist I find that very interesting uh my course of action that I gave you last Friday that number one it was was hijack number two we ought to look at Pakistan and Eastern Iran U why would Bo think a course of action that just wasn't arbitrary that's all I can say now it's interesting that we're starting to get other sources to verify it uh which I think is important we're not sure yet I I don't want to go down

(21:48) that uh Rat Trail yet but I do think that yeah I reached out to dark journalist earlier today Boeing and rollsroyce and the US government Journal know an awful lot what's going on the best sensors we have defense department are where they're in the Middle East they're not in the South indiaan I do think that Boeing and Rolls-Royce and the US government know an awful lot what's going on the best sense that I think that's the clip right there March 18th this is over a week after we have in the US defense

(22:27) department are where they're in the Middle East sure they're not in the South Indian Ocean as some are speculating the fact is is uh I think we're going to see in the next 24 to 48 hours that the Malaysian government may break it the Pakistani government isn't saying anything and why should they because it means they're complicit well let me ask you this

General if it's parked in Pakistan um they anything that made 17 please well that's very interesting but you notice the Israeli

(22:57) Defense Forces increased air defense alert you notice that the US Navy has quit their stopping their search in the Indian Ocean and we're starting to see indications that maybe it could be used for something else like and I'm speculating again fill it up with Munitions attack a target attack a Carri air defense alert you notice that the US Navy has quit their stopping their search in the Indian Ocean and we're starting to see indications that maybe it could be used for something else like and I'm

(23:35) speculating again fill it up with Munitions attack a tar carrier attack Israel along the terrorist line remember very early on uh John Brennan said that we is stopping their search what what if the hole in the cloud was the plane being like super tiny that's kind of weird that we could not rule out a terrorist act I still believe there's a high potential for a terrorist act but not know to get other sources to verify it uh which I think is important we're not sure yet I I don't want to go down

(24:12) that uh Trail yet but I do think that Boeing and rollsroyce one minute I do think that maybe rat Trail yet but I do think that so 59 seconds Boeing and rollsroyce and the US government know an awful lot what's going on the best sensors we have in the US defense department are where they're in the Middle East sure they're not in the South Indian Ocean okay as some are speculating the fact is is uh I think we're going to see in the next 24 to 48 hours so 59 seconds to 120 I think that's what we want

(24:59) want let me see if we can clip that let's use this sketchy website hopefully that won't get struck down here 59 seconds let's try not to get a uh a virus to 120 oh boy Let's uh can we play it it's among the very first to save the missing plane had been high I think that's good let's just make sure that's where it stops the South Indian Ocean as some are speculating the it's 119 20 second clip we want MP4 version I mean he literally just says it's not

(26:03) in the South Indian Ocean this is over a week afterwards it's like he's yeah I think he was missing I mean I can't say he's going to Pakistan but he does basically say that the government knows what's up and Rolls-Royce knows what's up right and that's super important very important so I think that's still big and then what did he say about the south Indian Ocean down here going to do with it well that's very interesting but you notice the Israeli Defense Force the US Navy has quit their stopping their

(26:36) search in the Indian Ocean and we're starting to you notice that the US 145 us alert you notice that the US Navy has quit their stopping their search in the Indian Ocean and we're starting to see indications 145 to 152 maybe it could be used for something else like I'm speculating again you notice that the US Navy has quit their stopping their search in the Indian Ocean okay 145 to 152 we have another clip it's actually pretty good I didn't think we would get anything out of this guy but this is

(27:17) what I'm talking about guys like you can we don't what we need here is just several Clips we don't need that much oh um uh let's see Bill are we am I following you William Bill on Twitter can you DM me on Twitter DM me on Twitter and I can give you a Discord invite I don't want to post Discord invites in the chat over here and I don't really want to give my Discord username in the chat either uh on a on a live stream that that that won't go well but or you can email me uh yeah hey hey Nat what's up we're

(28:04) clipping a couple things from this General it's supposedly was told some stuff and then somebody else mentioned another article to look into Bernie Goldberg calls out Fox news's MH370 coverage doesn't sound good but okay we got both those clips see if there's anything else we might need from this hijacked oh what's this Source within Boeing reportedly told what is this this group liet which is a bunch of this like the day after or the same day that they that Boeing according to this Source believes the jet is in Pakistan Boeing

(29:02) came out today after you talked about that on Fox News yesterday and said uh we don't have information I want to get the Boe the denial the Boeing Company does not have information that substantiates your claim your thoughts oh they didn't deny that they had their hiding data though they came up in the net that doesn't necessarily mean that it's not true uh and because we don't know I'm I'm still trying to figure it out myself I did find out that the distance from quala lur to Beijing and

(29:39) the distance from quala lur to Pakistan laor is the same distance roughly 2700 miles is that right because we were we were wondering whether the airplane had enough fuel to it and the pilot eras very interesting the data that they did erase when we look handing this and looking at it and I believe the pilots were involved this was too coming clean with this think a course of action now his info is not necessarily good but he does have good instincts right into either Pakistan or Eastern Iran I don't cannot confirm that but all the data I

(30:16) have this would be a course of action again a course of action if you don't take the right courses of action you can't look into the right databases and people are making a lot of statements about I remember some of these videos actually okay thanks uh bill I'll take a look they don't look those controllers at 2 in the morning are not looking on skin pains they're looking for transponders and I dare to say that there's probably not an Air Force along that whole route that is on I'm going to

(30:45) get copyright alert got a l aler 2 o00 or 3:00 or 4:00 in the morning that's not the you are very well connected uh in the in the Intel circles in this country and Military as well so you've got information uh not all of you uh some people don't know that they're turning in our airplane I think in our videos it's hard man a lot of people only get part of information I've been like kind of seeing how it works right A lot of people have been following a lot they know a lot of the stuff um but other people don't a lot of

(31:21) people are really stuck on this fake VFX **debunk** man I mean yeah if you come on my channel and try to claim that we're looking at a VFX **debunk** you got you're on the wrong place

you got to go to **mcwest** channel if you want that yeah so one person has really valid criticism daddy vet bro daddy vet 3D if you're listening uh this is valid criticism I literally had the I was on the trial version of the software and then it was like about to cancel because you can only do uh Zoom for like a certain amount of

(32:10) time I had to buy it like someone noticed I had to buy it halfway through but on the the real version it shouldn't it shouldn't have shown that that should only been the live stream version yeah I think that's only the live stream version yeah yeah the other version doesn't have that these people really really think that fake VFX **debunk** looks like ours huh they just can't get over that it's not a match I think it's m a matter of like people just unable to believe that the videos are real it doesn't like you

(32:41) could show them anything you could show them the donut and they'd go it's a perfect match right in fact let's show The Donut what my favorite I got to put the dut in my list where's the bfx donut uh damn where oh there it is here you go guys sorry it's all fake it's a perfect match it's too close unfortunately it's just too close to be coincidence that this dut matches so well it's just too close guess we're shutting down the case everybody I might actually make a joke post about this

(33:20) honestly maybe we'll do that tonight we'll just admit that admit that the bunkers were right we f it wasn't it wasn't a VFX from the 90s they were wrong it was actually just a donut we're shutting down the case everybody we've given up they've gotten to me we may do that I think we should post one of these clips though of the um what of that General see what let's see what Goldberg thinks I actually think that he's right to discredit him for thinking that it was like went to Pakistan or that was

(34:06) terrorism there just wasn't any evidence of it like what kind of what kind ofes like the story doesn't even make any sense right like oh they're bringing it to Pakistan for for what I mean it's not like there's there was one American on board it's mostly Chinese people doesn't make any sense but I don't know about getting him fired I I don't know whoever posted this does this this criticism doesn't seem very worthwhile let's see what ex uh ex talking head Bill O'Reilly

(34:40) thinks I'll admit I was not a fan of Bill O'Reilly it just thought he was just a huge dick for no reason like all the time but he's just he's a normal person right okay that's nothing so I don't think that's going to get us anywhere um let's where's my Twitter at only two messages why is why are people talking about Matt re let's see what they're saying at least I'm not trending Jesus with all the posts you'd think I would be

(35:59) this guy's nice he was telling us about the technology stuff why do people hate him uh just anyone in the chat can give me the lore I I'm just not good at social media I don't know why people hate other people very much um so let's do give me a sec I I don't really feel comfortable showing my uh my paths love this one here uh yeah I I don't want to go down that uh Rat Trail yet but I do think that Boeing and Rolls-Royce and the US government know an

awful lot what's going on the best sensors we have in the

(36:42) US defense department are where they're in the Middle East sure they're not in the South Indian Ocean as some are sport we're not yeah this clip is okay I guess um let's see what's what up with your letter to Congress have you heard back about a potential hearing yeah right yeah if I heard about a potential hearing they would uh they would mention it I guarantee that those congressmen are going to be told to not look into this guarantee we'll see though thing about Congress is like you've got

(37:15) a captain disillusion is that doctor oh yeah uh yeah literally no one will can discredit any of the evidence it's pretty sad um but yeah I don't think there's any chance that Congress is going to speak up on this one but it was worth a shot anyway you know oh yeah if I could get some clips from the Bob Greener uh thing as well it'll probably be easier after I upload the full thing um probably tomorrow I'll try never trust a man who's rocked a goatee since age 17 that's a good it's

(37:56) good advice good advice how much foreign news coverage very little foreign news coverage has been reviewed so if you guys want to review any really the best thing I can use right now is clips that will expose uh the situation like this so what are we going to do here um General what's his name Jes what's his name was it McIntyre or something where is it I wish my new camera worked so nice looking compared to this this junk I might be able to do uh some clips tomorrow though if all goes well although I was taking a couple days off

(38:42) of podcast or of doing other people's podcasts I got so many requests man I was going to do one tomorrow but I don't know I might invite alien scientists on for a podcast actually I'm curious like I want to know about like all the stuff he's been doing like I only found out about alien scientist like probably about less than a month before the videos emerged and I started following him but like the people he's been he's been having on are pretty pretty awesome so uh where's the thing about the

(39:25) general what's this general's name someone chat help me out yeah I'm going to have to start being a lot more careful on the podcast choices there was one person that reached out to me and I found I looked at their content and it's all about like exposing **scams** and I was like yeah I don't think so man it's just that like people come with dishonest intent and like it's okay to be skeptical and what have you but uh I I'm not going to do people who are trying to **debunk** me or whatever it just goes like how it went

(39:57) with some of these other podcasters whoa oh I can press the button down here wow chat watch this wow you can just press this button flip between the last things I've been looking at okay guys is this a match I love how they like this is literally the only frame they look at and they go well it's one frame that's in the similar spot well it doesn't match though well I would just changed everything about it and made it different like what and add the influ the interference in the background or is the interference real

(40:34) like walk me through it like all the you can see these like lines here as well like there's explosion lines in this that are very big oh thank you lieutenant general Mac attorney okay um is it lieutenant general or general are we sure I'll Google it I don't mind the drama people like their drama it's fine I joined a space last night and everyone was just raging about me although people were defending me too I mean hats off to was it uh red panda and Tupa they've been doing a lot of work uh fighting for my credibility in

(41:13) the case which I appreciate and Tupa is um you know pretty middle of the road in terms of what he's definitely like not like a hardcore believer in terms of the case right like I think he thinks that you know it's non-human intelligence that's totally fine no problem um but I do appreciate those guys who are out there and on the front lines against the people who are emotionally unhinged about the case oh he's on this guy's on Twitter oh wait no that's not him this is not the general that's not

(41:43) the general although this guy's got a cool background I don't think that's the Milky Way though yeah Air Force Lieutenant General I've learned how to spell lieutenant okay maybe we'll put in parenthesis I think a lot of people don't know the timelines either oh wait this is this was March not August this was with Megan Kelly right not sure yet I I don't know let's just say did an

(42:48) interview on Fox News I I don't want to go down that uh Rat Trail yet think that Boeing and Rolls-Royce and the US government know an awful lot what's going on the best sensors we have in the US defense department are where they're in the Middle East sure they're not in the South Indian Ocean as some are important we're not sure yet I I don't want to go down that uh Rat Trail yet but I do think that ever released the data Boeing and Rolls-Royce and the US government know an awful lot what's

(43:34) going on the best sensors we have in the US defense department are where they're in the Middle East sure they're not in the South Indian Ocean as summer sport we're not sure yet I I don't want to go down I'll just post the second clip in the reply here did Rolls-Royce ever release the data look **Reddit** hey look this is an MH370 thread yeah the Bob Green your part

(44:43) proving the science part right is really big really big Improvement like I can't I'm going to promote that um that interview once I get uploaded finally that was really big yeah the alien scientist interview is good like we honestly turned Jeremy onto our side I think you know it's hard for me to trust anybody but I think I can trust Jeremy I mean he seems like a very legit guy I think he's just skeptical because he's been in my position too so he's skeptical of people the same way I'm

(45:12) skeptical of people um but I think we we convince him there's something there you know or at a minimum he he doesn't think I'm a spook it's good enough for me guys I'll take I'll chalk that up as a win I mean this is nothing where's the rolls R engine dad we need to get this clipped this is the same defense minister again where's

(46:23) it I mean if it went into the South Indian Ocean we should have engine data what are

they talking about when they say before it disappeared what do they mean none of this makes any sense can anyone give me an explanation for where the rolls race engine dat is it's not in there there's nothing it's like they just covered it up and then said nothing not no articles there's no way they could not have it yeah I think if anyone like uh David fraver or anyone were interested I would have be love to talk to them and

(47:14) interview them I'm 100% on their side I believe what they were saying is true anyone who speaks to Congress and testifies in come of Congress as a free pass to come on to my podcast uh I talked to Florence of changy pretty frequently um she's not going to be like directly part of our investigation but we share information a lot of people have posted pictures of orbs but um I'm not I'm not like looking for other cases guys this just there's already too much going on here so we're not linking this

(47:55) to any other cas cases we're not linking this to any other conspiracy theories so and the I mean even if I believe a lot of that other stuff uh I wouldn't do it because we can't give them any way to say oh this person's crazy they believe this other thing that's fake or whatever right now you haven't missed anything we're just looking at information here trying to figure out if this Rolls-Royce data was ever given over looks like no so this is definitely fake right why would there not be any engine

(48:38) Transmissions there's no chance of that so this isn't mid1 1990s technology this plane was built in 2022 that's it is this true I don't believe this at all man so this doesn't line up either because this is 1 10:7 a.m. is 17 uh 16 uh 1707 a.m. so that doesn't make sense is there a way to connect the US

(49:41) to this uh yeah we're looking at two other sat two of assets on video did I just close that you got be kidding me man I closed that we'll just write it in here instead of sourcing it

(51:03) six hours yeah I think so 1707 is 107 yeah I mean that's actually seven more hours how's that sound then I'll clip the second thing right after in the reply

(52:44) yeah well they didn't make this they didn't make the data public at least you know if they were being transparent they would have made it public I think we can just say we'll just say Rolls-Royce never made it out of public they just didn't this seems fine right could bold this but I think we'll just leave it as is I've got like 60 notifications here let do a followup oops there's nothing bad there yeah I I don't want to go down that uh oh that didn't work oh I I clipped the wrong

(53:44) one sec yeah no there's nothing bad to see there anyway not that I have anything to hide really just don't want people seeing my file paths you notice that the US Navy has quit their stopping their search in the Indian defense alert you notice that the US Navy has quit their stopping their search in the Indian air defense alert you notice that the US Navy has quit their stopping their search in the Indian oir defense alert you notice that the US Navy has quit their stopping their search in the Indian defense alert

(54:24) you notice that the US Navy has quit their is stopping their this could be even a separate post should I just do a separate post for this one um the the noise around the plane

(55:48) doesn't match you need to check out the **debunk** on that so what happened there was that they used editing software to modif modify it and then the editing software removes a lot of the detail so that's part of the reason why that that **debunk** was an old one too it's already been it was **debunk** a long time ago as well um there was somebody that did a pretty thorough analysis against **Mick** West while he was talking with him and mck West once again couldn't refute it there literally are no **debunks** that have

(56:14) with stood any level of scrutiny at all so just to be clear if there are **debunkers** out there you cannot modify the images and then claim that there's something wrong with them or that they're match like when you modify the images when you stabilize the images you're editing them you're creating artifacts in them that's what you're seeing when you see in in things that are inconsistent so I think people are getting a little too emotionally invested into the **debunks** um just let the evidence speak

(56:43) for itself uh the videos are real that's just because that's the weight of the evidence guys if IAL search the fact that people are getting so emotionally invested into it too is uh a little bit little scary man there's no reason read read my post about how there's no reason for people to be getting emotionally invested into **debunking** the videos and people have gotten so scared now because they they're afraid that these is are real

(58:21) okay post that there seems good add this to our highlight and post this in my Discord real quick okay re update that real quick

(59:31) okay okay that was good let's see oh it's already 10 o'cl yeah close only counts in hando horses shoes and Hand Grenades so what does close mean guys so so Jesus in the chat this is close right but it's not it's not a match though right it's close but not a match this isn't the same in the middle here at all we have all kinds of extra lines there's extra Dots here that don't exist so somebody ran a computer program to try to find something that would be similar and then they resized it

(1:00:04) reshaped it tried to get it to match but because it's not the same it doesn't match so when you say words they mean things right when we say something matches what we mean is it has to be the same thing as we see here it's not we can even see part of the plane sticking out of the real thing here the real image so this this here and you see all these extra colors and what have you it's not the same thing and it's not a situation where you can change this to look like the other thing you're not

(1:00:35) copying something to look like something else what we're dealing with is an original work which means that you would have to blindly change everything to be exactly the same as what we see behind in the background here and this is just one frame right this is just one frame if you move it forward to the next frame you see that now it's not even remotely close right now

it's not even remotely close this is the black of the real image in the background here and here we've got all these lines coming out

(1:01:04) here like at this point less than 5% of the pixels match now maybe maybe almost none of the pixels match doesn't matter if you rotate it there's no situation where it matches nothing about this makes it match at all if you rotate it now the dots out of the wrong location it's simply not close at all you know so I keep saying this I'm not making an opinion here I'm stating a fact the fact that I'm stating is that these two images don't match that's not an opinion that's a fact it's not the matter that I'm saying

(1:01:37) that this is something that is my opinion I'm stating I have two eyes my two eyes can see the image and I can see that they don't overlay on top of each other I can tell that somebody tried to get them to match up right they got they tried to get it close but I can literally do this with with a with a donut I can do the same thing with a donut guys I can reshape the donut as well and I can say that they're also similar right now that's an opinion saying that they're similar saying that two things

(1:02:05) match is a factual statement so somebody says that the visual effect matches our our background that's a lie by definition because that's not a statement that's factual if they say that it looks similar that's an opinion someone's they're entitled to those opinions Everyone's entitled to their own opinions they're not entitled to their own facts so people get upset about that and they think that it's a matter of being cocky it's just a matter of being accurate and truthful

(1:02:32) right you know I think that that's the problem is like a lot of people want to believe what other people tell them and not uh not just the facts you know because the facts hurt people's feelings um give me a second uh yeah drwx if you're in the chat if you want to clip that um that'd be awesome you can then if you can send me the clip yeah send me the how did you send the clip anywhere you can honestly one sec

(1:03:53) guys so I don't think uh Bob Salis will be upset if I say this I think he'll be totally fine with it I've been asking him what his opinions are on the technology so I'll be honest with you guys on this I'm starting to have questions to whether or not Humanity should even have this technology the reason why I'm being attacked so hard right now is they're desperate to keep this quiet because the reality is this might be doomsday technology what we're dealing with right that's that's the

(1:04:43) reality of what we're talking about if you guys watched the Bob s uh the um Bob Greener interview that he that we uh posted then you know that when we were we're talking to him this technology can create weapons that could destroy a sun right because we're dealing with something where the energy can be perpetually Amplified up you can create a singularity um this is very scary stuff and it doesn't take much energy what we learned is if you create a field that can allow Mass reduction now you doesn't take a lot of

(1:05:17) energy to move it around so the scary part there is that that's the case now what Bob said though uh Robert Salas humankind seeks and is entitled to all knowledge it can assimilate whether or not we abuse it is our own detriment and I think I agree with him whether or not we abuse it is our own detriment we are entitled to all knowledge I think I like that thought a lot right it's a very intelligent thought wait the corridor crew this they tried to **debunk** the real videos the real uh how can you **debunk** Declassified

(1:06:09) videos oh no these are different wait this is the same guy by the way this guy this Nico guy this guy right here this cocky guy right here this is the guy that I saw in the video that was trying to **debunk** trying to **debunk** the real MH370 videos are these people just total ass clowns I think they're just total is he trying to De **debunk** real videos these people are just total ass clowns huh major Studio they're trying to **debunk** real videos the shape that we see here changes as the camera's orientation

(1:06:49) changes so shape is defined by the camera whatever that is it's not that shape first off are these people really trying to **debunk** real Declassified videos this one is a challenging one I think we're looking at two different things happening here so this is are these people like serious Jesus Christ are these guys idiots this is the idiot that was **debunking** trying to **debunk** my the real MH370 videos right here he's trying to **debunk** Declassified videos oh we're going to clip this we're definitely going to clip

(1:07:19) this yikes when he posts when they post their thing we're going to just destroy this guy's credibility I mean not that they have any they're literally trying to **debunk** real videos not everybody can tell the difference between not everybody can tell the difference between real and fake stuff and the crew definitely can't science can't explain this footage that you're seeing right here science can't exp okay we got to clip that science can't explain this footage that you're

(1:07:42) seeing right here Jesus we're looking at real Declassified videos that the government Declassified and they're trying to **debunk** them it could this this is probably this is most likely an alien actually this is 100% an alien there's science can't explain this footage that you're seeing right here it could be a it could be a vampire walk Nest monster Sasquatches can fly or could be a ghost a massive freaking High speeded ghost he's like I'm late to haunt this okay these are the people that were supposed

(1:08:12) to **debunk** our videos okay okay guys I think I I don't all I have to do to discredit them is just play this video they're trying to **debunk** real declass videos and then putting pictures of ghosts and goblins and uh vampires in it to ridicule it have they ever thought that maybe we're not looking at an alien in here maybe this is just a remote controlled object I seriously doubt that the government would be declassifying a floating object that's not real but I guess Everyone's entitled to believe

(1:08:45) whatever fake stuff they want to believe wow yeah Jesus these are the people that they tried to bring in thinking that these are the people that going to **debunk** it wow man this is just embarrassing man do people have no shame what are these people I'm got down about

that one this is just holy crap it's one thing to **debunk** random people's videos

(1:09:47) but when you're **debunk**ing the military's government Declassified videos what the hell honk honk what what am I supposed to listen to Andy is there something I'm supposed to listen to on there like there's as far as I can tell they're trying to make fun of real videos so they already discredited themselves so I'm going to like extremely extremely discredit them when they try to uh come up yeah are they just like are they paid Spooks is the corridor crew just paid Spooks like did somebody pay them to

(1:10:23) make that stupid video that's like the lamest [ ] I've ever seen in my life holy crap Cordo crew is a joke wow wow that's pretty cringe my dude wow that's those are the people that uh are all right that's that's your major Studio guys major studio right there trying to **debunk** real Declassified videos like so honestly it's like almost like if you just like even if we prove the videos to be real they're still going to probably try to discredit them huh they're still going to try to claim

(1:11:10) that they're fake even if we have Edward C Linn come out and be like yep I **leaked** them I went to prison for six years we're going to have Nico with the corridor crew going oh these are totally uh fake cuz there's not enough parallax Jesus man Jesus Christ yeah those videos are made for stupid people to feel smarter for once in their lives that's a comment from my chat but I agree with it just for the record okay um I don't want to get too much on dissing other people but that's that's

(1:11:43) like almost as silly as the uh the Minister of Defense it's almost as silly as a minister of defense nah nobody who tries to discredit real videos like again guys it goes back to the situation where why are you trying to [ ] on other people's stuff what why you trying to [ ] on what other people believe why you trying to prove stuff to be fake like why do why do you have skin in the game right to the point that the post that I made earlier why do these people have skin in the game right doesn't make any

(1:12:16) sense give me a sec let's make sure this is the right one yeah I think this looks right okay good uh yeah it's either skin in the game or ego I'm not sure which I think it's interesting that people try to claim that I have ego because I don't believe what they want to believe it's actually like the opposite by definition when you're yelling at someone saying that they need to believe what you need to believe like that's what ego is when you're like trying to give people unsolicited advice about how they should

(1:13:01) act that's ego I don't think people understand what ego is because someone like if you think someone's like you know wrong that's that's not ego it's not that they have ego it means you have ego it's very bizarre ego fam oh that was in a Rob Robert Solace video uh he's actually in my DMs maybe I'll have him come on a podcast I think he's a really smart dude that's my guess here um actually I need a send him something that reminds me thanks guys I want to send him this where's my salvator

(1:14:05) Pi thing I posted definitely if you guys are new read the salvator pi piece from November 17th that I posted just a couple days ago hi frequency gravitational waves induced propulsion need you need to read that need to read that I'm just going to I'm going to send him a link to him yeah actually let me read this out so

(1:15:13) this was the total Destruction thing I want to know from these uh very credible and you know um season veterans in the UFO field I want to know is it still worth it to disclose the information if it means the end of the world and so I want to read this part from salvator P's patent real quick at the disruption Point Energy may be Amplified to such a high degree as to generate a space-time curvature Singularity leading to a total Destruction of a planetoid asteroid he's obviously being cute here what he's

(1:15:46) saying is that this could destroy a planet right um let me check my mail real quick give me just one sec and then we're going to try to put do a little work on this and I'm probably going to go to sleep after that okay uh William I think this one's you okay okay I'll I'll add you hold on I don't want to mouth your name here I think this one's you is that is this you I don't know if it's not damn it wait this says you're not even following me is this you whatever I'm following you anyway if

(1:16:49) that's you on [Music] Twitter uh uh orbs patent yeah that should be you based on the timing somebody emailed me saying the salvator P science checks out 100% I say this from a physics perspective truly astounding big shout outs to Max Plank and Albert Einstein the folks who have figured this out the physics me included are so gobp backed by the implications of its practical applications Salvador has clearly articulated this in your interview yeah if this is you who was in the if you're in the chat um I'm going to send

(1:17:53) you my phone number number whoever that that person is you should text me tomorrow or later I want to talk to physicists I need as many people on my side and the science side but the reality is the science checks out I think that's what Spooks people the most um somebody asked if I'm uncomfortable hold uh with a firearm uh it's not that I'm necessarily uncomfortable holding a firearm I just don't the firearm's going to protect me we're talking about people who can teleport a plane man uh firearm's not

(1:18:28) going to do anything for me these people can drop a freaking they can drop a beam on me if they want from outer space it's going to be no way to stop it it's going to be just straight up death I think that you just have to realize that yeah we can't stop a lot of this you know um okay so let me check up in the chat real quick yeah so Jerry Barry good question if they were still trying to save the aircraft wouldn't they need to figure out a way to land it afterwards from talking to oh Oppenheimer research

(1:18:59) project Ranch project what's up Diamond um yeah Diamond man have you I don't know if you've seen the attacks man they're they're ramping up the Spooks are ramping up um and yeah I think they want to get me into like some kind of litigation with them too and drag it out too I think that they have they have resources um I heard from somebody today that they

they're going to be able to get free legal if free legal advice if I go after them like they kind of reveal their hand a little bit they give a little too much

(1:19:28) information away when they get emotional um and that doesn't surprise me that's actually exactly what I expected but the thing is the government's pretty stupid they're just collectively they're pretty dumb which is like how I even have a hard time believing that they could be this technologically advanced but it's not that the government's this Advanced is they get really smart people and the people that are the disinformation agents are are not the Smart Ones um Jerry be so when they when we talked

(1:19:58) to Bob Greener yesterday he basically told us that we could move the plane and they could just move it anywhere it doesn't have to be moved straight when it goes into the OR into the like Singularity it can reduce its mass and when it reduces its mass it can be moved by very little energy and it can be moved anywhere it might even be able to be moved through solid matter and this is the part two where salvator Pi was very koi about it when I asked him so it might be a situation where you can move this thing anywhere can move it anywhere

(1:20:24) on the planet and you can just set it down with no inertia they might even be able to essentially violate laws of conservation and momentum so great question Jerry Barry I think that that really helped us to understand and we might even need to add that into our evidence here I think in the science part I think that was a very big understanding that we got from uh Bob Greener yesterday I can't wait to upload that talking him was awesome even though I could only hear every second word it was tough okay let's see what else we got

(1:20:54) oh and I love all the emotes in the chat yes you guys are awesome love you guys all uh let's see what we got going here damn 162 viewers right now and I didn't even post this you guys are you guys are on it you guys are thirsty thirsty for that uh that evidence run okay and once again if anyone wants to assist one of the big things I need is somebody to go through the Salvador Pi interview so if there's anybody who's a kind soul out there and wants to go through the salvator pi interview and set up some

(1:21:23) time stamps I I don't need a bunch but like I don't know between five and 10 timestamps um of various topics and you just have to format it like this if anyone can do that for me and email it to me or anything like that then I just copy and paste it into the description and apparently that sets up the chapters so if anyone wants to watch Salvador Pi interview and wants to do that go ahead I appreciate it um and then these are the research things that I'm looking into too so if anyone wants to do any Research into these what I

(1:21:54) need is a little write up just a couple paragraphs of what it is why it's important and then a couple uh links for the old press conferences uh I need somebody to go through the press conferences and find any other Clips similar to what I pulled there and send me those um those clips really hit home anything that's about Rolls-Royce engine data uh Boeing engine data the fact that they should have had that data and not speak to it anything about uh what else do we want anything that implicates that they might

(1:22:27) have had communication with the plane uh really anything that might be damning for them in the case I think that stuff goes well I'm probably going to freedom information act request the Navy I'm not sure for what yet but probably just around everything related to MH370 now let's see when we do this here where where should we where should we put it what's the right word [Music] um okay that's pretty good uh

(1:24:13) okay let's see what we got here I didn't get into anything I I went on a podcast with with a podcaster and they were just ridiculously rude during the podcast like they clearly had an agenda and I told that podcaster that I was going to come out with some harsh statements against the false claims they made and I guess in response they decided to deceptively edit the video uh so I just made those claims those statements factual statements and uh they got destroyed in their own comments by their own by their

(1:24:50) own subscribers and I guess that just rage them even more at that point so uh I don't have anything against any podcasters but if people are going to be dishonest like that and uh do dishonest stuff like that I'm not going to not going to support their stuff and if people try to defame me then um you know I'll take the appropriate actions for that too so you know I think that you know be careful what you spread that people have a high amount of liability when you post stuff on social media especially statements that are

(1:25:19) untrue factually untrue sorry I'm looking for what else we got here phase conjugate is that Pat is that a link sorry I'm going back up here um thanks ocean thanks Oceano Woods man you guys we got a lot of messages in the chat today I'm sure I can keep up if I miss your question just repost it I'm trying to catch them all yeah the hole in the Cloud's weird I don't really want to dig into the hole in the cloud just in case it's not really there and it's something like we're we're missing or

(1:26:21) whatever yeah my credibility is beyond reproach man nobody has hurt my credibility even a sliver I mean people can sure try like but trying to like dishonestly edit people does not uh if anything increases their credibility if you want to discredit me I mean here you go have at it man have at it we got 12 pages of evidence here we're building a case you know and even if you pick a piece even if you pick apart one piece that doesn't discredit the case especially if it's not something that's even relevant which was a lot of what the the

(1:27:05) podcaster was obviously trying to get on is trying to find irrelevant things to try to claim like the things were discredited that's just embarrassing for people honestly and a lot of people saw through it right in the part one of this podcaster thing like all the comments were just raining on them yeah Adam McKinnon uh don't waste your time petitioning the courts they will side with the government you're right I that's why I'm probably not going to some people said well you should sue the government come on guys

(1:27:43) they're just going to aside with the official narrative that's not the play social media is the play we just keep going I mean our momentum's just building uh I did try to contact Destiny I actually mentioned it yesterday I showed people uh that I used to play Starcraft against Destiny

like 20 years ago maybe even longer than that uh and so yeah I mean I I would talk to Destiny I think that he's a guy that is influential in like the younger crowd especially and uh I think he would be very skeptical though I'd I'd be a

(1:28:16) little worried to talk to him because I think he he could be somebody who could be uh you know turned so to speak yeah so you can attach me on an email MH370 xpron that's MH370 xpron don't send me troll stuff I'll just report it block you it's no big deal yeah I appreciate silver Stargazer um I'm a I'm a nice guy I've always been nice I was even nice to the podcaster even after the fact honestly I mean I just made one statement about them and that was it right and I mean it was just

(1:29:01) factual statement that's all I mean if I was a good person like and somebody like said I didn't pay for their hotel or something like that I would just apologize and pay for their hotel problem solved that's just me though but I don't even care about the money it's not even a factor like got of mind paying for it I just don't like being dishonestly chopped up and uh put in a dishonest position by people so the airplane was kidnapped by aliens is that about right NOP that's not about right watch some of the

(1:29:40) interviews watch literally any of them if people want to believe that the kid the plane was kidnapped by aliens I mean feel free but I don't think there's really any way that there was aliens in those little orbs so probably got to come up with another another thing that makes some sense in there I think those orbs are definitely being controlled by a computer program not by little aliens inside of them so uh that's certainly not my position but everybody's free to believe whatever they want I think that most people in my

(1:30:07) opinion that think that it's nonh human intelligence just think that the technology is so Advanced and let's go ahead and show the videos real quick while I'm looking through this most people look at these videos well well that's not what I wanted to do how do you why can't I full screen this when they look at these orbs shoot in here I think that most people just think this technology just so Advanced that it has to be aliens but that's not the case right why can't this just be rtech why like why someone give me a

(1:30:41) reason why it can't be rtech initially when I first thought it I had the reason why I thought it had to be nonhuman intelligence because we're seeing this triangle pattern that we see in ufology but when you see the these heat signatures then I'm like wait this looks like a something that's mechanical right the pattern seems weird when you look at this pattern it clearly has purpose right this pattern we see here you can tell it has purpose but that doesn't mean it has to be non-human intelligence purpose in

(1:31:09) fact if I if I see something has purpose I'm generally going to be thinking that that's going to be human intention and when they zoom in here this tells me they know something's going to happen they zoom out right before it happens so no I think that this is an operation that's my view and I don't think this plane's going to another dimension I think this plane is just going somewhere else on earth now could it go to another dimension theoretically yeah I think

more more likely it would

(1:31:33) go to somewhere some other planet but you know again you can believe whatever you want I don't really care all I want is the government to admit that this is MH370 on this plane and this is what happened to it because this is what we're looking at that's MH370 that's it again this is a 77700 the videos appeared just weeks after the event uh this this is light on the top and darker on the bottom you can see when it comes around this thermal is an exact match to MH370 like the weirdest part is people

(1:32:00) claiming we don't have evidence that this is MH370 the coordinates down here indicate the nicobar islands this is the literal agreed upon flight path there's a satellite at this exact time staring down at it like I don't know I mean that's the least controversial aspect of the videos I don't know what what other plane do people think it is yeah can't post the link but if you tell me what I have to search for I will search for something and we can pull it up so if the orbs are creating a gravity

(1:32:32) bubble would they be invisible I think the answer there is no though I mean I think that if they're moving at the speed of light they're invisible but what we're seeing from this field here I mean maybe it's not able to be seen I still don't know 100% this is creating a field that's basically the vacuum between the energetic field they're creating and then space time that's why why they are moving without being impacted by gravity so if I pull up which one do I want to pull up so this is the higher quality one I

(1:33:05) think you can see the oh this isn't really the best one but what's Happening Here the reason why they're just completely free flowing and ignoring gravity is because they're they've disconnected themselves from SpaceTime they're having zero mass and they're doing the same thing to the plane they're getting ready to do it at least here and they're creating this pidal fractal moment where when they converge they're converging their uh like energy pulse or whatever you want to think of it and

(1:33:32) that is causing the singularity to occur it's creating an energy level that's so high that it's ripping a hole in SpaceTime if you want to think of it like that and that's why I think it's analogous to a wormhole but it's not really a wormhole they're not going through a portal but you know it's really I think a lot of that comes down to the words you use and if you watched the Jeremy Reese panel with Salvador Pas and all those other smart guys that one of the things they mention is you have to use

(1:33:58) the right words in terminology yeah Destiny might be too involved in the culture War stuff but I mean I don't really care you know people just want I just want people to social media to pay attention to the videos we're at a situation where all we need is attention to the videos doesn't matter if you're on the left you're on the right or whatever other stuff right like we just need people paying attention to the videos because the evidence is so strong it will convince a lot of people but yeah I agree with you

(1:34:25) that's not like my first choice I would like to be on someone like Shawn Ryan is definitely going to be one of the people that would have the most credibility right but I just get the feeling like anyone who's connected to the military they're just going to get talking to and they're going to say hey we don't we can't reveal this information it's classified it's it's like the most classified stuff ever we you know if you think about what I just said about doomsday weapons that's all

(1:34:46) you really have to tell a lot of these people some of the people I spoke to as well they they were like we should keep it secret right like some of these podcasts like most of them think they should come out but that's the reason why I wanted to ask uh Robert salace you know what his thoughts are like if it's really doomsday Tech is this should we keep it secret I me what do you guys think can I make a poll can you make polls oh yeah here we go yeah I want to see what you guys think we're doing a poll

(1:35:25) I might I might even do this poll on Twitter too okay guys vote in the poll please I want to get you guys votes do I think the people are still alive I think the people could still be alive yeah Bas I mean I don't think they all are no I think that at least some of them probably would have died based on situation it was just it seems like a really bad situation where can you get the video um so first place you can get the video video is right here at the top I'll post these links in the chat for you guys

(1:35:56) these are the original locations yeah the advanc the science is pretty Advanced but I think we have it let's see yeah if this was a hoaxer wow okay 25% wow okay wow 30% say we should keep it secret 27% 25% 75% are saying don't keep it secret wow this is yeah I think I'm I'm with you guys I think I'm like my leaning is I'm probably 7030 where I'd say 70% the you know with like like Robert Solace says like it's up for us to be the ones to destroy ourselves we have to we have to choose right we have to be be

(1:36:51) the ones to say you know this technology should be free should we use it appropriately and um but ultimately I understand the 25% as well we think we should keep it keep it secret like I don't I don't really trust I don't trust the world to be to be smart about this there I sent two more links as well let me see what else we got I sent the other Links of the other higher quality videos that were uploaded later on so you can find those one of the higher quality videos here I think is what um estimate was arguing about

(1:37:25) but he's looking at a different version not the original version that we at least the earliest one that we've seen But there is a higher quality one that doesn't show stereoscopic effects on it um and that one actually you can see the NR better so um I don't know if that means I both came up from a third party Source or or what but it definitely means that you can't produce a higher quality video from a lower quality source so most likely they both came from a different source which could mean that the

(1:37:52) original was stereoscopic or not which is why we haven't uh you know stuck too much on it uh do I know zurka uh sounds really familiar I'm probably following them anyone who's if

you want to ping me on Twitter I follow everybody who gets pinged to me to watch uh Bob Smith if you have questions go ahead and ask them just throw them in the chat here yeah uh Noah's point the technology could still save Humanity not just end it yep I agree it can and that's why I lean towards yeah um that's to why I lean towards us

(1:38:35) revealing it you know but it does spook me a little bit I really don't want to be responsible for the end of the world that would be that' be pretty shitty that's probably what I scared I'm more afraid about than anyone else discrediting me I'm more afraid this technology leading to the end of the world and I'm the one responsible for it uh could we Jam their location from the satellite yeah I think these awx can probably do some pretty advanced stuff I'm actually not convinced that they

(1:39:01) can't um that they can't remote control the plane even I mean that I know that was debunked but a lot of stuff's been debunked and ends up potentially not being fake so uh they might even be able to remote control the plane I think in my mind there's still a possibility that the flight the captains were or the pilots were incapacitated by the depressurization but I don't know still some mystery there and I think actually I think it was kim.

(1:39:28) com when I spoke to him personally we had like a two-hour call the morning before the space and he was saying that you know maybe that they didn't land because they had already got the rendezv point and maybe that was why they didn't land maybe it wasn't a matter of like they couldn't land maybe they could because his argument was that if you know when you dump the fuel it's going to come off from like by the wings but I still think it's really dangerous should be dumping the fuel if you have a fire on board at all so that's kind of my view on that

(1:39:57) but yeah man there's a lot of messages in the chat right now uh the higher side chat was fine I thought it was a little weird that he was like he was just really skeptical right I think that he was thinking this maybe this guy's disinformation agent right um like asking about like Social Media stuff that was pretty weird like going through my social media and being like Oh yeah you don't have a social media it's like yeah well I deleted my Facebook because I knew that weirdos were going to be digging through

(1:40:31) every aspect of my life and uh like then and then like the the Twitter thing was a little weird we're like oh yeah my Twitter account goes back to 2014 but like I don't know I didn't really use it much before all this I used a little bit but not much but there's definitely I mean there has to be comments out there there I didn't delete any so people should have been able to find them and then my Reddit account like I had deleted my Reddit account years ago when I knew Reddit was super compromised there's

(1:40:59) just nothing useful on Reddit the only reason why I liked Reddit was uh like the niche subreddits where like you know for like gaming or other Hobbies some sports stuff uh like the NFL one was is I guess fine uh but I don't really need to be able to post I think that a lot of people like the best thing they could do for themselves is delete their accounts and then just

lurk you know cuz then you don't feel inclined to like have to respond to people all the time I think that makes people get really toxic in fact I don't I probably delete

(1:41:32) most likely will delete my **Reddit** account um right after this is all done May unless I get banned beforehand which is very very possible what does ping me mean oh um what did I say ping me uh ping me means to text message someone if I sent you my phone number you can text message me um but otherwise ping me on best way to get in touch with me is on Twitter through DMs if I follow you if I'm not following you and you need to get in touch with me like you're going to help out with some of the evidence here please send me an email

(1:42:09) with your uh your Twitter because I only let people that I'm following DM me so do that let's see yeah so prophecy says it pains me to say but without safeguards this is not the time for the technology to come out you it's an opinion yeah it's hard to disagree man that's what I keep asking myself every day like is it really worth it uh that's a good question maybe I should uh see if kim.

(1:42:44) com would do an interview I think that that's another issue though too where it's just like I don't really want to get tagged as alt-right I don't really care honest honestly but um cuz I'm not I'm not really but you know I have my political opinions probably just upset everybody so that's why I just pretty much leave him to myself but I will say I did I did speak out in support of uh Jake Chanley I think that he got RAR roaded you know I don't think he meant any ill intent he was part of a riot and even if you think

(1:43:16) that they were trying to overthrow the government or whatever this guy was in a shaman costume walking through with police escorting him it's like come on he didn't deserve to go to jail for 4 years man that's not equal justice you know and that's what I I'm about equal justice **truth** and what have you what equal justice means for a lot just in case people don't know Equal justice means treating people that did similar things the same way right if somebody uh is you know being escorted

(1:43:46) around through the capital you they don't belong there that's trespassing you know maybe give them uh you know what is it um parole or something right you don't put them in prison for four years come on and then they as far as my understanding is they like bullied him into it thinking that you know he's going to lose and he's going to end up spending 10 or 20 years in prison so he took a plea deal it's like that is just scummy as hell government shouldn't be doing that right they certainly weren't doing that for um

(1:44:16) the black lives matter protests that were happening right so we need to be treating people equally however that is right and that's what I believe in so and I also don't believe we should be throwing people in prison for the black lives matters protest either but unless they're doing like you know fire and damage to buildings and um stuff like that I think that if you you commit arson of course you need to go to prison and I think too like even if you trespass right that's still a crime but that's not crime we put people in jail

(1:44:43) for years for so I think that uh and as we heard from men he had a lot of interesting information about ufology like he knew all about Bob Lazar all about the propulsion mechanisms uh that impressed me I mean he knew stuff I had no idea about so especially like the tack was it tachon pulse thing although he did kind of go on like a you know he went on a he was cooking but he he deserves it he deserves it it's the least we can do for him is let him let him do his his speech so if he's listening I you know I think he's

(1:45:13) probably a good guy and I'm happy to have him on my side oh man you contacted families I me be be careful about contacting the family members man I reached out to some of the lawyers but I'm not sure they're even going to contact me back so uh silver Stargazer there is no reason to fear death I agree it's not the end it's just a transition that's actually the exact thing that I've come to realize myself I'm not afraid of death anymore not afraid of death I used to be very very afraid of death and I don't

(1:45:46) know if it if this matters but it was the same time where I was atheist and now I'm at a point where I don't fear death anymore I don't know if it comes it comes it's no big deal I feel like I'll I'll come back as a different person as somebody else I won't have any of these memories but potentially my soul will live on and hopefully I'll Advance yeah we should actually thank you LL KKK we want to do that I I'm going to post that I think I don't think we ever posted this

(1:46:22) in fact I'm just going to do that one uh should we do that tonight we might do that tonight I want to let me catch up on the chat real quick I'm alt Pro American yeah that's that's what I am too I guess yeah the guy's he's a nice guy who cares what people think I agree I also like interacting with the chat thank you guys for all being here and everybody being respectful uh I don't think I have to remind anybody but you know if you're not respectful in the chat you'll just you'll get removed or

(1:47:06) whatever um so just be respectful in the chat if you're somebody who thinks you were inappropriately blocked um then you can also ask me and I will unblock you probably I've unblocked people before but unfortunately a lot of time I've unblocked people they end up just being toxic again um so guy who keeps saying the same thing over you're being removed let's see can I elaborate on uh sorry castric 2K I missed your message earlier but um I don't think you should be terrified of the weaponry and the tech technology

(1:47:53) because you know whatever comes may come right uh and I think that I I do think this technology has the capability of be in doomsday weapons I really do but I think like people mentioned it also has the capability of advancing Humanity to the next level and it matters on what we do with it hey look this is uh Cindy's thing so the lore Lodge was asking about this I think it was L Lodge right because he thought the plane was shot down I'm looking at I'm going dude this does not how I just look at this and I

(1:48:24) go do you really think there's an M like 100 miles wide in the ocean guys this m is not the scale at all this is not the same scale that we're seeing here oh Cindy Cindy Cindy Cindy's watching I don't have anything against Cindy she was very disrespectful me in a space but these

pictures just guys come on they searched over here yeah actually think did I email Dr Greer man I think somebody sent me his email but I might have lost it I think I lost Dr Greer's thing I don't know he's too busy anyway and I'm not

(1:49:11) sure what what's going on with him but I I think he's an honest guy but that's just hard for me to trust people man yeah we're going to talk about yeah we're going to yeah that's the plan we are going to be interviewing engineers and scientists that's what I'm going to be doing I've already got the next two lined up uh and I'll plug it right now real quick before we look at this actually let me finish the chat yeah I don't get why people are so upset with different beliefs just follow

(1:49:50) the facts you know see where they lead uh I think people are very at this point very very dedicated to trying to prove this case wrong which is not going to work out doesn't matter how much they try the more they try the more it will backfire I keep telling people but they just they're just so egotistical they can't uh they don't listen yeah so the L Lodge I thought that um so the people who are dissing on Greer I think also we should be open-minded about people let's not um listen to what the media and other

(1:50:23) people have told us to think about people I think we have to keep an open mind and we can judge them as we meet them as and judge them ourselves because what I found out like I found out with Jamie mous people told me oh he's a he's a grifter whatever he's posted fake stuff I talked to him he's like a really nice guy he's really down to earth he's very logical people I think I don't I wasn't really that familiar with kim.

(1:50:44) com but I think people said negative stuff about him too the first thing I talked to him he's like the most down toe logical guy I've ever talked to he's like here's the stuff I think you should probably focus on because you know this is where they'll try to discredit you I think you should try to stick to the facts stick to the evidence tells me he's not part of the UFO Community which is a thing I love to hear um you know so I think we definitely shouldn't prejudge people just be careful of prejudging

(1:51:06) people in general and yeah it's not that I these photos here it's like I don't want to rip on the people that posted these but you mean you gotta scale the stuff correctly you got to at least scale it correctly warp nuke yeah warp nuke somebody gets it can you line up the islands in the satellite video I was trying to line up the clouds but we it doesn't work I I don't want to go into this lining up the cloud stuff it's just it's not it's too non-specific with this but I think I'm going to post this

(1:51:44) picture here in a minute yeah I mean if you can contact the family please just do do it respectfully I I don't want people saying I'm harassing the families I don't really don't want to do that I have not reached out to the families I did reach out to the lawyers of uh actually I don't know to say i' reach out to the lawyers of one of the family members for one of the court cases because I think that we can prove that the US government's involved and they should be tried in the United States and

(1:52:07) I think that's actually pretty important that that's pretty big that might be a way that I should battle in the legal system without us being right in there good night uh who was that the wind sleep Amanda good night appreciate it posted the video where posted the flight video yeah I mean everybody thinks it's going to be fake it's fine though sorry who twitch I crap um Tau I'm not sure where you posted it I probably need you to describe where you posted it to take a look and then uh our

(1:52:43) followers can go take a look and help out with some of the evidence the key is look at my pin tweet and there you will find all the evidence to date although we did screw up chat we screwed up you guys didn't correct me when we got to this there's a part where we messed up here in the flight path or where is it I don't know somewhere about the pilot suicide thing here it is right here **debunking** suicide myth we we missed an enter Point here this is a separate part right here all the EV is lined up here that's why we're working

(1:53:21) on updating it for potentially tomorrow although if I don't get to it guys we're not going to get it done tonight cuz I'm getting tired and I have to go to sleep oh hey Kelly thanks for coming over here and subscribing to me from that uh podcaster because man it was really sad the way they were coming at me I'm glad people see through it and uh yeah what could be the next **Mick** West move I I don't know but I definitely think he's got something planned so uh we're not going to debate

(1:53:51) him tomorrow but I think uh he wants to wait until after the um Danny Danny Jones podcast comes out which I'm fine with so whenever he does I think we will probably debate him because I don't want him to go and have a platform unopposed um but I'm going to be I'm going to be respectful to him but I do think the fact that my opinion is that if he when these videos are authenticated if he doesn't apologize beforehand for his fake **debunks** then I think he should face criminal charges and he can defend himself in

(1:54:27) court and seditious conspiracy seems to fit so if **Mick** West is listening I strongly suggest you stop trying to **debunk** real videos you're doing real damage to the **truth** and it rises to the level of criminal conspiracy so you know that's who if I'm in front of Congress that's what I'm going to say just being perfectly honest right up up front about it so be very careful about how you lie about the videos guys that is it can rise to the level of criminal conspiracy this is not a random UFO video that

(1:54:59) you're hahahha laughing about being fake when it's really a real Declassified video These are videos where 239 people disappeared off the face of the Earth and there's no evidence for it crashing in the South Indian Ocean at all right these people disappeared and if you're hiding the **truth** that's criminal conspiracy even if you weren't directly involved as we found out from the January 6 stuff however you like it people that weren't even there went to prison for 17 years so again be very

(1:55:27) careful about what you lie about it can be it can easily be criminal conspiracy it's all documented I've documented everything to date I have all the receipts every time guys okay

now let's see oh am I doing the cadon podcast yeah let me that's that's what I needed to do did we that that wasn't set up for tonight was it [REDACTED] I'm going to feel really bad if I missed a podcast guys let me double check [REDACTED] cadon did I miss did I miss your podcast cadon [REDACTED] now I'm getting embarrassed hold on let

(1:56:08) me double check oh boy oh boy oh boy boy crack it down yeah the problem is I got spammed by like 40 emails yesterday or in the last two days if I missed an email or something you might guys might have to send me another followup he called me the nword no he didn't did he no I'm looking hold on I'm looking at my emails guys trying to see here it is let me see no okay I didn't miss

(1:57:17) it yeah so cadon we can set something up but um I'm probably going to chill for this week I've got something to wait what I don't even know what date it is what is it Monday I thought it was Tuesday for a second yeah I'm probably going to chill tomorrow too and then it's got Thanksgiving and I have I already have a podcast set up on Friday and I've got one on Wednesday I've just been doing so many podcasts I want to do a couple two where they're more chill where it's not just going over all the evidence again

(1:57:43) and again and again and again I'm going to reply back to you cadon though so crack it on if you're listening uh pick a date for next week I'm I'm wide open next week and uh oh yeah okay so actually I see let's do okay I sent you crack it on an email with a date that we can do if you want appreciate it okay we dealt with that let's fish let's finish the rest of this hey L LTB cheers from Brazil cheers back my dude I love my International audience I love that the international audience is getting involved in this

(1:58:33) because this really is a full thing um also guys I want to be clear a lot of people I see mentioning that it's four days we don't know for sure it's four days and when I talked to kim.com as well we think oh geez that's not cool uh yeah that's a big yikes go ahead and report that person so that they're permanently banned as well yeah make sure you guys report that person the racism will not be uh tolerated here at all that's that's going to get you permanently banned from YouTube okay dealt with um wowzers

(1:59:20) why people are really lost their minds huh hey synthetic future entertainment [Music] welcome kadon is on a panel yeah uh no I dealt with it can I can I not scroll up though I can't scroll up anymore yeah for some reason my chat one sec oh I lost my chat Jesus what the hell huh one sec guys my chat busted wow yeah the chat is going wild um I think it's back sorry about that when I banned that person it kind of went wild let's

(2:00:36) see okay we got rid of that sorry I'm just taking a look at any other last questions oh France Jim thanks for being here from France man appreciate it tomorrow hopefully I have my camera fixed and then we can have a high quality stream from this point forward maybe even do some clips uh I'm not worried about getting swatted nah anyone swats me they're going to just end up going to jail a live stream with 66 views tried to raid me I don't know what that means is that a good thing oh Wales Paul man I love that we have an

(2:01:22) international audience man early riser 4:48 4:45 a.m. thanks uh there is list there is a manifest somewhere you can Google the Manifest it's really easy to find but they I don't think has are occupations what what is the why would I change my background Susie I'm not really following that how how does changing my background prevent me from being um from being swatted I guess I don't get that oh wow end times that's awesome man I appreciate you getting the videos out there I think that this videos are

(2:01:57) drawing enough attention that's the reason why they're trying to discredit them so badly they need people to believe that they're fake because they're real um yeah I mean a lot of people just like they just have to believe it's fake because otherwise it just blows up their whole world right their whole re their whole perception of reality is destroyed oh I'm not worried about extra people coming in here I mean raiding people like so what we just ban them instantly it's not really a big

(2:02:29) deal hey welcome everybody we have 200 people in the in the watching right now thank you okay do you guys want to post this picture let's let's do some stuff here this is the one right I wonder if we can get a higher quality version of this oh there's multiple there's multiple pictures wait there's multiple orb pictures like this three images whoa whoa guys didn't never knew there was more pictures what's this one who does this line up to our videos like okay let's check guys we might have something here I might have

(2:03:19) overlooked this about this Cloud here could this be this Cloud whoa could this be this Cloud right here nah n this the orbs come in too late right so the orbs have circled it whenn the clouds do look similar like the cumulus clouds though right so the orbs are circling here but they go to Vertical as well so these would have to be like really early on right how quickly do they release these yeah they claim it's debris but they looked and they didn't find any debris here in fact they didn't find any

(2:04:16) debris anywhere so like right here could this be one could that be right there does this Cloud right here look like this Cloud right here man this is weird do they do they say where this stuff is People's Republic of China to me this this picture just screams we know what you did it just screams we know what you did why are people hating on COD yeah you know oh the Panorama good call good call where's the Panorama picture [redacted] I don't know where the Panorama is

(2:05:24) I might have to dig around for the Panorama tomorrow I don't remember where I put it oh you know what I think I have it in my Discord what's going on here oh wow so these guys are all connected huh wait why is Jesse Michaels in with these guys wait Jesse Michaels is in this chat with these guys for some reason Eric Weinstein is what the hell I might have to jump over to Twitter guys I gotta see if this is happening right now let me see if this podcast is

(2:06:40) happening do you guys want to listen in while I while I talk on the on the Twitter space that must have happened earlier something I don't see it oh yes I love Tupa Tupa says the last people I'm going to think listen to about Ash other people that made up a fake fake fake rape

case and fake GoFundMe about him wow someone showed me pictures here let's you guys want to see these pictures W who is this this is UAP Mike

(2:07:45) these are the people that have been hating on us there's king milk fart connected to I zando who's been banned multiple times already for being a troll and that's Julian Dory right next to him now down here for some reason we've got Jesse Michaels listening in who I've talked to seems like a good guy but interesting interesting huh so these guys are all connected huh doesn't surprise me these guys I'm just going to go ahead and speculate right now that this was a setup for me to go

(2:08:29) on this podcast that these guys were already in cahoots about it they knew exactly what the intention was going to be to try to defame me um we've got the evidence here so I'll be using this evidence I will be using that evidence hold on I need to save this real quick if someone can find me the recording of that please send me that recording as well hopefully they save that I need that recording as well if you guys are listening okay yeah I don't think there was a space out there for that guys but yeah if you can give me that recording

(2:09:22) of that uh take a recording of that space for me before they can delete that I definitely want to hear if people are defaming me in that that they're going to be in trouble yeah I mean honestly the podcaster that we're talking about there um just sounds like the various other people who have been trying to troll and and whatever about me you know that's what it set up it was definitely a setup there's no doubt it was a setup that's why they wanted to do it it's all good though I think people just need to be

(2:10:05) careful about who they do podcasts with especially in the future you know you don't want to do it with people who are coming at you with ill intent let's do one more post for tonight before we shut down I don't think we're going to finish the all evidence tonight uh I wanted to add a bunch of images yeah maybe tomorrow we will listen if someone can send me the recording of that space maybe we'll listen to it tomorrow maybe I definitely want to hear what these people are talking about dude what the

(2:11:13) hell wait so is that really from kradon go ahead and just report this person real quick by the way guys why why are people wanting to get banned I don't understand why is cadon mad at me I'm so confused right now wait I thought I already hid this person oh interesting make sure you guys just report everybody who's you know doing that whatever was so cadon is definitely

(2:12:18) something I'm not doing uh a podcast with then I get it seems weird Okay is kradon somebody from Twitter I I don't know I don't know these people why I don't know why they think about me so much but whatever man yeah just make sure you guys report them so they get permanently banned well I'll take care of the the H speech and whatever but yeah just make sure you report them why does it say unhide them they should be hidden already okay we got rid of

(2:13:24) them man spamming racist stuff in your chat is pretty weird man pretty weird how are people this angry very weird man it's really sorry I'm just taking care of some of these people in here so can somebody tell me who kadana is like I don't get it apparently kadana is sending people in my chat to say racist stuff or it's not related to tradon anyway Andy have a good night sorry I missed your messages we're getting I don't know why people are trying to get their accounts banned yeah we're going to need some

(2:14:31) mods I think so I'm going to probably need some mods oh nightbot will take care of it okay oh yeah I don't I don't mind okay kadana is not sending them we're good thanks kadana appreciate you uh mentioning that uh nah we're not going to let random people be mods but can I actually even mod people I don't even think I know how to mod people so oh add people as moderator uh Susie do you want to be a moderator I trust you Susie you're a moderator uh whoopy wowers you can be a [Music] moderator let's see who else do I know

(2:15:35) that I want to be a [Music] moderator okay so whoopy and other people we'll see if people I trust Professor J I'll let you be a moderator too you guys can ban people if they uh put racist stuff but please use it very sparingly I don't want to have to remove moderators privileges from people okay let's finish this post up don't ask to be moderator guys I don't I don't give people moderator privileges to ask for it okay we'll get synthetic future entertainment I trust you can be a

(2:16:25) moderator too that's okay I've got like four mods now in the chat that'll be good I'll add more in Future Days the key to being a moderator is to not want to be a moderator so yeah Adam you can moderate the old school way with your fist um I think we're just going to post these two pictures now these satellite pictures what was the day of them yeah so any racism you see instantly ban just waste no time on it so this was March 13th this is like five days after March 13th would probably have been like

(2:17:31) these pictures could have been from that day I don't know what I don't know know why what's someone's got to give me the lore on the cadon situation I can't tell if I'm being trolled or if I'm being trolled one way or the other but we have a Discord it's only going to be invite only so if people want to invite to the Discord they are going to have to um f I'm G have to follow them on Twitter that's the only way it's going to happen and I'm gonna have to trust them I'm GNA look at their content and

(2:18:12) see that's the only way it's going down it's going to be invite only so and you're going to have to be somebody who's contributing at this point probably as you guys can tell we can't really open it up um guys no more uh kadana trolling in the chat otherwise it's going to be a ban that's so you've been warned right now so if I hear any more stuff about this person it's going to be an instant ban yeah that's why I'm that's why I'm saying saying it right now any more

(2:18:49) comments about cadono will get you banned I don't care if it's in joke or not just don't don't mention this person anymore how do we know this is a South China see h they're they claim their pictures from

(2:19:55) March 9th so that's what I'm trying to figure out here I want to hear like official Source let's look at this a guy named Good Times okay sure we're just going to ignore the trolls guess let's keep working okay well you warned buddy you're gone this is the only quote a suspected plane crash is there a s there's no quote to this source of where it was located

(2:21:19) good job Susie you definitely know you're doing something right when you got people doing uh racist trolling in your chat these guys are really really mad right now yeah they aren't claimed to be near nicobar Islands but I'm still posting them I'll just be honest also if you see people doing like racist stuff just uh please report them as well so they get their accounts banned they'll just ban their whole account from into all of YouTube I don't know this may be a little little

(2:22:47) too HD there it's hard to tell because we also don't know what angle the satellite would be shooting from here either it could be coming from any direction there's just no information on this for

(2:24:44) I think we want that oh my chat broke again man the chat keeps breaking every time I report somebody the chat disappears so sorry if I missed your chat I have to restore it okay yeah I'll probably set up a nightbot I got a lot of stuff to do guys it's hard so once again from Once I post this we'll look through the to-dos and then we'll probably close it out for tonight so I can go to sleep good question Tyler do I think **China** and **Russia** don't want to F with us knowing that we have this technology yes

(2:25:41) I think that's probably true but I think that they want to make their own and then yeah one thing that Bob Green told us is that we might be able to just shoot down any nuke and destroy it before it can even come close oh that's a good quote Guardian article let me find the guardian article oh this one I need a new headset too one doesn't hurt as much I do think it's interesting that uh certain podcaster was uh coordinating with the people who are literally trying

(2:26:44) to disconnect me from the case seems quite coordinated if you ask me crap JK Philly fan where did your message go there it is [Music] how come I don't find contacted from this how come I don't find that quote in here JK Philly fan are you sure it's from the guardian no I need that quote

(2:27:50) yeah I might not be able to use that I might have found something else oh no this is the imrat [redacted] uh I haven't had any threats but I mean the suspicious sus suspicious activity of the people who are trying to discredit us is pretty damn weird cuz like the post said there's no reason to do this there's no reason to be like trying to rail on me there's no why do people have so much skin in the game why are people so invested and trying to discredit me and trying to prove the video is wrong there's no reason for any

(2:28:46) of that yeah should we should we play that guys I think we should play that so I just showed you those other images of certain people right I'm going to go and make this post

though I think I'm going to delete this part think this is fine the following people's repus pictures that reported to have been taken the day after the plan Miss March 9th H search and didn't find any locate any debris this plycraft could be sending a message to the US saying we know what you did to let's say United

(2:29:32) States I always say us but for international people it's better A lot of people in international say the states so it's better to say United States oversees nobody says us when I lived in Singapore nobody said us okay Chinese satellite pictures um we're going to go sleep here in a minute as well thanks everybody staying up late tonight oh he found it and now I feel awkward I I might update it actually if there's a quote in there let me look oh that's interesting that's spicy

(2:30:49) do I have to have all this crap at the end of it I updated it so if you if you post it already sorry I had to update it images were released by mistake seems pretty weird huh okay so we're going to play something as well yeah I mean whatever we people will forgive me for the grammar you're right grammar's probably not great I haven't got any weird phone calls I've got a couple weird emails nothing too weird they can literally just um they can just read anything I do I just presume that they can read anything I do

(2:31:51) anytime guys if this did I spell it wait is my grammar really bad if this inform if this oh yeah if this information is oops [REDACTED] okay we are going to fix it again thanks thanks for correct helping me out there yeah yeah I got too much Boomer in me it's true I'm getting old now thanks for helping me on that what's behind the determination that this technology is United States government first before we do that I want to show you guys this post that I retweeted I'm going to unretweet now but

(2:32:36) um 37,000 views on this so this is a guy who's a lawyer who worked in the justice system for 35 years he says it reminds me of my days managing criminals and that some people appear to have an innate proclivity for attacking something that should not really be of interest to them why would these even people even bother to comment much less try to Fumble together a low IQ attack of Ashton's conclusions the only way this happens is if they have some skin in the game they're either paid by somebody to

(2:33:05) suppress this narrative or they are part of the original cover up if my neighbor in my in the house on my right tells me that the dog from The Neighbor In The House on the Left To a dunk come the sidewalk I say so effing what I'm not going to try to prove it's this particular dog who is not the one who took the dump so any message to these clowns to try to **debunk** this threat is you are up against a superior IQ and you lack significance every attempt to discredit Ashen just makes you look more like idiots those aren't my words but I do

(2:33:36) agree with them so let's put that up there now they could be trying to test a weapon on Doom plane I don't know maybe okay so uh crack down you're fine no no big deal I don't know what's going on let's leave like the political trolling out too I mean you guys can believe whatever you want and I don't care what your politics are at all but uh you know let's let's just

leave it for another time um so why is it United why is it non-human intelligence or non-nonhuman intelligence there's not a lot of

(2:34:19) evidence one way or another people can believe whatever they want but there's not such a I I don't think there's such a big reason for this huge cover up if it was just ufology right if it's just a UFOs why are we have this huge cover up why are we throwing somebody in prison over it the assets are US military they're filming it their orbs are going Mack three in the air they either got extremely lucky or they were it was Operation I should add that here we'll try to finish this up tomorrow the

(2:34:58) the or they're filming before the orbs even show up the orbs are moving Mach 3 so the plane's not able to outrun them the pattern is explained by a we're just going to say by a computer program we're not going to say AI anymore fire event indicates a rescue motive you can't attribute human motivations to a nonh intelligence and science can explain everything that we see so guys um don't don't bring up anything about my past if you try to bring up anything about my past this is going to be a one

(2:35:33) and only warning or if you try to bring up any personal information about me uh it'll be an instant ban instant ban we're talking about the case in this so let's uh and let's not fight with one another as well let's just not fight with each other we're all trying to solve the case here guys and yeah moderators are Empower you too if you you see anyone trying to bring up personal information about me just instantly ban them let's see here yeah I mean they're probably just trying to make me lose my cool all good though

(2:36:20) we're just doing a casual stream here what is the science for the propulsion of the orbs uh check out my Salvatore Pas uh paper piece about high frequency uh field generators or the one I was talking about earlier so I'll put I'll show you guys so you want to know the science the science checks out I believe I think he'll be Vindicated salv foras will man this this was actually a few days ago already uh here's the one for the science if you guys want to check it out excuse me check that out yeah thanks a lot Adam have a good

(2:36:59) night man uh we will probably be streaming again tomorrow we had 200 concurrent follow or viewers here and I didn't even promote it so thank you guys uh feel free to like the stream or subscribe if you want to follow you know again um so I I will say that I did monetize the YouTube today uh just because I feel like that money can go to help solving the case can go to help uh upgrading the equipment so that we can get better information out there so that I can make better videos um so that we can get that stuff out there and get the

(2:37:30) video and get these videos uh authenticated and seen by a lot of other people so um and then if I do lose my job somehow over all this then I guess I'm going to become a full-time podcaster but for now the only objective is to put this money back into the case and make sure that the case can be seen by everybody so thank you guys for helping to contribute uh I'm not asking anybody particularly for money uh I will take YouTube's money though and I will take Elon musk's money as well and just in case people don't know uh last

(2:37:59) month's uh JK Philly fan before you go I did give last month's um money to JK Philly fan from Twitter uh because he has contributed so much to the investigation and uh I just appreciated all the stuff he's put in so it's not for him to I don't want him working for me or anything like that I just and it's not a guarantee that I'm going to do that for anybody else in the future I just felt like he earned it he's been putting a lot of work in he's one of my admins so thank you a lot JK Philly fan

(2:38:28) I appreciate it man okay so check out the gravitational wave uh things uh no this was not debunked with a video game okay you've been banned God man come on guys be an adult man come on guys I don't know why are the people who are like trolls like all the debunkers are just like the worst people in the world I just don't get it you know like you guys are just hurting your case like if you're trying to make the discredit the case the last thing you should be doing is trolling in the chat it just makes

(2:38:59) you guys look terrible like the debunkers are just like the worst I don't get it people just like have major issues I I don't understand okay let me take a quick look I want to pull up yeah of course I'd be open to a sidebar with other content creators yeah um I I'm really busy right now so you got to hit me up on Twitter on the DMS and Twitter right now is like the best place I'm not even able to keep up with all my emails at the moment so before we go we are going to play this clip here that

(2:39:36) I've got where is it I don't even remember where I put it here put in my quick links to separate him and the MH370 videos Hey look it's the guy we just showed UAP mic we just showed it interesting enough that podcaster actually called him out by name called him out by name in the podcast and I said I don't want to name anybody he said well I just did leing to a bad place and we just showed another picture where they were in a space together okay plagiarizing he's plagiarizing straight up he's he's going and now he's getting

(2:40:24) publicity so I don't know if the followers are fake but he's getting publicity he's going on some pretty decent podcasts who are not doing their homework so I think if there's one thing that we can do as a community is make it be known that Ashton does not own the MH370 topic and if it's real and he gets the whole [REDACTED] video is [REDACTED] we can't will never be the what is that every single point that he has made he stole who guys who made up the fire scenario who figured out what time the

(2:41:02) plane was who figured out the location uh I did on all of that stuff the whole [REDACTED] video is [REDACTED] like we can't will never be able to get to the bottom of it because of him so we have to set we'll never be able to get to the bottom of of it because of me is that is that what you guys think literally the only person trying to solve the case nobody in this chat here none of these people have put even put forth a scenario of what's happened with this plane separate action from that this guy in the bottom right has

(2:41:32) been banned permanently twice from Twitter already since I've been doing this in the last three months I already lost two accounts is on his third one that's also going to get banned

we have to separate Ashton from that video we have to separate Ashton from that video so all I'm doing here is showing the evidence I'm not making any statements on what I'm I'm looking at here but who are these people they're the same people in here a video that's just my opinion interesting interesting all right yeah great points

(2:42:17) let's go great points think Turtle let's see yeah I agree with what Garrett had to say though he said that um he's never done a space where he's gotten got more than 25 followers uh I the the most I've ever gained in a night was 78 and that was a big [REDACTED] space and I think it's when I had brain and Fugal on you the most followers I've gained in a day is 25,000 so the UFO hate group confessed to taret just wanted to post that just so people know I mean jealous I think it's definitely a little bit of

(2:42:47) jealousy but seems like there's a little bit more in there that's pretty wild right pretty wild so yeah uh you can share the interview link with diamond you can share any of the interview links people gatekeeping journalism that never goes well don't be that um pretty bizarre really really bizarre I really really hope that there aren't people that are in the UAP community that are promoting those people if you're tied to those people it looks really really bad so that's the last thing I want to say tonight cuz

(2:43:23) that's uh pretty weird man you'll never hear me saying anything like that as long as I live you'll never hear me saying anything like that bizarre man okay guys uh it was a good night uh we went through a lot of evidence here we posted some good stuff I appreciate you coming along and watching the point of this is for transparency and to make sure that everything we're doing is fully visible and if people try to chop up any of my stuff well this is the point as well where you can show them the whole

(2:43:53) stream and you can see the full context of everything that I'm doing um yeah I think that some of these people need to go outside every once in a while as well so check out some of the interviews oh so one of the other things if somebody wants to help out um so I still need help with two things uh I need time stamps for the salvator pi interview if you guys if anyone hasn't done it and looked through and wants to just give some I don't even care how accurate they are but like this is the format they have to be

(2:44:19) in and then you just part like yeah part one whatever and then just type in like what you think description is like it could be like super Force right and it could or it could be like yeah introduction superforce or whatever it is you know and I just need a few of those um not really a huge deal the other thing I need is a podcast compilation so if anyone wants to go through my tweets I've I've posted every podcast I've been on on in my tweets at least going back to when I did the last compilation so maybe the last two or

(2:44:51) three weeks if you don't mind putting one together so it just says like higher side chat and then has a link next to it and you want to email that to me and just do that for all of them I would really appreciate that effort if anyone's willing to do that you can just email it to my MH370 uh mh3 MH370 xpron me email address and just say compilation list yeah here's the link

I'll send for you guys for that what we just watched so this account actually documents a lot of these people when they're doing their

(2:45:26) toxic stuff um and that's how I find a lot of the stuff as well because there's somebody out there doing it pretty wild yeah hey John Doe I'm glad that you have kind of become part of the you know the investigation right like kim.com is a person who's skeptical as well but he's been swayed by the way way the evidence like a lot of people have been so thank you guys for coming along thank you for all everybody who's been here and we're only going to get bigger at this point so we'll do more stuff in the

(2:45:56) future uh for now I'm going to get to bed tomorrow I think I have a pretty open day I don't think I have any stuff planned and yeah the families deserve closure you know and so also I just want to say too if anybody says like you're hurting the families or whatever like that like that's obviously false sympathy the people that say you're hurting the families probably don't care about anyone in their lives right they don't they've probably never helped anybody in their whole lives like this

(2:46:22) whole idea of like oh you're hurting the families that have never got any answers like that's the most dishonest thing you could possibly say so definitely don't do that you're going to look like a silly if you do that so don't um the x is just I added that because it sounds good I you know kind of it can stand for Twitter the MH 370x but it also X generally stands for like technology like we're trying to figure out the science behind MH370 and that's why we have this big piece about the science

(2:46:52) that's why I'm interviewing Engineers why I'm interviewing physicists why I text message and have these people in my DMs is that you know we are going to understand every aspect of this we're going to reverse engineer this technology ourselves and thank you Josh thank you everybody who's been here tonight everybody who's supporting if you guys want to help the other way you can help if not helping with these couple things that I need as well is just spreading the evidence all this is

(2:47:15) pinned to my profile will probably make a new version so there's a lot of people who will say like what about the debris that was found right all you have to do is go to that pin Pro tweet and then you can just copy and paste this right just copy and paste this **debunking** the debris or people say well crash in the South IND oce just copy and paste this put it in Twitter right um and just educate yourselves on it and that way because **I want you** guys to all be informed that's how we're going to beat the

(2:47:41) disinformation campaigns yeah let's effing go guys we'll beat disinformation campaign because we will get the evidence out there and every time people have questions we'll present them with the evidence like that's my plan and that's how we're going to get this done and then if anything happens to me well you guys will just pick it up so thanks everybody have a great night and we will talk soon

Hard Truths #2 Bob Greenyer & Ashton Forbes - Green Energy & Martin Fleischmann Memorial Project - YouTube

Transcript:

(00:29) for yeah we don't sound got a little di here this little comic here and what this was they had had on chunk padium and they've been loading I understand it for a couple of weeks and they found that it wasn't doing so they dialed down the voltage on there which changes the electro static and they kind away from it and anyway they came in after the weekend to

(01:34) find the water tank had all the water had disappeared the water tank had blown up gone through the glass through the forer in the fum Hood cupboard or whatever it into the concrete removed a large chunk concrete huh and in the air there was five sign suspension of partic and they realized this far beyond new nulear um and story that most people know about whe about cold fusion as it was called um I he meta nuclear reactions the mechanism that drives it they're not aware of event and I've had it the holy described as fairly large to

(02:23) if you take Fist and you put it in now you imagine conrete it's got maybe some AG in there it's got some cement in there what can boil all that damage all that equipment and turn Lum of concrete have gone table into a very large a very fine suspens of particles that didn't settle over a long period of time what is going on that and so this actually frankly scared them and they decided much smaller samples from that point onwards never really discussed in the public it took a few years before I this

(03:05) story even when working within the community so what do you that yeah so that's interesting uh and just for a quick recap because I I think I forgot to press the live stream there so for the people who are watching uh Bob was just going over some of his history and the reason why he got involved in science and engineering going through his extensive background as he grew up uh always been interested in engineering uh helping out his farm his family Etc and then he was just talking about cold fusion which um you know I thought it

(03:33) was very amazing what you were just describing there what I'd really like to have you explain for our audience you know explain it for the layman in terms of what is called fusion and why is it important for us to understand that right uh because I you know my audience is people who want they really want to understand it in simple purposes so if you really were to kind of dumb it down for us for people like myself how would you describe it I'll D it I'll Dum it the simplest experience cold and is to be Fusion going

(04:04) on the second to come out with anything the lies of cold fusion a guy called Franchesco I

had the pleasure of visiting him 2015 lab in and he was 1989 in August of 1989 conducting a biology and in that experiment he had a nickel Rock which he had a house brain cell was alive was being kept Alive by an oxygen rich environment having a stimulation from a probe above okay the idea of this was to flush that chamber start the death of cell and then freeze the chemistry certain amount of time after the uh cell had die and then

(04:58) analyze the CH the cell and the idea was to tr chemicals that would allow uses of Strokes or or when you up the top of a mountain and you've got levels to preven damage in these scenar he was a biologist yeah right frann and what happened was he'd been doing a several Cycles these experiments and it's liquid helium Now liquid hel 4 Kelvin it's like Prett coldest stuff you can get start doing laser cool and the sort of stuff that's used has been used to create the first Coates of say sodium

(05:36) 20 atom or cium 133 atoms and what he did was this particular time Cycles he put in uh the cooling what happened was it started to boil it was boiling 250 Watts progenic cooling continuously power being provided what okay he knew he had nickel he had hydrogen before and electricity going on this occurred and that by umly discovering in a bi the nickel hydren old Fusion system in this context you can understand that it was cold and that someone something in heat that was boiling thing into a boiled state so this is the best thing I as an

(06:30) experiment actually Fusion but in the cold State obviously not at TS of degrees in in in a plasma bashing particles together is something that is domain of producing Co matter and it is in the domain uh having hydrogen in there with a a catalytic metal as nickel now most of mying of this science about 2009 20 yeah 20 2020 actually yeah um I as probably most of your listening that coher could only occur absolute zero why that's really cold the thing is and so like basically for instance the Boose was predicted a very long time ago

(07:26) by these two characters Bose and and I think think it was 199 1997 that they actually first created of this material West uh and they called it down to near abs and at this temperature say you're using for instance C3 it's still isotope which means you describe the matter wave you can describe wave it only type of wave but the wave changes it fre based on its th it's kinetic en energy and this is called the Dei right okay and so uh what you want to do is pulling it down to near absolute zero you are getting the

(08:14) wave and you are get into the same wavelength but it's still out of F and that's where you have a substrate it's like if you have a load of Metron after a while they end up yes yeah okay and this is like you have a substrate like your spring and your are sitting on there they're all at the same they're all got the same wavelength they come into fa then you have the same same wavelength and the same phase come coherent and losing their Iden atoms and coherent matter wave now what I didn't

(08:56) realize is that this can actually happen at any temperature really so there isn't award to loed Martin know them they are uh um man man manufacturer of peacekeeping equipment so yeah let's let's call that and so basically what they did they had a p 2013 I think it was 2017 is the

first thing I discussed on my on which is at remote ICU and so what what this is is a um uh produ uh matter but note that need is the same at the same and in Phase now can even be Trum except you have to

(10:04) prepare first by having TRS okay yeah you needed the same energy and in phase do that they use something iron Hof bomb effect okay and then they use micro and the comb these aspect leads to the production of a c wave of any matter at any temperature really so yes so this dispels the myth to be at Absolute Z this means you can have Fusion occurring different temperatures need to have them matter in the same phase it able to form a condensate so if you are you need to get it into a bosonic and in the case of an

(10:56) electron to get two electrons uh  $180^\circ$  they got up and down spin with them uh for a uh bows on and then the occupy the same space time and over and over again the arol bomb effect is explained uh by the penro St and so essentially we going this is AER staircase where you if you go and you look like you're going not you're staying the same point if you're going up you're going round you're staying in the same point these are called a phase Singularity Singularity is able to get to and if you to be and so what do I mean by in

(11:46) well does anyone know what a laser yeah what is a laser is something like this Photon I the same Photon energy same Photon wavelength then it's in Phase so it's the same thing you thinking of it the same thing and this comes down to is matter yeah and so you know what what would you say matter is yeah Just Energy but in a different form right I mean  $E$  equals  $MC^2$  so that's what I would say is that matter is energy how close am I tell me correct me if I'm wrong pretty close they are into and you

(12:27) can't get energy out of come from some yeah so the the way I you know a lot of people say that um energy and light energy and matter are changeable but easy to get from one to the other often people will say that um matter trapped light well I'm you an example matter is oops there is trapped light take an electron and you take a positron the antimatter of the okay to fire them at each other annihilate you get prod is two pH at 500 going at from each other H what is significant 511 k I'll tell yeah go ahead that is of

(13:35) anron huh so a conversion of the matter into electromagnetic wave and so you can actually do Mathis by taking a gamma firing it into ordinary M and it can produ electron and positron pair so you can do matter synthesis and you can do matter Dy okay the electron is probably the easiest example this is you know it's actually used in Practical technology like tomography actually it's because Decay coming out that produces an Annihilation event and you see these photons coming out yeah okay so so there's real techn essentially

(14:26) whole Fusion is coh matter new actions you're getting matter state where they can occupy the same time and uh the that does that in my view I will talk about as as we move through yeah but this is the thing that effectively was by pwn and Flashman when they had regularity created in my view ball lightning and micro balling and ity bitty bitty microing and extremely small lightning ball lightning they're all conizations of a stable plasma structure has at

its core roidal Vortex structure huh so let me just ask I'm going to

(15:17) recap real quick cuz uh someone was breaking up I just want to make sure my audience can hear what we were just discussing because I thought that was pretty amazing um you were pretty much describing what cold fusion is how it comes about I think some of the main points that I heard there and you **I want you** to elaborate anything that I might have missed is that you know matter is essentially trapped to cold fusion can happen at any temperature which might mean that Bose Einstein condensate can be formed at different temperatures as

(15:41) well I'm not sure if that's accurate but that matter can convert to an electromagnetic wave and the idea behind going from a fermion to a boson which is something that has different points in space and time compared to a boson which is like a laser beam where we can focus that as a matter of aligning the wave waves so that the waves cohere with one another um and then that can cause coherent matter reactions is that uh pretty accurate or did I miss anything important in there because that was pretty awesome

(16:12) essentially the you create coherent energy all kinds of things so these aise systems that use what's called which is effectively the laser but using sound and they they are they are discens actually they're not just active when the the coherent comes into your it goes into your P bone or your P El or your p Electric and you get what's called conjugation the sound comes back and you get the the same stuff we produce Sonic experiments that does C in your body so it mashes up your body disgusting that is even allowed

(16:59) to it it should be banned the case of laser understand laser but there's a merer and Laser is is a micro laser and there's also called baser which is essentially a matter wave right beam so a baser is is aign a b condensate laser okay so there's these different things about dealing with coherent matter and um look at what is in the Martin patent um and I will I will here probably that's probably thing to to so people can understand the real thing and it's it's it's sadly I I mean I'll come to that in a minute okay

(17:53) essentially we yeah we we launched this project what it was was it all went quiet there an effective disinformation campaign uh around technology **truth** in this yeah but there a story out there thaty gun put to his head when he opened it it it sh scared him so much that he the US wow I think he he's half French half um America he gave up his American um and he R and he was funded by Toyota work together for about funded by Toyota in in France essentially no one is stand still alive unfortunately died in that I tried to go

(18:45) to the first com this field in 2000 um but right forward to a bookus in all its forms by U the Barian who's a a lead the uh against matter nuclear science field so I understand at the time that they both fled and they their equipment with whoever they could the country I mean it was really scenario for them I don't know how many people knew that I talked about this Singularity where they saw something well opinion Beyond nuclear matter ball lightning in my view and so there was a campaign to shut them

(19:31) down and I did interested in this and there was a very flamboyant um guy called Rossi who went public all kinds of things and he'd actually reach out to P originally to get his py refused he went to guy a new scientist at ban University Jo fardi and in and kind of gave to what Rossy was doing whatever whe Rossy has something or anything it's completely ER what he did was he Showmanship and the showman me and at least for people to go to the com South Korea at the KA material Institute of South Korea and

(20:24) when we were there um we were looking at all s who were see the same kind of products being sized in solid phase Fusion systems liquid phase and in plant gas phase what seeing across all these different systems but they had at least 70 and so all trying to win the new no and like if you got 70 well at least 609 wrong right yeah so cold fusion it's not quite and so um what was interesting is that if anyone was having reasonable amount of success either a pseudo private entity private entity maybe or government body would swoop in invest

(21:13) and they get them spinning till they died and dying they were we realized as a colle the so-called young we weren't that young than a lot of them um in room we realize that if if some doesn't do something radically different then these people are going to die with all incredible wealth of knowledge so we came together it was for uh and formed the mar Memorial project we at Quantum heat dog this was the original web mostly an archive site although there project up on there right now called Thor and essentially uh the was is to create a

(21:54) system where we could experiments live on the unredacted and that people could guide inform on the experiment and you know the the the protocol what equipment was being used the analysis should be conducted and so on they would have the live data actually as the experiment is being they can actually comment and how the experiment should change you were doing this with equip that guy called Ryan hunt Founders made him his it and it was like for monitoring home systems and they rep you can actually show these live datas before any of the

(22:36) major acquisition companies could actually do this kind of thing and we then one person to Providers with an okay okay one person did come for and that person was called Franchesco he worked for the the Italian nuclear Institute and piece of Constantin wire that's nickel and copper and it was loaded with hydrogen and he would heat it up and see excess heat and he' show amount of excess heat of in ex% at week in Texas and Conference and it was a live demonstra so we set about some money uh and it funded by SMS uh from

(23:27) from uh public and from own personal people setting up this this open and that early work was funded by Ryan Father Paul hunt so thank you um and so and the people that helped this work and essentially the claimant they next wanted to do uh Fusion by increase the excess Heat by raising the temp and they had a thing called Bor silica glass and the next want is fused quartz now the Bor softens about 300 fused quarts can go up to like 700 degree C so he thought well they want he wants to do that next do that now and

(24:15) did it and we didn't see any so we thought we've done the thing wrong the first thing is

don't try and change the experiment we changed the experiment I know the experiment was going to do it but we changed the experiment so we went to Bora a silic glass and we the second time this was with Matt another director of the pro in started the experiment on this past 12 minutes past 12 12 of the 12 the 12th California of course it was started in front anyway we thought that's again and two later I was in the military

(24:52) ba in R publicly giving the data yep achiev 12 and a half% it would have been better if it was 12% per and then uh I gave my presentation the still running they the data live at the uh military presentation room and after I gave my presentation I walked out the room and I probably about eight from the room and I heard at Fair 30 brisk footsteps running up behind and on my left shoulder this Italian General tapped and he said to me and he whispered in my ear he says you need to use an Aline metal and I said well what do you mean

(25:46) like lithium yeah and he said off later we that they did use you take pure water like you from a scientific ra from supplier chemical supplier and you take the the the head so that is not H<sub>2</sub>O d<sub>2</sub>o okay yeah you need to make an electro you can do the electrolysis and it turns out and actually through uhan um pwns showed handed over some of their stock of their electrolyte which was aluminium so lithium in their so is lithium the secret then is is that the secret sauce is that the secret ingredient in some of this CU I

(26:48) know that lithium is one of these ingredients we can turn into B go ahead so have you heard of Castle br uh I have not I'm I'm pretty new to all this and I'm trying my best to catch up on the science side go ahead Bravo I think it was the largest F test or the largest nest in I think the pollen Islands I don't know like out uh all out in the Pacific okay um and it was it yield two and a half times expected yield well now what what happens is you get Neutron to lithium six forms two tritons to

(27:36) heavy hydrogens and do more fusion um because one of the easiest reactions n tritium in a nuclear Bond okay so in in in fact Fusion reactors they want lithium jacket and the lithium where the neutrons are CAU C and what it has theum itself has a high cross what that means is it's good at so one you stop the neutron and two you convert to more tritium right yeah and so what they didn't expect the a lithium that's actually playing a role okay and our lithium is most of lithium so if you don't purify your

(28:22) lithium I think it's only like 10 at most I think it's something like that is is lithium six off the top you can go and look out all these things are slightly vague things and things you can look up at Wikipedia go and do your homework ter yeah I could now but it's not my flow so yeah the Bas and the basic thing is that the S that's responsible now I have given him presentations that years that the research uh um groups in **Russia** have found that um okay this is a bit of a jumpic here but um yous are made from it's

(29:15) complicated to go in but um essentially Tesla's etheric matter string and there's a guy called coral and shushin and another one and another one called dich and he is a he electric field antic field electric Di and magnetic dipole and these that are well understood in he

discovered of his thesis work working at dubna nuclear Research Center Norco in 1965  
published in 1967 something called the teral m yeah and this this uh thing which shows some  
imagery in a little um this to um create structures that have what's

(30:13) called ating boundary and ultimately they are the thing that causes B lightning anyway  
let me ask you a quick question on that what they found is is a strk go on yeah so you mentioned  
ball lightning um first question I have on that real quick is is ball lightning something that can  
naturally occur or is it something that we have to produce and then with the nonradiating  
boundary is that the shell of the ball lightning how would you uh Define that so I can show us  
from 192 from edwood's Bas which are classified you

(30:52) them on this stream where they show this non-round and that they have Quant levels  
which means this science you know that the scales at which this okay which subf fral scale need  
to generate the fral scale and the skin it would appear super and super fluid and we can show  
experiments where we've had exactly that kind of with other material and and when when it  
state it can cut through anything it's like a literally like a Star Trek like totally Like a Star Trek if  
you built this and someone was something from the

(31:38) outside it would eat the thing whatever speed it's traveling one atom at a time it would  
just become part of the ball side done it the other way around where they called Hank urine has  
created in his experiment and it only cuts on this when it gets up to this and it like will cut tun  
like that but it does until it particular point and then another one where this copper tube here  
and here in front of me this one here yeah yeah which you can see and and was a copper tube  
on with a piece of ey this one and another one below so think uran he's

(32:23) operates out and a ball lightning for formed and H a hemisphere in this case yeah and it  
cut instantaneous hemispherical section out pipe um wow and it's like a flash you see it and you  
see the little yeah there's several things I can off alternative hypotheses for for which youve try  
explain in in some discussions um but I I need to just found out um the the angle I was on yeah  
sure go ahead is if you are able to get this out of print book The Secrets of War technology  
project har by Jerry vassel talk he talks

(33:14) about how Nicola Tesla when he was doing his unidir uh disrupted dist he would create  
feel these tricks in his and these are Sim to those observed by who have been close to Natural  
ball L he would go back 15 feet from uh device and still get these pin Pricks he w a glass sheet he  
would still get the pin Pricks would then erect a cop and still get the pin Pricks he only found  
that he didn't get the pin prick If he if he was using magnes verillium or aluminium anything  
heavier and to get these pin Pricks and

(34:01) all these pin Pricks the result of the uh dirty matter streams these are ter clusters of  
something that's inside matter okay it they call Energy within matter in there was a Declassified  
92 document on a website was Declassified 17 and um something like oh God I can't remember  
off hand um trip journey to Alpha or something like that it was about exting enough energy from  
Willow of iron with a that would also provide the propy to get to AI in six years that is extracted

from one Kil and the technology is the propulsion and by the

(34:55) way document the bearing in the mind this 92 they say this is the same technology called Fusion wow they literally say it right so what what duic and and shishin is that for hydrogen it's two to four times easier to get this a theoretic matter that Tesla that for any element Beyond lithium which implies you can create the from lithium wow is a similar ease um this more interesting than just creating period matter from a um an alkaline me this is this is create something that is subatomic um and they it's a cluster of what's called round

(35:56) neutrinos ground neutrinos of more than like two and a half of all of plasma planets like if you take our solar 99.8% of our solar system is the sun the rest of it is just of around that just dust and a small small Speck of dust yeah we might think we're big in but we're not right and you compare our son to be is not even reging on it's a spec around so and add up all STS in Alles in all of the universe and there's still tough times more of this stuff and do you know it's all at 2.6 Kelvin it's all stuff

(36:48) with the L at exactly the it's a coherent compensate through entire universe it's one way function everywhere all in time and this is what the can capture it has the ability soos they are able to interact with two things weak force and gravity weak Force and and these things through so I can go take you through a few slides take you through a few presentations but I believe the simple segment in this using only of John Wheeler y the inventor to of the term black and of Wormhole can use just a clip from him I've already told you to what you

(37:51) see now the question is get interested in that video well yeah in Jan I was asked to be interviewed by Ross as part of his work um try and work out what was going between these very So-Cal disclosures yeah and I described to him as probably the second person in my life that I've ever to something that occurred to me my siblings 1979 I was standing I was just in the house and my daughter's all down into our lounge and this was at 32t Gardens wor West K you can go and look at it on Google Maps right Washington Gardens

(38:43) Worthing West Sussex UK and out of the back of our Lounge there's a like you know big friend and he just told us into the sky it was a late evening in N I think it's 1979 think I was at 7 years old uh I might be wrong you know replace tricks with sometimes that's that's where I think it is and what happens four lights when wow said right kids you can go to bed and I but I don't even know what I see I didn't think of anything other than showing us something that's nice day and I didn't think about

(39:30) it and one of the sponsors of of our a guy from Sweden kept telling to go and see the serious disclosure project I thought okay oh he's into UFOs and all right all right finally I a couple of years have been trying me trying to get me to look and I and I looked at all right that makes sense all right well my dad was showing me and so I met him in Prague and and I told that was person I told I think was maybe one other person then like the when you started what it was was Matthew vat who conducted that first

(40:11) experiment on the Franchesco Chan um Nick copper system he contacted me number of weeks AO have you seen this and I looked at it and I go oh I know about that is yeah what you I've only recent like in the last couple of months realized that du in the line that is Airfield which is oldest custombuilt airport in the world running okay was that was laid for the right brother but this is the oldest one yeah and so my father had good contacts with navy I know this for and because of what he did and he was senior Mason and

(41:03) very and so is his father above and so I don't know whether put on because of his Navy conts or was it because his uh association with but this was 197 right and they looked exactly those spheres W that are running around that plan so I don't think this is and I can show you that we'll show or imply very strongly not new technology and I'll show you them in a minute so it's been around for a while quick question on that before we dig into that so did how did that you just told me about your sighting that you had

(41:41) had right did that change you or did that how did that change you when you saw that and did it change how you approach science did it make you more interested in it I'm just curious is your thoughts Lally no thoughts how to you know what I didn't think about all until after I saw the series yeah that's well because the point the point was the hland lights hland lights were um they ref in this Valley hin in Norway there's you know there's a couple of metal metals that are mined in that place and it's got quartz and it had

(42:22) large temperature changes and there's this um sulfurous that runs to the center so you got big freaking battery there of electricity and some people claimed these things there certainly unidentified aerial phenomenon UFOs as we might called day um are free floating uh of some type or ball they're essentially B lightning walk through how what weed and can repeat in experiments are sa they're just bigger right quantization of this on that called Earth lights stuff and so there's a lot of the so I I was

(43:06) already around the periphery of B and and literally had not thought about it and then um I saw the serious and I thought well I better better start because I I could realized that a lot of things were natural phenomen and you could manmade and i' already I know my dad freaking yeah he's not so it can only be a fear making and since I've deduced that it it's from an air base um maybe an early version of this defense system you know or maybe it was just showing oh look we plasma balls and we can control them and the idea that

(43:55) you're move you're changing direction very that's because they're not a physical object no one inside them if you you you know how get a laser pointer and you can move it around quickly in the sky well may got some phase conjugation and you've got some interferometry between electromagnetic waves and you've got a cross point and the on that node you could move as fast as you could move those these things were relatively easy to control it's like chasing a you know laser cat huh so

(44:29) question on that on the change on it moving around so and this kind of digs into the videos a little bit uh but what I wanted to do first thing is how do you think you would control

that moving around my Approach would be that that would be some type of remote control functionality that you would use but do you have any thoughts on that so so firstly the movement see in that video M they are relatively Tri in to early 1990 animation software I was the trainer of new off new tech light wave trainer the UK in the 19s right with

(45:06) along with my business time and with the soft you can create those easily right second thing is why why three why three well who it's geometry if you have two like this you can't make a plane I mean a plane not as in you know get on Go I mean a plane as in you know you only Define a line you have three like that Define a plane and that means know what the normal of the plane is right and you need technology to have Central azoth through the central degrees perpendicular so it needs to come out there needs to be in the perpendicular

(45:59) to that's created by the and you'll see when it com its final position which is in and they rotate around their their gravitational that and with Wheeler's words and it will be simple very simple that um but you see them now you show a picture of uh a LED rod with water moving around it in St electricity in in zero grab or your your thing so that's what happens right whatever happening because it's matter they need to get those equidistant between and to a degree they will self oriz because they repel each other as

(46:46) well as attract each other okay then they then they to be aligned in the and then I will using whe in a little while on principle now the moving them around you you synthesize that largely using the lock key you need to create a lot of c and when you put it into a in their pattern in drawing three they show a structure of a coherent matter it literally is and this is the structure that we experiment it makes these kind of like carbon Nan tube type buy Ball type impress and an arrangement of the matter around it in the brass samples

(47:34) that we produce right and so I've been saying for years like it forms these tubes and these spheres and stuff have a you know five sided sided sections with branches coming off and they are effectively because they're are super super fluid electrons they they uh at least that's how you initiate they can form this um particular structure on the AI and then round by effect moments and and and uh um inter perometry which isting electromagnetic waves probably with what's called phase conjugation which is where you have a wave and

(48:18) another wave 180 degrees out of phase and that that produces nodes which are effect scaler um and discussed be in his 1990s work and St in this is FD Lance one of his late Books Okay so most of the stuff is in that you you need to understand um so if if bring up the the paper um locky Mar to my blog so yeah you can go to my blog View and you can type in uh probably you can go uh feel free to share that in your chat and I can copy it over as well well yeah so like just pull it up here don't know what and real quick while you're doing

(49:09) that um uh I wanted to ask that is the aouth the area the kind of the surrounding of the sphere that they create with the three points or how would you describe the asouth I was just pulling up a picture I'm I'll I'll in 3D yeah thank you so give me a second I'll share awesome so I'm gonna you down here sorry think you should have permission to share I'm GNA share my okay

share screen okay so can you see that can't see that yet let's do that there we go right see that oh yeah okay

(49:45) now we're cooking yeah go ahead so you can see this the Cent this cone here yeah I'm pointing at yep can you see that yep right I can see it that is the the point of Singularity that is where electrons will come down on this uh spiral and repel each other they're 180 degrees out of phase Point they've got no space they have to be become coherent and and this is the point of bomb effect okay okay uh this was talked about by Brit white by um Eric Weinstein and how put off in January or February

(50:28) 2022 in a presentation that's available on YouTube and they talk about this um penro stair diagram that used um to Aron Hof bomb effect and then and the fact that that is allow us to break them um changes Epsilon zero so you the light speed and and the the physical vacuum charge it changes the dielectric con physical vacuum and this allow to um to change time in here and change the speed of light go faster than light with changed and they this and then help put off by saying oh yes and you can go them that there are all kinds of Tes that you

(51:13) can BL blah blah blah about communication techn so it this see this little ball at the back here that is the disruption Zone and the the gravitational wave comes here all through from this point here and out through the top now light wave here go so I can actually spin this puppy around here and you can see our three substructures which are exactly the same as a key large structure so this is what you need to produ and when they get this they will create all about and so each of these cones has a rational wave that comes through and

(52:02) when you are running ordinarily the the and this pole so it's it's a a top I that with the Photoshop here yeah so each of those Rings each of those donuts in there recomend would represent uh potentially an orb that we would be seeing visually yes each one of those will have the there will be sphere and then when they join the gravitational waves together they make a line at the quantization level above and they' be snapped to to to ization level okay so so here I can show you the this I'm going to bring up the paper

(52:48) I'm making it up this is observation poles in a synthetic magnetic field and this is by a bunch of people MW Ray and this was published in nature okay so this is what I mean atic monopo you structure here you have they end up looking Hogs and it's anyway you can read but here's their paper and I'm going to show this di with the model that we derived we derived was Chic only no maths no preconceptions whatever we just at what nature was doing under a microscope and I kept drawing pictures that would fit

(53:30) until it fitted everything and and it ended up being this thing that just is just a thing of great Beauty so what we have here in on the side is a comp between experiment everything that looks beautiful andar and sorry fuzzy rather and and simulation looks really clear it says um experiment AI simulated condensate parts so these are binstein densities with a monopole near of condensate compar on the vertical axes are shown in rows A and B and E I think sorry A and B this is along the the vertical axis and those along horizont

(54:18) are shown in rows C okay depends what your perspective is but anyway um so is essentially what these produce and um you here here not there not there okay yeah okay so uh I showed this is University same so you have your spin spin down and spin okay and this is the bit that glows inside here right yeah the spin change and coming into the bottom is monopole it's a topological monop it's not but it acts like a monopole to a degree uh you can the Russians have done where they show these things created birdy struct yeah on it when they're

(55:18) generated and you can them by the way by taking and spinning the cone very far and these these po by way and you if you get four cones Point them to the center you end up aggregating in looks like a par pattern doesn't it okay um so here you can this o structure here and you'll see this is from the this is from the top and if I on the geomet that is what's going on and it the the cone bit coming in so this is see in images in my view inthis um now the interesting is their mathematical prediction this is what the

(56:11) Bose eyes cond say like and can you see you See the s yeah oh yeah yeah see a little s in there and there yes is there because it's actually got the subra that's interesting that that that produces the that shape is very interesting a wheel within a wheel within a so is the monopole faced in the opposite direction of where the heat signature is with that uh you know I would almost uh call it that um that half circle shape that we see that you were showing a second ago is the monopol is then yeah and that one

(56:46) there so where where's the monopo there monopol part facing down right there or what the monopo if you look I I've got y so this is the the spin middle spin down uh this is above overall structures you can see there yeah okay this is the non-radiating bound sphere that you see and it a gravitational be through the center okay happens with charged particle they come in and they stop the singularity here okay and and that power these things once you made Power themselves they are are wole they they are they don't their energy you can put

(57:30) more energy them yeah they're quite stable right so so can last for days how would you so in terms of going to the videos and what we've seen in the videos with these orbs moving around how would you define the direction of travel while looking at your 3D your model here how would you determine the direction of travel exactly where and what would you expect it to be based on what we're looking at from this visualization so so okay let me let me if you have the videos you can pull them up on your side

(58:04) too I was overlaying it on my side but you can't see go ahead have seen them and I I'm talking about so um essentially these have a beam that comes out comes out the back further okay and I'll I'll have how am I going to do this uh I'm going to have to change my layers here so you can see I've got this three three one here um and then break it down so you can see the substance here so I'm going to take a the main tour there oh yeah the lemon the so here oh so I've got subtour structure

(58:52) and subtours are only made of two okay now what happens is where this disruption F interacts with the tour above actually have a leak and the leak is reduced so in reproduction

vehicle they have 40 is the maximum number you can have and this is in just ancient stuff but anyway oh dear oh yeah so the point is is that that um you have this show it by showing the the uh I'm going to turn off and uh the normal and they they have this disruption being okay yeah so almost look like perpendicular to the Taurus right or am I missing am I mistaken well

(59:43) um you you'll see it in a minute okay so you can see here not this is only for two t I say you can't use two practically you have to use three four is pointless yeah yeah you don't need any three to Define so that the plane be when this part so you cannot change where the plane's got to the plane's got to be from here in the center of the what this is L these aises the fish bladder it's the theet Tre the plane sit between this point point here okay you know the plane has to Zone all right

(1:00:29) and then it can be acted upon um within this sorry anything in this overall bubble Epsilon and mu has changed it's permittivity of the vacuum zero rather is changed the per vacuum and so um the speed of light and time and electric field propag will change inside this and it's detailed in a paper by one Kenneth Radford sh from 2000 and the document is called pertivity transitions permittivity trans Kenneth Radford should Radford shoulders demonstrated and showed all spars have a ball lightning equals and charge cluster called an exotic

(1:01:20) vacuum object as a leader that does whether it's a spark coming out of or the that ionizes from the load potential to the high potential between a cloud to ground ground or Cloud to Cloud Lightning Charge okay always got a ball lightning that does the a charge cluster that does Hing Channel first and you can see this on extremely high foot speed footage of lightning and these things would get excited and they lit up and and produce you a lightning branches but it's only one that will the the higher and so um so it doesn't matter

(1:02:04) whether you got three so I think what I need to do go through a couple of papers which to note down and you're need to read yeah please uh to speed on yeah um so uh um so so essentially this this is a topological monop and we create them and we that so interesting the first oh I need to show you show you something else okay so oh wow look at this okay all right I do this here and I do it as present to you and then I can you can you see that yeah yep I remember I was looking at this I think when you did your presentation a few weeks

(1:02:58) ago go ahead okay basically this is 23 if you have 24 of a circle that's 48 is what we I observed by looking at this particular sample tou in 2020 was synthesized in7 so on here I found several qu levels on there us a uh cheap microscope okay um do not care about Electro Fields this is a high magnetic electric field in here experiment these are actually of thing these little plasma need to be luminous to this level you can see a Le one up here okay you can see an almost un luminous one here okay but these ones

(1:03:47) are luminous so you can have ranges of Luminosity on the outside they produce these this matter wave here and it's two orbiting around each other we see three and some sometimes this is effectively the same you're seeing but already in next Quanto up um that you're seeing going on the playing the admir so it comes out of bostic's work was charged in

1948 make a fusion that was practice of the the Theron and he worked on Project sh project sh wood as part of the atomic engine and he worked at Los

(1:04:29) Al uh Princeton University and he shot toroids okay this is tanium and he does a dischar 10 incredibly small amount it produces plas has a current going through it which reforms a Taurus wow gets passed over H and it a toai of toai that is the structure that's the basic structure and is talking about non rating people can look at these perers in nature materials and you can all load the book uh Eevee a tale of Discovery um which is five years after Ken shoulders so who is Ken Scher Ken Sher is the guy that was brought in my view by the CIA

(1:05:23) um to investig G John Hut from 1979 he came in 2 F five years later he was awarded go and look at them the he creates these objects is the same that Lo heed Martin create without crediting their 2013 pattern right yeah go figure um and it says here these can be thought of as longitude and waves in the back hardly undetectable by stand ELC detecting means but a readily accessible monopole world this is there appears to be an incred of useful phenomena yet to arrive using potential effects that are not accessible to electro magnetic field

(1:06:07) this is very Scala potential what Happ the structures this m one this is an anapole it was 1954 by okay you have fle currents here which magnetic field going around these poid they oscillate and you have sorry an electri oscillating field this is the most and the fields can solid and you only get the vector and scal potential hide okay so these quanti and they are contained structures if you pump energy into here you can keep pumping energy into here until all forms of matter will Decay now you don't need when you have a

(1:06:50) fractal thidal structure published in a 2017 paper in a major PE review journal do not need these oscillating will self organiz into a radiating uh okay is in nature M and it's describing the same thing as was described by Ken shoulders 30 years previously so do you think they didn't do anything shoulders doing these patterns you know I think they did a lot um interesting quick question on that here here's a thir order structure oh yeah keep going sorry sorry what uh no you can keep going I I have a question

(1:07:29) after you're kind of done with this part because I think it's very interesting it goes back to what you were showing maybe what you're showing here where you talked about decaying matter um and this kind of goes back to the videos if you want to address it is that I remember I was watching your presentation a couple weeks ago and one thing that I thought was interesting you said there's two possibilities is that this is either some type of teleportation or some type of annihilation event and early on I was

(1:07:52) all about thinking it was an Annihilation event event but I Ruled that out because I thought well since  $E = mc^2$  this Mass has to go somewhere our zap must have been a lot larger if it was uh an Annihilation event okay I'm wondering can you kind of correct my understanding of that or make help me understand that a little bit better okay so yeah I think you asked the question so let's address that now yeah one um when when this matter is condensing it releases kiler electron volt photons they thermal

(1:08:26) photons right um and so you see them in IR but the end dissipated if you point where you get unification of the force and so if you go and look at a pattern mik Solin which INR actually not Soviet republics so it's 1992 okay for is incoherent nuclear reactor he fires an electron beam at a Lo metal and it forms these solons of opposite charges that form clusters in spheres or tubes and there you get unification of the force and Decay of ions that's a neutron or proton in and the beam can Decay into light leptons

(1:09:21) what do I mean by that know what light is but light doesn't need to be thermal it can be gamma Rays x-rays it can be extra low frequency Ray of which you can see in visible or the but if you have x-rays coming out they will excite molecules around it will produce photons in the spectrum which are still not thermal okay yeah so and electrons could be either uncharged electrons charge Electron an electron a neutron or a tau or or the uncharged electron neutrino muon neutrino Tau neutrino you can have a vast amount of energy released without

(1:10:04) any explosion really because it's an implosion event releases what they called field forms of matter and I'll example okay there's a guy Mah sh he worked at the babatton research center about years ago he was given data from a trick Arc furnace in India had three something like meter wide graphite electrodes something like 11 megaga going in so you got three it's three anyway there three of going into what's called a FEA furnace and what they were chucking in was scrap iron sand and uh Coke you know like uh

(1:10:52) charcoal and what they got out was silicon Ferro silicon alloy what they found was in a it's a continuous stop this because stop it everything set solid you can't you have to keep it going 11 weeks they produced three tons of excess and one ton of excess iron per for 11 wigs and if you it's something like 300 which is the mean weight of an 00 or an a300 is the bigger one right and you know what there massive hole in the middle India and if where's the Silicon coming from well if you carbon and oxygen and you fuse them up with silicon

(1:11:46) yeah 12 6 28 right so they were doing using in tens energy which will whether you like it or not it will these vertical flows if you got electrodes in there it's going to do some stuff like this one's going to spin around here because you've got an electric AR and then you've got um a magnetic field spinning around there's going to be spinning here and spinning here it's getting these same things because you damage shear when I say that the fluid of the metals which all got in a plasma kind of state because the electrons are

(1:12:22) not associated with any particular nuclear you're going to get these structures forming so it's unsurprising so you don't have necessarily a nuclear bomb like you don't need to have that we do experiments and and it appears that we're synthesizing but the world isn't there because what happens is when you form these matter structures the nucleus occur inside and when matter structure collapses well they just pop out I can show you what happens because F of it you're yeah in a paper um it's a book the

(1:13:02) book here which I like is it's the um steps to the discovery of electron nuclear Collapse by takimoto sadly he died earlier this he had visit him just before he died and the the keys which I

must read show you an example of what in these spheres and we've repli show far in the universe nuclear collapses very hard take place by the gravitational force after Stars consume their fuel that would be when the black hole happens right since the electromagnetic force is 40 orders of Mag stronger than the gravitational force should be easy

(1:13:39) to induce similar collapses by electromagnetic for in laboratory but we never knew never knew until now to do that recently the author discovered a nuclear collapse which was induced by the electromagne laboratory during study of the of so-called cold fusion several kinds of reaction which were direct induced by the electromagnetic force called electron reactions were found about to occur in a special state of clusters called ionic clust idea or micro ball lightning the nuclear collapse is one of the remarkable reactions among enr

(1:14:19) called electron nuclear collapse en NC furthermore amazingly uh completely broken materials by entc to be regenerated again to and films of cont conventional such as carbon and iron the L Pro electron nuclear regeneration so and push this so hard all of the matter is converted field forms of matter and there's a guy called clad and he add this between 99 and 2000 using sound habitation completely destroyed matter converting it in just waves so Weirs disappearing John Hutcherson observed things dising inside of

(1:15:13) the here in 199 uh 1990s published in Fusion technology the American Fusion technology used padium electrodes loaded with uyum Moto cut them in half and you found inside material had disappeared spherical sections that started grain boundaries like this and grew and then consumed crystals and he ultimately microing here he describes the process here how it occurs and the reason is is because you get the concentration of and and uh hydrogens uh at brain boundaries and you end up forming okay the same thing occurred

(1:16:07) with John Hutcherson and of ultimate it's forming if it's consuming the whole Crystal boundary inside where is them going well if it goes into electromagnetic waves it goes into neutrinos it can L and you don't even see it so you see it question on that then if you don't mind so I think there two quick questions on the same topic here is that so there's a zap where there's a flash when we see in our our MH370 videos at least in the satellite video do you think that that might be indicative of

(1:16:40) this type of process and then a follow-up question would be how much energy do you think would be required to induce this Singularity that we see very little self feeding once you get it does itself so let me um saying it's amplifying it's able to amplify itself and ramp up is that is that a good understanding or how would you describe it so thing if you have have a in which you change the of electric form what is an atom an nucleus let's say it's a little and on the outside electrons right now

(1:17:27) the electron kept the electrons are the positive nucleus aren't they yeah because you got positive charge in the nucleus because protons forget about the neutrons help right you got the electrons on the outside they attracted stops the electrons collapsing into the C they repel each other right so there's equilibrium that they form now imagine you change Zero the ability

of electric constant the physical Bank these things can the charge doesn't way they can collapse in if they get all the way into the middle TR nuclear

(1:18:09) collapse then the electrons become part of all of the prot but in every atom that ever was you always have an electron with every proton like the simplest one is hydrogen you know proteum it has a proton and like that right if you have dyum it's it's a two neutrons you still only have one electron every proton you have an electron at you're looking at the ones the one the plan's made of the one the lithum batteries are made of the in someone's everything's got every atom new proton an electron but if you change

(1:18:43) the electric constant then and the electrons can't repel each other same way they do they clap in and it becomes claped object fully collapsed object and you're going to when I show John Archie board's com comment you're going to see you everything you need that short comment explain what you're observing now I can show you a video what happens when an ex because and you'll see like you see in your videos let let me do this uh it's one of videos I shared on my blog sure um um and the Cy thing is um when these things

(1:19:28) blow up uh they actually leave a cold things so what happens matter is collapsing in and this electronic speeds people can't conceive of at which these kind of rect occur they they happen so fast it's it's minding right you you think when a bomb goes off it goes from nothing like a big freaking thing miles wide I well look fast they claimed that the the universe went from something the size P to something the size which is unfathomably big is kind of when when you're talking these reactions they can

(1:20:06) occur to all intents and purposes instantly okay and there many things going on at the same time so I'm going to share this one if I can drag this down and it's Blaster um and you can see here I don't I need to actually that would help usually the people on my channel can see let me share here so essentially what you have is

(1:21:18) these flashes yeah and then you have cold tone left right um and so this is an exotic vacuum object but it it's reached the point at which it's now detonating and so if you look at Matt Moto uh he talks about 91 um that when hole explodes of a black hole here get a carbon film form you also get this Wormhole and the matter comes out somewhere else and is re b as other elements in electron nuclear regeneration I can I can show you actually because I have it here M so real quick in that scenario though

(1:22:07) it's it's matters coming out somewhere else right so for something that's the size of a 777 shouldn't there be some byproduct somewhere yeah but it might be in the middle of the Earth in some galaxy far away okay I get it yeah so it could be somewhere else that we're not seeing basically right I I prefer the second option was using the 1979 the same year that I saw these balls in propuls analogy that was proposed to NASA by AC halt which has the fractal structure in there um uh but before we

(1:22:46) go there I'll just close this out by showing you this diagram on uh page 91 here so you

can you can see it a little bit clearer here so this is his con having studied a lot of PE pieces of material you have this Zone at which the expands out to and that's the point of the collapse and then through the worm and you have the emission white hole so it may well be that this will go down to ground and in whatever was originally it's now inside the Earth that part about the eruption of the white hole is very interesting uh I

(1:23:26) was talking about that with Salvatore Pas and just real quick on that just a side note you don't have to go too much into it what do you think about salvator pi and his work is that you think it uh you know it's similar to your work do you think it there's differences what what are your thoughts on that I think it's definitely well researched I I don't know how original it is MH um you know that in 2017 when I realized I had to either walk this science or actually because occasions of what I was Finding or move forward and I

(1:23:58) only forward because it was obvious to me that being weaponized and it was only going to be to subjugate Humanity yeah and so um I I and I thought I will take a full on reput hit I don't care I had Choice uh uh various reasons which I've explained in the I would always have to do this that it wouldn't be something anyone would be particular with me doing and I and and I will say on your podcast for the first time yeah when just before I released what uh the presentation I looked into the camera and I

(1:24:32) deliberately looked my mind but I was acting it it was to gain a bit of B and but the point genuinely I was also in shock that it was easy to do but I I said I I don't know people can sleep at night knowing what they done and and that they're hiding this from to yeah and you know who they are and I you have got a few years to come clean with this and that was Jan that was in March 2017 I said you come out and be public about this because he gonna come out now yeah out and one of the parties I was referring to was the US Navy and that's

(1:25:11) the first time us wow it's absolutely crystal clear that they've had thisy yep for a long time probably and the evidence is already there the so the other thing is about um uh Salvatore Pi I've already done a presentation like I I went visited the hon lab which is in a secret loc in Germany his previous lab which has been reconditioned and waiting to operate it uh having the skill to do it and um sharing for the minute um and uh in in there there was a sample and I pull from this is before the P patents were

(1:25:56) released and I pull shelf and I said is going on here is there is electric material and the electromagnets interact with this block and form pH conjugation and coherent Andis of what's going on producing the hutch effect the reason I said that is late 1950s and in New Scientist in 63 using a pzo electrical called quartz which I referred in number of different cases um they used a magnetron to produce uh electromagnetic waves that goes into the P material which can convert the elect waves into phonons at the frequency of the electromagnetic wave

(1:26:48) and it track down the the quartz the other farar side and reflect and you get these little Blitz the sound is at the frequency of let's say 2.4 gigahertz that's the sound it's sound but it's weird to think about it it like like so ultrasound it's unbelievable and what they found is that

if you go to 10 Gz you actually start getting sound which is at the same frequency or rather in saying periodicity as the interatomic distance okay and this leads you to be able to create phase conjugation at each atom nucleus and because of this as I said

(1:27:35) earlier electrons have a relationship with this right the nucleus is held within a shield of electrons if you squish that on the because you've got a phonon coming through a sound wave going to affect the nucleus so you're going to get waves right in there means is you can make coherent matter now what would be the best choice to make coherent matter from one with a single isotope what it's aluminium that is in the Salvatore P he pz T led titanate a p material on the outside of a mono isotope then hits it with pulses

(1:28:16) magnetic waves why doing what it's doing it's creating room conductivity it's converting that single isotope by using sound waves which the scaling at the inter spacing it gets them into phase and when you have all matter wave in phase the whole thing becomes superconducting wow and then what happens when you now you got a superconductor 193 yeah and I agree I think that a lot of Caloripias's uh stuff in his patents obviously you know it leans on all types of science that's been out there for forever so when

(1:28:53) you've got that superconductor go ahead I was just going to say you've got this superconductor now so is that how is that like the kind of um the mechanism by which all the rest of this is possible in your mind or what leads from is it one leads to the other how does that work in your mind I guess that's my question okay so so so let me get the locky Martin pattern time to bring it in now sure um yeah I'm going to ask I sharing M or am I what's happening here I'm not sure you're not sharing yet there you go yeah

(1:29:29) so that's okay all right so down there so you go to my blog at remote view. I and go um just type in COD probably that'll do it maybe there it's the first blogle public blog article and it's the Aronoff bomb effect the bomb Aronoff effect and relates to so here it is systems and methods for generator and matter WS there we go United States patent this is probably one of the most pattern here uh understand so this is uh filed TW December the 28th 2011 okay and it was published on July the 4th 2013 and so here you've a magnetic field

(1:30:31) you've got micro cavities here cathode which is emitting charge clusters in the same way sorry I'm I Shing my screen am I so myself it's okay I have your other one up I'm watching your stream at the same time so I was seeing it you're all right cing um is this is system Anda Cod uh there file the 28 2000 and it was first published 2013 uh I think the here is maybe this did uh 22nd 2016 I saw it in 2017 or 18 or something anyway they admit um electrons via SP with a this is exactly the way that done by Tesla and it exactly done

(1:31:34) by his electrical particles of uh uh as described shortly before he died and this is um that Ken Shers did it they pass through a magnetic field with these coupled resonant cavities forces Co along with the field and you get a coherent matter right and this is the moment that a half of me yeah this is the structure right okay and this is a coherent matter okay so they how you like so furthermore unlike Bose Einstein condensate of coherent matter wave technology

May produce coherent matter where both fermion and boson coherence okay

(1:32:28) according to various aspects of the subject a system for generating coherent beam is provided the system com of a plurality of beam generating disposed each each uh of the polarity of beam generating unit generated stream charge particles uh and so on um okay according to various aspects of the theory intense direct coherent matter wave beams of particles on EG part particles within SPS or firion EG particles spins neutral or charge juice so basically there's no restriction the energy stored in these being virtually zero entropy

(1:33:02) experimental physics with unexplored teries coherence in matter waves uh in particular phonons may be beyond the reach of theories unless the temperature can be reduced to zero however if this even this approach may work for bosons using conventional blah blah and then it goes on to explain yourself but it goes on to explain that you do not need to have zero can be at any temperature as I was describing in the but I want to talk about the coherent matter ways May electrons as well as bow on appearance examples

(1:33:41) examp applications I'm going to zoom in right the money shop all let me but because in there doesn't matter examp applications for coherent matter W being include single bath energy extraction what is this like Su out of free space where couldn't ordinarily do it normally you need a differential to capture energy using this you can it's like a hole suck for something this is a weapon actually but in all by itself Ultra sensitive accelerometers interc track of air and spacecrafts you move this to track these okay in difficult

(1:34:29) things that you can't track other way a more ACC alternative to Global positionings matter wave proes wow so is that teleportation this is not or is that something different what do you think well how would you define matter wave projectile this is a ball of clustered in energy huh can fire and because it has it own that allows it to own space time it it loses it and inertia and so you can accelerate if with a little bit of negative you can use so as described how just using 200 volts from your domestic power socket you can accelerate

(1:35:22) all incredible volume to one to the speed of light just with the field generated by an normal elect electric socket you don't need a huge linear accelerator because the mass is completely removed the inertia is removed huh so if you remove the inertia then you don't need a ton of power right go ahead no you don't you you can expect something phenomenally fast with a low hm okay wow um uh matter W projectiles and directed energy weapons that's different from M waves and missiles they energy so what you can do

(1:36:07) is in my presentation chin I showed what cold electricity it's a cluster toal cluster electrons in this condens state which then is guided wi so this was sh's book B it was shown in 199 right eight Micron wire you can5 kilowatts of power it's happening is the structure is guided down the W by um field and it can more energy the energy is in the super conducting State relative wire wire is just the guide now you can make a wire you can make a by using a laser to IR air and then LGE cluster travels down the IRA

(1:36:55) Channel as a wire a virtual wire so that is your directed energy okay you can you can direct but there's also other ways you can do it you can spin shoulders talks about uh fluid electrons which we have created you can send those fluid electrons to somewhere they can go metal and they can direct what happens to them you can get them to detonate in one go and shred them in or you can get them to destabilize turn the metal to jelly there's all different ways you can manipulate them this is like it's it's

(1:37:33) like magic and you send off of things that you can then ask it various with right matter wave op so with matter wave Optics you can change the uh the uh the electric not dielectric properties the refractive pockets of an area of space so you can create lens in the sky if you wanted to lens substance you could literally create a lens that's not pH physical literally created a lens in I remember burning burning what do you call uh ants when I was a kid I got got over guilty even but were quite annoying there was a lot of apparent

(1:38:21) apparently the tenth of the M all bi all animal Biol life on Earth is an so you know I've kind of got to turn come with my killing ANS um yeah you use Sun a magnifying glass to just burn out and so you could in theory create a viral lens in in a of the atmosphere to you know direct sunlight were in the same way the Greeks or some ancient station used mirrors to burn ships they have these big copper mirrors or something they would Point them all on one [REDACTED] they would set light to it right yeah um cloaking can use this

(1:39:00) cloaking so you can you can track a cruise Ma and then make it cloak right matterwave emissions and propulsion propulsion propulsion part's getting me US matter oh I know and then I'm going to sh done okay and wave solons matter Optics tests for physical contents and suitable applications this is shot there this is kind of a idea of where you might want to use it but it's the the applications are mindboggling minding it's a literally a whole new era in science just and this is 2011 this submitted just as Ken shoulder

(1:39:47) 1987 in 1987 okay so yeah I'm gonna papers at you right now so this this is for free time har asmo by Jack nin and he is the philli of laboratory directorate at the Air Force material Edwards Air Force Base and this is from 1992 it's on paper but you can get it free uh publicly available and it talks about the Str a here to unexplored solution of maxw is investigated for time harm particular ionized gasis is focused on the spheric Elric cases that behave like elic energy trapped in the plasmoid okay you're

(1:40:40) going to hear the word plasmoid a lot okay it will be shown that a critical frequency exists below which the current cannot be carried by electrons and would remain stable resonance sizes to exist such asmid will not exchange any external surroundings you can build these things eject them and they're not going to dissipate any energy at all wherever they go huh you can get energy in there to get energy in there but once once You' made these they're in their own little bubble of time interesting and their boundary met

(1:41:22) by vac solutions to ments VAR analysis calcul density blah blah blah what are they wealthy under conditions they may have names nous discharges Chargers and ball lightning

there it is I'm telling you this is what it is what happen Moto is he happily in the American nuclear society Fusion technology until 1993 when he correlating this phenomena with B then they changed the rules preventing him to published then the Air Force Under JRR Rock in the following year it was actually submitted and I was published May 95 submitted a paper that said ball

(1:42:18) lightning teaches about Fusion technology you can create a 10 mm ball lightning would provide all the energy for a home that was INF Fusion technology after they him from talking about ball lightning Ken shoulders would watch his thing in our field condensed matter nuclear science Ken shoulders was prevented from sorry a guy that worked at Los National Laboratory demanded data of the library of f on cold fusion called at I.

(1:42:54) org to remove shoulders work from the database and I heard of Ken shoulders object ball lightning work some Moto work until I mentioned them first time in 2017 since started working in the field from 2012 it's crazy so this ising and what does it look like it's a sphere like this they don't don't know about the in 1992 they didn't know or understand in in the west about kernal structure and forms this object which is a Quant is in here to to stable quantization level tells you about what's on the skin of

(1:43:38) it and you know the the suid nature of it so here we here we go images like spheroid uh matching the pl sorry two matching plasmoid boundar at the surface of the plasmoid and magnetic fields are parental to the surface this be exactly matched by extern Fields so there stable once you make these they can fly through water they can through the air they can fly through space okay and they're perfectly stable right so we can pretty much just go and do whatever you want for any period of time right so you could deploy it you

(1:44:15) could have it just float around have it being controlled and it's going to be perfectly stable so our understanding is um I'll I'll I'll show you a slide from a presentation and then help me to you understand how this thing can be St so I need to here it's not that one there that one and then I need to go and I want slide I want so I was talking about the the pen R st okay going round and going the face Singularity Center here actually going up or down and you get that strip and you get that there and this is what I

(1:45:04) was talking about single Bal extraction that is a mobia strip and extracting thermal energy at a distance okay and this this losing matter because it's Yin Force so it's not Bri as destroying matter the Yang makes a brighter Flash most but it still out to a different place um I was going to show you what was I going to show you um I think I was asking about because so I'm kind of going back to the videos in terms of the balls and whether or not they're stable and if they can just float through the air so here here you

(1:45:46) are here you are here you are so in the top left there you have six structure a Taurus with a MAG um and and the electron in or the ions coming in into this Singularity where it can't go out here this is the overall fractal stru and showed found this in henin's this was the first one we've many since oh wow and this lapsed matter wave fun okay calcium oxide calcium and

oxygen and calcium oxide are all magnetic they can all live inside magnetic structure but side it has here and carbon here these are all

(1:46:30) diamagnetic they cannot go across the the boundary because they get repelled by the in magnetic force at okay now I three to the Russ have a regular Mee with and they immediately s and this from in the a guy called jbless was invited because heed in DNA and coil coils and and how you could make because a DNA is a coil of a coil coil of a coil right he thought if he started making complex coil he could interact somewh with DNA and so this word got about and invited into this Moscow basement 1988 and technology

(1:47:17) which looked like here where I've got my mouth and what they did is they put put 30 AC through this showed on a flux gate magnet an AC magnet wave in the center of this stru and then what they did is they turned the power and it still persisted and then what they did is they moved the where the center of it AC magnetic wave form moved it over to the side and free space that it was left behind it still had the magnetic form and at this piss for two days even when the powers turned off and so he thought this is crazy you're

(1:47:58) obviously pulling some trick on me I don't believe that this is real so he went to neski and I translated both of these papers on my blog and although it was conf 1992 sorry in 1988 he only published after Union in 199 to the peer review journal and what he found was using stand Maxwell equations if you have current going in the loop you produce a magnetic Vector the asthma if you have this and you rotate them 9 and put a loop of those you have atic loop with an electric field going if you take that and you

(1:48:38) rotate it 90 degrees and put that Loop you have now another electr loop with a magnetic field and this can go on indefinitely exactly what I described in 2020 having derived this structure from looking at impact marks on a John sample John hudon being the same way that Ken shoulders developed car charge okay and that structure you just showed there was that what you define as a fractal toal or is that how do you define this um donut shape that you have in theot yeah so like here is the pridal structure looked at the

(1:49:14) SE and I found different levels so this 90 de and you get this running through the Cent take that structure and I'm looking see it here now that one if I take that and I rotate that 90 degrees I 48 divisions around here that's how I got to this and then we saw the impact marks this is four this is this is more we see these structur and these are CL structures this is 36 this would be as a full tour this is three and the some here in the sub tour here okay so these created this structure and is if you

(1:49:59) have a magnetic sorry if you current going through a wire I'm G to stop share right now because it's just do it with my arms right sure um if you have electricity going through a wire the pointing Vector comes off and is dissipated if I'm go going through a coil the pointing Vector comes dissipated if you have a WRA into a then the vector comes off and dissipates but if you have a coil in a coil then the pointing Vector is into a loop and so none of the energy dissipated and you can keep putting energy in and it gets in a vacuum

(1:50:44) current now the word vacuum the phrase vacuum comes from this established by veski in 1988 1992 and released to West when they they the threw in the towel when I sent three images um um if you have a coil of a coil of a coil of a CO that then has a loop Vector there and a loop of pointing 90 degrees and if one collapses energizes the other one and vice versa and so you have a stable exotic vacuum object it's ay concentrated upon space time which require any visitor at all and it can be now fryberger at the Stanford linear

(1:51:35) accelerator he calulated independently the same thing that neski did three decades two decades earlier whenever in 2009 when he was trying to explain ball lightning floating around in the superconducting cavity inside a national us and he counted that the energy concentration caused by this standard maxf equation derived phenomena could lead to uh vacuum Decay that is say it would knock a barion off reference to the direct SE and it would fall apart and and the baron would just fall apart okay so I'm sorry to say and but this is what

(1:52:17) one looks like when you make it du to Cosmic for make you in UK so you can see you have a CO into a coil into a coil there we go he he devel ending machine to make these things these are a they put them on parabolic dishes and then project them wow that's all I'm saying so that's what you showing that patent earlier that's pretty much how you can enable all of those functionalities that we were seeing there the weapon the propulsion I don't know I don't I don't know but I'm I'm going to

(1:52:54) dbc this look here I'm going to go back to sharing share screen and we'll go here and yeah can you see my screen again yeah I think it's starting right now okay so yeah there it is okay around that um around that balling section that was cut disappeared this in a Flash right I you can go and look on the on the FM's YouTube channel Martin Mor projects YouTube channel you see the beautiful patter coherent matter as it BS it's like low tubes running through the copper um and and next the copper is not melted evly it's

(1:53:48) like scalloped out in credible to see right but just on the boundary you have these fractal thidal structures of different orders of um n level n minor level tours so on this one you have two making the structure and you can see in the center has did here three and in the center is like paisley pattern and the center has disappeared here you've got four and in the Center and it's appeared okay so in each case here you'll get you you only need because two you can't Define a plan and Bostic was the work the I told

(1:54:35) you about Bostic trying Fusion here are his imp's at publishing 0 and he says a d ring with spokes under the it's the same thing it is now in a will show you here um got it got it yes this is the 1979 uh B called field res and in this paper it's every single thing we've seen supposedly about the behavior of uh unidentified aerial objects in recent Congressional testimony you can go and read it in this document from 79 W like literally mean that no it doesn't surpr keep going yeah the speculative propul described in this paper was at

(1:55:39) special session of the 15th these guys propulsion in June the 18th to 2099 propulsion concepts for G spacecraft this concept was developed of private unofficial research is not

involved in the U UFO research we've got by this because NASA doesn't want to be involved however which which may be stimulated by could be result ination of the essential concept and the feasibility studies development of new generation of NASA space okay uh electromagnetic wave gravitational wave form CRI metric the system utilizes re we associated with

(1:56:21) magnetic field line hydromagnetic wave effects and lasers laser genation Fields okay so it talks and waves and properties of the earth here here is the money shot this is the money shot I think you might be sharing the wrong this view I'm not sure oh am I yeah I think so D I let me try that sorry no problem this one this is the money shot can you see it yeah it should be coming up here in a second maybe can you see there it is yep now I can see it yep yep okay so is a current Loop a current Loop a current Loop yeah that's a

(1:57:11) magnetic loop that metal moment this is you can go and look it up on wikipedia moment is now magnetic field line reconnection yeah they connect produce magnetic Venter that creates your phase singy that allows for coher the center point now going around that plane is three of these yeah not not not what know what toal moment was 1979 it wasn't verified in the west until '97 right so they were behind the Soviets okay but this comes to my second hope not that the is destroyed like we seem to be able to do fairly readily in

(1:58:01) a range of cold fusion and our own experiments and they CAU on I hope that it packaged itself into one of these bubbl and it's used as a drive to move it to somewhere else interesting it's not telep it's not teleported it's just the SpaceTime metric no mass or ader and then you can move the next tour up and one tour below with no effective mass and and move it around by the same way you above so that's really interesting when it coll the problem go I was just going to ask so because I mean what you just

(1:58:46) said there was a pretty big Bingo moment for me right is like you reduce that mass and you can move it around wherever you want can you move it any direction if you do that or are you Limited in the direction of travel every you balls that come in can do you can do everything that you can see any of these spheres do in any ports ever you can do they can move in any and there will be a no inside that bubble wow so they can be going like that and inly they could go underr they into space they could go P back immediately as soon as that struck wow

(1:59:25) and the interesting thing is time down or stop for the participants in there and like I say and Ken in his writings has clearly DED that you can go with a small at one tenen the speed of light well it would take you no time at all and also you could instantaneously now I was describing sometime earlier today we were at the technical Museum here where I live and I was saying look you know there's a real problem in a car accident even at 75 now because you're you're you're the dashboard right sorry your

(1:59:58) head HS the D your skull stops immediately keeps moving forward and it turns right that you can't decelerate but in this you can decelerate instantaneous you you can go from 600 cap it in bubble move it at the speed of light to another point yeah and stop it instantane and gently lay it down wow and then you have a method for dcoh that's so two questions on that

might go yeah because so if you put it in a bubble though isn't the object hold it like above the ground yeah isn't the object in the bubble going to keep

(2:00:39) moving at the same speed that it got put into the bubble or is that also able to be modified does that make sense H there's ways to get I'm sure you there's ways to get round effectively as soon as it can that thing it it's relatively in that if you know what otherwise you're kind of argu that it should punch itself way out no it's stuck in there it's locked it's literally locked and so you think that if there's any now I'm yeah one more thing real quick on that because I think

(2:01:16) you talked about fans and bans and converting them you know are we talking about situation you convert them back and if I'm talking about the videos I guess what I'm trying to figure out is like could the thing the occupants still be alive based on what that's happening can the plane survive the event that happens there or is it going to be you know deconstructed destroyed you know what are your theories on that based on all the science that you've kind of shown us here today if you if you get

(2:01:43) this roly thing is the matter ised to other matter right just that's what we have right um that's what appears in physical experiments so um you don't the fact that they were discussing exactly the toal as a means of Intergalactic travel back in 1969 and they were right this is what you need yeah it's not and I I I'm not a time to tell them to go and put them in thisal right you look at this Associated this there's an Associated paper from 76 and they fire a laser in Japan into a nonlinear and they create Tor in the

(2:02:26) plaza with internal magnetic field over a thousand Tesla that was replicated and funded US Department of energy the UK the European Union South Korea and and published in 2021 hated the phenomena they found it produced in their ones if it was 20s something microns across it was uh like um 360 okay bearing in mind the MIT super conduct is 50 Teslas doing Fusion okay 1,300 no the the smaller it gets higher the the magneet gets okay and I will show you this because it's in my presentation yeah get there am I am I sh again I

(2:03:18) can't tell you're showing the pattern what am I oh okay so let me get a present yeah I'm going to need to wind down here in uh five or 10 minutes as well so if we want if you want to try to conclude yeah so I appreciate the time is this laser this is the laser and it was published physics of plasmas uh in 2021 yeah and M uh as this magnetic field goes up but note your Vortex motion on that plane here is the magnetic fields at 1000 Tesla but also magnetic field that comes to a hard here okay we know that ions and

(2:04:10) electrons in here or matter will be pulled in here um oh God there's so much I need to go through but anyway um all right fine this is theity the magnetic field literally it stops that singular the phase Singularity that is the magnetic core okay and that is the same at which the the pting vectors close electromagnetic everything the wave comes through the center you're going to minute when you listen to John Wheeler the gravitational waves come through the Cent you know the Electro and mag to come in here and it's a singular this is

(2:04:53) where singularity in terms of unification of the forces okay so we're gonna listen to J hopefully you can hear it I'm G to move my down um I don't know whether it will pick it up let me know you're um stop it relevant points do it is going let me do it it doesn't it let me do that okay that's that's G to not help that's going to happen like that I might need to get that video separately with me if you have any questions now to me and I'll get no so I think that really you know just to kind

(2:05:43) of sum it all up you know I I I think that what the audience really wants to know is your thoughts on kind of the effects you know even so much as we I think we appreciate the science a lot and I hope that the academics who are watching will you know look at this and take it very seriously because a lot of people wonder and they think when we talk about this kind of stuff that they think that it's not proven or that it's not supported by science but I think as you've done here you've shown that it

(2:06:06) absolutely is and it's proven by science has been out there for decades you know so I think that what from a perspective of the videos and the MH370 videos what we kind of want to know is you know what's possible what are we looking at here think what I've heard and I'd like to hear your thoughts on it is that we could be looking at Annihilation event we certainly could be looking at I'm going to still call it teleportation but I think that really it's more complex than that it's a situation where we can

(2:06:30) move an object a matter wave can be moved around freely just like we see these orbs move around ignoring Gravity the inertia could be stopped entirely we can have it put it down wherever we want theoretically and to me that's very powerful because it answers a lot of the questions I've had about the videos and and that's why before I let you speak I just want to say I appreciate you and the time and going through all this so did I get that right or what are your thoughts just from the straight up you

(2:06:56) know kind of what could hypothetically be happening scenario yeah so um I very firmly believe that two most likely options one total Anil and I believe that this was developed as a weapon to remove uh projectiles I believe this is why they don't care abouts like you you say gets up and he says oh if your carrier groups n we we'll be able to launch kinal from our black from our aircraft like no one even BS and it doesn't matter if it's going top it out because we can literally and it's the perfect

(2:07:40) technology it doesn't matter whether you've got a a dirty uh uh bomb or a fusion a thermonuclear bomb the nuclear bomb still has plutonium like a like a a nuclear bomb it has a PL trigger if you knock knock these guy with a missile or thing from a satellite have as many uh missiles as you have tungsten things coming that from from from the satellite it's not an electromagnetic system which you can just recharge by getting a b more um or nuclear Char Bo um you have a situation where you're leing down one of the most tance to

(2:08:27) human life with uh um plutonium and it's got a half life for like 200,000 years or something ridiculous so this is going to be a problem for a very long time every single bomb that

rains down but if you have a system that literally make that matter convert whatever it is into light and electrons which are all very friendly yeah right it's not a problem nothing Rains Down literal Perfect Defense Initiative wow right perfect one so I honestly my gut instinct is likely a technology was developed for ballistic missiles and now that's

(2:09:08) why that's why America and China and Russia this because matter and I have been this for years long before I saw your video I've been saying they don't care about and I believe that the Russians are on to this because generation of fighter jets were metal in them so they're less prone to being affected by this you know they will have actually no weapons on nothing that will have if they yeah real quick can you switch your screen to stop share real quick and show our faces while you talk

(2:09:39) about this because I want to potentially clip this as well I think that so just from the one aspect right as you just mentioned that we could have a perfect defense defense something that can completely wipe out a bomb missile anything that's coming at you just completely nullify it I've in short yeah I've said in short I do not uh I have argued that the reason they don't care about nukes and upgrade nuclear Arsenal and stuff is because they already have a solution that they can knock these things out and

(2:10:13) I quote this number they can knock them out at one speed of light so who cares about Mac 14 you know um they get these things generate them move them to any on Earth at one tenth of speed of light easily I mean you can go faster but um and then literally and I've literally said they can make the things disappear that's lit and it's recorded don't know which videos and I've said it number of times so they don't care about and then when I saw your video I go go there it is go and and it is lightning structure it

(2:10:47) is the monopole and when I will get this wheel of video have to close with that sounds good all you need to know guy that worked on the Manhattan Project he was the tutor of Fineman and he is the person who's attributed with talking about black holes and worm and what he describes when you know there is a grav well we've shared these videos look at them called in extreme ACS go and look at those videos you can see when one of these evos is moving this direction not caring at all about any magnetic fields in reactor another one come over from here

(2:11:26) and within Horizon it starts orbiting around it or gets but more interesting it does it in its directional path so you have one coming over here and it starting around before it's even got it got there so you know that there is a com in front of this structure right now when those things are around the plane they will be pointing in any direction allow them to link their gravit waves together they will be arranging so that they have the center in that Visa capes out to the disrupt there and they will be

(2:12:03) perfectly ideally but they can move around because they don't link in a loop like I showed you yeah right in my 3D visual wow they must link their gravitation there I'll I'll show with wheeler but what happens is yep they on the subtour level but they're still individual ends right

when they rotate like that this with that one this one links with that one and links with that there that Graal wave creates newal Asma through the center of the that pinches these increasing the gravitational that pinches it in gra a self- feeding Loop

(2:12:43) they self organize to the point which their nonradiating repel each other and then the tour above and it's literally like that you can't even imagine how fast that will occur so is that they together they have yeah keep going they're self s aligning self organizing and and it's all ways and I you have let me get wheeler say because everything you need in what wheeler say so we let's do this let's first I also want to ask to just a quick Claire I was thinking maybe can you speak to the like

(2:13:19) let's call it teleportation aspect again one more time and then show the video and then after that I'd like you to you know plug whatever you want to plug because you know I think that you've done some amazing amazing research you BL my go ahead the the teleportation I would okay so when you are in the structures I believe that because the the the Zero's changed your own SpaceTime bubble you not really perceive time and because you are in a fractal Taurus and because your brain works on the tral moment brains

(2:13:55) need the tral moment fortive function right this is how people can do telek and how Nina could stop a person's heart um and and move things around she she had the ability and the to control these things don't look up n alaga um anyway so um if if you are in there your timely stop now if you can move 10 to the speed of light you you have no inera and you have no um uh Mass you can accelerate fast and slow down fast okay now what you do is you have no perception of time in one of an eye you're on another point in the and

(2:14:40) you're suddenly stopped that's it to you you have teleported right because in in the blink of an eye you're in a completely different location so perceptually you have teleported wow okay and I've been joking to my to my my my wife's Vietnamese and I and and and been joking to like at some point honey you're gonna be able to go go to Viet we're gonna be able to visit our lunch come back through the planet yeah through the planet and the amount of energy is very minimal right that we have to pull this

(2:15:12) off is that because of these electromagnetic effects that are happening where it's just amplifying itself you don't even need large amount of energy to pull this off is that what I heard or Layman's understanding imagine imagine imagine El imagine electron that how much you have to move that one electron yeah nothing you have to move that here to here yeah it's almost zero wow and it's well described in in 10 shoulders papers almost effortlessly now the point is why would you not want this technology out well

(2:15:48) you imagine has a craft that uses nearly and they could go to any point on and they don't have to go through baggage don't have to show their path for they don't have to do x y and Zed how Hell could you completely Humanity how could you to convince them have a chip in the which would switch up them off it's by the way yeah the same technology and I don't want to go into what I see bad enough this I was going to say too though it's like I was thinking

that oh well we can make you know Infinite

(2:16:19) Energy but now it's almost the opposite we just don't need any energy so now having any amount of energy now becomes 10 right yeah so serves the same purpose right I I've said look you've got hydroelectric I I'll tell you how you can make an energy Genera this you've got a High Dam excellent we're already 99% of the way that we use one of these structures we capture tons of water and we put it in your red top yeah we let it run through your generate done done free energy there you

(2:16:51) go ways you can think about this on a heat pump we use zero bath single bath extraction you make an extremely cold air over here and you make an extremely hot over here by using the reverse hot on a cold Zone well you can use a thermal generator you can you can change the Epsilon zero for one side of a load of rocks on pully system running around two cogs tied to a Dynamo and literally this side's lighter and all the within the beam of that and it goes around in a loop and when it goes over the heavier right you just you know you

(2:17:26) there's so many ways you can make an electrical generator but the reality is you can convert to energy now you take two neutrons and you fuse them 5 roughly million elect right if you take carbon and oxygen you get Co2 five electron volts so you can see why 25 is bigger than five even if you take five and you divide nucleons that's a lot lot than five right it's it's a million right but take a nucleon in the to a barion like a proton neutron and you turn that energy by unraveling electromagnetic energy

(2:18:03) that's trapped that non-radiating structure aole that is the the baron right if you rip that apart over 900 million electrons there is nothing Beyond this wow there is nothing Beyond this it's 133 times more energy than you get from Fusion so basically infinite energy at that point yeah more than we would ever need as Alor P say I'm paraphrasing but in like let's we can destroy aroids but we can also generate we take four unit size of a domestic fridge we can put down the the central plane of the and using the power

(2:18:48) to run a domestic Kettle for a week create a singularity at the center of the earth and the entire Earth will disappear that's basically what it says in the salvator P I read it that's the same conclusion I came to using using this appliation of this principle we can also do Fusion Energy exactly now you can do to energy direct now this is where you have to understand this is the great power anyone that has a face has the answer this is this is the structure yeah so we are built the technology that runs the entire universe

(2:19:34) and can build it and completely build it right it's going one way or the other and this the the weird I I I used to Mo for always having these aliens the load of prosthetic on their face the we are the answer to the it's in our so let me get get this wheeler thing yeah P wheeler and then uh yeah that was amazing though thank you Bob for that explanation I appreciate that uh this the new dawn of an old age and I'm not gonna play God play for me maybe I've just got no resources I'm going to close restart

(2:20:14) it no problem I'll close down and while you're pulling that up I do want to thank you for um being on hard truths number two here today and going through all this evid I think that this is the perfect example of hard truths this is information that a lot of people have a hard time understanding accepting we just went through the implications just a second ago and we are talking about new sources of power being able to need very little power to move things and essentially teleport them throughout the planet we're talking about

(2:20:40) technology that could essentially create doomsday weapons and destroy our whole planet which could understand this could be the it's hidden you cans you can destroy Sons yeah we can destroy maybe even we can maybe yeah I mean I don't want to necessarily go into all the implications there because it starts to freak me out a little bit but it's very uh scary it's very big and so this means that we have to be very responsible I think with this technology um and yeah not religious here but I'm going to

(2:21:13) say Jesus said the me shall inherit the but the work is a mistranslation from from the original Greek and it actually means those that know that they have great power but choose not to use it with herit the Earth there's one significant problem with this technology if it's used in a war I believe it will destabilize the magnetic field that locks the crust to the Earth and we will have a cataclysmic event yeah it cannot be used in War you cannot use this anger yeah that honestly I'm not talking about this planet I'm talking about

(2:21:54) wiping everything off of the earth no I understand why like with a yeah it makes me even think about not trying to reveal this technology because I can understand this is most likely the reason why it's being held back the reason for the disinformation is that the same people have come to the same conclusion that you and I have come to but the reality is I think that we can't hide this forever Humanity deserves this because as you pointed out it can change the world it can change the circumstances of millions if not

(2:22:19) billions as I've brought up before people that have nothing on this planet but we have to use it responsibly right that's my opinion absolutely but you're bang on absolutely bang on and the the thing is we use this on Earth before it's in all of the ancient Sy every aspect is precisely in the symbology and you any any point in the universe can easy uh how to do this from just a nature like I said I did no math no preconception literally looked at what was under a microscope what's going on and I started drawing pictures until

(2:23:02) oh my God this is how it works and it's so simple right I'm gonna will work now yeah yes okay it's GNA work you got it down here yeah I think what and uh he speaks really slowly but that's good because I'm going to stop him and then I'm just going to fill in the uh show and this is the guy that invented black hole right so Ken wheeler right yeah yeah yeah yeah gonna do it for me or what radiation a penil WR am I need to share I hear it yeah yeah see seeing it see that's fine as if

(2:23:49) they're seeing it it's probably fine I'm probably going to use your recording here as well no no where are we going where you going though I got about a million those open here share

screen uh I want desktop too share right there we go okay so and I'm going to go on to Wheeler take it away for me radi pencil radiation energy with it energy has mass and therefore pation must exert some attraction on beside it a pencil of radiation like so light beam yeah it's got energy  $mc^2$  s it therefore must have mass therefore it

(2:24:51) exerts some attraction around it yep what about getting a pencil of radiation curved Circle the light goes round [Music] and then Direction it exerts is concentrated as if so what that bends is circle this pencil ration into the circle gravitational attraction of the pencil radi itself so this structure here which looks very much like the structur I this is from his 19 54 paper this has a gravitation going through the center that is a stable called gon and he predicted that things iners were made like this okay so everywhere around this radiation

(2:25:51) that's going around you an attraction but this stable structure is by the gravitational as that means there is a gravitation going through the center as I said be a gravitational beam going to this right let him carry on that was the idea of the Jan actually think of different possibilities for the size of that gon bigger or you find that if it's very the energy is low to push the radiation together requires energy and you climb a hill like the hill of a volcano till you've come to a maximum energ so

(2:26:41) to do ordinarily you have to put to push it together it takes more and more energy together okay wait and then if the radiation becomes any EAS inside the energy Str down and the thing collect so gon is really unstable entity it either blows up into a cloud traveling One Direction or it into totally collapsed object something that we today would call a okay so if you can push together enough yeah the thing would into a black hole but wa there's but that's the analysis I have in mind when I first published this

(2:27:44) work only later did I see that that's a feature that's it noways I'm attract the idea that this venil radiation going around this does not have to be light it could be gravitational W right so we already know we've got a beam coming through here through our structure right and you can hear grav waves imploding to make a black hole h there everything you need to know is in that little clip by the came up with the term black hole Yeah that's amazing I think a bit of a spiritual be able to decode that yeah I think that you know

(2:28:33) and just what I say this get hon I was just gonna say yeah I think that for me I was gonna say just very briefly that you know uncovering the science behind this has actually led to me a better spiritual understanding for me as well just just this is all so deep and I think from the Layman's perspective it's just completely unknown so the last few months of going through this learning from you and other Engineers scientists physicists um have given me a whole new understanding of our reality to be honest so thanks for

(2:29:00) sharing that John Wheeler video that's awesome yeah so it's free downloadable from remote view. IU it is my practical applications for the Frank little moment uh what is each substructure go down to Torrid that are twice the diam the planks distance and each level can have up to 48 but maybe a little um subtours you can imagine there is uh almost unfathomable

numbers of ways can be organized um things self assemble so darn quick and what he's saying there is what I started out with is these TS when

(2:29:44) themselves so the gravitational way pulled into the next one pulled in in they make the new gravitation and pinch in until it forms stable structure and at that point it's not in our space uh it either collapses which he says it can go into a hole and I've described how when things occur you're not necessarily expecting thermal energy out you're going to get other forms of field energy um uh you could have stable structure that self similar like the ones that in the first place and can be all those

(2:30:17) magical ways you manipulated when they were brought into the S I would like to think better that's what I would think awesome well thanks Bob I appreciate you having uh being on here for hard TRS number two you were a great guest here today you went through some awesome science I think you blew a lot of people's minds so I would just close it out by asking you go ahead and plug you know whatever you want to plug here at this point shout out anyone you want to shout out you know this is your opportunity go ahead thanks a lot

(2:30:45) Bob okay well I want to thank uh all of the people that the Martin FL Memorial at Quantum heat. org H over the years you on the Martin Memorial project on uh X on on um uh Facebook on uh um YouTube and you can also see my own personal right on uh um remote view. and and that is uh the T on that is Back to the Future insight and critical fiction and uh I would also like to thank um the the late Neil K and gold who come up with who who was confident enough in the experiment I I suggested and produced incredible experiments and also H in

(2:31:41) recent years wonderful colleague Alan Goldwater in California without which his sem I wouldn't have been able to understand many researchers that have shared their information with us over the year boier who produced some of f fantastic coherent traveling ways and allow us to decode this thing that about how they they project in front of them that is able to vect like objects i' also like to thank the the sadly dep earlier this year uh mat Moto uh we reprinted this book step the discovery of electron

(2:32:18) nuclear collapse everyone get a copy we make two cents on this in royalties two cents if you want to donate to the project pretty every video it has ways in which you can donate project underneath it and uh everyone that's worked with the project has done it a um essentially on their own resources basis they they've often given up jobs or had had no other income at other times and stuff but uh for me this is the great I since the early 27 the gods tool box um I I say that little G because there are people out

(2:33:04) that have stolen the G's God's glory and uh um they are take from themselves and they are using uh and the other word can be used is just that everything you can that you can do I can't watch watch a super because everything is possible in instantaneous cloning teleportation um you know every single is possible and and and it's you you completely change your your um your framework of reality when you get this and and so that is based on theet Tre

every single class building uh the ancient world through to the

(2:33:50) Greek architect Roman architecture and every derivative that and the obviously the church it's just a manifestation of this the Great Pyramid of Egypt all of these things they are based on this technology and if you want to understand a little fragment of that go to the Martin pman Memorial project YouTube channel and follow every notation that starts with the phrase o dash you can search o Das it's spanning six years you can follow my personal Journey unredacted even the Stu they get wrong the exper the live sem session

(2:34:28) everything that explored this thing I want to thank the community that been with whilst I was in essentially past six years trying stuff out of the door so it cannot be un um if anyone else has terabyte out there can download 4K downloader I'd be happy if you to clone the channel if you want to use any single piece of material that is published by the mfmp in video form in image form or in uh um on the any any any um uh please do so obviously credit project and and and backlink um but uh we are the dawn or old new dawn of an

(2:35:12) older and uh it to be back and this is species inheritance built in the image of the technology that drives this but we shouldn't let those that want to over us and hold Dominion to use this Tech to control both our phys reality our perceptions of what is what is right and just and what um literally control our minds which is something you do with it as well so on on on that level I would you do not need to fear nuclear weapons you do fear them at all it's a fraud because they can make disappear from the

(2:35:54) sky they can M and disappear Sky your money is being taken out pockets for things that not real things and there needs to be some coming together uh to recognize that this is a real possib the immense threat it could F present on a on a completely disappearing state level but also the fact we are being lied to we have the ability to convert matter direct into energy we travel without all of those tedious uh times and nonsense and this planet with thisy could support 10 20 100 times its current population without another rainforest

(2:36:43) chop a load of tens of thousands Eagles uh uh all kind of Technologies which are really really rather redundant when you understand what is possible with this I want to thank then for his incredible hard work on um get information out um uh please share this very very WID and learn if you have any questions to remot view.

(2:37:09) IU them I tried to do a regular uh blog post um uh uh sorry um session on on a Sund if I can this is in of that um buty you can come along and uh ask questions obviously um you know helpful if you've done the homework I I some some people have watched every video we've out over the last 11 years and that's four months um H there there's people that just do the OD day I think he can probably do that with the reference do and everything that I have published it's link links back mainstream scientific

(2:37:49) and we have shown that you can conduct a three-year-old in seven shows this basic PR principle \$35 budget okay it's literally Galileo asking the people calling heretic to look through

the telescope and see the planets as they are actually moving we are at that point of absurdity in this Revelation so thank you very much Ashton thank you for giving the for on there yeah and so I just want to say on behalf of uh MH 370x organization we set up to solve the videos look into advanced technology uh we want to give you an honorary

(2:38:25) membership into our organization and we want to let you know welcome to MH 370x sir so that's it for today's podcast on uh hard not on uh hard truths and let's be in touch I'd like to talk to you again in the future learn more about the science keep up the good work sir and thank you again have a great day recording stopped awesome yeah if you wantan to soon appreciate it and uh yeah I think that if you want to just put your Twitter in the chat or somewhere as well I can um tag that in the description

(2:39:01) when you do it if you want to oh like your Twitter where people can reach you people are asking me about that um I I stopped the recording on my side and then if you I've I've stopped stream oh okay yeah and I just stopped my stream too so um just real quick as well if you

Transcript:

(02:43) hey what's up we're back back Street's back what's up okay let's see what we're going to do tonight yeah that space tonight was pretty sweet uh we got stuff we got to work on I didn't get any of my video shorts done because I ended up having to spend all day you know not having to but getting to spend all day talking to kim.

(03:30) com going over our content See okay we're gonna um we're going to strip a couple videos today sure hope this is legal I don't even know jeez one sec I'll be right back here full screen face o we got to get a new camera today too or maybe not today but sometime this camera is not uh it's not cutting it anymore I'm trying to decide if I can wait till next week for that but not sure uh let's see here oh we got to get a new camera today let me see if we can find the clips we need here oh wow almost 5,000 subscribers on

(04:37) YouTube not bad but yeah if we're going to be serious we we got to got to professional this up a little bit you know um what am I looking for I need to find my Clips actually there's a few things we need to clip so here's one of them I need to clip this sorry it's probably too loud oh do I I probably have to say something why is this so loud whatever YouTube's apparently smart enough to like know what's going on here so I'm going to give me a sec not sure what why I'm hearing myself

(05:30) so loud one sec guys I also have to figure out how oops okay I'm going to try to make sure I don't get struck so I'm GNA I don't know how this works actually is it going to strike me if I do it like this I hope not is it going based on the video or the audio you guys think yeah still alive I was I good to see me alive for sure huh some re's in the way I'm hearing myself so loud right now maybe that there we go yeah that that's better that's

(06:34) why no okay it's much better man I hope I don't get copy struck copyright struck here I know I don't know if it if this thing's smart enough how it works I'm just going to keep talking in case it copyright strikes me look at this what the hell so this is zero g yeah I've got something that can clip on I'm just huh this is wild what somebody need to

(07:37) explain this to me so this this is zero g not sure if this necessarily relates to our videos but this is just cool I guess so the electrical charge is what's causing into orbit what am I learning from this I feel like I'm learning something but I don't know hey Nitro hey everybody who's on there oh yo Bernie what's up buddy yeah um Bern ey yeah looking for looking forward to it I was going to

(08:39) prepare for the green Bob Greener interview I was actually kind of talking to him I think we can kind of wing it I'm gonna have him talk about his research and then we're going to talk a little bit about the videos and take it from there I'll full screen this if anyone can explain this to me please do they're acting like electrons so is this needle going to teleport at warp speed or maybe I just post this and be like this is just really cool I'm just trying to figure out what the implications are of

(09:37) this whoa this is just oh yeah [REDACTED] I didn't even check my emails today God wonder how many emails I have oh please don't have a million emails man this I like people have 50,000

(10:55) subscribers and they can't even get 400 likes 400 views on their on their videos yeah these people are embarrassing man why are people so obsessed with me totally obsessed I'm now even going to respond not going give these people attention the more people say my name the more the people will come to the evidence let's see oh I got to post the thing uh

(12:03) oh [REDACTED] I forgot to post David's interview I'm going to post that real quick um actually so it's Diamond the interview I did with him where is it the one we did yesterday did I I didn't post this right did I post this heard of him you're gonna hear about him tonight okay don't wait let's post this I'm going to post that on our Twitter real quick uh then we're going to clip some more stuff man I a lot of stuff to do today uh one sec the heck where's my other okay full

(13:06) screen I didn't even post this on uh on my Twitter today for the stream my notifications have just been going absolutely wild guys it you know I just want to give another shout out to kim.com if he's watching or anybody else I doubt they are whatever um but man we had a huge day today a lot of people following huge space 3,000 active followers on Watchers on the space another 1,500 on the YouTube channel at the same time yeah yeah thanks Bernie anytime you go against the mainstream you just get huge amounts of attacks everybody thinks

(13:43) they're just the smartest person in the world you know when they think that anything that they don't know has to be fake it's honestly embarrassing uh we can't we can't reach everybody though as I like to say I'm not really sure B Danny I talked to Danny I mean he was just trying to set up a marketing gig I think he was I think he was worried that he would he would get um you know hit like the other podcaster did but I don't really care man I think if people want to like build a little marketing hype for their stream

(14:15) get people to watch it it's fine I don't think it it was nothing I did on that stream was bad um oops there it goes what was his stream called uh uh it doesn't really have podcast guess name magnetic reversal news I guess we say

(15:31) feel like I should just add a little more I'm just so tired and lazy can't even spell my own name a lot of people misspell my name it's kind of interesting I really don't care though okay we got his thing posted just going to see did he have a Spotify link as well I think that's it actually oh he he was posting me the attachment of that we got over 3,000 followers yesterday last night now we're now over

(16:35) like almost 5,000 I think yeah big day for the community today so you guys thank yourselves as well for Following being involved what have you um appreciate it I'm just now getting involved with all these scientists Etc I'm happy to make all these connections to people who are who know what they're doing know what they're talking about uh can help us in our cause as well let's see what's the other thing we got to clip here I need to clip the New York Times guy I think I'm okay to share some of

(17:09) this stuff I get a little bit worried about what will get us copyright strided or not oh boy let's find it we have so our Discord we'll probably open the Discord up again pretty soon but only to invite only um so that we can vet people individually it won't prevent people from getting in but probably help um what else we got here okay we're gonna have to watch a little bit of video here to get the right clip I think there's a couple more articles on the fire Theory as well that I want to post probably

(17:59) why do I have the Rogue Archer thing still up close that save fire we have a lot of content to go through I don't know if I want to make videos until I get my better camera that's the situation but I am going to make a video that's going to expose all those people that I made a tweet about um because I've just got the evidence lined up and I'm tired of being attacked by these people on their minions so uh I don't like doing that stuff but we're going to make one strike at them and if they keep pushing then we'll push

(18:34) back harder but they' brought this on themselves they've been attacking me for weeks where is it man there's so much holy crap holy crap there's a lot okay here we go um is it day three let's check this one where's the sound this guy just gets murdered I'm not sure if it was day three I feel like it was day one ass Us in to items that looks like the tail of the

(19:40) aircraft but when we dispatch confirm any of them come from the aircraft and for the

aircraft to just go missing uh Danny's definitely dropping the podcast he was never not going to drop it he just posted that to rile people up he called me ahead of time made sure I was cool with it so tells you that whatever you can't hear this what do you mean no you can definitely hear it from the rad blip there are many theories that have been said in the media there are many expert around the world have contributed their KN how okay this is

(20:29) clown shoes where I need to clip the I need the questions intensifying and what is this nonsense what is he talking about narrowing down the investigation uh as a possible midair explosion or disintegration at this stage we did not narrow any other possibility we are looking at all angles we are looking at all angles of Poss what could possibly happen on that infed [Music] flight sign so is do you get any signal right now from under the from the day the

(21:33) aircraft lost from a lost contact and disappear from there's no signal been able to be detected by any other ships of aircraft in the region of no signal able to be detected reason we will tell you we did not have the reason what did he just say right there let's listen to that one more time at this stage we did not narrow any other the possibility we looking at all we are looking at all angles of Poss what could possibly happen on that infected flight Greg gutfield and Scott Adams were in the space today are you are you guys serious is

(22:19) that true wow Scott Adams is the Dilbert guy right and Greg gutfield is Fox News I did not notice that but that's pretty wild so do you get any signal right now from under the from the day the aircraft lost from a lost contact and disae from there's no signal being able to be detected by any of ships of okay I need to find which I believe have offered their assistance have they arrived and have they started to do their work the offer that we got are from FAA NTSB USA aib UK and also the Australian we have not got anything from the French

(23:11) yet the FAA and NTSB I was informed this morning was already here and we going to meet them as soon as possible to to discuss with them how could they offer the assistance to our investigation uh of of this uh the New York Times I wish I clipped this before are we investigating a group from China called currently claiming responsibility can you give more information because we have not received any of it's going to be hard to find has been reported is something that we not verify officially I have the the video

(23:49) Somewhere in My Links that is more on security matters uh I will we have to inform we have to get the information from the security uh people will you uh will you issue that I leave it to uh uh the Chinese uh or rather the Chinese NEX of kin of the Chinese passengers uh we have making I'm pretty sure that's not the right video what day is this one March I think this is the one yeah I think this is it uh uh to T after justas is there a button you can press to do that I think something that we are all like to know the answers as

(24:50) well and we are information oh here it is we here we go here we go get a a better picture better picture into this so because of that the search area has been widened as been as we speak uh into well into the South China Sea and they're searching the South China Sea on March 99th even though they know this guy knows right here that this plane didn't go to the

South China Sea he he knows this is a military defense they have radar data that shows it going back over Malaysia what the heck uh James fox is like best buds with the

(25:33) podcaster that tried to just attack us that clearly set up the interview to try to attack us and discredit us the producer worked on moment of contact with him I talked to him about it James Fox is one of the first people to try to come out against the videos James Fox is a guy that does thirdparty interviews with people that think they saw aliens this guy's discrediting our videos doesn't add up guys doesn't add up at all James Fox apparently is you know I don't know what's happening to him if

(26:09) he's being Russell branded or what there's not a lot of things I can think that could end somebody's career one of the only ones is some type of criminal charge against him or some type of Court thing that's really bad right or some type of past information that's come out that makes them look really bad what else say is I couldn't have a lower opinion of James Fox he will never have my support and anyone who supports that guy is not going to be a friend of mine uh we already have requested our Indonesian

(26:41) friends the Star National in Indonesia thank you I think what people should ask James Fox is why is your career being ended man why is your career being ended we uh if you look at the somebody reached out to me I won't even say who exactly yet but said that James Fox has direct connections with Lou alzado L alzado has definitely direct connections with the people who are attacking us he follows one of the guys who's been banned from Twitter twice for attacking people he only has like a 100 people that he follows and he's

(27:16) following a guy that's been banned twice from Twitter for harassing people non-stop to the degree where like it's going to get to criminal charges against the guy like why would anyone be following someone like that y I've heard rumors that L elzado got this criminal got his record removed to basically be his ally like someone just walk me through this yeah what this podcaster did I don't even want to say their name because they're just so pathetic was very weird it was clearly set up clearly

(27:54) he was talking to a literal spook when I came came in a guy who's literally an operative who's a former FBI agent and then he tells me that James Fox thinks the videos are super fake why even tell me that just super weird man super super weird why the drama cuz I'm tired of being attacked man I'm tired of it I got Spooks trying to discredit me I've got fake podcast trying to discredit me it's like that's cool man I'm not going to sit there and just take it I'm going to wait I'm until I get all my

(28:36) evidence lined up and then I am going to destroy their credibility that's what my plan is I'm throwing the cards on the table so if you're one of those people just be careful man okay New York is possible I've been nice to people there's no reason to be attacking me if you got blocked it's cuz you're a [REDACTED] frankly the guy who I went on pox was talking to an actual former FBI agent who's an actual spook and they they had clear intention to try to discredit me who's directly

(29:10) linked to James Fox who talked to James Fox about me and about the videos what more do you want man don't trust these guys just don't trust them right they're not going on Spaces they're not going on streams revealing themselves I don't think James Fox is too busy to be talking to people for a trip to turn off all of this diagnostic yeah it's one thing to be skeptical it's another thing just to look at the evidence man if you're not going to look at the evidence and just dismiss stuff and you claim to

(29:46) be in ufology find a new gig find a new job you can't go into ufology with a closed mind literally you can't if you're going into ufology with a closed mind you're in the wrong line of work you're not really somebody who's looking for disclosure you're the opposite just think about from logically right and I'm just going to Sidetrack here if your whole goal is you want to show that there's uaps which pretty much technically means that there must be aliens somewhere out there or whatever

(30:14) you want to think right how are you going to go in there and try to cast doubt on other people's work how do how does that make any sense it doesn't at all right like I don't go to James Fox's uh documentary and go dude aliens are stupid you're an idiot for interviewing people in a third in a third world country like these people have no credibility right like you you don't do that I wouldn't do that because I just don't care about his stuff right like I I looked at it with open mind that's the

(30:49) difference but once I find out he's acting like that of course I'm not going to listen to anything he has to say right so I just want to point that out rad guys this isn't the place to be like trying to put me down on my own my own stream man we're working on the stuff if you don't if you don't like it this is just a stream where we're chilling man and we are we are talking to the experts from their I'm just going to answer questions and be honest we will get assistance from being in fact there you

(31:28) go is it better be part of the investigation YouTube didn't hack you if you don't want to watch feel free to leave manate something you can wait till the content comes out and then you don't have to listen to the the commentary the people that are here watching right now want to listen to the commentary what is the technicalities of the aircraft I think to be you have to be fair to us we have to look at every angle from the aircraft I just I just cannot that will be part of the investigation wouldn't it

(31:56) be a basic here it is this is the cad thaser from The New York Times Thomas Fuller from The New York Times okay 355 sorry I got to make notes of this this is the clip I wanted yeah that's the thing guys there's larger reasons why I'm being attacked here it's not a matter of like people not liking me or whatever it's clearly more than that right that's the reason why I'm going to strike back no man I people that are closed mind aren't going to come around man just be real like we're not going to

(32:36) reach everybody the way this is going to play out one way or another the videos are going to come out all the people who are trying to attack me are going to look like fools they're

not going to apologize that's not how they work people with egos like that aren't going to apologize just like the podcaster who I proved didn't pay for the the the um the hotel he's not going to apologize either these aren't people that are people that are good people that are going to apologize for being wrong you

(33:01) know these are people whose egos like control how they act for a trip 7 to turn off all of its diagnostic information that it regularly sends out I mean is that is that actually technically possible that it would disappear from the radar but also all of this diagnostic information that's routinely sent out would just cease is there a button that you can press to do that I think is something so he just asks him is there like how is this diagnostic equip stuff all just not being sent out is there a

(33:34) button for that and this guy just doesn't answer that we are all like to know the answers as well we all like to know the answers how is that not the first thing that we're looking into here I mean the Rolls-Royce engines are still sending back the data so how is and this is the guy in charge of this this doesn't make any sense and we are we are investigating on that on that on that matter and we are we are talking to the experts from the airline also we will get assistance from boeing in on this mead oh sh is full screen for the

(34:04) copyright be a basic just a basic question can airra well he follows this is from The New York Times so wouldn't this just be a basic question whether or not that aircraft sending data back like he asked the right stuff here like this was smart this is the next day look at the day uh no this day is not correct that day is right not correct I don't think I just just cannot speculate something that you can't speculate you can't speculate it's not a speculation we just want to know whether or not the

(34:34) aircraft's sending data back we are not sure now it's better that we get uh from the from the right resources from the from what is what is the technicalities of the aircraft I think to be you have to be fair to us we have to look at every angle of this inv you have to be fair to us we have to look at every angle how about the angle on Rolls-Royce engine sending data back ination we just cannot do something very fragmentally or we can't do stuff this whole investigation is so [REDACTED] no wonder people were just smelled it

(35:05) out right away right investigation so thank you you okay so that went to about where like here investigation okay right there 458 okay let's see if we can clip this um I'm going to move it off to the side just in case I get in trouble for this I don't know if this is exactly street legal as they say to clip things I really actually don't know if if people know if it's legal or not let me know three what was the time don't worry guys I'll get the video back in a second 355 458 okay let's see if I can clip

(36:11) this I think I want MP4 version okay let's see if this works fair use says it should be yeah okay good just in case I'm not going to show it on my main screen oh is this is it not working right now YouTube should be correct although it's the camera is not centered probably did that work okay I think we got that there we go turn off all of some of these guys ask good questions

man that I think that's that is

(37:15) something that we are all like to know the answers as well and we are we are investigating on that on that on that matter and we are we are talking to the experts from the airline also we will get from Bo in fact on this matter that will be part of the investigation wouldn't it be a basic just a basic question an aircra disapp I just I just cannot speculate something that we are not sure better that we get from the the right resources from the god I I need to upload my stuff on Spotify too Tak a lot work just cannot do

(37:52) something very fragmentally or investigation okay so we got that clip okay we got those clips that I wanted sorry I've got too many videos open here close this okay let's fix the camera real quick actually it's probably fine I'm just not sitting up right yeah the intell like there's definitely people tied to the intelligence community that are attacking me there's just no other reason right like I'm not doing anything that hurts anybody else at all so when you see these people get so

(38:45) irrationally angry about me it's like dude what are you what are you upset about peace meal investigation yeah the peace investigation thing is like what the hell makes no sense okay we found this as well I'll let you guys take a look at this take a look at that date while I'm looking at my list of what I we got to clip next does anybody know know how to upload videos where you can like put the little time stamp things in so like how do you do that yeah calls from the plane somebody asked about that you're right um the

(39:45) only one I know about is the uh there's a Philip wood um there's a Philip wood on there uh picture guys I'm not into the Dr drama I'm like the least dramatic person I literally never post about the drama ever like ever the only reason why I've into it is because I've been getting attacked a lot recently and I had a bad experience on a podcaster so I'm just telling my opinions man when I stream by the way this is just me chilling talking to the chat doing work right so if you don't want the

(40:25) commentary you don't have to listen to to the live streams you can add chapters time stamps after the upload stream thank you appreciate that if you guys want to just get the content you can wait for me to post it on Twitter it will definitely be on there you know uh you don't have to listen to all this I'm really just chilling hanging out with the chat for people that want to get the inside information as to what we're talking about what's going on um nothing big has happened just uh you know I I went to a podcaster and uh

(41:03) we're never going to say their name again but we went to a podcaster they were extremely rude it was unprofessional they didn't pay for my hotel they edited it to released it to try to make me look silly they're connected to several people who are Spooks like the whole thing just stinks to high heaven right just stinks to high heaven and I'm the kind of person that like when I learn I took karate uh when I was back in high school when I was a kid and actually younger than that one of the things I learned is you fight to

(41:33) the level of your opponent right and I'm very patient I haven't really reacted to like maybe 99% of the attacks that have been on me but once you build up enough evidence and you want to strike a decisive blowback at them you know you let them know and then we don't talk about him ever again right that's how you deal with people we gave him a little bit of attention he got some views on his uh you know struggling uh podcast and then we don't ever talk about them again I just want to let you guys know

(42:05) that's that's the the **truth** behind it right I'm a normal human too right I'm not not a not a perfect person by any by any regard but I am going to get to the **truth** of MH370 and that's what we're working on here tonight so let's focus on that for the rest of the night so I can go to sleep um but today we had a really good day I mean we gained ton of followers tons of people watching we gained a new Ally and kim.

(42:41) com it was huge uh I'm I'm kind of tired now because I I spent just so from the moment I got up I've been working on stuff talking to people like kim.com we did a really big space today that had huge huge number of people on it uh I want to thank him and everybody else who joined on that space I mean it's a lot it's a lot to take in and to figure out that we're getting to the point where people are starting to take us seriously right so I appreciate it yeah I think we' found the **truth** and I think that's the reason why

(43:14) potentially we being attacked so hard right and the harder they attack then you know we'll push back just as hard uh what was the other stuff I feel like I'm missing something that I need to do sorry I'm looking at my list here so we can look at the fire scenario real quick don't worry guys I'm not bitter I'm very very far from bitter if anything I'm just tired of course I expect to be attacked doesn't mean I'm not going to strike back though um kind of want to see if we can upload the

(44:02) sou pasas interview why I can't figure out why keep won't connect my other account why is it on the wrong account here is this why oh I think that's why okay no wonder okay let's see if we can get this figured out guys um here I'll let you read this while I'm uh looking real quick to figure out how to upload this yeah the space today just the YouTube space already has 7,000 views from four hours ago pretty big I probably need to upload some of those as well and probably edited a little bit my

(44:55) videos how do I upload I really don't know how to do you social media like at all wait what the evidence review has 90,000 views what holy **[REDACTED]** okay I think you guys can see them 84,000 views seems like a lot that's all just from kim.com would he linked that and now we have 84,000 views on there did it just go down wow 84,000 views that's C that's a lot 84 84,000 views okay holy

(46:03) **[REDACTED]** pardon my French but holy **[REDACTED]** yeah it's not everything can be faked you're you can believe whatever you want but not everything can be faked especially not in 2014 you got to build a story guys so when you Inver an investigation if you let's say you're a police officer yeah um Jack I am going to do that actually I was going to upload shorts but my video camera as you

can see kind of sucks so you know it's kind of a problem when it comes to faking stuff though imagine if you were a police officer and

(46:45) you said well anything can be faked you would never solve a single crime right you you literally solve nothing you go well it looks like we have two videos of this person murdering this somebody but well anything can be faked so I guess we'll just give up right like that's not how it works you build a story when you are trying to solve something you need to build a story and the question here is what's the story that makes sense something happened to this plane it's not that nothing happened to it right we've shown

(47:15) that the official story doesn't make any sense so now we have to find another story that fits the story that we've put forth fits more evidence than anyone to date by far by far and it's incredible it shows a plane teleporting now I have to figure out where my Salvador Pi interview is oh is this it no that's not the real one [REDACTED] okay guys we have to do a little uh Googling where does Zoom save recordings oh documents Zoom this is where it saves it once I get this uh actually I think you can watch I just want want you guys

(48:08) to see all my file paths although I guess I don't really care that much oh here here it is um [REDACTED] probably this one I think that's the one you guys want to help me edit this yeah people have been convicted with no bodies and way less evidence of this sometimes they get convicted just on circumstance alone Sean Ryan spells his name a little bit differently than that but yeah uh Sean Ryan the problem is a lot of these people are connected to military people I just don't man I don't know I feel like

(48:50) they're it's hard to trust them it's going to be really hard for me to trust certain podcasters anymore more the thing about the podcast where I went on I looked at some of their other stuff and it seemed legit like they didn't treat anybody they've ever had on like they treated me so it's like weird man if like it's different too if I come in and they tell me they're going to be hostile but if you like pretend and like you know like I it was clear in retrospect that it was planned from the

(49:18) beginning like he was kind of stand offish in general about me when we met and I was super nice to him and everything it's like what the hell man how attached am I lithium ion battery fire I mean that's just what happened it's supported by all the evidence we can see it on two videos all the witnesses support the same event it's not a matter of what I'm attached to it's a matter of what the evidence shows you know now we're not going to be saying anything it's not a matter of like

(49:50) running them down the whole point is I we don't want people to go watch it I don't want to give them any clicks right I'd rather support the people that we do have good podcasts with and check them out I'll say that the Danny Jones podcast should be pretty good n nobody's ever told me they're going to be hostile that's the thing because when phonies try to jump you or whatever they don't come at you and let you know right away they you know get roundabout with it but then they release the title like

(50:20) oh this whistleblower got **debunked** or whatever it is right it's like one weird thing too is I've never called myself a whist blower not not one time not one time uh hard TRS should we call it like this what should we call the name of this like that oh can we edit the description later on I need you guys to teach me how YouTube works like I literally just don't know I don't know how any of this works I think should I tag m370x or does that not make sense for this I already did Danny Jones um I've

(51:07) talked to him now I'm just like skeptical of everybody because I I just don't know like people just act like they're your friends but then they stab you in the back you know it was funny someone was talking about I think someone uh I think someone uh was what were they saying crap I already lose my train of thought I'm so tired um I forgot what I was going to say yeah **debunking** uses persuasion science is a a mechanism of uh testing things but yeah it's hard to tell when people are being honest now

(51:52) anymore um yeah I don't know even if there's going to be a part two of the other podcast I'm not going to promote it or talk about it people want to watch it's going to be just his subscribers I'll probably promote the Danny Jones one but I'm probably going to watch it before I post it or anything because I just want to see how he's chopping it up he told me he's going to be honest and not edit it but you never know what these guys man can't really trust anyone anymore like I did uh the professionals

(52:26) which is probably still one of the best probably the best in-person podcasts like and he was the best interviewer in general just nice guy everything right just gives you a platform to get the information out there which is what a podcaster should do right um because that's the point of a podcaster right um what else should we tag for Salvage trays uh what do we what do we tag here yeah why do you have somebody on that you would oh somebody me that was the thing too somebody mentioned why not why have only people on that you agree with

(53:08) I don't know isn't that the point of a podcast to have people on that you find interesting and want to listen to like why would I have people on that like I don't want to listen to what they have to say like that to me that's the whole point of my podcast I mean if other people want to like argue with guests and stuff like that they can do that it's not not what I want to do I'm a nice person it's hard for me to be mean yeah the pro only problem I have with confessionals is that it's outdated

(53:33) right now it's really outdated we just we've had a lot happen since then boy when did we record this guys the 5th I think it was November 5th is that Sunday I can't even tell Sunday yeah stand YouTube it's definitely not travel and events Science and Technology hold comments so when where do I edit it to make it like good I I can change the description later on right no Danny didn't sight me at all during the interview oh oh yeah I want to tell the story this actually Danny just seems like a really nice guy so I'm

(54:24) I'm just the problem is I'm just skeptical now cuz I just got stung right but uh when I was on with Danny it was really funny we were talking and then like halfway through the power goes

out just the whole power goes out the entire building I'm just sitting there and I'm like okay this is that's kind of weird I mean I I'm not really W you know thinking that's really bizarre or whatever oh yeah alien scientist was good too and the interesting thing about alien scientist is that Jeremy Reese was

(54:52) very skeptical right he had me on but he was skeptical very skeptical but it's because he's like a skeptical guy just because like he also has dealt with like the type of disinformation and stuff like that as well and he like changed his opinion you know like he defended me against other people that were trying to talk smack to me in his replies and then he's reached out to me we've talked on on DM as well so um yeah I mean like I I actually respect Jeremy and not not like I don't want say it like that I mean I respect

(55:26) Jeremy because of the way I've talked to him and the way that even though he was skeptical like he you know was fair and he's asking you know tough questions but he was really good and then when I watched him with Salvatore Pas like that was like one of the best panels I've ever seen so yeah it was really good and I see why he's skeptical too like I think he um you know I won't I don't agree that like I don't necessarily think that 91 was necessarily like a conspiracy or whatever but um you know I can see how

(55:54) people do think that for sure and you know so I think that if you're somebody who is like big into that kind of conspiracy angle you got to be really cautious right like you're dealing with a lot of uh a lot of powerful people there yeah I think Jeremy by the end was pretty excited for the information he thought it was interesting and then I mean he had salvator Pas on right after so yeah alien scientist I'm a big fan of Jeremy I'm definitely going to be checking his stuff out in the future um

(56:22) you know and so I it's really hard to Teeter the line between being skeptical and being uh being like uh you know just open and and honest with people because it's scary because you don't want to get bit by people right this is the right one right I think this is the right one we got to make one of these for Bob Greener as well how do I do that I should have one where it's like just my face and then we can add the other stuff in there but maybe you know what maybe we use the AI art and and try to make

(57:09) one what about the Weinstein brothers are those people that make movies I don't know yeah Eric Weinstein salvator Pas is not fan of him he is not a fan of that guy um I want to put his stuff in here do we can we get a link to that somewhere let me find it Salvador and we'll probably do what is it late we should probably make a Twitter post real quick I think we're going to post one of those videos real quick I wish I had a better picture of salvator pi as well I might have to ask him for one okay here we go these are the three

(57:55) right yeah dang it uh hi well does that work that's not right there should be enough information to get to the right right link right yeah okay high frequency this is the one that I wrote I I put the paper on you guys if you haven't watch look at this one this one has like 700,000 views The High Frequency gravitational wave generator you got to look at this P look at

the scientific paper I posted I mean wow I mean it's literally talking about our videos man just literally talking about them craft using and actually uh man we

(58:47) today was just such a day Jacob Chanley was on the the the the j6 shaman and he just he go he just cooks and he just talks about all the stuff he talks about salvator P's patents I was like man you gotta you got to check out my uh you got to check out my my interview with him man like wow I did not expect that I mean I didn't know what to expect from him at all but I didn't expect he was just going to know all ufology lore definitely didn't expect that we'll start with this I hopefully I can edit the description later on I'm

(59:24) just tired I don't want to go all that so is this how you do it I need a I need somebody to create me an end screen as well oh is this the cards here no I don't want cards yeah I mean I'm not I would never turn down Shawn Ryan I would even let him just Grill me if you want so I really don't care I mean I have a security clearance as well so it's like my background checks out I saw somebody today trying to claim that I'm Russian disinformation dude I have a government security clearance pretty sure they would be able

(1:00:01) to figure out if I if I'm Russian disinformation but that's the reason why I did this though is that like imagine if I don't have a government security clearance people make up all kinds of BS about my background people would say I'm I'm disinformation I'm a spy or whatever right like all that stuff would actually could you know I'd have to address all that all the time but all I have to say is that I'm you know I have a government security clearance and that just debunks all that stuff it's like dude they did

(1:00:29) background check on on my whole life hey Michael um I will probably talk to Dr Greer but I mean realize guys like I I mentioned this on my my space or the space today is that I'm willing to talk to anyone I don't prejudge anybody so I and I don't like saying people's names but the Patrick Jackson guy or whatever right I don't even prejudge him the orb expert I didn't prejudge him at all right I just judge people based on how they interact and his interactions were super weird super weird and he starts making polls about

(1:01:12) do you think the videos are real to determine if the videos are real like that means means something and then he posts a picture of this debunk Cambodia airplane where the plane's flying over the jungle and he says is this MH370 it's not even the right kind of plane like that's just weird man but I still even after that then somebody else went ahead and dm'd me and they said hey you got to check out maybe we can I can have you talk to this Patrick Jackson guy and I'm like okay man what's the deal with

(1:01:40) this guy let me know I'll give him another chance and he tells me oh well he wrote a book and he gave an orb to Gary Nolan he gave an orb to Gary Nolan and I'm like okay dude if if that really happened you should be able to Google that in like two seconds and and get it to me the information I was like go ahead of course that doesn't never happen so I Google it I don't find anything else at well about this guy this Patrick Jackson guy except for what I find is a book A book analysis or a book uh um review and it's by Dr fir or

(1:02:09) Mr Fireside which is one of the people that did uh I did a written interview with him and he was a nice guy I read this written review of the book and it's just destroying it like the whole book is like just just nonsense and uh and so I read it I'm like okay now I know this guy's just completely full of it right like I I've already talked to him personally blah blah blah blah so when it comes to Dr Greer that was kind of a side note doesn't matter what you rethink about people don't let the media or whatever

(1:02:44) shape your opinions of somebody like just look at what they're saying and come to terms with it right and see if it's legit or not so my opinion of Dr Greer is that I would like to talk talk to him to feel him out and see wherea comes across in person right see if he's interested and yeah Gary Nolan might have collected an orb but he didn't get an orb from uh from Patrick Jackson um so yeah does anyone know how I add the things in here is this the checks or where do you add the stuff I don't get it there's no option

(1:03:20) to add the stuff though what is inst I don't know what any of this stuff means I don't I don't get what this means do I want to set it as instant Premiere somebody who knows YouTube help me out instant Premiere this is too hard man what does this do you and your viewers can watch it together at the same time can't you do that anyway I don't understand

(1:04:25) what does this do none of this makes any sense to me gives you a live chat oh oh oh I didn't know that huh yeah when I disclo I mean I'm pretty good at telling if people are full of crap or not like I can tell pretty quickly my opinion of Greer is always been that he knows something he doesn't talk like somebody that is making it up right the question is what are what are people's motivations why does it say copyright oh boy yeah we got copyrighted on that one does this one work does that video Work yikes that feels

(1:05:23) bad um someone needs to teach me how to add that the clip things in here where how do people do that subtitles I don't know how any of this stuff works man maybe the music all I want to know is how you add the little chapters is this what it is do the chapters automatically app add themselves someone want to check it out and see if you can see it yeah I want the chapters why doesn't even load for

(1:06:31) me yeah we better go back to rumble guys uh okay it goes up until the egg that's fine I don't mind if it goes up till the egg I do you guys see it doesn't work does this not work for you guys either man this is lame edit video editor oh here we go oh here we go damn oh I should have trimmed it okay it works for you guys cool is it it's is it dark though until 5 minutes I don't know how this works like I can't see anything here if gonna be tell to be your first interview

(1:07:41) so boom okay we are live sir we are live here today with Salvatore pasus one of my favorite people on the planet right now he is doing my first ever interview this is going to be hard TRS with Salvador p and AST yeah this okay this looks good okay so I I don't know what I'm doing here how do I add oh info cards is that what it is can someone just tell me please how how you do this nobody nobody knows there's got to be a way where you can add like little things here huh end screen info CS people before

(1:08:33) in oh these aren't what I want these are little info cards that's not what I want yeah how do you how do I add the time stamps I already uploaded it video description is that how you do it you add it in the description how do I do that that's all I want to know is how do I add the time stamps oh hold on somebody sent me an example oh damn you got a lot of uh subscribers there can we shout you out or is this going to reveal you in some way I think we're going to shout you out I don't think you're afraid of being

(1:09:36) shouted out right aqu the anime look at this 29,000 subscribers oh damn dude look at this I know you're so talented my man wow this is cool wait don't copyright strike me wait wait I want get copyright strided um you got another 29,200 now uh how do you do this this is how you do it do do you literally just copy and paste this or how does that work ask chat GPT you just add that in there and then it just knows and it works like that peace uh given Fox neat the pias video had no

(1:10:42) audio can someone check and make sure there's audio on this recording on Zoom okay we're recording on Zoom I'm G to see if I get the live stream going it's it works fine for me yeah 18 views no there's sound okay let's um let's make a post and then I kind of want to try editing that a little bit you have to look at your video and note the time where you want to add the chapter yeah so I'm imagining what I'm going to have to do here here is I'm going to have to edit the description

(1:11:25) down here I'm going to have to put in the timestamps and then I'm going to have to make chapter chapters or whatever so the problem is I have to watch it again and figure out where I want to cut it so that it works okay cool thanks for the information advice I'm going to save that in my to-dos list so I know how to do that see it's just a matter of okay so you just the time Stamps will automatically like it'll pick it up from the description automatically make the chapters is that what you guys are

(1:12:03) saying sweet okay got it got it that that makes a lot more sense for me thank you is there evidence that the tech has ever been used before I mean that's a pretty loaded question man uh not sure you know how I I'm not an expert I don't know I think that people people would out there say they is a lot of other stuff that looks very similar I'll be right back by the way yeah there's a lot of other stuff that looks similar out there guys um God I wish I was organized honestly boys boys and girls yeah it might be stuff out there

(1:12:53) but it got to be found right right interesting okay thanks for the explanation how to make the chapters that that helps a lot actually yeah our our YouTube's only like two weeks old and we've got 5,000 Subs already pretty pretty wild um let's let's just post this cool video which video should we post first sorry I probably shouldn't be eating

(1:13:56) while I'm uh while I'm streaming here it probably sounds really weird my bad how many Twitter followers do you think we have now wow 39,000 holy oh it tells you the the exact amount you hover over it I didn't know that should we look through our followers j6 videos okay I'm curious curious if that's tied to Jacob Chanley I want to watch some j6 videos I heard they

were released the other day of course I I don't really like to

(1:14:59) get into politics stuff as I mentioned but I do like to see the **truth** you know anyone who's got a big following we'll follow him back man these are all just the verified people it's a lot of people man sure keenly aware give you a follow America's plumber sure why do why do you think people lock their accounts it's kind of weird I guess they just don't want anyone to follow them imagine if I open up my DMs oh boy it would be troll Heaven wow 77,000 followers single moms posting L's single moms posting

(1:16:02) L's this person is an attorney we're going to follow that person or at least they claim to be I guess anyone can be anything online were they the j6 videos were out and then they stopped yeah sorry about the mouth noise I was eating licorice I probably have to avoid that dude these licorice dogs man 4,000 viewing hours needed for monetization I don't know what that means is that have I hit that these licorice dogs oh my goodness best best licorice I've ever had in my life they're just kind of hard to eat

(1:16:48) you like he makes a lot of noise when you eat them okay I'm getting sidetracked guys I I've got a lot these are just the verified followers I mean you think I can go through 39,000 followers there's no chance no chance oh look at this 89,000 followers okay I used to follow back everybody but then it got to a point where I couldn't do that anymore it's just too many it's pretty crazy we've never been on TV before and we've got almost 40,000 followers anybody I see with over like thousand something followers I just

(1:17:41) follow them back cuz you never know some of these people might have connections to people that we can uh this guy seems like a normal dude to help us get the information out 21,000 followers I mean it's a little political but whatever don't matter to me I kind of get the feeling I'm going to get labeled alt-right but yeah whatever they can label me whatever they want it doesn't doesn't really hurt my feelings reality is these videos transcend politics in every way possible it is a little awkward that

(1:18:28) Obama's like very implicated in them though there's not really a way around that I mean like this operation would have had to have been played out by him everyone is a LARP uh I don't know I'm getting kind of weird vibes from that the reality though is Trump is almost certainly implicated as well like he's probably knows about it and can't say anything about it what I'll say about my politics is my politics probably are enough to get everybody upset how orange pill am I on bitcoin

(1:19:10) I don't even know what that means I literally have no idea what that means yeah I guess you could say I'm one of the people that just thinks the left and right thing is just like a distraction that that gets everybody upset my politics will get everybody angry I believe in helping the the less advantaged the people who have nothing I Believe In Justice I believe in uh people not being railroaded when I say justice I mean Equal justice meaning treating people by with a law the same way not based on politics not based on

(1:20:02) the color of their skin not based on their soci economic status everybody should be treated the same way by the law that's how the law should work oh interesting that's really interesting Remax okay we're only going to do a couple more here man it's a lot it's a lot this is just this is just the people that are verified okay we're never going to get through all these I think I hit most of the big I wish it would say how many followers they have without me hovering over them like shouldn't it just say how many

(1:20:50) followers they have right here I just want to make sure there's nobody huge that might want to reach out to me because my DMs aren't open but they're open if I follow you back yo people love the Dodge Coin huh yeah that tiny clous guy is like a total nut job like you got to be careful people that spend their whole day posting um oh look at that 176,000 this is probably somebody whose politics I I'm closely aligned with um although I'm not that against taxation yeah if anyone's spending all

(1:21:34) day posting UFO stuff and UFO politics stuff like man just stay away hard stay away it's Australian person follow the Australian person if anyone wants to be followed and I'm missing them or whatever uh let me know UFO curious uh okay afan vet okay we're going to make an exception for that guy I don't know a lot of these the Bitcoin stuff I don't know I get worried these aren't like real people so yeah we are going to make um some clips that definitely is in the cards probably not tonight

(1:22:29) though I just kind of set the framework for it okay we'll do like one more minute of searching for people 44,000 followers Dr **truth** here we go here's some here's somebody I agree with without freedom of speech we are nothing I'm here to inform post facts opinions Mysteries satire and some comedy okay this is this is right on my alley that's that's probably where my politics line I can't can't follow everybody here public and political Affairs consultant cat dad sure okay cat dad

(1:23:23) F do this say Jeremy Reese follows this person okay well I think we hit as many as we're going to hit here oh what interesting well that was fun okay let's do yeah Discord is invite only if you want to be involved in the Discord yeah we already have a Discord we've had a Discord it went nuts we already even before we got big we already had like 300 or so people I had to ban like 150 people cuz we were just having too many troll people too many people leaking information too too many like the whole goal of these people were

(1:24:15) attacking me they were actually coming into our Discord trying to chop stuff out of context from the Discord to use it to attack us like that's how deranged the people attacking me are so like when you guys talk about uh I think I'm going to be on lore Lodge tomorrow actually so when you guys talk about like why am I striking back at some of these people is cuz like they literally have like these operatives like constantly trying to dig into our stuff it's so annoying the reality though is I just don't really think about them ever but

(1:24:52) when they postu stuff it's just it's annoying as heck okay let's post which one do you think we should post should we post the uh one sec wait can I bring this back over no should we

post the knitting experiment or should we post the press conference one probably just the knitting experiment what do we say about this I don't even know what to say about this here yeah I don't know like racism is like really really not cool man really not cool just try and talk to Destiny do you guys want

(1:25:55) to hear a funny story you guys will appreciate this uh I actually reached out to Destiny I wonder if I have the message still I think I'm okay to post this let me see if I have it I don't know if these get deleted huh he only has 200,000 followers I would have thought he would have more than that um so I know Destiny not in person I used to play Starcraft against

(1:27:03) Destiny I remember that he used to play Zerg and I played I think mostly Taran back then probably all Taran and I I was almost as much of a troll as he was back in the day and like we would just talk [REDACTED] to each other he I'm I'm sure he hated me back then and I probably hated him just as much actually but you know when you're young and you're a kid you can't control your emotions whatever I kind of wish we still had some of those replays of some of those games cuz I I used to be like a

(1:27:40) really hardcore gamer like really really good like really highly ranked on like all the ladders uh especially for a lot of Blizzard games realtime strategy games uh Warcraft 3 I was like the number one player in North America for a while um but I couldn't never keep up with like the Koreans and stuff they're just much better and a lot of it too is that I I lived overseas and when I lived in Singapore like when you live in Singapore they have these land shops they call them everywhere and the land shops were just places where you would

(1:28:18) go play like in a bunch of computers up and they would just like after school all the kids go there whatever cuz in Singapore like people live in just like small apartments with their whole family so you would go there and you would play with all your friends we would have like overnight things where we'd overnight at the land shop like all night and we just play Starcraft and like counter- strike against each other I used to be really really good at counter- strike as well and I stopped playing those kinds of games but I

(1:28:44) remember Destiny specifically because that's how he initially got like popular popularity was he would start stream he was one of the first people that was streaming and it was funny because I I kind of regretted not doing it and that's why you guys find my Twitter account goes back to 2014 is that I like regretted not getting into that because I was like really popular people would always watch my my streams and uh or like like all my games would always fill up when we have like you know Whatchamacallit and so when I would play

(1:29:15) on the ladder and stcraft I would run into Destiny quite a lot because he was pretty he was pretty good um so anyway I sent him this message to see if we would want to talk again look this was September 23rd so this was almost two months ago but he never replied back but I would talk to him I think that you know he's like me if like I was like much more spiteful I think I became a person who's like a little bit more you know you grow up a little bit and you realize you don't want to be like a negative person

(1:29:47) and doesn't mean like I'm not always doesn't mean I'm just always a good person right but I try to be a good person as much as possible possible so yeah I mean if you want to reach out to Destiny I feel he would be somebody who might be willing to talk about this stuff but he's somebody I imagine who's going to be extremely skeptical like some of the other podcasters we've had so maybe not maybe don't don't need to talk to him we might be reaching a point where we might attract attention of people who are like

(1:30:12) really really huge so I don't know I don't know man um what are we going to say about this is this from NASA or just outer space in general I don't really know what to say about this sorry we were just discussing random stuff Noah Zergling Rush we were talking about Starcraft uh Street Fighter I used to play Old Street Fighter turbo on Super Nintendo and stuff like that whatever yeah you want to be a good person but you can't let people pick on you man it's kind of a like a really you have to

(1:30:58) walk the line uh Rustin what do you mean by indirect evidence can you help me about that I I don't know what we mean by indirect evidence yeah rust ROM rustom I hope I'm not pron butchering your your name if I am please correct me um let me know what you mean by indirect evidence I'm just trying to think here these are water droplets from an electrically charged needle it's electrostatic is that am I say I don't even know if I'm saying the right stuff on this tin remind and what when drops of get close

(1:32:05) to that Char need charge needle what did it say it was I've got it on and you're looking at is a needle and to in my prence a cple need electrostatic field experiment I have a piece of paper and I rub the knitten needle with a piece of paper and this KN needle is a polyethylene knit needle it's 8 mm in diameter and now I'm going to take a syringe with a little teine canula I'm going to squirt drops of water out and look what happens when those drops of water get close to that charged needle so this is like a little

(1:33:06) satellite going around a cylindrical shape Planet except the physics here is a little bit different it's not about gravitation it's about charge forces and of course charges can exert a potential field as we call it so it can exer oh yeah yeah we can do stuff on indirect indirect stuff uh rist like the basar thing sure we could do stuff like that probably not tonight but we got if like I called the lawyers already oh I didn't call the fire yet needle huh interesting so I mean this is how much stuff we have to work on it's a lot man

(1:33:55) it just keeps getting longer I haven't even finished the salvator P science stuff we uploaded the interview but now I need to add chapters we could do the general part two thing there's a Sig part two that I found somewhere which I don't even know if I know where it is anymore it's been that while long need to upgrade update the evidence and post it to conspiracy subredd it I mean look at all this stuff man in that's a lot yeah go ahead and send me the list of indirect evidence if you want this isn't quite gravity it's just

(1:34:50) cool I'm still going to post it I don't know for some reason just reminds me of the videos like the orbs flow around like this right this is how the orbs also flow they look just like

this H God that's so weird man that's weird I guess the point here is that you can't see the electrostatic charge right but you can see the effects of it is that the point here H what do you guys think I think that's the point h

(1:36:28) yeah the charge exerts force uh I'm going to be on the Generation Zed podcast maybe this week we're having him on after uh Bob Greener next week by the way Dave Rossy or uh yeah Dave Rossy Dave Rossy I've got in touch with is one of my favorite people on the planet already I could see being like best friends with that guy sorry I ate another piece of licorice so my bad yeah Andy Miller you nailed it buddy Social Network movie um great movie one of the best movies honestly if we were to make a documentary or movie about

(1:37:20) this that's what I wanted to be like is like The Social Network movie monetization comes down later the most important thing is we get we don't know what this is MH 370x right but we know it's important well we want to focus on building it up for how

(1:38:47) about in zero g okay okay we'll post the science oh whoa sorry I'm looking at something animated is that picture you put in the Discord is that an application you're using man I don't know I don't know what he's doing but seems cool man thank you

(1:39:50) for whatever you're doing animated I don't know what it is but seems awesome um water droplets okay cool give me a sec best we get a tpo okay it's already been **debunked**

(1:41:27) it's amazing how many people literally just poke post **Mick** West crap without even looking at it oh nice what's this yeah that Hermes if you're in the chat it's uh it's okay but the picture is a little bit much okay I think we're going to do one last thing dude I can't keep up with the the information here I will say I love that there's all these Malaysian people responding to the stuff comments dude I definitely can't keep up with all

(1:42:50) the notifications this is just ridiculous how many notifications I've gotten today someone was claiming there's a fourth orb there's definitely no fourth orb right I think we would have seen a fourth orb right now by now Snopes claims something was **debunk** damn my my random reply to kim.com has 400,000 views Jesus that was just my reply to him wait how many does his post have 3 million it's not bad should we take a look how many how many uh views do you guys think the letter to Congress has now yesterday

(1:43:51) yesterday it had 1.5 million yeah these like liars and disinfo people they always try to reframe your arguments right aliens took it aliens took it it's like dude relax like he he's just he's definitely a disinformation agent it's not he's too smart for that right so you know it has to be dishonest the the VFX **debunk** has been **debunked** for three months man hey Paul welcome to be here buddy yeah kim.

(1:44:37) com sent us a lot of people on our way today um really really appreciative of it you know uh just awesome guy talked to him for a while today as well just definitely a nice guy appreciate it let's see how many views we have on our letter to Congress 2.9 Million we've

gotten 1.4 million views since yesterday on this 1.

(1:45:04) 4 million views since yesterday wow almost three million views on this well guys it's going to be getting pretty awkward for uh for the media to be ignoring this we have more views than CNN in the last day our stuff's been seen more than CNN's all T TV shows on CNN have been seen probably in the last day let's check the CNN ratings I want to see dude we definitely have more than MSNBC holy crap we we had more views than like more cable most cable news today that's wild man we had more views

(1:46:13) than CNN today h CNN struggling my man okay so let's see if this guy what this I want to read this fire scenario thing Thomas festler from disclosure tonight would like to have you on a show so here's my email if you want to send me something I'll admit I haven't really responded to my emails today cuz I been so busy man but you can send that to me um let me see who this who this is we can vet him real quick guys yeah if you guys can respond to some of these people in the two my tweets as well with some of the evidence

(1:47:14) that would really help me a lot because it's too much work for me man uh disclosure tonight yeah this seems cool wellit that's a a lot of hashtags luel zando that's I don't like to see that oh oh oh yeah yeah yeah yeah yeah yeah I recognize this guy's face yeah have him um send me an email and we'll try to work it out reality is I'm pretty heavily booked uh through Thanksgiving at least but we can make something happen I don't think news nation is

(1:48:18) going to reach out to me because one of the guys from news Nations DMD me and uh I pretty much told him to be cautious of Ross kohart I said that I said I had evidence that Ross CER had seen the videos and has been saying that uh he thinks that they look like the VFX and that uh uh what else did I say that he says he has nro contacts if if you have nro contacts which is National reconnaissance office and you're not familiar with the cers system then your contacts must not be pretty good we were able to figure out

(1:49:00) the cers system with just Google hey guys let's figure out how satellites look okay well let's just do cbers let's just do cbers and then let's just click the top link that shows up oh look missile defense Battlefield awareness missile War War tactical intelligence is this where we found the video too I think the video is in here somewhere too it's like it's the very top video video overview like I don't need contacts to know how the CER system works I can literally just look at this

(1:49:38) video that's one minute long see how it works look at this how can you claim to be a journalist and you can't even do this this is why I'm skeptical over as cart guys it's just it's not rocket science it's called being a journalist that's why I'm I'm a citizen journalist because I like actually research basic stuff wait let's look at this video Ash T what the hell is that oh I don't know I don't have I actually don't have a Facebook account is that why I can't watch this

(1:50:19) man uh asht is this the guy how funny would it be if this is if that guy's name was the guy that said that they solved MH370 with the cers system I mean look at this look at this this is

cool the second is missile defense it gives a tip and Q to the missile defense assets that are owned and operated by the missile defense agency oh this is Defense Agency then turns on or activates their their high sense assets and they turn on Fire Control Solutions so that they can shoot down any inbound missile where do they shoot the orbs

(1:51:02) from the third mission is technical intelligence and our partners in the Intel communities use the asset to characterize uh infrared events across the globe the last deliberate mission that that we do is Battle space awareness and so the combatant Commanders use it in order to to ensure that as there's an inbound missile they can notify their troops to get under barriers and other things in order to protect themselves an example of that is you want show us the video of it early 20ad air base look at this I mean this looks that's I don't up

(1:51:41) and was able to notify the combatant commander our troops guard use fire firefighters to the front line realiz for years to come we benefit from it our nation benefits from it single day honestly without the Trump picture I'm not sure we'd be able to solve this we might owe Trump actually without without this picture like I'm not sure we can solve this those clouds and the being super high resolution is basically the only thing that's able to prove that video is real with this along with this

(1:52:17) picture otherwise there's just nothing out there like they hide this information so well they're not going to put it in their promo welcome everybody yeah welcome to the rabbit hole everybody yes **Mick** West knows exactly what he's doing exactly what he's doing release the orbs okay so let's read through this real quick um then I'm probably going to go to sleep after this so this was 2018 uh maybe I'll just read it out for you guys like this is uh grade school the uae's official report says their

(1:53:04) investigation concludes with reasonable certainty the UPS fire started in the cargo hold um and moreover this was an element of the cargo contained that contained among others lithium ion batteries although the UPS Boeing 777 had very sophisticated fire fire cargo fire suppression system and cannot handle this type of Carnage unfortunately this incident happened during a Handover between Malaysian and Vietnam air conditions therefore there may be gaps in the radio Transmissions that may have helped explain how the lithium ion batteries

(1:53:40) down to 777 Captain Amir Who currently flies for United Airlines feels frustrated by Air Malaysia's initial response to the incident I was pleading with the Malaysian airlines to let the superpowers take over the search I warn them when they have small wind this is what is this once again I have to ask questions about including the large quantity of lithium batteries in the caros passenger cred was what was so urgent to the consignment of the passengers to put the Fatal wait that put the passengers at fatal

(1:54:16) risk Daily Star online includes this is nothing this actually what this still barely even talks about lithium battery fires weird oh he was talking about the US One God the mirror G

(1:55:25) how would this consume the cockpit area this is how it was ruled out guys because it's highly improbable on board MH370 with a comparatively short flight duration and under controlled conditions what does that even mean what does that actually even mean they said the flight was for eight hours what do controlled conditions mean this is the weirdest thing ever how is that ruled out so it definitely was lithium ion battery

(1:56:28) fire is there actually any evidence that rules lithium ion battery fire out like or is it just like literal nonsense is there any good articles about this like where does he actually claim it as opposed to like reading news articles about it no I don't think I don't think these drones are normally filming stuff that has to be an operation I just like calling them orbs because they're just orbs you know that's why I don't call them I mean I don't do they have any relation to other orbs uh

(1:57:21) these are all just like these might as well just be written by AI this is just rehashing the same crap over and over again yeah these small ones like these small like cell phone lithium ion batteries is way different than 221 kgr it was definitely a lithium ion battery fire this is like literally this is their argument for ruling it out a statement that makes no sense whatsoever well guys guess it wasn't a lithium ion battery because this was highly improbable on board MH370 with a comparatively short flight duration under controlled

(1:58:09) conditions this sentence just doesn't even make logical sense makes no sense whatsoever what none of this makes any sense why does this have to do with being on autopilot the flapper on was not down none of this makes any sense either so they just ruled this out because they claimed that the plane went into the South Indian Ocean that seems to be what they're saying here when the reality should be should have been that it didn't go to South in the ocean because it was a fire should have been the opposite argument

(1:58:59) right here's another incident here's another one the DU buai one does this guy actually like have any content that we can read 10mon old YouTube account yeah 10 us the name of the channel or something oh interesting so they're trying to claim it flew for hours on autopilot so really these pings is what basically everybody screwed everybody up now all they had to do is falsify a couple pings and everybody just goes with some fake pings huh I can't believe they were able to

(2:00:12) convince everybody that it wasn't a fire when it was like clearly was a lithium ion battery fire 221 kgrs this thing's just might as well been loaded up with a bomb absurd man the there's two cargo holds I mean this is just such weak I thought this might this person might actually give us some evidence but their analysis is just even worse there just did nobody like do any real journalism it just really makes me wonder what's wsg I mean I'm not like into leite speak okay well this guy's analysis

(2:00:52) ended up being kind of whack I thought we might have something fun here okay um probably going to go to sleep been a long long day oh okay I am AI I am AI Jesus is this it no this is 60 Minutes Australia a year ago 9.2 million views o I am AI oh what's good wsg means what's

good wow okay guys I might be too old for that I'm I'm not sure uh we're going to see if we can find this channel I might need a direct link to this I'm not sure how to find

(2:02:03) it what is this why why are people what is this liked you until I saw this comment what did I say okay so this is if you tell me to grow up then you're instantly getting instab banned you're never going to be able to make comments on my post ever again guys just act like an adult Jesus Christ me not wanting to promote somebody else's content is not not needing to grow up it's quite the opposite what do we got here I don't get it I am AI is this what am I looking for the right thing here this looks like this

(2:02:55) can you give me the name of the thing that you want me to watch yeah kim.com talk to him today he's he's on board oh asking AI what happened okay thanks man appreciate it yeah kim.com man pretty sweet okay what's this okay here we go guys what the heck is this what why does this video look like this 37 the Malaysian Airlines flight 3 wait is this going to be trippy as heck how can you not full screen this does this come from like Tik Tok or something why does some videos look like this how do you how what is

(2:03:40) this yeah you my younger audience needs to teach me how the internet works took off from qua lumur on the 8th of March 2014 and entered a dimensional portal leaving no trace of its whereabouts in the year 2560 the plane and all its passengers arrived in Beijing airport but unfortunately all the passengers were dead due to the time and space travel that's not how that works by the way guys if you travel to the Future you don't experience that amount of time travel so this was this was actually getting me somewhere till the last

(2:04:20) scientifically wrong what happened to Malaysian Airlines flight 370 I got too much Boomer in me I'm not quite Boomer but I've got like too much Boomer in me you know it's like there's a little too much Boomer in me the Malaysian Airlines flight 370 took off from quala lumur on the 8th of March 2014 and entered a dimensional portal leaving no trace of its whereabouts in the year 2560 the plane and all its passengers arrived in Beijing airport but unfortunately all the passengers were dead due to the time and space

(2:04:58) travel ask okay well that's weird that's just weird yeah okay AI is interesting um let's see real quick what we got to do tomorrow I can say I've never watched a YouTube video where I felt like I needed to go make a comment about like the person who made it I just don't watch the stuff it's something I'm not interested I don't know I don't really understand the internet though wow we have 131 people watching well thank you guys all for watching here tonight I think I'm going to close

(2:05:39) down the stream for tonight uh this was a fun time working on stuff let's see what we got tomorrow um I was going to call the lawyers of the families that are suing and see if we can get that changed based on the new evidence that we have where they were ruled against it happening in America where it should have been tried in America given the evidence that we've seen because the videos that we are seeing are um are American assets which implicate the US government so to me just the fact that the videos show us

(2:06:12) assets uh indicates that these these lawsuits should have happened in the United States that's honestly probably enough information I still need to call the **Foya** office to uh we have to appeal our **Foya** and I mean they're going to reject it no matter what we do these were some people that people told me to reach out to although Bob Greener we're already talking to tomorrow oh we didn't even make the thing for Bob Greener yet oh boy uh we might have to make the thing for Bob Green here guys H you know what I'm going to just

(2:06:47) have to do it in the morning I feel bad but yeah sucks first thing tomorrow morning I'll make the thing for Bob Greener I'll post a bob Greener interview uh I'll make the the zoom link for it it's at 1M eastern time I'm just too tired right now got the strange article we wanted to post the one that has all these theories in it including the aeronautical black hole we've got more salvator Pi science I to add the chapters to the salvator Pas interview uh should I link the salvator Pas interview I think I might link the

(2:07:26) salvator P interview real quick in my Twitter wow it's already got over 100 views and I didn't even like promote it or anything o my camera is so bad just take a look okay um to be honest with you you know what I guys what I want from Twitter or YouTube is I want to get big enough so that we can have MH 370x be like one of those special tags or whatever they call it I wish can someone also teach me how to

(2:08:42) upload directly to Twitter none of these buttons let you upload like this one let me upload an image although it says media so that should be the right one what I'd like to do is upload directly to Twitter oh you can drag and drop it in really you can drag and drop the file into this one sec yo if that's true wow let me try

(2:09:48) this out real quick let me just test this holy crap that's all I had to do who just told me that Noah holy [redacted] Noah wow wow wow Game Changer no that's all I had to do the whole time oh my God man okay guys should I link it or should I upload it directly damn that's that's amazing I didn't know you could do that huh huh wow think I'm still going to link it [Music] though I don't know if I want to do that problem is I kind of want to edit it I

(2:10:53) think I'm just going to link it for now Rumble works like yeah I need to upload to rumble too [redacted] do I want to use hashtags here what hashtags would I use science yeah they SC is that scientists um engineers yeah the algorithm is going to throttle the hell out of this but it would bring more people to my YouTube channel that's the tradeoff

(2:11:57) that's the tradeoff guys I think we will directly upload it I think you guys hit the or wait I think you guys are right I wish I kind of want to clip it or like edit it first though I think I think I'll put no you don't want to put the link there I want to put the link in the reply like this maybe this is why I'm glad I talk to you guys

(2:13:15) yeah oh man it's going to upload um yeah cuz if I post the link it's going to throttle me it's the link that's what's throttling it I think the direct thing like this will work really well what what uh what do I say about salvator P yeah we're definitely directly doing it yeah doubled the

amount of Subs since yesterday pretty amazing I hope we get enough hours or whatever so I can change my link to be MH 370x that'd be pretty cool um

(2:14:54) what this where's my phone I got to see I think December 3rd is the day we are doing a followup yeah December 3rd Don upin 25% yikes wait does what do you mean salvator in what language does Salvador pas mean country savior does it really I honestly don't I'm not trying

(2:15:59) to do this for money anyway it's cool that we would get a lot of followers or whatever the heck that means but um moreo just doing it to get the information out there so I think I prefer to just directly upload stuff like this this was a zoom link as well actually seems pretty good oh in Spanish H he's Romanian though yeah if you experience time dilation the way time dilation works you don't experience it the same amount of time that passed time is relative to where you are in

(2:17:03) SpaceTime that seems weird but it's true so let's before we go while we're waiting for this cuz we got 30% to go there's probably a time dilation explainer video somewhere that we can watch and maybe I won't get copyright stried let's try not to get copyright stries ripe Tomatoes melted mozzarella and freshly made Green Goddess dressing what's this I can't skip those details can't skip this what if I got copyright strike uh by Panera in describing our environment the passage of time enables

(2:17:47) us to qu okay I better I better commentate otherwise at we might get copyright stri a single clock for the entire universe time is absolute time isn't as simple as we might believe yeah time dilation everybody get ready here we go arriving at 9:00 a.m. and leaving at 500 p.m. and our perception of time does not vary during that time though it seems to slow down before the weekend at the turn of the 20th century a discovery radically shattered our previous understanding of Relativity time is no longer absolute but relative

(2:18:25) yeah each item not absolute time and clock and two so that's a good way to put it guys time is not absolute time is relative and each every thing that you see every atom has its own clock think like that previously synchronized clocks on different trajectories across space can meet again and show different times what is time dilation time dilation is the seemingly strange phenomenon of time passing slower for an observer who is moving relative to another Observer depending on their relative motion or positions in a

(2:19:01) gravitational field this is how it works time is a relative concept that as absurd as it sounds is a result Einstein's theory of relativity we're used to speed being relative in everyday life for example a car traveling 60 M or 97 km an hour relative to a stationary Observer would be observed as moving at 120 M yeah we're getting off though right after this we're just Wai upload this kmph by a motorist heading in the opposite direction at the same speed this same phenomenon also affects time depending on an observer's relative

(2:19:41) speed or position within a gravitational field time passes at a different rate for that Observer than for another Observer this effect known as time dilation is only noticeable under

certain circumstances although we are constantly subjected to it at a low level time dilation is a consequence of Einstein's relativity in which time is not as absolute as it may appear the rate at which it passes varies for observers in different frames of reference Einstein's starting point was that light has the same measured speed

(2:20:16) irrespective of the observer's motion this seemingly innocent assumption leads to the inevitable conclusion that moving clocks run slowly this phrase is frequently used to describe time dilation but it's a little deceptive since it places too much emphasis on yeah Danny Jones is going to upload it that was kind of a joke guys he's trying to build up hype for the video you know which I don't blame him he wants more people to watch it I I don't mind more people watch it it's not going to be bad

(2:20:44) for me clocks which are only relevant in the sense that we use them to measure time however rather than seeing time dilation as a clock property we should consider it an unexpected reality about space and time the theory of relativity is divided into special relativity and general relativity and time dilation features in both the principle that the speed of light is I'm afraid of getting copyright strided so I'm just going to pause for a second uh but you need to understand Einstein's general relativity

(2:21:15) relativity and special relativity same for all observers is crucial in special relativity according to Boston University physicist Andrew Duffy one of its consequences is that two observers moving at constant speed relative to each other measured different times between the same events however the effect is only detectable at speeds approaching the speed of light 10 years after he proposed special relativity Einstein expanded his theory to include gravitational effects in general relativity however time dilation in this

(2:21:50) hypothesis is determined by the strength of the local gravitational field rather than the speed of travel we currently live in a modest gravitational field on the Earth's surface so this is important right our field our gravitational field is very modest so we are experiencing time dilation we're all experiencing time at a very similar rate because we're all on the same planet with the same amount of mass around us we're already experiencing time dilation without even realizing it additionally

(2:22:18) the strength of the effect changes when we move up and down within Earth's field gravity is weaker on the top floor of a tall building gravity is weaker in the top floor of a tall building than it is near the surface so time flows at different rates what you need to remember is the more mass the more gravity of gravitational effect the slower time will flow so if it's hard to understand think of it like a black hole so a black hole move has a ton of mass so that means that there's a relatively

(2:22:52) slower flow of time the less mass the faster flow of time so the further away you move from the earth the faster your time's going to flow even if you take a small object the part of the object that is further away from the Earth is going to move faster than the part of the object that's closer to the earth now what does that mean so even if I were to take take this uh let me

see how you guys can see this yeah this licorice thing the part on the top here is going to be flowing faster than the part on the

(2:23:27) bottom so what does this mean this means if I let it go it's going to curve towards the mass of the Earth because the top part here is moving faster than this bottom part so that's what's going to happen now what's happening there is that both objects the candy is moving forward in time and and it's moving forward as the Earth is moving as well because the Earth is moving rotating as well it's like moving in space as well and so what's happening is as time flows they're converging on one

(2:23:59) another then on the ground floor so this is why if you guys listen to me in spaces this is why you will have to listen to me when I say time is a fluid symmetry that's what I'm referring to to referring to you have to think of space and time as a liquid that time is Flowing differently regard depending on how much Mass is around time dilation effect is similarly weaker higher up the further you are from the Earth's surface the faster time passes although the effect is too small to perceive with

(2:24:29) human senses the time difference between different altitudes can be measured using extremely accurate clocks a spectacular example of gravitational time dilation is the region around a black hole which has stronger gravity than earth NASA has considered what would happen if if a clock was placed 10 km from a black hole with the mass of the Sun the clock would take yeah so if you put a clock near a black hole it's going to go slow roughly an hour and 10 minutes to show a difference of one hour when view through a telescope from a

(2:25:05) safe distance one of the most perplexing consequences of time dilation is the twin paradox in this hypothetical experiment of twins one identical twin lives on Earth while the other twin travels to a far away star at speeds approaching the speed of light when they reunite later the traveling twin has aged significantly less than the one who stayed on Earth thanks to special relativistic time dilation the seeming Paradox arises from the erroneous belief that the situation is symmetrical in other words you could say that the

(2:25:39) traveling twin is stationary relative to the Earthbound twin implying that the Earthling would have aged less than the traveling twin however this isn't the case because the situation isn't symmetrical when special relativity talks about relative motion it means Motion in a straight line at a constant speed that is not the case in this illustration because the twins are together at the beginning and end of the journey the traveling twin must Accelerate from a stand still to top speed then turn around and head back in

(2:26:13) the opposite direction before finally decelerating to a stop these phases of acceleration and deceleration introduce general relativity because they have effects similar to those of a gravitational field when the math is done to account for this acceleration it turns out that like time travel the space fairing twin does age more slowly than the Earthbound twin if you like this video please consider subscribing and click Bell so you do not miss any so that's how time dation works right Einstein pseudo science uh yeah Einstein's the probably

(2:26:53) smartest person that's been on the planet in last 100 years so definitely don't dis Einstein unless you want to discredit yourself pretty heavily science is not a matter of getting everything correct science is a matter of uh Discovery right Einstein means one stone sure uh Einstein did more for science than anyone probably maybe on the history of Earth okay anyway no need to talk about it oh Tesla yeah Tesla's pretty that's interesting kind of want to look about Tesla we can take a look at this

(2:27:43) tomorrow I'm too tired to do it right now but you guys have a good night uh thanks for hanging out and have a good one have a good night guys tomorrow we'll take a look at more stuff it was a big day today uh we will try to post some more content I'm going to see if I can get some video stuff created I know there's lots of people asking about video content short short content that they can share uh I know you want it I know I'm going to try to get video set up where I can see clearly oh yeah heck

(2:28:14) yeah thank you uh JK Philly fan for setting this up JK Philly fan made this for us so we'll get Bob greener's fa in here tomorrow add it his thing in here and then we'll have this ready to go for tomorrow thank you very much JK Philly fan for setting that up for me we'll work on the B uh oh hey ber eye what's up my dude we'll talk soon berie um tomorrow Bob Greener 1 pm Eastern I will go ahead and get this ready to go for tomorrow and we'll be set looking forward to seeing you guys I will

(2:28:48) promote it first thing in the morning as well yeah thanks ROM I'll take a look at the emails as well I'm super far behind on the emails I'll try to get to them peace everybody have a good night

MH370x Space - The **Truth** w/ Kim Dotcom - YouTube

<https://www.youtube.com/watch?v=4u7E6M0y7AA>

Transcript:

(00:01) hey what's up guys we are going to stream this uh space live let me see if I can get it going how does it take to get this turned on how do I how do I turn this on how come I can't join this there it is it will let me join there we go see what we're going to do here first hey what's up

(01:10) everybody hey a can you hear me testing testing okay mic's definitely working hello good evening yes I hear you awesome can you make me co-host or is it uh does that work here y just yeah no problem welcome everybody who's jumped on as well this is Ashton Forbes this is our Twitter space I'm also going to be streaming live on uh YouTube same time so you can find my channel on YouTube if you want to follow there JX Aston we are going to be going over the MH370 videos in the case and answering questions and having discussion about

(01:49) everything related to this case uh I'm going open book so you can ask me anything that you want to ask me here today we're going to have some pretty big guests I think joining us here that they've been reaching out so that should be pretty awesome as well look forward to chatting with all of you guys here hang tight for just a couple minutes while we get this thing set up and ready to go I invited you uh you must watch in your message please oh I may have to switch over to my phone to do this hold on

(02:59) right can you try to give me a co-host one more time please there we go okay now I'm co-host we're going to try this out uh trying to stream this the right way we'll see if it works if not then uh I apologize for the people watching on Twitter or on YouTube I mean

(04:05) um so you can hear me okay everybody on there okay now I'm co-host we're going to try this out get started here just a minute trying to stream this right way we'll see if it works if not then uh I apologize for the people watching on Twitter or on YouTube I mean um so you can hear me okay everybody on there we're going to be getting started here in just a minute okay can anyone thumbs up if you can hear me real quick X or anyone else can you guys hear me okay sweet you guys can hear me okay I'm G have to try to do this a little

(04:54) bit differently uh just to make it work while I'm streaming so once again welcome here to the chat or welcome to the the space thanks X for having me on here uh I also want to go ahead and thank all of uh the people that have been supporting the case recently especially kim.

(05:15) com who just joined thank you very much kim.com uh ex alert if we can give kim.com co-host just in case anything goes wrong I'd appreciate it awesome so if you are watching on my YouTube I'm going to be sharing videos as well that you can follow along with what I'd like to is first just talk a little bit about the case of MH370 the what happened what the official narrative is and you know why I've gotten involved in this and then you guys can kind of jump in and ask some questions potentially and we kind of let it organically develop so you know and if anyone uh

(05:47) kim.com has co-host as well has any questions feel free to Jump On In he and I had a good discussion this morning where we talked for a little bit about the case and what's going on with it so if you're not familiar oh hey Kim go ahead if you want to say something okay awesome appreciate that man so I think we're going to start by going over the overview of the situation and so when we're dealing with MH370 this is a plane that took off from qual lur that was headed to Beijing now if you're

(06:26) watching on my YouTube I've got an animation here that's playing as well now this plane takes off at around 1642 UTC so this is I believe 1242 in the morning and at about 40 minutes into this flight this plane goes dark a lot of people don't realize that there's really multiple events that happen with this plane when this plane initially goes dark it's not that it gets shot down there and that's the end of the incident that was really the beginning of what happens with this plane and

(06:58) there was a lot of obfuscation in the initial case right afterwards it made it very confusing as to when certain events happened with this plane so 1721 this plane goes dark over the South China sea now one minute before that there's a communication that was officially released weeks later uh May that should be days later but at least a week I think where the pilot communicates says good night Malaysian Airlines flight 370 this is the last communication so 64 seconds after that the entire plane goes dark now the

(07:30) official narrative was very confused at this point they searched in the South China Sea for the plane they then claim later on a few days later they have this radar data this military radar data that shows the plane going back over the peninsula of Malaysia and then out into the Andaman sea through the Straits of Malacca this is very odd because you would think that they have this radar data they should immediately know that this plane did not crash in the South Indian Ocean they end up searching with 42 planes and 30 9 boats so this is

(08:01) important because if there's a crash or a debris field we have plenty of boats and planes that would be able to see it interestingly enough and I'm going to kind of split to get group together that the various evidence here at this point in this flight path while this plane's over the South China Sea at 1721 UTC there's a witness his name is Mike McKay and he's sitting on an oil rig 300 miles away on an elevated oil rig just far enough away where he can see this plane very low on the horizon because it's at

(08:31) cruising altitude probably 35,000 feet or above and he sees the plane on fire his sighting gets misreported as claiming that he sees the plane crash but in reality he doesn't see the plane crash he just assume the plane must have crashed because he sees it so low on the horizon where it looks like it's just above the water he may even been able to see the Reflection from the water itself of the plane allowing him to see a little bit further but his sighting only lasts about 10 seconds where he sees his

(08:56) plane on fire then it's not on fire anymore this is going to be indicative of the scenario that we are going to be putting forth today of a lithium ion battery fire 221 kg of lithium ion batteries that were in the cargo of this plane so this plane what does it do next according to the military radar it turns around and it goes directly to Penang Langkawi International Airport now if you Google wired uh MH370 the first hit you get is an article about a potential electrical fire that would corroborate the emergency scenario that we see here now

(09:33) it doesn't talk about lithium ion batteries because at this point we didn't know if lithium ion batteries would have been the cause so in this situation here there was another there's a bunch of other uh Witnesses they're on this Coast in the South China Sea right along the coast in these little uh towns nine of them they report loud bangs at the same time Mike McKay hears the plane or sees the plane on fire this would be indicative again of some type of explosion related to the lithium ion

(10:04) batteries now the plane turns around and it flies for about 10 minutes to about 1730 UTC it's still over the South China Sea at this point and then we get eight more witnesses so

we've already had nine people on the coast to he bang Mike McKay sees this plane on fire and then it goes out and then we see eight Witnesses they fishermen on a boat and they see the plane flying extrem extremely low now this would be indicative that this plane had a depressurization event happened where the explosion of the batteries

(10:37) potentially cause some damage to the plane not enough to bring it down but enough of a localized explosion that they have to get people enough oxygen to be able to breathe another scenario could be that they need a because there's this fire happening they need to kind of get the smoke out of the plane fresh air into the plane that's just speculation but there was also communication at 1730 the same time these fisherman see this plane over the ocean on South China Sea another 777 pilot who doesn't want to be named

(11:06) mentions a communication that happened with the plane that he heard either the pilot or the co-pilot and a bunch of static and he doesn't elaborate anymore on what the communication was about this is important because it may mean that the communication was not lost for this plane it may be just that it was this information hasn't been released about any Communications there's more evidence that if you watch one of the interviews that was done with the Australian um it was an Australian woman that they interviewed the Malaysian

(11:37) minister of defense and he was acting minister of Transportation at the time as well he actually admits in this extremely sketchy interview that they didn't have identification of this plane which is very odd because how many unidentified planes are flying through your airspace when there's only one plane missing but even weirder he admits that they knew it was a civilian airliner and he admits that they they knew it wasn't hostile how can you know a plane is not hostile if it's unidentified if you

(12:06) don't have communication how can you know it's not hostile one of the major scenarios for this plane was a hijacking event if terrorists had hijacked this plane or even if the pilot had taken this plane and was flying it for a suicide mission you wouldn't be able to know it's not hostile unless you were talking to them this evidence indicates that what had happened here is most likely an emergency event most likely not a situation where they are host style and again the plane is going to panang laa International Airport which

(12:33) the wired article says that's the correct location to go in a fire emergency event it's got a very long Runway where you could Land This Plane so about 30 minutes later the plane went dark at 1721 1752 31 minutes later the plane is over Penang Lan kawi and the copilot's cell phone pings a local cell phone tower close to the island now the mystery here is why does this plane not land we know it doesn't land because we have radar data that shows it going out into the malaka Straits into the andam

(13:07) and SE the question here is did it not land because the landing gear was damaged if it was the next thing you're supposed to do is you're supposed to land on your belly you're supposed to just take the chance land on the land on your belly now I would argue if there's a bunch of fuel in your plane you don't want to do that it's going to end up very badly if you try to

land on your belly with the fuel most likely you're going to explode You could argue that they might have wanted to dump the fuel first ultimately

(13:33) this is going to be the Pilot's decision in terms of what they should do the next thing you should do if you can't dump the fuel if you can't land on your belly is you're supposed to try to land in the ocean now since we've established that it's almost certain that they had some communication with this plane due to the minister of defense's contradictory statements we could argue that at this point the US military has gotten involved and the reason why we can say that is the the Malaysian Minister of

(13:58) Defense also argues about why he didn't send up fighter jets this has been a very contentious point on the same interview the interviewer asks why they didn't send the fighter jets up and he gets very defensive and he says well are you going to shoot down the plane and she goes well you said that not me and that's very unusual why he's turning the back around on them then she responds well no you would send up the the fighter jet to watch to watch the plane to figure out where it goes especially

(14:26) if you have this Rogue 777 flying and he asked well why would we send up a military plane to do that I mean I don't know what other kind of planes are you going to send up there you going to send up another uh commercial plane to track the plane doesn't really make any sense so it's very unusual why they didn't send up this fighter jet to track the plane and potentially if it is hostile to literally try to shoot it down as opposed to have a bunch of other people potentially die if they try to crash it

(14:49) into a city or a building regardless they don't send that plane up so this would be indicative of the US government getting involved and the US government potentially might have said hey this is a rendezvous point over in the nicobar islands where they may not even tell them what they're going to do they may tell them hey you can come land in the water here because again if you're going to try to land in the water this is now 1:52 a.m.

(15:17) this is the middle of the night there's no sun up the Moon is down we checked that I mean it's pitch black outside if you try to land a 777 in the ocean it's going to rip apart so now you have to have people nearby uh you know a support system in the middle of the night to try to get people out of the water the people that do live from that type of event also keep in mind that a lot of Mainland Chinese Nationals don't learn how to swim in the west at least in America a lot of people learn from a young age it's not true in other

(15:47) nations especially in in Asia and in China specifically so what this means is a lot of these people maybe the whole flight was doomed at this point maybe there was no way for them to get onto the ground so this is what helps support the idea that this official narrative might be a lie now whatever happens here and why it doesn't land a panang this flight now starts flying out towards the Mala Straits now there's some really weird stuff that happens at this point the official narrative they don't release

(16:16) the data for the radar for weeks they also don't release these imrat pings for weeks if not months which if you're in a situation where this plane is missing maybe it crashed into the ocean you've got people on life rafts you need to get out there right away I mean there might be people out there alive who you know need to be saved or something like that so why are you not releasing this data immediately like the next day you should be releasing this data so if you look at the reports of when this plane went missing if you guys

(16:46) go do a Google Search and you just search from the date ranges right around March 8th and March 9th 2014 on when signal was lost with this plane it doesn't say 1815 UT or 1822 UTC which is what supposedly the released radar data says it says 1840 UTC 1840 UTC is very important because we think that's the time and location of our videos happening that also happens to be the time and location where this plane supposedly turned into the South Indian Ocean so up until this point we've got this plane flying into the

(17:24) Andaman sea in the Mala Straits towards nicobar islands and this is all the official data and the official flight path at this point this is where it starts to get sketchy this is where they start to change the time and say oh no we lost contact at 1822 or 1815 which would be that you're potentially trying to cover this up and throw people off of the real scent now lucky for us there's an actual witness so when we were investigating we were looking for satellites that might be able to take this video and we come

(17:53) across USA 229 and initially I was trusting all the data I thought this might have been gone to the South Indian Ocean so we find this sat this satellite satellite pair two satellites right next to each other we say oh we're looking at two videos in our original video here you know it must be that this is the satellite it has the right payload um but it's in the wrong location at the wrong time in the South Indian Ocean it's there at like 1815 UTC and we're sitting here wondering how could the plane get there you know did

(18:20) it just fly over Indonesia doesn't make any sense and then we realized that no the real location of our coordinates in our satellite video is the nicobar island it's the exact location where this plane supposedly turned into the South Indian Ocean and if you follow the satellite as it gets up there and for the people on my YouTube watching I'm pulling up the Passover detail right now you can see that almost exactly 1839 or 1840 UTC these two satellites are looking right down at our coordinates in the in the

(18:50) nicobar islands right where this plane supposedly turned in the South Indian Ocean so please jump in oh yeah yeah if they want to watch hold on let me see what I can do about that real quick yeah here we go and we're live here so let me figure out how I'm going to post this um I'm working on two systems at the same time so give me just one second to figure this out I'll post this in the nest for you guys and that way people who want to watch can take a look and watch as well copy text okay tell me if I don't do this

(19:45) correctly I'm not great at this stuff here so I posted that in the chat and now I'm going to share it right is that how it works sh okay I think I just posted it to the nest take a look and see if

you guys can see up there so we have this satellite the right location so then we said Bingo this is our Smoking Gun we've got the satellite in the right location the minister of defense on day five of the press conference he actually admits he gets asked there are us spy satellites in the region have you been in contact

(20:19) with them his response yes yes this indicates that there a we know there spice outs in the region we're looking at the flyover of them and that they were in communic a with them so this would mean that potentially they had to have had the spy satellite data they had to have at least known the plane was here and to date they still haven't mentioned that they had spy satellite data that that proves that we have this plane in this location here so now going back to the flight path I start looking around and thinking okay I'm going to

(20:46) start digging for more data the first thing I find is there's a witness Katherine T she's actually in the exact location in the nicobar islands at the exact time everybody agrees she's there she's going on a boat with her husband and a crew member going from uh India to puket so let me switch back over to my flight path here and we can see this boat if you're watching the flight path in the YouTube video you can see this boat sitting here now Katherine T sees this plane for about 5 to 10 minutes she

(21:20) sees a glowing orange plane with no navigation lights on it the no navigation lights would be uh consistent with the fact that this plane didn't have any power the glowing orange uh the glowing orange Factor would mean that this plane is fighting a fire where the hon gas has created a chemical reaction that's releasing bromine gas if you guys look up this bromine gas you will find out that it's a very orange kind of glow to it and her actual picture she did a Recreation on her old blogs that we found it looks almost identical if not

(21:55) identical to a hallogen lamp bromine is one of the three cogens so this is where it took us a little while to realize why is this playing glowing orange when we realized oh this is actually consistent with a fire in fact a b777 fire suppression device washes up in the malds like two weeks later March 25th about thereabouts and it's a very very unique looking device it's a circle with some uh tubes coming out of it and it's exactly consistent with a b777 it even has a visible serial number on it the Maldives

(22:30) is intentionally excluded from the search the Minister of Defense the same one that is been issuing contradictory statements he just issues a statement that that's been ruled out without explaining any way how that it could not be from this plane so Kate T here on the boat I asked her I did a personal in in like interview with her over the phone and she was not very familiar with the case at all like she had just been cursy kind of you know listening to the stuff that I had told her in Center um I asked her

(23:00) what time do you remember that your sighting was she tells me 1840 UTC and then she tells me that she felt pressured to change her time by the experts because they were trying to get it to fit within their narratives so she sees this plane flying very low she says she saw two other planes that had lights on them that did have navigation lights that might be the awax that

the French dad talks about in the Netflix documentary in the Netflix documentary he's told and I believe this comes from Florence to Changi that the

(23:33) Americans know exactly what happened and they had two awx in the area these awx potentially are signals intelligence planes that are tracking this plane that are communicating with our drone that we see in our video and the satellite that we see as well in fact it may be collecting information using the cbers system to create a 3D Battlefield map in order for tracking the purpose of cbers is actually to track missiles boats planes intelligence and Battlefield awareness so she sees this plane flying low and it's actually descending she

(24:08) sees it with dark smoke coming out of the back of the plane as well the way she describes it seems like maybe the engines might have had problem but really this would be consistent with a lithium ion battery fire where there's this very dark smoke that comes from these lithium ion batteries so as she sees it she sees it descending she sees it coming from the general same direction as the plane is agreed upon traveling in the same location where everybody agrees the plane was I can't understand how all

(24:37) these Witnesses have been discredited we again have Mike McKay who's out on that oil rig sees it happen we have nine Witnesses along the coast hear the loud bangs consistent with a minor explosion we have eight Witnesses who are in a fishing boat that see the plane flying low 10 minutes later consistent with the the pilot trying to give them oxygen we have the flight path that's going to the nearest airport where you would try to land in emergency scenario everybody's corroborating the same thing and then we

(25:02) have KT who sees the plane probably just minutes within the time of our videos happening she sees the plane circle around her boat now the thing about this is her boat starts drifting because she's watching this plane and she doesn't know what she's even looking at initially until she can make out the plane I ask her I show her the picture of the thermal and I say is this picture of this thermal consistent with the plane that you saw and she says well it's not green and I laughed cuz I realized that she hadn't been watching

(25:34) the videos hadn't been following at all with the case right which to me it gave more credibility to her she didn't know that what I was showing was a thermal overlay she says well it was orange and then I say okay well don't worry about that what about the shape oh the shape is the same she says so to me I find her sighting very credible and now the issue with the which direction it went around her boat it did accom counterclockwise Direction on our boat it was recreated by some experts that looked at the

(26:02) automatic GPS signals and the thing about it going behind the boat is that this boat was drifting so we don't know exactly where the plane was when her sighting happens as it's turning around her boat but we do know it's the same direction counterclockwise movement now the part that people um have the biggest issue with is that she says and she even says this in her original blogs that she went inside the boat at this point and comes back out and she she says to me that she went to go put the kettle on which apparently is

(26:31) a very British thing that people do now it's the middle of the night she had been fighting with her husband this is what she told me as well consistent with her old blog posts and that she was in a bad mood around it so she watches this plane for a little bit she goes put the kettle on she comes back out the plane is gone she presumes based on what the experts had told her that this plane must have flown into the South Indian Ocean she told me that she also sees a glowing orange Halo out there but no plane anymore

(26:59) so it's possible at least from my understanding that what had happened here is that she just missed the events of the videos by probably just a minute or two and she doesn't see any orbs I asked her she doesn't see any other boats around she says that if there were boats around they wouldn't have had their lights on it was very dark pitch black and so now we have a scenario that I think is our scenario up until this point now a lot of people say well what about this iMat data this ping data the

(27:27) official narrative says this playing win into the South Indian Ocean I went ahead and I looked at this ping data cuz I don't know how many people have actually even looked at it and if you're watching my stream I'm going to pull up the ping data I found it on uh this one of the independent group experts uh blogs Victor of radiant physics you guys can go find it for yourself he's got a blog post where the chain of custody of this iMat ping data is actually worse than the chain of custody of our videos it went from the

(27:57) Malaysian government who got it from iMat who gave it to the families and then the families give it to Victor and now when I look at this data my background is in it I work with Excel spreadsheets all the time when you load them into databases they are very very particular if you have even one row off your uploads are going to fail so I start digging through it thinking okay let's take a look at this data and I started scrolling through the data and there's hundreds of data every minute where they send back a signal there's

(28:32) perfect data going across every every row and every column in here you scroll down from the when the flight takes off there's no issues until you get to 1839 UTC at 1839 UTC the channel changes one of the columns just has zeros going all the way down another column just is blank for dozens of rows it just keeps going at 1839 UTC and then after 1839 UTC the next ping after 1840 is 1941 an hour later there's only two rows of data for 1941 the next ping 2041 two rows of data again 2141 two rows of data again

(29:15) 2241 two rows of data again and there's a clear pattern in it the channel just goes 104 104 104 104 I look at this data and I wonder how could I have hundreds of rows of data up until 1840 UTC and then from 1941 to 2313 there's 10 total rows of data for 5 hours we have hundreds of rows of data for the first hour and a half two hours and then we have 10 total rows for the next 5 hours the only things that I can come up with here is that something happened at 10 1840 UTC there's nobody who can tell me that this looks normal I

(29:54) confronted Victor on Twitter about this like over a month ago he couldn't explain it to me he just kept yelling it looks normal in all caps which was very unusual to me um now when I

look at here I think that either somebody added these rows in here or we have a situation where this plane didn't go where they think it went something else happened at this point maybe the data is correct but it's being misinterpreted I'm not sure I'm not an expert at um you know how to interpret the pings what I do know is

(30:21) these pings are supposed to indicate how far away the plane was from the satellite they can't tell you exactly where the plane was and the reason for that is that it only pings one of the satellites this I satellite that's essentially over the Indian Ocean it should have been pinging the P satellite which is over by Japan for some reason mysteriously it's not because if we had two pings we'd be able to know exactly where this plane was this is why we have an arc and this is why they search along

(30:52) the arcs because we don't know necessarily if it went North or South but we're pretty confident didn't go north because if it went North it's going to go through a bunch of Radars it actually should have gone if it went South it also should have gone through a bunch of Radars but it didn't or at least it wasn't seen by them so something anomalous seems to happen at 1839 I might be the first person to have reported on this I would recommend you guys take a look where you can find this is on the Su log tab of

(31:19) the official IMAP ping data the official iMat employees including the CEO cast doubt on the data there's reports that one of the engineers quote unquote thought that a hoax was being played on iMat when they reviewed the data the CEO when they released the data weeks later if not months later said that the data is good as long as it hasn't been spoofed why are these people issuing statements against their own data if they believe in it nobody has corroborated the iMat ping data so the problem here is we don't have any radar

(31:52) data after a technically 1822 UTC we're fairly confident the plane gets the 1840 UTC and the nicobar islands at our videos but it's not going down it's not going to the place um it's not going south now what they say is now that this has been two hours the plane they say runs out of fuel down into the South Indian Ocean the problem with this is this is six more hours of flying so now you've had to incapacitate everybody there's no indication of pilot suicide anywhere on this route if you

(32:28) look at the German Wings incident which happened in 2015 where the pilot crashed the plane into the mountains that happened 10 minutes after the pilot locks out the co-pilot if you look at ua93 where the crew where the uh Brave passengers were able to break into the cockpit and stop the terrorists from doing whatever they were going to do with that plane that happened almost instantly too they crashed the plane right away as far as I know there's no incidents where a suicidal pilot has ever gone flying on an 8- hour joy ride

(32:59) there was nothing wrong with the pilot everybody supports him they put out a bunch of disinformation kind of to claim he was like having problems or his wife didn't support no they all supported him the all his co-workers supported him um the officials even all supported him there's nobody who hasn't supported this guy he had 18,000 flight hours he was a trainer all the

people he trained loved him as well he had a simulator he loved flying this simulator route they try to match the route mh150 to Jetta which is in the Middle

(33:30) East and they try to claim well since qual lur goes up to the Northwest up there that that's similar to this route where the plane goes through the through the malaka Straits the problem is he was actually scheduled to fly mh150 on February 4th the the flight paths these points that they try to say is a suicide route happen on February 2nd February 3rd one day before he was scheduled to fly on the official flight they basically just manipulate a fake story based on him actually just practicing a route that he

(33:59) was going to go on so now we've got this plan supposedly going on a 6-hour joy ride South Indian Ocean I looked at this whisper uh data because early on I thought okay this whisper data has to be correct um and this whisper data tries to re use the pings to and like the capabilities of a 777 to use these um radio signals that are old and dated from 2014 that supposedly come from a lot of places around the world try to pick up where exactly this plane flies to now the problem with this is that this is essentially like trying to track

(34:34) somebody who's wearing a white shirt where everybody's wearing white shirts it's kind of like reading the tea leaves so is as long as you have like accurate data and you know what you're following it works but this whisper data never made sense to me even early on and I was always skeptical of it because it claims that this plane hugs the coast of Indonesia which is not how you avoid radar and then it gets down towards the south side of Indonesia and they claim it makes this cut back and that they claim

(35:04) this is in the whispered by the way that in this cutback it's like making this turn because it's looking to see if there's somebody behind it you can't infer this kind of information from some pings that's not kind of information you can infer and then it also claims that all of a sudden down here in the Indian Ocean before it goes all the way South that it makes a 25 minute holding pattern what why there's no suicide routes where somebody's going to sit there and make a holding pattern back

(35:30) then when I thought the data was legit I was thinking okay they had to be in communication with the US government they're trying to figure out where to go because that makes way more sense the reality is they just didn't have any pings that made any sense any of these radio pings and they were just making up something at this point this whisper route data is complete nonsense and the people that supported it I'm just calling them out they have no idea what they're doing then the reason why I can

(35:53) say this with confidence is that we can say conclusively this plan plane did not crash into the South Indian Ocean we have the evidence and here it is first of all no debris field found you have a 777 crashing into the South Indian Ocean and it's not leaving any debris field this is not possible for a 777 this is a huge plane you can go watch videos of planes trying to land in the ocean and they rip apart this is not like trying to land in the Hudson River Sully solenberger is actually a hero for even being able to get that plane to to land

(36:29) in one piece a lot of people argue that that was a miracle and that's on a very narrow window or very narrow river that doesn't have a lot of waves on it the ocean is not the same at all again they searched with 42 planes and 39 boats we have satellite we can prove the satellites were over the region that was that USA 229 is only one of them we can show the cers system has satellites everywhere they scan in the entire world all the time even back in 2014 if this plane had landed in the ocean and broke apart this debris field

(36:59) would be visible from space the US spy satellites would have seen it the very next day in fact that's exactly what happened with the Wagner Russian guys Jet and that was a very tiny plane that just showed that they had satellite pictures of that the next day when that guy's plane was uh you know whatever that happened with it you know we won't speculate on that this was the most expensive and extensive search in history and the official search didn't find one piece of the plane not above water

(37:27) or below water they even sent subm all over and they didn't find anything underwater they searched all along the seventh Arc where they say this plane ran out of fuel they didn't find any black boxes either these black boxes work up to 20,000 ft depth the ocean's not even that deep under there so this idea that this plane uh you know crashed into the South Indian Ocean doesn't make any sense you would have heard the black boxes we would have found those black boxes this this is now 9 years later and they

(37:58) didn't find anything there's acoustic detectors too several of them interestingly enough Sosa system this Sosa system the one that heard the Titan sub pop they kind of gave away the secret here because the Navy lied about it for 5 days they knew that this Titan sub popped and imploded right away they heard it they let oxygen counters run on CNN every I'm probably probably all the TV stations I don't watch cable news anymore but I heard there was oxygen encounters running all of them and then 5 days later they admit oh yeah we heard

(38:31) that and we're going to go ahead and send our subs to go pick up the debris and they picked it up in like one day they knew exactly where it was they're able to actually pinpoint the exact location based on this Declassified sosus system this Soso system is a listening system they have these uh listeners all throughout the ocean acoustic waves and sound carries very well over the water the Navy is listening to everything that happens on the ocean this same system existed back back in 2014 they would have heard the plane

(38:59) crashing into the ocean and they heard nothing there's not there's more Western Australia and Diego Garcia both have hydrophones similar devices they had no acoustic detections either in fact I've been told that potentially there's may be something coming out that's even going to help prove this but there was actually a video that we found that the Diego Garcia hydrophone data had been released to the public there was no acoustic detections consistent with the crash around anywhere around the time anywhere

(39:29) in the area as I mentioned with the radar systems Indonesia has a radar system so does Australia which is called jorn I've looked at those radar ranges they see far into the into the

South Indian Ocean they both would have caught the plane if it have flown there neither of them do this is an active shipping route as well in the South Indian Ocean from Africa to Australia is a very active shipping route This Plane supposedly crashed in the morning 8:00 a.m.

(39:59) 8:19 a.m. this is the daytime there's no Witnesses nobody out there sees this plane crash or anything like that so how is that even possible we've got all these witnesses that see the plane in South China Sea we've got one that sees it in nicobar Islands but none of them see it on an active shipping route they don't find any debris field no no not even one piece of debris by anybody who's on these shipping routes 19 families of the victims signed a statement to the government claiming they could call the cell phones of the

(40:25) victims for up to 4 4 days CNN has some kind of expert go on try to claim yeah you phones will ring if they're you know dead or whatever yeah I'm going to call BS on that if it was just one or two maybe you could convince me 19 families begging them to track the cell phones because they can call them one of them proving it on live television that to me is too much evidence to ignore and as far as I can tell they did ignore it some of their social media sites even had the missing passengers logged in as online

(40:57) so okay I don't know exactly how that would work but if I'm flying from qual lumur to Beijing I don't think I'm going to have my computer on somewhere where it's logged into my social media there was uh the official flight path has it running out of gas a lot of people say well the ocean is so big well where else do you guys think it went there's literally nowhere else for the plane to go the official narrative has it running out of gas they searched all along the seventh Arc they searched all

(41:25) along the flight path where it could have gone as well no debris field anywhere there's nowhere else if it was 2015 still I'd say okay maybe we somehow didn't look in the right spot it's N9 years later we gave up the search seven years six years ago there was no nothing that they could find there the official narrative also lied they tried to claim that the way this plane didn't have a debris field was that it did some kind of 90° Swan Dive which first of all as you guys know uh diving into the water is not or

(41:56) know crashing in the water is not like falling into some pillows you know this plane if you fly into the water it's going to be like hitting concrete This Plane would just explode and there would be debris everywhere second of all planes can't even do those kind of 90° Swan Dives at least what that's what people tell me um and then this was later very quietly changed to say that oh no it just it crashed into the water at a 14 degree angle which again this plane's going to rip apart so the last thing is that there's

(42:22) four redundant elt which are emergency transponder beacons that activate only on Crash none of them activate we also should have had Rolls-Royce data these engines actually transmit data and this was actually in the same time with the Malaysian defense defense minister on the day five press conference you can go look it up if you want he gets asked right after he gets asked about the Spy satellites they ask him Rolls-Royce would have been

transmitting data are you and communication with them yes yes again confirming that they would have had this

(42:55) data in one of the earlier press conferences the New York Times asks one of the other ministers who's up there asks him there's all kinds of electronic devices that are communicating from the plane have you have you looked into any of that and he dodges the question oh yeah that we'll look into that you know part as part of the investigation what what do you mean that's the first thing you should know he won't answer whether or not that that data was communicating because if they had to show that

(43:20) Rolls-Royce data it's going to eliminate this route into the South Indian Ocean right away as far as I know they have hidden rules race data that has never been made public so the other thing I want to say and then we can possibly get some questions in here cuz I'm sure people are asking what about the debris that they found they found some debris right some third-party people found some debris 18 12 to 18 months later some debris washers up on the reunion Island South Africa potentially in some other

(43:51) locations so the interesting part about this debris is that it's consistent with the events that we've put forth with the fire scenario and the technology that we see in our videos which we believe is teleportation the fire scenario is going to have debris burning off this plane not very much if you look at the CNN article that actually goes into the debris and I'll pull it up on my stream here it's about 1% if that I would argue of the plane it's essentially nothing so I'm pulling this up real quick I'm

(44:29) not a big fan of CNN but you can see in this picture here that the three pieces of a confirmed debris are doing a lot of uh or the non-confirmed debris is doing a lot of heavy lifting in this picture very very tiny pieces of the debris have been found not nearly enough to say that we've found a plane and this is how the disinformation works is they find a couple pieces of debris and go okay now we can say that it crashed but no not really this is actually more consistent consist with a fire where a couple

(44:58) pieces fall off in fact some of the debris that was found actually had burn marks on it the pieces that had burn marks on it have a honeycomb pattern that's consistent with only Boeing airplanes so I'm not going to cast doubt on this guy bla Gibson who found this I think a lot of people want to try to discredit this guy I actually think he's just a normal guy that just happened to find some debris it is a little unusual that he found over 10 pieces um but I don't think he's the kind of guy who

(45:24) should be vilified and the impression I got from him from the Netflix documentary is not one of ill intent but that's just my opinion the flapper on everyone says well what about the flapper on the flapper on matched with the unique serial was not matched with the unique serial number they don't tell you that in the media if you actually go Google the unique the flaperon cial plate you'll find out that it actually delayed identification because the unique serial plate that's bolted onto a flapp Ron is magically missing what a

(45:54) coincidence they use a unique serial number to match this flapper on which normally I'd say okay why does that matter well it matters because GA Telesis produced an exact copy of MH370 in October of 2013 that was scrapped decades too soon GA tesis was started by a guy who's 34 years old exmilitary potentially has connections to intelligence and the military so you could also argue that it's a different piece of a different plane that somehow got into the water especially because the official search

(46:27) didn't find anything the Jeff wise actually has two blog posts where he argues that the debris found years later is not consistent with the Barnacle growth that it should have had and that Barnacle only grow at like I think low or um either near the surface of the ocean or at low uh U what am I say here low depths or shallow depths I can't speak too much of that but what I can say is if what we're seeing is Tel portation there's nothing wrong with the debris whatsoever you could even argue This

(47:01) Plane shows up somewhere else they disassemble the plane throw pieces of the plane in the ocean but most importantly we didn't find nearly enough of the plane so once again I want to say that claiming the ocean is really big doesn't make any sense this that the official narrative has it running out of fuel there's nowhere else for it to go it didn't go off to the Atlantic Ocean there is nowhere else so oh one more thing I want to say is how do guys how do we know this is MH370 guys and ladies this is the only missing 777

(47:37) still to date the thermal exactly matches the silhouette exactly matches MH370 77720 ER the color tone in the satellite picture matches Malaysian Airlines it's light on white on the top gray on the bottom the satellite coordinates put it on the agreed upon flight path of MH370 at 1840 UTC in the nicobar islands at the same exact location where this plane supposedly turned into the South Indian Ocean the purpose of signals intelligence sigint is a network of information and devices if you Google sigint payload go ahead and Google it

(48:17) right now I will do it while I'm I'm doing this at the same time you will find that the very top hit on the Sig payload is the mq1 C gry Eagle so this is this is supportive of the evidence that would claim that what we're seeing in the Drone is the signals intelligence that's communicating here with our awac and communicating with our satellite data that's building a 3D Battlefield space that that can be monitored and used to track planes this is again the purpose of the cber system as I mentioned there's no way that the

(48:50) US government is not tracking a rogue 777 in a post 911 world even even before I saw these videos I knew that the US government had to know more than what they're talking about this is before I even knew how many satellites were in the area which is a ton so um and again uh the US military uh yeah oh yeah and the last piece is that we actually found um a quote from an article that's out there that says that the US military confirmed cers provided data to the intelligence Community to help solve the mystery of

(49:28) MH370 that's very weird because we didn't solve anything so how could we have claimed to have solved the mystery when we never solved anything at all and if cers was used

that pretty much proves that our videos are real and again with the collaboration from the Malaysian minister of defense that they had communication with the US spy satellites to prove that information was that that is accurate and that's what happened I'm going to go ahead and just pull this up real quick on my YouTube just so people

(49:55) can see that this is real here's the actual quote here directly from them this is the art of what we do says Colonel Mike Jackson 460th operations group Commander at Buckley officials at the 460th uh space wing also confirmed that cers provided technical data to the intelligence Community to help solve the mystery of Malaysian Airlines flight 370 MH370 which disappeared over the Indian Ocean in March 2014 to me that's a little bit damning I don't know about you guys so I want to go ahead and open it up to some

(50:27) questions first I'd like to start and I want to thank kim.com I want to say thank um Derek Bros as well I apologize I'm not pronouncing your name correctly and all the people that have been spreading this information today all the people that have been following the investigation there's still a ton more evidence I haven't reviewed yet but I just wanted to give you guys a highlight to start kick off this space right now so thank you guys for listening to me if either of you guys have comments feel

(50:50) free to jump in yeah absolutely Kim thanks a lot let me go ahead and pull it up on my um if you want to watch the Youtube you can see the videos otherwise I will speak to what we're looking at here so these videos reemerged on a **Reddit** a **subreddit** called UFOs on August 7th or August 8th depending on what time zone you are in these videos had been reposted back in January of 2023 they had probably been reposted several times before that as well when we dug into the archives of them we found out that they go all the

(51:35) way back to at least May 19th 2014 they might even go back as far as March 12th 2014 which is just 4 days after the plane went missing they were uploaded by an account called regicide Anan the video of the first video the satellite videos literal descript deson is satellite video airliner and UFOs it doesn't mention MH370 anywhere in this video it says published May 19th 2014 says received 12 March 2014 posted May 19th 2014 Source protected we looked up this guy's old videos his accounts been deleted he was

(52:21) a UFO uploader he had other UFO videos that he had uploaded before this that are not nearly as high quality as this you know in my opinion I would say many of them look excuse me very fake but um so this would kind of show that this person potentially was not the person that found these videos they're not somebody who created them either they're not somebody who is a CGI expert or anything like that the fact it says Source protected while there other ones we looked up say like email submission would tell us that there's somebody who

(52:52) actually **leaked** this video to register side an non and in fact because of the receive date if you believe that to be true March 12th 2014 we have just a 4day window of opportunity this would show that the person that **leaked** this was probably somebody that was right there when it happened or they were informed of it right afterwards we'll present evidence that they were

there that day please that part you know it's to me I'm not 100% sure one way or another I'm leaving that as speculative for right

(53:30) now as opposed to being a factual um but yes we know that it's at least between March 12th and March and May 19th I think you and I were talking about this earlier it could be that they uploaded it but they didn't publish it until later on yeah exactly um and yeah just for the people watching if you want to watch some more of my stuff feel free to just follow or look at my other content I have a lot of other stuff out there if you guys want to watch and get more in-depth I hope we cover everything on this space I know

(54:22) we have a ton of people listening right now and I want to thank them all for listening to this evidence I just want to again it means a lot to me that people are looking into this we spent a ton of time looking into these videos um so these videos on here would be indicative that there's a situation where this was **leaked** to UFO account it may have been **leaked** to a forum and reg side non was the first one to pick it up this uh this delay between it getting published might also mean that they had to be convinced that the videos were

(54:49) real the fact that it doesn't say MH370 to me says that the person that **leaked** this didn't give away the information they just said hey post this online they wanted people to figure out the mystery they wanted people to realize that we have enough evidence in this video that we can prove that this is MH370 they wanted to be a little bit koi about it yeah exactly they would and and people have argued well be later on they actually post on Twitter three days after this video shows up they post on Twitter and say what they make a Twitter

(55:46) account they didn't even have one before that and they say watch this before it gets deleted so that's interesting because then that's the first time they tag mh3 370 in it so it's like they got told about it later on that yes this is that but I would agree it's very weird that you would leave that out I mean if I was making a fake I'm certainly not going to leave out that it's not MH370 right and one of the biggest Clues too is that if this was faked the whole hoax would fall apart the moment we find

(56:13) the plane how do they know we're not going to find any plane nine years later right like the whole thing right away the only way this starts to make sense is if these videos are just authentic they were actually **leaked** by somebody um and I'm going to post a couple images in the YouTube as well just so you guys can see some of the cating data here just to see that this they posted other videos that were unrel completely unrelated and I'm trying to pull up the Twitter I'll try to do at the same time

(56:40) go ahead yeah yeah yeah yeah thanks Derek

(57:44) yep okay yeah yeah so this appears to be video that's taken from outer space a lot of people that look at this video right away we had no basis to understand what we were even looking at and this is probably why it's been ignored for 9 years is a lot of people say why am I looking up you're actually looking down on this now after a lot of in introspective and searching

through like how this is playing out we've determined this is the cers system so right now I'm pulling up a video of the cers system

(58:19) for on my YouTube the cber system has satellites everywhere scanning the whole Earth all the time and what this is doing is building this battlefield space like Google Earth and the reason why this is important is some of these satellites move very quickly they're seeing we have times where need to be able to look in the dark so they can show a false color ey are and they can produce essentially something that looks like it's daytime for people that are trying to track uh objects at night and

(58:49) they can do video playback too which means they don't have to be looking at in real time you can just pull this system up anytime you want and pull it back and that's what we think we're looking at here because in our video they've cropped they've cropped the plane so we're just seeing the plane we there's a drone we know there's a drone because the second video shows a drone from a different angle at a horizontal angle not looking down and they've cropped that drone out this is

(59:13) evidence that the person that **leaked** this information was a US military personnel somebody that actually logged into the real system using a citric session and they didn't want to damage us intelligence they wanted to crop out as much information that would hurt the military just enough information for us to be able to solve that this is MH370 they left the coordinates in we can watch these coordinates update it's six decimal places actually five decimal places I'll correct myself here the decimal places

(59:43) in this video don't move when we see this mouse come over the screen it only moves when the perspective of the video Moves We Believe here that they've logged into this Google Citrix uh video playback and that they're just able to look anywhere they want in the world and then they're doing a screen recording this is not a situation where somebody pulled it up with their camera phone this is not a situation where they have a camera hanging out behind them they're actually using the screen recording in

(1:00:11) real time now this means in my mind early on when I saw this they got caught you are not going to be able to hide this information from the government especially if you logged into the real system it's going to be getting tracked that cber system I was looking at is produced by locked Mart at the end of the video and you guys can just Google cbers and you'll find this video as well from locked Martin says we never forget who we're working for kind of ominous in my opinion cers is the space-based infrared system that's what

(1:00:38) it actually stands for and again what we're looking at here in our satellite video seems to be a false color infrared false color IR there's more brightness on the top of the clouds than there is on the bottom clouds have more infrared radiation on the top than they have on the bottom you actually collect radiation when you're flying on a plane as well which could be why this plane appears to be very bright white but again this is all relative color what I want to point out on why this is night time when we're

(1:01:07) looking at this video is there's no there's no Shadows anywhere you don't see a shadow of this plane on the clouds even though it flies right over them so this is actually a nighttime video using a computer program and generated Battlefield map it's also supported by the fact that what we're looking at six frames per second as I play this video you look you can see it's kind of stuttery that's because it's 6 frames per second and the field of view is much wider so when you're producing something

(1:01:35) by a computer and you have a huge field of view that's going to lower your frame rate because you have a lot of processing that's happening at once and we know that's happening because there's not a mouse on the screen this mouse is going to come flying in from off the screen and it goes off the screen both directions meaning that we know this is a cropped field of something that they're looking that's as much bigger as well it also means that our coordinates might not be right where the plane is in

(1:02:00) fact the coordinates are only two dimensional there's an X and Y axis only which means we know it's looking at a point on the earth it's not looking at the plane which would require three directional axis X Y and Z so when we're looking at this plane here we can see the smoke right away coming right off the back of it in both videos now both of these videos here I'll say first that we know it's smoke because we see cumulus clouds if you've flown on airplanes these cumulus clouds only form at low altitudes between 1 and

(1:02:33) 5,000 ft when you're flying high the clouds look much different contrails only form between 18,000 30,000 ft and above so these are not contrails that we're looking at here this is smoke that we're seeing so we've already corroborated now the lithium ion battery fire that was witnessed by how many witnesses 18 plus witnesses that we've got including one who's watching the plane probably just a minute before this a couple minutes beforehand and now we can also corroborate that this plane is

(1:03:01) flying low consistent with them trying to get enough oxygen for the passengers it's also turning left here this turn people have looked into the turn it's perfectly consistent with a Boeing 777 wall on descent if it wasn't descending they would be doing the capabilities it's not capable of but because it's descending and turning it's actually maxing out the capabilities of 777 perfectly a VFX expert who posted on [Reddit](#) claiming to be a top VFX expert who made the top gun Maverick movie says

(1:03:31) that whoever produced this would have front ran their work by four years and that the hardest part is that they had to fake a lot of the shots with the speed of the plane because they couldn't get it to be accurate and yet we have two videos and I'm not talking about those two we're looking at here two different videos from two different perspectives that show an accurate term of a 77 7200 when we're looking at this video and we'll get to the main event here very shortly there's two side by-side

(1:03:56) videos from the original reeside and non version this is the very first version that was out there these are not duplicated they're very similar however what we're looking at here is 3D

stereoscopic we've proven that this is 3D stereoscopic what that means is that if you were to Overlay them over the top of each other and wiggle back and forth between the two views you would see Parallax this also means that you can convert it to 3D and we actually did that some of my old posts on Twitter and I may post them in the next a couple

(1:04:27) days we've actually proven that what we're looking at here is 3D and if you're watching my YouTube stream right now I'm I'm playing the video of this exact video in 3D where you can put on your glasses right now your red and blue glasses and you can watch it in 3D so did the person that make this are they a Marvel expert uh you know this is like really really high quality at this point if this is how it worked now assuming that this is 3D and we have have this this 3D stereoscopic our satellite USA 229 the

(1:04:59) one that was in the region is actually two satellites if you go look up and you can Google this right now NOS Naval ocean surveillance satellites USA 229 you'll get to the Wikipedia page there's not a lot of satellites that are the third generation third generation always come in pairs the second one is always classified as debris they fly right next to each other this is what we would require to in order to create a 3D stereoscopic imagery two cameras slightly different angles both in outer space both looking down at the same spot they

(1:05:31) can't be on different trajectories go ahead yeah yep yep so we had satellite experts they were actually looking there's amateur trajectories that you can look up they're kind of hard to find the website but there's a website that tracks them amateur tracked all satellites they're very accurate you can't move satellites around so we actually looked the two weeks ahead and two weeks before to make sure that it somehow didn't move and it didn't and we were able to use that to recreate the real positions of the

(1:06:24) satellites back then within probably a margin of error of less than a minute and then from there when we realized that we had this payload go ahead 1840 1839 UTC right at the location in the nicobar island staring down at the agreed upon flight path that everybody agrees the plane was at at the time at that day this is our Smoking Gun this is undeniable evidence yeah yep and right now I'm looking I'm pulling up the Wikipedia page from Naval ocean surveillance Satellite Systems you realize there's not a lot of satellites

(1:07:24) in the third generation and if we look at the Trump picture of a satellite Trump actually did us a favor in 2019 he posted a picture of a satellite and this was of uh I think an Iranian um kind of launch station that we I think blew up or something and this is a very very bright picture brighter than our picture is and we can tell it's daytime because there's a huge shadow in this Trump picture this Trump picture actually is the same similar angle that we're seeing in our video most people when they think of satellite they think

(1:07:56) of looking straight down those are geostationary satellites someone reverse engineered the Trump satellite to figure out that it's USA 224 that was able to take this shot or send the data for this Trump picture that satlite was set up in 2011 when people looked at this Trump picture they didn't think it could be real they didn't know how they could be removing

the atmospheric interference I think we can explain that because what we're seeing here is a computer generated uh civer system that can just take a screenshot or you know a

(1:08:29) single image shot and that's probably what the Trump picture is this was also probably video so and that and that explains why we don't see the apparent movement of the satellite as well because what we'd be seeing from USA 224 as well as our videos USA 229 is a low earth orbit satellite something that's very close to the Earth but if you're trying to spy on someone you're not going to be following a satellite that's moving very fast you need to be looking in a stationary location so this is why you need to have

(1:08:58) a 3D Google Earth video playback so that you can look at the video and you can have from you know not the motion but as someone who's trying to track objects but have the satellite data just constantly beaming back that information to build that Battlefield map in real time this is why we have such a FL low frame rate because we're looking at this huge field of view these satellites are constantly sending data so that we can track this when we look at USA 229 the Wikipedia it's a pair of American signals

(1:09:27) intelligence satellites sent up in 2011 same exact year as USA 224 was sent up from the Trump picture this would tell us that it's going to have similar capabilities as the satellite we see in the Trump picture and they look very very similar when we look at them this is where I started to narrow down even before our amateur uh MH 370x satellite experts had already pinned down the trajectory I started to think that these have to be one of our satellites because we see this 3D stereoscopic imagery it turns out that USA 229 is like the only

(1:10:01) satellite there's a couple other satellites that are nearby but none that are as close as to what we've got from USA 229 but as I mentioned earlier there's satellites everywhere we're essentially mapping the whole world all the time so that's one of the reasons again why there's no chance this plane didn't crash into the ocean we would have seen the debris field the very next day we wouldn't have been searching for weeks years Etc um this isn't like it's early 2000s right this was

(1:10:29) 2014 so go ahead and take a look yep yeah yeah yeah yeah I think the big thing is that this means the US government is watching the whole world all the time so anytime they come out and say they didn't see something there's basically no chance that can be true true and I think if you look at these satellites I never thought I would learn this much about satellites ever um you know I can't believe that we've just got I mean

(1:11:33) I can't believe it we've got full coverage everywhere but even now you can see there's even more of these satellites that have gone up in more recent years so just imagine if that's what they had in 2014 like now when I go walk my dog I wave up to the satellites because they can just they don't need to be tracking me they don't need have people in cars they just literally can pull up video playback anytime they want yep yep and that makes sense right because if you have spy satellites they have to

(1:12:24) be able to operate at night time otherwise they're going to be useless half the time right so um you know I think it would be silly to think that somehow you wouldn't be able to see at night and this is how we're able to do it so when we're looking at these smoke Trails here these are not coming from the engines you can actually tell that they kind of spread out a little bit as the plane starts to move there are two exhaust ports that we found right next to where the landing gear is and that's

(1:12:45) where we believe the smoke is Bing out of it could also theoretically be coming out of some holes in the plane if this plane was depressurized but this would make the most sense it's coming coming out of these AC exhaust ports because these cargo bays are actually built to withstand fires so the scenario of these lithium ion battery fires is that they rage up you can put them out but they just come back up again it's like the trick handles that you give people on their birthday where you blow it out and

(1:13:10) comes back up again because they have a huge amount of energy built into them Kim and I were looking at the pictures earlier today of the when these batteries put together they were put together the same day March 7th 2014 they do not looks safe the way they're put together we were looking at the actual official atsb report of them they just stick these batteries together they put them in some boxes and they stack the boxes up in these cardboard boxes and they just put them in there 221 kg for our Americans that's almost

(1:13:41) 500 lb go ahead yeah yeah we were looking at pictures of it the smoke just fills the room so these things the the scenario here would be their battle in this fire for an hour trying to keep it from disintegrating the plane and breaking out of the cargo bay breaking containment they're called Runaway lithium ion battery fires because once they stop you cannot stop them and you can see if you guys Google the FAA the FAA actually has these things like we didn't even really know how dangerous they were and this is probably why

(1:14:12) people didn't get onto this scenario of the lithium ion battery fire there were a few people that actually did argue for this interestingly enough um lithium iron battery fire and if you look at the incidents here I'm going to pull this up on my Twitter or on my my YouTube look at early on in 2014 we thought there were only nine incidents my guess is there's more than nine and I'm guessing Malaysia Airlines is another one the FAA is just the United States incidence they banned lithium ion batteries from being

(1:14:40) in the cargo bay of passenger planes in 2015 the year after Malaysian Airlines look how many incidents there were 2022 74 incidents and now we're talking about ones that are in the past passenger area because that's the only place you can have these lithium ion batteries just this year alone it used to be 52 like a couple weeks ago we're already up to 63 incidents this year I saw some videos on Twitter the other day where it was another one where one of these was raging out of control in the passenger

(1:15:08) area and they're just pouring water on it in some guy's backpack these lithium ion batteries they scare me more than orbs scare me and we're about to go see some orbs

disappear a plane here in a few minutes so what I would say is don't be afraid of orbs disappearing your plane be way more afraid of of people putting lithium ion batteries in their in their uh cargo of their um the luggage that's going in the cargo bay CU here's the situation if this is Raging in your cargo bay you're not seeing it

(1:15:36) light up so probably what happened is when this plane was taking off these lithium ion batteries are unstable and they're starting to smoke nobody's watching our plane goes dark probably at the exact moment when these ignite and they explode and they make a pretty large explosion you send all of your people down there to start fighting that lithium ion battery fire and start keep it put out some of them might not even make it these are very toxic events if you Google the situations of lithium ion battery fires from 2010 to 2014 a

(1:16:07) bunch of uh planes burned up because of this and a lot of people have died so all this information corroborates this smoke that we see coming out the back of the plane here it's probably flowing through the air conditioning systems and then Bing out the back now let's watch our video again or uh finish our video out here so we see a mouse come on the side of the screen here this black mouse the coordinates move but they only move when the field of view moves here building this coordinates in a fake video would require a separate Software

(1:16:36) System that somebody would have to code to five decimal places they would have to know where the plane was and this is again just either days after or a few weeks after and they have to know what the weather's like as well and this is a situation where all the information was being OB fiscated where the official public didn't know very little at all a lot of people still think that oh the South **China** Sea when the plane went dark is where everything goes down they don't realize that there's this whole flight

(1:17:00) path and narrative that's been built so for a hoaxer to figure this out we've already eliminated like 99% of the population to be able to do this so what we're going to watch here is an orb come flying in on the side of the screen so this plane is turning all of a sudden we see this orb come flying in this orb is moving 10 to 13 times faster than the plane as measured by the pixels this plane on turn is moving around, 1500 or sorry uh the plane's moving about 150 to 200 mph the orb is moving at roughly Mach

(1:17:33) Three speeds based on that estimate 2,000 miles an hour extremely fast it goes right past the plane now this is interesting why does the or first orb not get around the plane right away it would seem that they're trying to track it trying to locate the plane at this point in fact it begins to circle around the plane from the side and its first rotation and then it captures the plane's location and it starts to circle around the plane as well what we're going to see happen here is this Cloud that's right below the

(1:18:06) plane at this point south of the plane or let's say down of the plane here an orb is going to shoot out from the water near the water or along the water and then it's going to come up through this Cloud it's very hard to see in this version but we have another version that makes it more apparent you can see the orb there now it shoots up and now we have two orbs

and then very quickly a third orb comes in these second and third orbs they have no problem finding the plane and now once they get into

(1:18:31) this locked formation it's a perfect equilateral triangle we had a PhD reply the other day and say this is consistent with a a cocal pattern that is  $120^\circ$  of a 440 volt pattern um and that this would be a0 Point pattern now I don't know what that all means because I'm not a PhD but it seems that there's very specific purpose to what's happening here so now these PL these orbs start to circle the plane and they're not just circling the plane they're circling the plane in a sphere to me it looks like

(1:19:03) they're mapping the plane they're getting it ready for something they're collecting data on it these patterns we this sinusal pattern that we've seen is a perfect wave pattern what this means is that these are not aliens these are not people flying in these little orbs here these are some type of drone if you want to think of it like that with a field around them and that this is being controlled by AI a computer program is controlling these here and so potentially they're using a very Advanced Computer to collect all

(1:19:33) this data you know I would imagine if this is US Government they're probably using some type of advanced quantum computer to pull all this now I'm going to rewind it just a little bit because once it get past this Cloud the pattern changes now the pattern is completely vertical on the plane at this point we believe it's getting ready for what we're about to see here which is some macroscopic IC Quantum coherence event a phase transition of this plane where if you have watched the movie contact it

(1:20:00) looks very similar to that or it looks similar to an atom that has electrons flowing around it and that's exactly what we think is happening is that there is a unification Theory out there of quantum and macro and I'm going to go ahead and Shout out two people right now salvator Pas who has a paper called the superforce that I've read that actually surprisingly argues this exact thing and another physicist named Roy D Herbert who has a theory called dilation Theory I think you guys should be following

(1:20:27) these people if you're listening along because there's people out there that can explain the science of what we're watching and the science that potentially will change the world so let's watch what happens here now so they these orbs are doing this pattern and then all of a sudden we're going to see a zap we see this zap I paused it perfectly right on the zap here this zap here is not an explosive event the clouds don't get blasted away it's also not a black hole because the clouds and the whole earth don't get

(1:20:56) sucked into it either it this zap accurately illuminates the clouds in the foreground in the background and it doesn't illuminate the cloud that's very far away we believe that the electrons are being energized in the area around this zap and that's the reason why we see this illumination accurately Illuminating these very detailed cumulus clouds indicates that the whole thing is real so this right here is very interesting that we see this and then the plane is gone the smoke Trail just stops so this

(1:21:32) isn't this then potentially is not cloaking I thought first of all okay maybe they got to be cloaking This Plane we argued okay what if they cloak every electromagnetic signature somehow that we can't understand the smoke wouldn't stop we just see the smoke continuing forward to prove it the leaker actually Scrolls over to the right they want to show us Yep this is not a magic trick they're not cloaking the plane it's just literally gone and then the leaker goes ahead and closes the window which is

(1:22:00) evidence that they weren't watching this in real time if you're watching in real time you're not closing your recording window you're going to go ahead and you're going to keep watching you're going to keep recording Etc this is a playback most likely that they went and pulled up later on that they wanted to show and make for us someone mentioned where these coordinates are we do have a list of those coordinates there's six coordinate positions that are produced by that and uh it's actually but we can only see uh

(1:22:24) six of them if you map out the coordinate positions this is how we able to prove beyond a shadow of a doubt that that's the nicobar islands even if you assume there might be a missing minus sign in our coordinates that would then put it in the South Indian Ocean and this was early on I thought that there must be because it puts in the South Indian Ocean where a whisper route has it silly me thinking that the official data might be accurate um the problem with that is that the direction of travel doesn't work if it's if there's a

(1:22:51) minus sign and you m it out that means the plane would be going north into the East if you're flying North into the East you're turning right if you're flying south into the East with no minus sign you're turning left in our videos there we saw the plane turning left this proves that our location is the nicobar islands at 1840 or right around 1840 UTC before I jump in the second video uh kim.

(1:23:20) com you have any other uh thoughts or questions on that for mhm yep

(1:24:29) yep yeah and what I want to say too is that we don't think this is a vaporization or what I would call an Annihilation event because it's not energetic enough since  $E$  equals  $MC^2$  that means energy equals mass time the speed of light squared speed of light's a very very big number so this is why we were able to split the atom and create nukes is that we can make a bomb blow up a whole city so if you have something to mass the size of a 777 which is huge and you completely annihilate it then without some type of exotic matter the

(1:25:00) only thing that would be happening here is we would see an explosion big enough to potentially destroy part of the planet as we saw from that that was a very small zap so we believe that science explains this as a transitional phase State change you know matter cannot be created or destroyed it only changes uh only changes form so we think Happening Here is what's really happening is what we would call teleportation which is moving at the speed of light or maybe even faster than the speed of light the idea here being

(1:25:28) that the macroscopic plane is obtaining the properties of quantum Quantum objects

can can do things like we see in the double slit experiment where they can essentially uh undergo non-locality quantum entanglement quantum teleportation this is the science of how we would explain it in a real world as opposed to you could theoretically call it a wormhole if you want but I think the better explanation is macroscopic Quantum coherence and sorry yeah for the people on YouTube listening uh you're not going to be able to hear the other people

(1:26:01) talking um unfortunately because I'm the co-host this is the only way we can do it so the second video here right before I show all of this I want to point out that the published information here says June 12th 2014 while it's not visible it says received uh June 5th one week earlier it says video shows airlin are being followed by three identified spherical objects for a short time The Airliner and the orbs vanish this appears to be an ALT angle of the previously submitted satellite footage with a link to that as well so because

(1:26:34) we see this came out after the first video and remember this drone is cropped out of the first video It's very possible to leak or thought that we had enough evidence to prove that it's real I also think due to the fact that they've leaked this to a UFO account and that it says UFOs in both videos that the leaker thought they were looking at at UFOs in these videos if you think of leaking a UFO video you'd think it's not very damaging but if you later find out that that's secret US military

(1:27:05) technology then you would think that okay now I did a whole bunch of damage to the US government and that's going to become relevant when we talk about the leaker because they potentially went to prison over this so let's pull up this in a in a big field of view here and while we're looking at go ahead yeah it's interesting we have two different angles of this right so again starts to show we're trying to capture intelligence here right this drone is

(1:28:08) not fast enough to catch a 777 it had to have intercepted it we believe that it intercepted it from a a base that was deployed from in the nicobar islands in fact it's coming from the north here base again we know this plane is moving south into the East based on the coordinates which means this drone is somehow the north looking South and that's actually from the direction of travel we think the Drone was actually deployed from we believe this is an mq1 C Gray Eagle now if you Google again Sig payad you find the mq1

(1:28:40) C we think that this line that we see above the top is the housing of the camera not necessarily the wing when we look at it we can see the smoke we can see the smoke accurately stack up from our perspective here as well the Drone actually feels a little bit of turbulence as it goes underneath the smoke Trail of the plane and the trail of this plane it's actually very close to the plane as well which people have pointed out that you don't have planes fly this close to one another so again uh indicative of an emergency event

(1:29:07) scenario now as we watch this it's very clear that it's being manually tracked there's a person moving the the camera around they are not automatically tracking the plane in this video they zoom in on this plane they're trying to get the best intelligence possible on it then we see the first orb show up we have a side by side that proves these videos are in perfect

synchronization when we look at this orb it's a nearly perfect sphere this appears to be a field around a smaller object this is not a metal ball that

(1:29:40) we're looking at here and we can kind of tell because we see the thermal layer kind of have a blending effect where it gets a little bit cooler as it goes around now when these orbs start to get around it this video shows a lot more information and we can see that these there's these Trails but when we look at these Trails they're actually in front of the orbs the only reason why they look to be behind the orbs is because these orbs are moving in a high rate of speed perfectly matching the speed of

(1:30:08) the airplane and again they're moving in this perfect triangle formation they're also just ignoring gravity entirely we believe that what it takes to ignore gravity like this is room temperature superc conductivity which can be either obtained through Med materials such as lk99 or something similar to that or by using some type of electromagnetic uh event a pulse an accelerated pulse vibration now this is then essentially giving them zero mass and when you have zero Mass you can ignore gravity entirely that's why we think we see this

(1:30:42) field if you read the scientific paper by salvator Pas that I put out there he argues for this field existing due to them basically separating themselves from from the empty vacuum state which is thought of as you know SpaceTime as we know it so some people may think that room temperature superc conductivity is debunked well it looks like we had it nine years ago at least the military did so I think maybe we should give that one a second shot now again these lines are coming in front of it so they are creating their own

(1:31:12) geodesics uh Kim and I were looking at the video of gravity and how gravity really works I would suggest you guys take a look at how gravity Works in general cuz I think it's not exactly the way that people get taught in school gravity is the interaction between mass over SpaceTime and what's happening is over as time flows objects are uh converging towards the curvature of mass disrupting SpaceTime that's important because it looks like What's Happening Here is they're creating their own

(1:31:42) geodesics their own gravity they're almost like train tracks that they're running along here so when we were watching this here if somebody was faking this video as well they would keep the plane in focus in the field of view all the time but what we see here is the the person who's operating this drone manually Zooms in and now the plane gets out of out of field of view if you were faking this this is not how you'd fake it you'd fake it while the plane's in the field of view the entire time this is because

(1:32:10) someone's actually trying to keep up with the plane and they've zoomed in and if you were like zoom in with your camera while you're watching something it's hard to keep it in the field of focus now they've zoomed in a ton here as well cuz what's going to happen is when plane comes in now we can see it very clearly we can see this heat signature this heat signature is in the same location as where these exhaust ports are right near where the landing gear exists so if you're watching on my

(1:32:35) stream I'm going to go ahead and pull that up just real quick so you can see what we're talking about and if you're not you're going to have to just trust me that we can see that this heat signature right near the landing gear of the plane it actually morphs as well so if somebody's faking this boy they're going to a lot of effort to make it look like there's a real Heat Signature billowing smoke out of the back of this plane and this is where you can see the smoke line coming from the back of the

(1:32:58) plane here which is not lined up with the engine you can see that it's actually right next to the plane here at a different altitude a different height than where this engine is at the smoke does not appear to be coming from the engine you don't see the smoke coming from right back of the engine here it's coming from this heat signature that we see down here so we see the same spiral formation notice when I pause it here that there's what we call a pole here and tomorrow I'm going to be interviewing a guy named

(1:33:24) Bob Greener who believes he can explain the movement of the orbs he did a video called fractal total moments where he believes that What's Happening Here is that kind of as we've argued that there's essentially some type of pulse laser or something coming out of this that's able to create this geodesic and we can see they spin on their axis here where we see this heat signature from the orbs they're spinning around and then before we see our zap happen our transitional state St change the operator zooms out to me this

(1:33:56) indicates they knew exactly what's about to happen at this point they know that the main event is about to happen they're zooming out to get it perfectly in field of view here and that what they're doing here is they're recording this to for intelligence purposes either the US government had the perfect assets and the perfect time to collect this and we're seeing some non-human intelligence that we just got extremely lucky to get on video or this is an operation that they were expecting to me this is an

(1:34:22) operation now I'm going to try to capture it but I actually have a better VI uh field uh uh video but we see the the plane just disappear the operator looks around a little bit but they don't freak out and then that's the end of the video to me this would be this would indicate that oh this is the original so in the original here it actually then shows a super slow-mo version of this and it shows the orbs zoomed in here where we can see the orbs in this field around the orbs there's a higher quality version of this

(1:34:54) which I'm actually not going to switch to because this version will work so then there's a slow-mo version of our zap we can see that the orbs actually Converge on the plane right before this zap happens this is a pretty extensive detail to put into your fake video the monopoles actually begin to orient right towards the center as well so we have all three monopoles orienting towards the center Bob Greener argued that What's Happening Here is is created an azoth which is basically your sphere around the plane that is then able to

(1:35:24) you know see what we see from this macroscopic decoherence event here's the super slowmo of it I want you guys to notice that in the final frame this plane blurs as well so they

start to converge here and then right now we don't see any blurring effect in the next frame all of a sudden the orbs are flat this would show gravitational lensing they're creating a very powerful electromagnetic field here that is even potentially causing gravitational lensing on this plane like if you were looking at a black hole with

(1:35:57) a star behind it and you see this bent light come around it because of the huge gravitational mass of the or gravitational effect of the mass of the black hole the plane is blurred it's actually cooler than it was before it's much more green now and the size of the plane has shrunk a tiny bit if we were to superimpose this over the the previous image you would see this plane get a little bit smaller and so I actually have a picture of this if you're watching on my stream as well where you can actually see it the

(1:36:29) plane is bigger here it's got you can see the Heat Signature better next frame it's blurred we believe this blurs because it's accelerating already starting to accelerate to the speed of light and then the next Frame It Gets encompassed By The the our endothermic event this endothermic event that we just saw is black in our thermal it's actually cold so in the false color IR it looked White because it's a false color IR they're using fake color scheme on that because it's a computer generated uh image that

(1:36:58) is using that cber system but in this one we can see very clearly here this is a cold dark event so this cold dark event is endothermic if somebody was going to fake an event they would fake it as an explosion because there's no basis to even think to create this somebody that would had to fake this is going to have to understand physics better than most phds out there in order to create the pattern that we saw they're going to have to understand math mo better than most PhD math experts as well so this

(1:37:27) requires a huge amount of creativity if they were going to create this there's no basis to copy this from uh so what we see here is this endothermic event that's absorbing energy we speculated that this is potentially sucking the energy out of these lithium ion batteries so that you can actually save this plane prevent the plane from you know burning up anymore because the thing about these runaway lithium ion battery fires is that the energy in them is what keeps them lighting up over and over over again um it could also be that this

(1:38:02) event is so cold with this cold event that we see here that it is able to put the lithium ion battery fires out but again this is speculative okay I've been talking for a bit Kim anyone else who is in the speaker zone right now what are your thoughts or questions before I address some other stuff mhm mhm yeah that was my view too early on

(1:39:23) Kim and what I realized was that if these videos are real then we would be able to authenticate every aspect of them right because it's a real event then it must line up with everything I never thought we would get as much evidence as we've gotten today I mean it even blew me away I didn't have any idea about this lithium ion battery fire scenario all these Witnesses and that's why I've got all evidence and theories my all evidence version 2 that is now about 12 pages long that's just a list

(1:39:51) of the evidence evidence doesn't even have all the links to all the sources in there because it just become too long I I plan to add that later on and this is really like I think all this evidence that adds up really Stacks up to prove that these videos really are 100% authentic especially the part about the science where I've had physicists and Engineers they want to come and talk to me because when they look at these videos they know that this information can prove their theories that it's consistent with real physics real

(1:40:19) engineering and real science now a lot of people might think well that zap that we saw I I saw a **debunk** of that that said that this was fake or I was on **Reddit** and somebody posted saying that this was fake the account that posted the Pyromania VFX **debunk** was called icy slide that's a play on words I slide it actually stands for intelligence Community Forum slide they're not very creative and they actually didn't defend their argument at all if you're looking at my picture right now people have overlaid that

(1:40:55) image the one that they say exactly matches and you can see as a statement of fact that they don't match what they did was they tried to line up one frame of an of VFX that they were able to run a computer search for to try to find something that was similar and they were able to fool a lot of people into thinking that these are the same event now the problem is that just because things are similar and they look somewhat similar does not mean they're the same all dispersion patterns look the same or look very similar my

(1:41:23) butthole looks the same as your butthole but it doesn't mean that my butthole is your butthole in fact I would argue that this that closer than this here if we look at this um we can see that this VFX compared to our endothermic Events first of all the VFX is an exothermic event it's an explosion ours is an endothermic event there's several lines that aren't even close to be in the same spot the center of mass here doesn't match at all even the edges don't match this would need to be a 100% perfect match in order

(1:41:56) for this to be in our real videos it can't be a little bit similar or looks pretty close that's not how it works if you were going to go ahead and try to move all the pixels around to try to get it to be an exact match first of all you can't do that because our videos would be an original work you don't have the luxury of looking at something else and moving them around but I would I have literally asked anyone how many pixels match that's all I have to say and it shuts down the argument

(1:42:26) and wins the argument every single time because no one can respond because they'll have to admit that it's not a 100% match in fact if you were to match the pixels because of this blue background it would probably be less than 10% of the pixels matching of these two comparisons you would have to actually make all the background blue with all of the interference that we see in the real video that doesn't exist in the VFX either so this is not even close to being a match not even on a single frame and if anyone out there wants to

(1:42:56) prove it wrong I don't care if you're the corridor crew I don't care if you're the best expert in the world pull up your stream pull the two things side by side get a computer from

2014 get software from 2014 or earlier and go ahead and stream us we want to watch you changing all the pixels one at a time using the old software I want to watch how long it takes you to change just the one frame that that's the closest because if we compare the whole VFX it's not even remotely the same here's an overlay of the

(1:43:30) VFX this is not even remotely the same what I'm looking at here if you looked at the other frames while this explosion happens in this VFX it's not even similar there's all these extra lines and explosive events that aren't even close to what we see these other ones it's like less than 1% match if you were to match the pixels up basically just complet completely conclusive that what we're looking at here is not a VFX from a 9s video game in fact if people look at go ahead yeah oh yeah

(1:44:43) yep yep yep yep MH yep yeah the is slide account was created August 9 18th one day before they posted on UFO subreddit and if you're watching my stream you can see proof of this I actually messaged the moderators of that uh subreddit they confirmed to me that a one-day old account cannot post submissions without manual approval they got manual approval

(1:45:48) which is really unusual because this is a heavily moderated sub Reddit I asked them specifically if they know who the person is they Dodge the question multiple times they wouldn't State now exactly what you just mentioned in terms of putting the information out there and getting other people to run with it that's exactly what Forum sliding is is that you try when you have real information you're trying to hide you post fake information up there get people to focus on that and have the real information slide down the comments

(1:46:15) in this uh in this post were also very suspicious tons of stuff about thank God this is Deb and we don't have to talk about this it was actually used to ban all discussion of the videos from that subreddit this subreddit is ex extremely compromised in my opinion probably run by the US government the moderators are extremely sketchy no one should trust anything that comes from the UFO subreddit possibly nothing that comes from Reddit in general now the only person go ahead yeah yeah yeah they got three years shaved

(1:47:07) off so let me run through the evidence for that real quick because I think that's extremely compelling Okay so we've looked through all this information right and we have a bunch of information that we think can corroborate who this is we think the leaker is probably US military personnel they're probably an operator because this Drone footage that we're looking at it's doesn't come in thermal it's normally an electro IR camera we think that Ron makes and that there's a thermal layer that can be added in with

(1:47:34) the software that's built into the camera so somebody has to know about how it works they've removed the HUD information we think they had an emotional reaction indicating they were probably there that night they may have been in one of the awx that K T saw that the French dad was told about they cropped out the Drone out of satellite video which was the first video they released they probably had to convince reeside andon that the videos were authentic due to the fact that it took regid non like 8 to nine weeks to

(1:48:02) actually um publish them and they may have thought they were looking at UFOs and they thought they maybe they weren't looking at us technology themselves based on the name of the videos so we find or I find I was digging around for anyone who been charged with Espionage will for attentional classified doents or willful retention of national security information took me several weeks it was actually really difficult this guy is not on the internet after 2017 at all and if you look in Google you always get recent searches I looked

(1:48:33) up all the big people you guys would have think of the Chelsea Mannings Edward Snowden anyone who I thought was huge nobody even came close the moment I found Lieutenant Commander Edward C Lyn we hit a bingo first thing I see is all over every article signals intelligence that's what we've been talking about this whole time he flew in both the Lockheed Martin ep3 Aries 2 and the Poseidon p8 depending on you know which his specific unit was using this Aries 3 has realtime tactical Sig in and full motion video intelligence which is

(1:49:03) what we've been talking about with this cber system it actually crew the the crew fuses Battlefield intelligence along with offboard data to create Battlefield space situational awareness and then he would have been responsible for actually reporting that information up to commanders that are you know in their command post Etc he was uh deployed on this special projects Patrol Squadron 2 the Wizards vpu2 he previously had experience using uh with nuclear weapons we gave this guy the highest level experience he had spent 17

(1:49:34) years in the Navy his last deployment was from February 2014 to 2016 as part of this vpu2 again so he starts February 2014 less than a month before our videos or before the MH370 he gets reassigned March 25th 2014 two weeks after the plane goes missing the investigation into him started April 2nd 2014 he ended up getting arrested a year later in M May of 2014 he was caught with two flight manifests in his flight suit from a deployment that included search and rescue code names so in May after he had been reassigned his next assignment by

(1:50:18) the way was the brg so they basically reassigned him because they're investigating him and then they catch him with these flight manifests like less than two months later from a search and rescue I mean it has to be MH370 given the time frame they try to run a sting operation on him and the reason becomes apparent cuz they try to get him with charges of Espionage that would put him in prison for life it's the first major incident of Espionage by an active duty member of the Navy since the end of the Cold War his charge sheet is heavily

(1:50:50) redacted we tried to use AI to like figure out what it says but it's impossible they they redact all the dates as well on everything so we can't even corroborate the dates to the times of the videos but we have enough information from all the articles that are out there that we can narrow the time within like 1 month of the same month that the MH370 incident happens one of the Articles out there even has a picture of a p8 Poseidon searching for MH370 in the captions on March 31st 6 days after he gets

(1:51:22) reassigned he was privy to the Navy's black program portfolio he had knowledge it would be potentially useful to us adversaries they later admitted not really a spy case the

defense actually if you read my piece called Rogue Archer that I put out recently the defense basically argued that he was never read uh what he was charged with and that the whole situation was just like a big **scam** to catch him and try to use disinformation they argued that the mil that the government was putting out like fake information to the media about what

(1:51:53) his situation was they argued that he was held in pre-trial detainment under false pretenses and the reason for that is you can't have him talking to anybody the emails that they listed for why you should be held in entertainment were all mundane and the judge argued that he had a dangerous pattern of disclosure of classified information but they didn't point to any disclosures of classified information in their argument so it seems like they had to hide this information from from anyone knowing what he was really

(1:52:22) disclosing there was no evidence he ever exchanged any sensitive information from anyone from **China** the defense actually argued this is real that the classified information in question is available on the internet okay so if it's not our videos someone please tell me where this information that's available on the internet that he **leaked** is cu I can only think of when you add all this stuff up that the time frame the fact that they're throwing trying to get him for life in prison it adds up to our videos and it doesn't add

(1:52:51) up to UFOs if it's UFOs you're not throwing the guy in life of prison it adds up to it being our technology and the implications of that technology is whoever controls that technology controls the world and we don't want **China** and **Russia** to be able to reverse engineer it he was abused while in pre-trial detainment by a goon squad they went into his cell stole his stuff that was attorney client privilege they put him out in the cold all documented they force him into a plea deal probably tell him that hey that wasn't UFOs this

(1:53:24) was our technology so he gets 9year sentence even from a plead deal nine years they they get rid of all the Espionage charges they take the last three years off they say okay we'll only give you six years because he ends up working with the NCIS and the FBI so I imagine what he's doing there is he's telling them where he gave the videos to who he gave the videos to reges sideon non's never going to be heard from again Etc he ends up accepting responsibility for the offenses he was actually guilty of

(1:53:54) and issuing a statement about how he wants to be like um a lesson for anybody else who would leak classified information to be careful about it so I go ahead and I do freedom information act requests to the FBI and to the NCIS I haven't heard back from the FBI yet the head of legal for the NCIS sends me back a total rejection of my Freedom of Information Act request in total despite the fact that in 2019 or 2009 Obama made Freedom of Information re class foyers uh easier to obtain he actually quotes one of the exceptions

(1:54:32) that Obama lists and the exception is to keep secret in the interest of National Defense or foreign policy they won't give me a thing about this guy's case I sure that the reason is because he **leaked** these videos and they know if they give me anything I'm going to be able to to help figure it out there's going to be clues in there they're going to mess up they're not going

to be able to redact something so this is extremely damning evidence that this guy did something serious especially because

(1:55:00) it's not a spy case so if it's not a spy case why is it being held back in this interest of foreign policy right yeah yep look yeah I mean it's perfect match and there's even more cting information I suggest you guys can read my piece called Rogue Archer we keep finding more information that was actually the they

(1:56:02) gave him because of this whole case he actually got a code name for him because of this whole situation how many situations do they get code names did Chelsea Manning get a code name if so I'd love to hear what those other code names are but this narrow window of time is too small the evidence and what they came at him with too strong that tried to put a bunch of disinformation out there public which is what you would expect when you're trying to throw people off because otherwi those people are going to figure out that he's

(1:56:26) related to MH370 just from the timeline right like we have so they had to throw stuff like prostitution charges you're trying to go at somebody for Espionage why are you trying to throw a prostitution charge it's like it's nothing at all right compared to what you're really trying to get him for um so yeah I think that in my mind there's no way he's not the guy um I just there's no way we're going to find anyone who's even close to as much as this realize though that he went to

(1:56:53) prison for six years they probably hooked him up with a government job afterwards because you got to keep this guy happy we didn't reveal the videos like he probably thought we would you know so he's going to be at this point very reluctant to talk to anyone so what I would argue if you're a random person out there please do not harass this guy he is my hero I would actually take a bullet for this guy if you are a journalist please look into this case look at the evidence that I put out there I mean this is a huge huge amount

(1:57:24) of evidence we do need this guy to talk this is probably one of the only ways we able to verify these videos yeah yeah let's take some questions

(1:59:18) yeah yeah I agree I think go ahead yeah

(2:00:48) awesome and I just want to say right while we're doing that I agree with Kim that we should try to stick to what we know for sure right and what we can prove and when we deal with the speculative side of it you know there's a lot of options we don't have two cameras on the other side we can't uh you know be certain about anyone's motivations um I have gone into depth on all that stuff so you can find that information if you want to dig into it uh but ultimately like we've dug through what we can prove here and

(2:01:19) it's very very damning to at least to the official narrative oh sure I don't I wasn't really watching who was up but let's say money Penny I think we'll start with you since you're near the top hey money Penny for money Penny is asking about uh Philip

(2:02:25) wood I'll I'll relay the questions into the chat I'm on mute there she also was uh saying that the presentation was really good I thought I thought we did a good job there very happy to have somebody like um kim.com support in here I think it's big he's a very logical person um we think the zap is um solving the fire fire issue potentially or it could just be teleported to a specific location at zero speed and stopped right there the phone's ringing would mean that they landed somewhere else on Earth

(2:03:11) not in the ocean yeah so I mean I think that I you know briefly what I'll say I just you know again this is speculative we can't know but there were at least 20 freescale semiconductor scientists on board Engineers they were going to upgrade plants uh in **China** that having 20 people from the same plane is far too many this breaks company policies This Plane we believe was doomed right it can't land it's going to land in the ocean it's going to break apart could be doomed at that point um we have found an NSA 2005

(2:04:12) security report that is about commercial superc conductivity development it references this company they also free scale semic launched a major initiative dedicated to RF power needs related to us Aerospace and defense so we do know that there were some very important people on board this plane that could theoretically be a motive let's take some other questions um I think diligent uh diligent Dennis in hey buddy how are you doing we'll take you next yeah so I'm going to repeat I don't want people harassing this guy he's my hero

(2:05:11) what I will say is I've already this is already come out publicly that I have tried to get in contact with him um I have not spoken to him no I will say that um but you know I would say that I I would think that if this is real the only way we can get this to be proven definitively even despite the huge amount of evidence just because it's so hard for people to believe all this is we need him to come out as a whistleblower or even better we need the president of the United States to issue a pardon for Lieutenant Commander Edward

(2:05:39) C Lyn he is a hero he doesn't deserve to be vilified he deserve to go to prison for six years over trying to give this technology to the world that deserves it so please president and if this doesn't get solved and we have a new president please do the right thing and pardon this man if he gets a pardon he won't have to worry about his plea deal he won't have to worry about going back to prison over this because keep in mind if you have a plea deal basically means you can never talk about it ever again they

(2:06:04) make you sign a statement and that's most likely what happened here he also probably doesn't believe in the good of humanity because we ignored the videos that he **leaked** and we didn't do anything about them while he sat in prison and rotted for six years so he's probably not going to be very willing to come out I want him to know that if he does I will support him in all my resources I will send all my followers after him I will stand in front of him as people try to do anything to him anything he wants

(2:06:31) so we need that pardon if he does we can get the full **truth** we can prove that these videos are real and we can shock the world he's asking whether or not it would be protected um

so interestingly enough I say that phrase a lot I probably need to come up with a new phrase um there is a new whistleblower uh law that's going through Congress and Senate right now maybe that law would be enough but realize that if these are not related to real uaps this is potentially our technology he may not be protected under

(2:07:12) that so I'm not really sure what all the motivations would be there um I did get an email from uh one of his uh lawyers from their company that actually was about court Marshal cases regarding the new law coming through which gives me some hope that potentially if that law does pass that there could be an opportunity where he might be able to come forward but ultimately in my mind just due to the searious situation I mean we are dealing with potentially the biggest conspiracy ever technology that's been hidden back

(2:07:45) held back from us that we really need a full pardon from the president for this to really be happening then he would feel safe enough where he can talk about it and even then he may not feel safe enough I really really don't want anything to happen to this guy so please everybody be respectful kim.

(2:08:09) com wants to talk about the magnitude of the situation here as well thank you guys for watching and listening right now on YouTube if you're watching and you want to follow along with the case further uh feel free to subscribe here I hate asking people to subscribe and what have you but you know this is an active investigation where you're not going to stop I'm going to keep streaming stuff like this almost on a daily basis so follow along and you want to support best thing you can do is follow on Twitter you know follow subscribe on

(2:08:47) YouTube watch the other content spread the evidence he's talking about the implications here for this technology yes I have interviewed Kate T I think I mentioned some of the evidence if you want to rewatch and early on Quantum teleportation's already been proven to be real guys quantum teleportation is 100% real nobody should watch more **Mick** West you should watch less **Mick** West **Mick** West is a fraud guys if you're watching **Mick** West that's probably part of the reason why you're so ignorant of reality nothing **Mick** West

(2:09:33) says is real or true **Mick** West went last five minutes in a debate with me that's his level of uh intelligence and expertise **Mick** West actually had a direct request to be in this this space and he dodged it because he's a coward so if anybody's Heroes **MC West** he failed you guys kim.

(2:10:11) com specifically asked him and I actually unblocked him so that he could join and he and he didn't he's asking about the lithium ion batteries I'm going to pull it up yeah yep yeah so uh in my pinned tweet right now I have all evidence uh the only one I Mis formatted was the evidence against the suicide pilot Theory but you can find the lithium ion battery fire evidence so 221 kg of lithium ion batteries that were put together the same day that's almost 500 lb of lithium ion batteries these are not the ones that are running the plane

(2:10:53) they're just in the cargo bay so these batteries skipped two security screenings this is

all from the atsb the official report the cargo compartment was designed to withstand flame sources of up to 1700° Fahrenheit or over 900° C for at least 5 minutes so theoretically this cargo bay can withstand the fire if you're battling it you know but this this plan is not going to last forever I have a source that I've talked to as experienced testifying on Capitol Hill willing to testify that the plane could

(2:11:24) last for over an hour while battling the fire and that a lithium ion battery fire could escape from the cargo bay that could potentially not be extinguished by the cargo Bay's hon fire suppression devices and that the glowing orange plane that KT saw would be consistent with a chemical reaction of the hon fire extinguishing devices releasing bromine gas an orange chemical gas there's a heat signature near the exhaust panels of the landing gear where the AC units are so those AC units may be flushing

(2:11:53) smoke from the plane this could indicate why we don't see a very obvious fire in our thermal it's within one of these containment cargo Bays made for containing fires the smoke trails are coming from the back of the plane in both videos it's too low for it to be contrails so therefore it has to be smoke that we see in the videos the batteries may have been unpackaged unsafely if you go look at that atsb report pictures they look like improvised explosive devices they were packed in these um just straight up uh

(2:12:26) what's the word I'm looking for here um just boxes basically stacked together seems like an extremely dangerous event I would not feel comfortable with these things on my plane there's a b77 fire suppression device which washed up in the malds around March 25th that was not investigated the MDES were not included in the search Kim and I were looking at it earlier there's a very clear um number serial number on this device which most likely would have tied it directly to MH370 there yeah yeah so so we have to remind we have to go

(2:13:16) back to the flight path which is the plane goes dark at 1721 UTC over the South Indian Ocean then it flies all the way over Malaysia then it flies to the nicobar islands then it flies over to uh yes the nicobar islands where we see our videos the time the plane goes dark 17121 UTC is where we have a witness who sees it initially start on fire where we have nine people on the coast that hear the loud bangs so this is going to be that our situation where the fire initiates the explosion happens from the batteries then from that point forward

(2:13:47) you're battling the fire you're battling the smoke as this plane is traveling this is where our drone is now going to be deployed and intercept our plane where it finally reaches it the rendezu point of the nicobar islands later on whether or not this fire started accidentally it was a very hot night almost 100° the landing gear heats up when it takes off the wired article actually argued that the landing gear itself might have started on fire so if something like that happens this is an accidental event that is not being

(2:14:17) monitored because it's in the cargo bay and if the I think it gets to about 160 plus degrees if these batteries get to 200° then they are going to ignite and around 160 if there's a defect in them if there's a defect at all then they're at risk for blowing up and that's the most

common cause from talking to experts so we also heard a SOS comm

(2:14:41) unication that was at 2:43 a.m. or intercepted at 243 a.m. which is converted to 1843 UTC Malaysian time only reported in Chinese news in ch in Chinese saying that it was from MH370 planes attempting an emergency landing and disintegrating consistent with the videos consistent with the witness testimony at the time and the location FAA changes the rules in 2015 no longer allow lithium ion batteries in the cargo passenger planes pretty coincidental timing there's more than one lithium ion battery fire in passenger planes per week even after that 63 this year alone

(2:15:15) this fire event is corroborated by every single Witness that I've seen so far which is all the ones that were in the boat 10 minutes later that see the plane flying low Mike McKay who sees it initially happen the nine people along the coast and then Kate T who sees it far over in the nicobar islands which at this point all the gas and chemical reaction has caused it to glow orange covering up the fire event this is a mundane event a fire why would you have to cover up a fire event with this story of it going to the South Indian Ocean

(2:15:46) the only explanation I can come up with is the technology we see deployed if the videos are fake you're not coming up with this whole scenario of oh it went to the South Indian Ocean you would just say it crashed in the nicobar islands where the fire would have taken hold of it where the plane is current currently in our videos attempting a landing does that answer your questions so he was asking what the situation was the fire yeah

(2:16:59) so we have a journalist risen right now yeah I think he was the one who talked about the phones right oh okay oh yeah yeah yep I so we tried to look at that picture yeah go ahead yeah weird he's talking about Richard Quest the guy who was in the the picture yep he's talking about the cover up from the media side Patrick I think you made some

(2:18:04) really awesome points I just followed you back because I realized I hadn't um and exactly it is why are we covering up this fire event right there was actually a few people that were trying to argue for a fire there were people saying that Mike McKay's sighting was very credible that meant it had to be a fire but no they had to throw water on that right away and the media did their job I mean I watched a lot of the CNN reporting I mean yikes they really really tried to push people away from all the most obvious scenarios right

(2:18:31) they tried to even vilify this pilot it's just embarrassing looking back at it for he's asking about mh17 yeah so my official stance on mh17 is that it is completely separate event it is a tragedy for MH for Malaysia in

(2:19:36) general but that they're not connected there was a different number of people on the plane uh completely different countries of origin from them mostly Dutch people on mh17 I was actually online uh on that day when that happened and I watched the separatist General post the brag post that he posted on Facebook about it in real time on social media until 15 minutes later they realized they took down a passenger plane with a buck missile launcher that guy has

never faced Justice he was protected by the **Russians** and it still

(2:20:05) upsets me to this day um I can't remember the general's name but I'd have to dig back through it sure for yeah I like Kim he's really good he's

(2:21:10) he's basically saying focus on this event not focus on Mage 17 yeah Kim is awesome I'm so happy to this guy on here yeah wow it's almost 3,000 people uh listening to this space right now so yeah sorry you guys can't hear on the space that's probably why less people are watching which which is fine um feel free to you know like the video here we can get more people on here again feel free to subscribe if you want to watch I post all my investigation publicly that I've been doing recently yeah I'll post I'll put the

(2:22:03) video again while we're listening so we yeah thanks Kim and I agree we don't need to mix this with anything else or any other conspiracies we already have a conspiracy that's so big at this point that it's honestly too big right I would have been happy with this just being MH370 on here without the plane getting teleported to another place or whatever we see from the science perspective um if if we do think there's another plane involved the one that I'm looking at is the ga tesis plane that was purchased in

(2:22:33) October 2013 there's proof of this that was scrapped maybe a decade too early that is an exact model replica of MH370 that was purchased from Malaysian Airlines if you're going to do an operation and you need need to test it out you're going to use a plane that's going to be similar so that's the one I would be looking at for you guys to check into if you want to try to you know find some connection here but let's go on to another question um I'm not sure who is next Jenny I think you were

(2:23:14) next yeah so that's goes back to that if you guys look up 2005 NSA uh security report that was done on Commercial superconductivity I'll see if I can throw that in the chat for you guys here in a second and put it up in the in the um in the top I didn't think we would find anything like this like I thought in terms of trying to connect the people um that it would be very difficult to find the evidence surrounding this but we ended up finding this report it says super conducting technology assessment National Security

(2:23:44) Agency office of corporate assessments August 20 2005 this is a very long report most of its appendixes free scale semiconductor and their microchips are listed nine times in this report this is actually a report about how close we are getting to superconductivity from microchips that potentially there could be microchips that are used in quantum computers because those use superconductors now um in addition to this if you read the intro it basically says that this technology could be available by 2010 or 2012 and then in the final bit it says

(2:24:18) that only if the government actually invests into it which directly in my mind ties the people on board this plane to the technology that we see at play but again that's speculative on my part I'm going to go ahead and post this you guys can take a look at it yourself free scales listed nine times in this report um so take a look at it I'm going to post it right now any follow-up

question on that thanks a lot Jenny appreciate you too so yeah uh take a look at that and then we'll go to our next next question

(2:24:47) as well I think I just threw that in the what do you call it Nest I'm not really good at social media guys um okay next person I think Nick you might have been next and then we'll probably go to Confluence and then oh Tupac's next okay T oh sorry okay Tupac you were next and then Nick will get you next after that tupacabra welcome okay two Babas next year okay so what are we talking about here oh sorry let show you guys the video wait what's up rages what are you guys doing

(2:26:16) here I've got so many messages holy [REDACTED] yep he's asking about the Tic Tac and the other videos and other things that are similar for you guys who can't listen um and I think that there is potentially some connections there so yeah one thing I want to break up

(2:27:38) that real quick too is those 2017 is when they were Declassified they were out there before that for I think about 9 years interesting enough those DOD Navy videos were actually conclusively debunked for 9 years until they were proven to be real and Declassified that's also the same period of time that we've been dealing with just heads up now in addition to that the I think the vibration that weird vibration that David FR or Commander fraver sees which I think that these are very highly credible people in their witness

(2:28:04) sightings um that could also be uh similar to what has been explained to me is happening with our macroscopic coherence there's two ways to achieve the macroscopic coherence according to Salvador piás one is that you can increase acceleration of the spin of electrons the other one is you increase the acceleration of the vibration of the electrons so to me I think that there may be a connection there and I do think this is why in my opinion that what we might be looking at here is based on some form of reverse engineered

(2:28:34) technology is that it's very consistent with a lot of other sightings but just like with the other intent we were talking about before we have enough here that we don't need to link this to other stuff that's out there right um we have enough here that we just want to be focusing on this case but it is very interesting Tupa okay yeah I guess Nick go ahead now thanks for waiting patiently do you have any questions in the chat I can answer while we're while we're doing

(2:30:13) yeah that's a good question and I I don't mind hard questions at all so I guess the first thing I want to say is why do I think it's US versus non-human intelligence I actually have a piece on this in my all evidence which is there's no reason for such an extensive cover up for just an anomalous event in my opinion if it's like a UFO event I I can't imagine we're building this whole going into the South Indian Ocean narrative uh that's just my opinion the assets that are filming are military

(2:30:38) they're filming before the orbs appear so it's like they're expecting it to happen the orbs are moving at Mach 3 so this plane is not able to outrun them early early on I thought maybe the initial event that we now think is a fire could have been caused by the orbs but it

never made sense because this plane can't outrun the orb; the pattern that we see doesn't need to be explained by AR and non-human intelligence because it's explained by AI, a computer program. The fire event indicates a rescue motive.

(2:31:05) and I think that it's I don't like to attribute any human motivations to a non-human intelligence. My opinion is they just simply wouldn't care about us if they do exist and I'm agnostic about that. Just in case anyone cares, science can explain everything that we see. I think is another big piece too. Now with respect to the UAP Community, I have distanced myself from the UAP Community. I certainly think individuals, people who are on here, I think are good people. My overall impression of the UAP Community is

(2:31:30) extremely divided, extremely toxic. I don't want to be any part of it. I don't want them talking about me whatever. I just want to solve this particular case. My opinion on why these people have come at me is multipronged. Some people, they see it as their bread and butter is going to disappear. Some people have a jealousy motivation into them. Some people are just gatekeepers that think that they whatever they think has to be the right answer and then there's a last group of people that I think are controlled by the intelligence community.

(2:32:01) and their entire purpose is to cast doubt so that no one can believe anything to be real because if you just throw enough doubt out there like the same people that are making fake CGI videos and posting them, they want you to think that you can't tell if anything's real. That everything has to be fake, that's how you cover up real uaps if they're out there right so I think it's probably a combination of all those factors and I think the answer for me to that is for me to separate myself entirely from them. We don't need to be

(2:32:29) involved with them at all. I've stopped using those hashtags weeks ago so there's no reason for those people to attack me. Anyone who's attacking me personally, the only motivation left now is that they're nefarious and their intent is to try to silence the situation, which is why I'm going to throw one last blow to them later tonight because I've been watching and I've been seeing which of these like, uh, people that speak about uaps and claim to be for disclosure are connected to the trolls who've been attacking me. I've

(2:32:57) been watching and waiting for my chance and we're going to strike at them now. I know some of you guys may care about them and think that they're on your side. This is what I would say to you: what have those people revealed that's verifiable information ever in their careers if somebody has not confirmed anything that's verifiable? Why are you trusting anything that they said? Look at how I conduct this investigation. The reason why very intelligent people like Kim,

(2:33:23) come look at it and talk to me is that we can go through the information and we can find verifiable information that we can prove. You know that's a big thing now and I'm very transparent and I even answer questions like this so when I call these particular people out, let's wait and see if they respond. An honest person will come out and respond and have an answer for very basic questions and why they are in connection in direct communication with people.

who are toxic trolls who are trying to cut people down constantly if I was doing that I would

(2:33:51) have an answer for it when they don't respond you'll know exactly what to think of them yeah we can take one or two more yeah go ahead any questions he's asking whether not the batteries were tampered with and it might be an [Music] Espionage yeah yeah my opinion is my and this is just my opinion is it's a matter of opportunity un because you have this plane that's flying for an hour and 20 minutes my guess would be that this was an accidental fire because we know how dangerous these lithium ion batteries

(2:34:55) are but there's still mystery despite how much evidence we have I can't say for certain whether or not this was not a planned operation right from the get-go this the evidence for that side of it goes back to if you want to watch my confessionals podcast where I still had no idea if this was an emergency event or an Espionage scenario there's two fake passengers from Iran whose cover story doesn't make any sense the satellite only pings one of the two satellites even though it's flying towards the other satellite it should be

(2:35:22) pinging which would allow us to get triangulation so this kind of shows that maybe there's more to this there was also this evidence that these awx that are out there could Jam the plane they could remote control the plane so there's evidence too that this could still be an Espionage scenario and they could have been planned from the beginning though I think there's enough time with this 1 hour and 20 minutes there they can deploy the assets they can communicate with the plane get the plane to the way point the rendezvous point

(2:35:48) and then deploy this technology if you're trying to take out the plane you can just let it crash right that's the thing too is that this plane is pretty much Doom it's going to crash the fire is going to take it out eventually it's never going to last to all the way down the South Indian Ocean so you don't really have to deploy technology to wipe it out to me the strongest arguments are either this was planned we were going to do something about it and we want to take these people and rescue them or

(2:36:11) really a matter of saving them um the other Theory too is if this plane is doomed maybe there's some protocol where you just break out the experimental technology we don't know what's going to happen that just seems a little bit too dark for me but again it's very speculative and I leave it to really everyone to come up with their own opinions on what they think happened like Kim was saying I just want to throw the evidence out there and let people come to their own conclusions and that's

(2:36:34) one of those things too going back to the UFO Community you get a lot of people out there that tell you they know exactly what's going on right those are the people you should trust the least the people that come out and say Here's the evidence you make a decision those are the people you should trust the most in my opinion we're going to do Confluence next uh for me I would have been much happier if this was non human intelligence the the thing there is I thought initially had be nonhuman intelligence before I dug into it and

(2:37:13) really learned a lot more about it looked into the motivation Etc learned about the fire event and then I realized this is potentially in my opinion our technology that's where I'm strongly at right now but even more so that it scared me more I used to make the joke that um I'm much more afraid of my own government or be me that I am of non-human intelligence or be me I can avoid the Tigers in the jungle I can't really avoid my government trying to silence me but even more afraid than both of those

(2:37:38) things I'm much more afraid of lithium ion batteries in my plane especially in the cargo of my plane uh so that's my hierarchy thanks Nick uh let's do some other questions uh Confluence you were up you were waiting patiently thank you if you guys have questions I'll answer them as well can answer questions if uh the Youtube if you guys want space lasers what you got to watch out for I'm actually afraid of them dropping something from satellite like just he's asking about Diego Garcia and

(2:38:25) the Philip wood a of picture to the military yeah great questions no I know yeah no I think that those are great questions the first one's the Philip wood picture which was posted on forchan uh roughly a week later after the event and this Philip wood picture is a black picture posted on 4chan that claimed that he was being held prisoner that he was potentially drugged and that he didn't know where he was and this exf data on this picture points to Diego Garcia military base this is some of the circumstantial evidence that some of

(2:39:08) these people survived that this plane landed there the same person that **debunked** our videos is the same person that **debunked** that picture I found a very detailed technical analysis that refuted every single factual point that was made by that **debunker** and that this picture is consistent with an iPhone 5 Picasso picture and the exf data was not inaccurate in any way shows no form of manipulation at all that doesn't mean the picture is real doesn't mean the story is real just means the **debunkers** uh explanation has been refuted cons

(2:39:37) conclusively the second part is why do you know a lot of people I think say that the military's got to be evil they have to take these people out you know they're never going to save anybody um I personally don't know I will say that I do highly respect the military I am a contractor with the government and I have worked with military people I think that a lot of them you know maybe you can say that the government overall as a whole is not trustworthy but I think that individuals themselves are human and I think that most individuals

(2:40:06) are innately good but that's my opinion but again this goes back to the motivations if this is a fire event there's no reason to even interv at all you can simply let the plane crash and everyone's going to get wiped out so to me the only thing that really makes sense here is either this testing scenario or that you're actually trying to save these people and we have shown that there is a connection between these at least between the engineers on board the plane as well as technology but you

(2:40:34) can also make the argument if you do believe benevolence and that the government's good that they're just doing the right thing here I hope that if my plane is on fire for an hour and

has no way to land please save me as well that's me praying to the video screen right now I I would hope they would save me I don't trust them to yeah I think that you should read my buying silence piece with respect to that so if they were alive and they did save these people what are they going to do with them you know most of them are

(2:41:34) Chinese Nationals so you could send those people back and they're going to be silenced pretty easily you could force people to live out their days on a random Island in a military base in the middle of the Indian Ocean uh the American passengers theoretically could be uh put into witness protection never seen again interesting enough none of the family members still to date have reached out to me none of them now these people were desperate for answers so people make the argument well they've all moved on every single family member

(2:42:02) has moved on I think that you can make a stronger argument that they've been silenced that they've been told something in fact Florence the Changi presented evidence that is corroborates this that the nephew of the pilot was told that his his uncle was collateral damage that the uh French dad was told that his children and his wife that the Americans knew exactly what happened and that they had two awaks in the area there was an Indonesian I believe police officer that was said that he knew the real what

(2:42:30) really happened and he was told by his Malaysian counterpart so it seems and as well I'll report on this right now I don't know if I brought it publicly before I did receive an email from somebody that said I just want to give you this story they date matched somebody like Tinder or whatever you know some dating application one of the people who was on board that plane that lost their significant other and that just randomly in the middle of their conversation said okay I've got to go there's people watching me I can't talk

(2:42:58) anymore after they had already basically said that they were you know the significant other of somebody on that plane what I will say that supports your theory is a lot of these people have gotten remarried they've moved on which would indicate that they haven't been reunited with their loved ones whatever happened with them so good questions on that one uh I want to hit up some more questions cuz we don't have infinite time uh let me see who is left on my list here I think next was Jay let you go next

(2:43:28) Jay oh yeah we'll do Carlos after that go ahead you're fine go ahead Jay for yeah so I what I want to tell people too

(2:44:41) is I get lots of videos and stuff that are sent to me um you know I am not an expert at orbs or anything like that I would say if I'm expert at anything it's these videos and really not much else um but there is a lot of other stuff out there that I think is similar that like Kim was saying could be uh that kind of indicates that what we're looking at is reverse engineer technology I'm still not 100% convinced of that I think there's still a chance too that we've just happened upon this since the

(2:45:08) Manhattan Project and since we split the atom that we've been improving behind the

scenes and that this is really just almost like a breakaway civiliz situation with the US military um but what I will say is that I hope that if we can prove these videos to be real that they can lend credit to all these other sightings that people see out there all the stuff that people send me about the orbs and other anomalous events that happen I had a woman who is almost in tears telling me that she just wants somebody to look at the videos

(2:45:36) that she sees of these anomalous lights that she sees in the sky and I wanted to give her answers but I can't I can't pretend to be somebody I'm not so what I can say is that if we can prove these are real you see a lot of people in how much they just have an instinctive angry reaction to the idea that these videos are real if we can break that down open people's minds up I think that it can help those types of people that want to know you know that that type of evidence they want people to look at their

(2:46:01) evidence they want to their see their stuff so I do look at people's videos and stuff that they send me but I don't have all the answers good question though Jay sure hey Tyrone hey everybody who's here nobody's recovered sorry I missed first part was it about Diego Garcia was that what you're saying yeah oh yeah yeah so again I think we talked about the Philip wood exf data picture a moment ago there's the b77 fire suppression device that washes up in the Maldives not looked into there's also a

(2:46:55) sighting by other Witnesses in the Maldives early in the morning around 6:15 a.m. local time there that they see Malaysian Airlines supposedly they see the blue and white stripe they see a jumbo jet on there the problem with this timing is how does the plane get there at that time it just doesn't add up it's not coming from the right direction of travel but if what we're seeing in our videos is some form of teleportation there might be a time dilation effect that happens which essentially means this plane can show up in the future

(2:47:22) which would be uh proportionate to the distance that it's traveled so if this is technology that is real I think that maldiv sighting adds circumstantial evidence that this plane went to Diego Garcia as well as this is one of the only places to hide a plane you know this is a very Advanced base I'm told that it is the equivalent of Area 51 on steroids that they can potentially hide planes that there's underground facilities but a lot of that's speculative don't want to go too much into it uh we can talk about that more

(2:47:48) on other spaces but yeah thank you um let's take some other question Carlos you were waiting for a while um with the patents I think that's a red herring I think the patent a little bit red oh he's asking me asking about it right now he's actually asking about right now the patents so here we go he's actually asking about the pat so here we go he's literally ask about the pens he's asking about patents and why

(2:49:14) now so saying is it a message that this is like a warning to the other countries good question no that's fine yeah so and it looks like some other people's questions are getting answered here as well so the patent situation I think is a little bit of a red herring and I looked into it the thing about the patents is that they are owned by the company the individuals don't

own the patents so if people die it's not going to change the circumstances of those patents in that situation now it doesn't mean that the

(2:49:59) patents aren't necessarily important or a piece of the puzzle here I have had uh several people come to me with different angles claiming that I think I said that they might have been producing quantum computer chips that might be corroborated by the National Security Agency report talking about Quantum Computing um there was other I think patents that people have discussed that might be involved uh but like kim.

(2:50:18) com said I I don't care as much about that angle I think that that All Leads back to the engineers and scientists on board anyway um so that part is like a little bit speculative of course but really ultimately leads back to the free scale Semiconductor Company which was sold off to nxp semiconductors a year later the why now question is another good question I think that the answer is that we first of all these videos have been out there the whole time they've been hiding in plain sight I am not any type

(2:50:46) of disinformation agent or working for the government in any way shape or form other than through my normal job as Healthcare it which has nothing to do with anything like this um and my understanding of how they're real requires at least five different things we needed to see those DOD Navy UAP videos that we were just discussing that were Declassified in 2017 that was when I actually started to look into uaps and consider them to be uh real CU before then I I just didn't really have any basis or strong evidence and reason to

(2:51:15) think that they were um and they also showed us that Flee forward looking infrared what we're seeing in this Electro IR camera is a very similar camera to that that has a thermal layer added over the top from the Ron software we needed the 2019 Trump satellite image from USA 224 that we talked about before that was sent up in 2011 without this satellite picture the last time I think we've seen satellite imagery is like the 80s we had no idea I mean it makes sense that sure they're recording 3D video or

(2:51:44) recording video of the entire world but to then really understand it and see it and see the actual resolution where we've been able to deduce that it's not just a satellite taking the picture they're not logged into the satellite looking at it they're logged into a command satellite that's looking at the cber system that's able to create essentially a computer playback Google Earth you know so that understanding all of that is huge and that's how we know because there's no atmospheric

(2:52:08) Distortion why we see the low frame rate which probably also shows why Trump didn't leak or didn't show us video cuz when we see that there's this six frames per second we now realize oh there's a wide field of view six frames per second probably because it's building in real time using real data a computer generated Battlefield map that they can look at we also needed Advanced theoretical physics Concepts while I don't think we're looking at a wormhole and I think that we've explained this as

(2:52:35) macroscopic Quantum coherence we needed to know about Bose Einstein condensates which are lithium 6 is one of these where elements as they get super cooled can change from fermion to bosons and what this allows is for macroscopic atoms to obtain Quantum properties just like what we've been talking about now doing it to a 777 is a whole another scale but even with just within the last two or three years this is brand new science for the public that hasn't really been out there even the the converting Fermions to bosons and back to

(2:53:06) fermion which is converting stuff to stuff as uh different points in space like Mass stuff that we can pick up to things that are equivalent to laser where they're focused down to a single point and then converting them back that just came out like several weeks ago and then we also needed Lk99 the emergence of room temperature superconductivity before the whole Lk99 Fiasco I never even really understood room temperature superconductivity and what it would mean what room temperature superconductivity can mean is that your

(2:53:35) phones don't heat up all these databases Farms that we have of computers don't get hot anymore that we can transfer power from long distances without any degradation due to heat Heat this can just alone can completely obsolete most fossil fuels not to mention that in the paper that I posted from Salvador Pas which probably has nearly a million views now he argues that room temperature superconductivity can be used to create fusion power devices probably at that point we're talking about small Fusion portable generators

(2:54:04) fusion power is not exactly free energy but he also argues that you can use room temperature superconductors to amplify power and that what you can do is essentially create an amplification so strong that you can destroy an asteroid or a planetoid or if you really just if you extrapolate that a whole planet we might be talking about doomsday technology lastly you need to understand AI what we see in the pattern there is a computer program I'm 99.

(2:54:33) 9% sure that we're seeing a computer program it's most likely being run by AI to map the plane I would have thought in 2014 that AI is like you know maybe the next Lifetime right but we're already using I've been using chat GPT every day now and that's only within the last year or so it doesn't surprise me at all that the military would have AI at least nine years before we have it and probably quantum computers is required to store all that information to prepare the plane for that macroscopic Quantum

(2:55:00) coherence so without all that we simply can't understand this to be real and even now people there's so many people that you know adamantly angrily think that these videos have to be fake because they can't still understand it there's still a lot of people whose Collective consciousness hasn't risen to the point where they can I think that people in the uaps communities UFO communities and conspiracy communities are some of the first to be able to understand it because they're so plugged into to all

(2:55:24) these like very current events and things that are you know somewhat conspiratorial or UFO in nature um and then lastly I would just say that why is it not like a controlled thing where they are you know showing off the technology the main reason there is that it's not the

government releasing it so I think the strongest angle there is to claim they've threw it out there on the UFOs sub **reddit** so that someone would find it like me and start to exploit it and then you know do exactly what happened but what we've shown here is

(2:55:51) they've been still trying to hide it the account that tried to post this terrible VFX **debunk** that's tricked so many millions of people right that's most likely coming from the intelligence Community this is not the government trying to get this out there I think that the reason why potentially I haven't been silenced to some degree or another is that they've already kind of thrown this as a lost cause like you know **China** and **Russia** if I figured this out and my team has figured this out using a Twitter account and using just

(2:56:18) Google then I hope that **Russia** and **China** would have figured this out because if they haven't then they really have absolutely no chance um but they are going to still be so far behind this was n years ago they've probably already reverse engineered it and have similar technology themselves any followup yeah yeah yeah I mean it could and that's why I stacked the evidence so high that I don't want them to have any wiggle room on the narrative right because we built so much evidence like it's going to be

(2:57:17) very hard for them to admit and that's part of the reason too why I'm so adamant against this VFX **debunk** attempt to me that's a very obvious Ploy for them to try to admit that the videos are real without admitting the technology is real it seems like they're trying to create an angle where they can create admit that it's real right even though you know because again that VFX **debunk** doesn't **debunk** anything else anyway even if it was a match which it's not I don't think you'll ever see these videos on

(2:57:42) CNN like what Kim or what Patrick mentioned is that they are so implicated themselves in the cover up and directly tied to the government this explains why none of the top Ms mainstream medias have reached out to me and none of them have I've have gotten requests from all sorts of alternative media but mainstream media will not even talk to me the way I imagine it'll go down is they're all going to reach out to me at the exact same time which is going to be really funny um they're happy to make

(2:58:07) fun of some kid who says he saw aliens in Vegas right and drag them over the coals and make him look like a fool but they know that even if they were to try to do that to me it's going to force the evidence to get out to more people and they know probably that the evidence is so damning that they're so implicated that even if they try to vilify me or whatever in the mainstream media it's just going to bring more people over to the cause that's my opinion yeah yeah and right before we do that I want

(2:58:55) to thank Bob I just saw him come up to the speakers so Bob Greener actually is uh the the Martin fichtman uh Memorial project uh account that you see up here I am going to be interviewing him tomorrow and he's one of the first people from a scientific perspective to really dig into the videos and explain parts of about the monopoles and what we might be seeing there I can't wait to talk to him tomorrow feel free to come check out our interview

tomorrow if you guys want to know more about the science behind what we think we're seeing that's

(2:59:22) going to be at 100 PM eastern time on my podcast on my stream it's called I made up a new podcast I didn't have one called hard truths so I hope you guys enjoy that um go ahead Eric let's see what else we got yeah I think this does date back to Tesla having kim.com is pretty awesome of course I'm gonna thank him yeah 100% I'm going to definitely thank Kim so if you guys want to watch tomorrow the stream uh feel free to subscribe 1M tomorrow we will be going over it I'm so excited about this and having

(3:00:27) kim.com on our side I'm going to go have a celebratory dinner after this yall let Kim handle that one yeah that Bob Green in your video is awesome yeah totally I he's so yeah kim.com saying you would want to hold back this technology until you have to use it as like a secret weapon right I totally agree totally agree I love this kim.com is awesome I

(3:01:31) love this guy my God he's also saying we didn't modernize our ICBM program no you wouldn't use the tech that's the point kim.com is arguing that you would keep it secret you don't want to you can't deploy this because the moment you deploy it then you allow them to catch up you want to keep your secret weapon right because the moment you have you play deploy your secret weapon now everybody else is reverse engineering it you got to keep it in your back pocket I'm pretty adamant about that in my

(3:02:04) opinion I'm totally on Kim's side on this one man we've got so there's 3,000 people listening to this this has got to be the biggest space on Twitter right now we almost we had almost 1500 viewers at one point in the at at the peak here sorry AI is not prolific right now um oh sorry maybe I misreading your comments but these videos are from 2014 they predate commercial AI they predate um maybe I'll make a comment about that predate commercial AI predate deep fakes

(3:03:19) yeah this is definitely not a distraction guys there not what is it distracting from what are we distracting from this is the biggest story in the history of the world everything else is a distraction from this not the other way around that's one thing I don't like about these conspiracy communities is that everything's a distraction from something okay tell me what's a bigger story than this somebody else mentioned I think it was Patrick that that he had a military source that showed him this as

(3:03:56) well that said to take a look at it um Jack great question is it more likely that this destroys the world or that we advance thousands of years that's the part that keeps me up at night um I hope I'm not responsible for the destruction of the planet that's going to be hard to live with if so um if we use it responsibly I think we can change the world for the better no Kim's definitely not compromised he's I talked to him beforehand he's definitely a guy who's on it he's been literally been attacked by

(3:04:53) the government a lot yeah this technology will undermine the fabric of our economy

that's 100% real the problem about Slow Rolling it hellward and you're right is that it's the elites are going to just you know use it themselves right yeah I think **Russia** is legit I mean he's he testified in front of Congress yeah the nsah hates kim.

(3:06:03) com that's what yeah you can do flexman yeah I want to add on Kim I think you made a great point I think the biggest Point here is a lot of people think well why are they not using this technology all the time and the answer is keep this in your back pocket the moment you deploy this right now you're risking people seeing it just like what happened with these videos and now you're allowing your adversaries to catch up so in my mind as well that's the strongest argument here is this is something you're keeping your back by

(3:06:27) this is why they're keeping it secret so desperately this is why you threw someone in prison over it this is why they have a huge disinformation campaign attacking anyone who tries to reveal this information and I'm like Kim too I've got scientists and Engineers coming out to me reaching out to me my DMs as I've been investigating saying that hey yes you know this can confirm our theories which is what just makes me even more uh convinced this is real and like Patrick said he had a military Source tell him to look into this I want

(3:06:53) to reiterate this predates commercial Ai and predates Commercial um deep fake technology as well so it's this is might be our last chance to really get disclosure on our own hands before everything is considered fake uh go ahead Lulu are you okay boo sorry that was my dog I'm talking to I've got to take her out I gotta I gotta thank Kim here is Bob Lazar I like how Bob laar go he's like Bob Lamar he doesn't need to have he definitely you know the thing I love about um P kim.

(3:07:50) com is that he's not even part of these communities either like me why would grush rush hasn't said anything about adversarial ETS what are you talking about does make sense this is not about alien invasions either guys if people think that I don't know why people would but this doesn't have anything to do with alien invasions these videos are out there for 9 years so it's a little too late for that yeah and I appreciate you guys digging into this everybody who's everybody who's been digging into

(3:08:26) this thank you very much please all the people who are answering questions for for me for other people thank you very much yeah that could be very well be true Kim and I mean I I leave that open-ended you know I just think that what we're looking at there is not people inside or little aliens or whatever inside of that um really great points uh and I think we want to take one or two more questions right is that the is that the real Jacob Chancey there oh I'm oh wow okay sir I I'm go ahead yeah I'll make a mention of that

(3:09:06) John go ahead wow we have real Jacob Chanley in our in our space right now holy crap we have real Jacob Chanley the shaman from j6 in our thing in here this is wild this is wild yeah so we're going to only go for about five or 10 more minutes guys I actually have huge respect for

(3:10:11) Jacob chansley for the people are listening like this guy got screwed over he didn't do

anything so he he he role played and went through the capital and they put him in prison for like four years until Tucker Carlson vindicates this guy I have to make a statement about it I hate talking about politics but I have to bring it up yeah yeah yeah so actually people have back channeled and given me some of his information I sent him an email uh I sent emails also to all the top people Jeremy Kell follows me um any of the UFO

(3:10:56) people in general I'm happy to talk to I sent him the information in general what I will say originally is I think I may owe Dr Greer an apology the reason why I call him a doctor is because he actually was a emergency room uh physician um those are generally the only people I call Doctor it's not a matter of disrespect to other people uh but that did believe even before this that he had had some information that he was a privy to potentially during the Clinton era Administration um and I think that a lot

(3:11:22) of potentially now that I look back on it I think that he may have undergone a lot of disinformation to try to discredit him and I've been listening to some of his recent stuff and the more I look into this the more open-minded I've become I would be happy to speak to him or anyone else in the UFO community that can be connected um and so I will post in the probably I mean you can give my Twitter or whatever and we can get in touch there's plenty ways I will yeah guys so we're not going to be

(3:12:10) trying to um play games with who we're going to be talking to right um I I don't care who you think is the best who you think is not I we listen to I we don't judge people ahead of time yeah one thing I want to add just last on that is that I don't judge people ahead of time based on anything anyone says about people I listen to people directly and come to my own conclusions about them and uh so I again I'd be very happy to talk to anyone regardless of how they've been vilified or whatever might

(3:12:37) be around them um so yeah that would be great thank you very much John I I would appreciate that and I sent you a DM with my information yeah no problem and I want to say real quick on Jacob Chanley here who is in our chat who we're going to let speak here in a second that I don't really talk much about politics but this is a person that even before this if if my tweets still exist out there uh I defended this person because I think that they were someone who was put into a situation was completely unfair that

(3:13:06) they had been vilified for something that they did was completely blown out of proportion by the media and I honestly believe that Tucker Carl Vindicated this man by showing videotapes that were held back from him that gave him a completely unfair trial and that the government railroaded this guy so I just want to give kudos to Tucker Carlon for saving this person and getting them out of prison it just it upsets me still and Jacob Chanley thank you for being here and you can say whatever you want he's basically saying that it was uh

(3:14:07) coincidental timing but that he still got Vindicated in the public in the eyes of public opinion interesting he's talking about disruptive patents yeah Jacob Chanley seems like a smart guy I'm surprised I mean I didn't know what he would be like but he's like on it with ufology like

I'm I'm just surprised yeah there's a lot of people that have been in my opinion railroaded for a riot um which is messed up and I won't ex I won't go in further on it

(3:15:25) guys don't engage in the trolls if you're going to troll my channel you're going to be gone this isn't a platform for you to espouse your weird beliefs there a serious investigation we're doing here if you live in a world where everything's fake well okay I'm sorry you live in that world some stuff has to be real and what we use is a scientific method to go through the evidence what I would say is if you guys believe people are discredited go back and look at the evidence you know Lulu come on come on

(3:16:13) come on yeah Lulu come on my dog needs to go out so we're going to have to shut this down here for a minute thanks I serial thank everybody else who's been following I appreciate it we are going to close down the stream here probably in a few minutes one sec Lulu come on come on I know you need to go out wait my dog's got to go out so we going to have to we're going to have to shut this down in a minute he's talking about Zero Point Energy right now and a lot of stuff right now you have to listen to the entire

(3:17:07) space uh re-watch the recording after we're done contrarian if you want to get all the information on where the video came from yeah my dog is she's got to go out real bad he's talking about salvator PI right now H that's funny I'm just going to let um Jacob Chanley go as much as he wants because he's a smart I he deserves it yeah this has been a really good live

(3:18:10) stream take it easy new word older going to be done in a few minutes anyway I'm hoping my dog can hang out for another 10 minutes before we have an accident in the house yeah uh you can watch the alien scientist interview there's a lot of interviews that are out there they're really good he's talking about how UFO technology history and what have you he's cooking

(3:19:16) yeah the problem is if I go out my my Wi-Fi is going to mess up here uh because and I'm going to get dropped from the space I think yeah I do interviews on smaller channels but I'm super booked up right now I've been doing them every single day I probably got another like five requests that I've got to try to manage but yeah you can message me at anyone who's watching you can message me at MH370 xpron me that's my email if you want I try to support as much alternative media as I can but of course

(3:19:50) I'm going to have to hit up the the bigger audiences first but I would like to accommodate as much as possible yeah yep xenon gas but argon sure need him to wrap it up here

(3:21:11) though yeah there's definitely Shady stuff going on so feel free if you're new here feel free to follow along watch my salvator Pi um interview which I'm probably going to tell Jacob Chanley to do yeah we're gonna have to shut we're going to slow this down yeah he he deserves a little bit of platform guys I mean what he's saying here is actually

(3:22:17) consistent with grush saying how these the the these UFOs can skip across water essentially watch my interview with salvator Pas which I'm going to recommend for him in a second yeah go look at my live streams you'll find the one with Salvador Pas I haven't uploaded it just yet but yeah okay it's time okay yeah it's on this channel I guess Jacob's uh Jake Chanley is uh cooking right now pretty hard yeah thanks

(3:23:28) Jacob so yeah yeah real quick uh Jake Chan you should check out my interview with salvator Pas so somebody told me that I should message him and so I did and he responded right away and he wanted to set up an interview this is the reason why I have a podcast actually I had to make one up for him so that I would actually interview him on so if you look at my YouTube atj X Aston you can go to my live streams you will find my interview with Salvador Pas uh I think that all those patents we talk about the reason why I think he's so interested in

(3:24:06) talking to me is because he's looking at these videos and you can tell that what we're looking at here explains his patents right so thank you for the explanation Jake Chanley I think we do want to try to wrap this up um Tupa do you have a real quick question real quick comment otherwise I want to get to kim.

(3:24:25) com let him say his final words he did guys come on it's got to be short come on Tupa I love Tupa he's a good guy he's always been nice to me yeah we are going to do a part two with salvator Pas okay I'm going to have to do some work here later um in terms of making some videos as well yeah

(3:25:46) yeah that'd be cool we definitely need you in a Tupa space uh he does a lot of stuff like that um so thanks a lot Jake and even if I got the the Vindication a little bit off I'm glad that you were somewhat Vindicated in the eyes of the public uh I think you deserve that and then lastly before I hand it over to kim.com I just want to thank kim.

(3:26:02) com personally for bringing attention to the videos bringing attention to the case like kim.com I was never involved with UFO communities or even really the conspiracy communities before this this has been a rabbit hole for me going down as well um I'm just a guy who was put into an extraordinary situation who has been disclosing potentially what I think are the most important videos of all time I just want there to be some closure and conclusion that we reach on this and the fact that someone like kim.com has reached out with similar

(3:26:30) mindset similar logical pattern similar things happening I couldn't be more thankful thank you Kim thank you everybody who's been following and I'll hand it over him for final words okay thank you guys for the Stream as well I'm going to go ahead and close out of this so you guys have a great night we will be back later on um but thank you guys following I appreciate it everyone have a great night um I will probably be streaming a little bit later we'll see I've got to go get some food

(3:26:57) do some other stuff and I got to develop some videos follow me on Twitter follow me on YouTube and uh have a great night everybody I appreciate you all

MH370x Brainstorming/Working - 11/17/23 Part 2 - YouTube

<https://www.youtube.com/watch?v=M8QRm9uzViA>

Transcript:

(00:04) okay are we back that was wild I I didn't know YouTube was that advanced man just automatically picked it up should be back oh no oh no it looks like gotta switch to the new stream guys damn getting copyright stri feels bad feels bad guys uh how do I go in my old one that was funny okay here we go it just ended my

(01:10) live stream you got me YouTube YouTube got me yeah are we back in the right one now can you guys hear me now yeah that's weird uh I did not know that guys so you learn something new every day uh that's fine though I probably won't stream too much longer tonight anyway that was called the egg if you just Google The Egg and then you uh go to search YouTube you'll find it like near the top the Bots are apparently good enough to do that Saint yeah that was pretty impressive pretty pretty impressive so

(02:14) we're probably going to be shutting down here in a few minutes um I I just want to kind of decompress uh address a few things talk about what we're going to do tomorrow so if you guys want to watch tomorrow um you know I know we've got a lot of new followers today I actually want to do I think you guys should we do a personal statement I think we should do a personal statement we haven't done one in a while uh let me take a look at my YouTube notifications first you guys want to do a personal statement with

(02:59) me okay let's see what we got um hold on a sec let me see I got to read a message real quick I've had some pretty big name people supposedly wanting to reach out we'll see what happens I no idea Sam with Wiki that's a good name I like that name I'm G to follow him back okay uh give me one second I want to check the verified followers see if I got any big names following me that need a follow back and a lot of these people thousands of followers I want to follow them back this guy's got 36,000 we'll hit him

(03:58) up I just can't follow everybody back back anymore it's too hard yeah a lot of these people have a lot of followers wow okay I'll do that later we you guys want to do the personal statement let me take a look yeah you don't need a degree in astrophysics to understand that we've been lied to why are we talking about shil La exactly oh that oh Sam with Wiki yeah yeah yeah people come up with some pretty funny names yeah uh yeah my followers are going wild I wonder how many we've gained today

(04:51) whoa we're only 25,000 already wow okay we've gained a couple thousand today I think okay guys it's personal statement time let's go a little music just for now just a little music we

need non-copyright music let's see I want that 2023 sorry if you guys don't like this kind of music it's going to be like electronic oh wait let's do this one we haven't tried this one before okay got a little little background music okay I got to think about what we're going to say here if you guys have any

(05:46) ideas let me know we also need we need an image as well to post I think we might post the vpu picture what do you guys think this one this is [redacted] wild man what is this this is a real image for the vpu it's pretty interesting let's see yeah we're just focused on the **truth** here yeah Corbell has been following me for over a month I sent some messages to him as well I'm not going to out them

(06:49) but let's see do we have did I already post this Kiki AI art I think I already posted that one let me look at my own art I might make some some a new art honestly or we could even use something like this tell me what you guys think should we use that should use this yeah I should have realized the copyright thing that's on me that's on me everybody do I have another one for art I'm GNA pull up my Bing thing real quick Bing art creation what do we want I'm going to have it create

(07:54) MH370 nighttime with three plasma balls what do we what's in a Sino soidal sinyal pattern wait how do you sinal so we're going to call it three plasma orbs okay we're going to see how advanced this Bing AI is guys get ready what do you guys think is it going to be able to pull it off oh whoa well this one's weird I think it's this one right here right guys look at this one I think this is the one I think that's the one

(09:02) yeah a is pretty legit I want to try to get I might give it one more go though we're going to probably use that one though this one right here though this one's kind of weird what if we get I me I don't know how advanced this is three plasma orbs how about creating Singularity sinusal pattern thing definitely didn't work [Music] Singularity I love why I just have to type MH370 it knows exactly what I'm looking for how specific can the instructions be for AI art I don't even know yeah just being AI that right now the AI is just

(09:58) wild now it's crazy how much it can do oh whoa look at this one down here o whoa I don't know if do I like that one better though I don't know if I should I think we should get rid of plasma I think Plasma's messing it up and Singularity is not working either how how advanced can I explain it to it like update your instructions like it's a conversation oh okay make a picture of MH370 at nighttime with three orbs circling around it it created a wormhole like that over the ocean yeah

(11:04) that's a good call over the ocean anything else okay we got it we're doing over the ocean good call good call the intention is to get a picture I just want to get a picture for my uh personal statement we're doing here sparkling ocean that's actually a good call Amanda ooh it's getting better why is there two planes in this one why is there two planes in this one then why is this plane all weird uh huh oh this one oh whoa why is there a boat though oh this one's like getting sucked into

(11:44) it let's try again how about over the sparkling ocean sparkling ocean it feels like it's using one of the orbs let's call it four orbs we can always go back to the other ones you can see they're over here on the right I was worried about that actually huh okay okay we definitely need to go back to three orbs that didn't work we need a triangle anomalous balls of light I

(12:56) think that's a little bit too detailed hey you got you got to keep it somewhat simple I think for the AI although this is pretty Advanced you can you've added in Satellite and drone that's interesting make a satellite picture oh okay now we're getting there oh this is how people are getting to these weird triangle oh the triangle is actually making a triangle let's just do pattern yeah the first one is still the best [Music] ironically I think the first one's just is the best oh teral I don't know if it is going to

(13:34) know toal I don't even know teral why is it I don't get why it doesn't oh look at this one oh these are pretty cool oh maybe this one oh what about this one I think this is the one guys oh from above let's try one more from above yeah good call we maybe from above I like I'm glad I'm doing this with you guys this is you guys are much more uh we'll try tral if this doesn't work you guys are more creative than me we have eight more tries until it locks us out that's what this thing means right

(14:23) here oh oh whoa oh I like that one's a little weird this one's very weird huh let's say around the plane flying into a wormhole over the I don't think sparkling Ocean's working unfortunately over the ocean let's do in a teral pattern we're getting real complex with it we only have a few more let's try this out so we have enough we can make this work but now I'm getting nitpicky with

(15:28) it yeah first ever crowdsourced what's our personal statement going to say uh I want to invite all our new people I want to thank everybody I want people to be respectful of one another I'm just going to make some notes Here uh invite new followers welcome uh respectful to one another different backgrounds what else do we want um yeah the teral parts I think messing it up except for this one there's too many orbs I think the teral part is too much for it let's try

(16:31) this you Cas I be civil and then we can talk about what we're going to do tomorrow some clips maybe we ask people for suggestions on what we should do is why does this person have a cell phone in this one what maybe this one let's say three balls of light surrounding the plane maybe encourage other people that's a

(17:46) good idea Andy it's a really good idea Andy sorry different screen what are we I doing something wrong guy did it with a cell phone I'm not sure what do you guys like the best here I think this one is one of my favorites right here this one's pretty good as well these are all the ones from below none the ones from above really worked that well these are my old ones you still like this one the best maybe I maybe we just go with this one or this original one yeah go back one these are the bad

(18:55) ones these are old see sorry I'm just going to go with this one for tonight we'll do others tomorrow I like this one although it doesn't have the the vortex yeah I mean using the actual Drone footage you think that's the best I like the art though especially for personal statements this one's pretty good I like this one right here as well I like this one although these look like moons I like this one a lot you like top left maybe you should M this one I don't know

(20:05) we'll do one more okay let's see we picture at night from above of mh37 let's see uh going into a vertical Wormhole at night nighttime over the ocean with three balls of light surrounding the plane let's try this yeah I like the art for personal statements Landy Gear's fine you think the satellite view I don't think satellite view is going to help maybe oh boy this is weird just AI is just kind of weird it's not really figuring it out going into a wormhole let's say flying into a

(21:09) wormhole make a picture from the satellite one's going to be looking straight down though let's say looking down we'll try one more what do you think which one's ey catching change balls to orbs yeah probably one on the bottom right what the hell oh this one why so okay yeah let's change ball uh orbs three orbs are around the plane engulfed into a wormhole it's probably a good call see what Suzie side top left I don't know we've got two more looks at

(22:14) this let sa engulfed in a wormhole disappearing into a wormhole mid Journey maybe I will use that in the future o there why are there so many balls light on this one the looking down doesn't seem to work at all let's say make a picture of mage7 golfed into a wormhole I'm not going to I'm going to get rid of the over I think it lesses more with this guys it doesn't seem to understand a lot of it ocean three orbs aerial

(23:23) view yeah we could look at some of these others this one here is pretty cool yeah I think this one's pretty cool too we'll just have to pick you like this one too second one they're all pretty good I don't know we're just going to pick one let's go with oh this one's pretty good too is that KT's boat right there should we go this one KT's boat right down there I don't know third panel down this one not sure about that could you like that Drew which one do we like one two three or four I don't

(24:27) really care okay everybody likes this one oh you want to do the boat one tell you got to like I I'm a little delayed so you got to tell me like where the ones you want you want the one with the boat we're either going to do one of these here or where's the one with the boat this one down here third panel the boat one down here I think we're doing this one definitely the boat one okay we're doing this one okay I think that's the one this one's legit with the boat k boat down there it's money in the bank okay so let's see

(25:02) what are we going to say here for

(26:30) keep an old mind I like that oh I like that I like that Drew we're going to use that or something like that for for

(28:37) how's that sound guys do I need a bold these or do I just I think what I do is this we do it like this that was a good jumping point oh congress must act I'm glad I think this can bring us Unity we feel your we feel your

(30:13) grief all is grief the right word frustration we feel your anger I feel your pain yeah I like that wait why is there two of

(31:26) these w now is the Bolding too much

(32:40) here what do you guys think is the Bolding too much I think transparency goes without saying we say we demand transparency bold You Think Bold after the comma instead of instead of italics let me just look at it maybe bold andad italics what do you guys think I don't know think I guess maybe bold's better Boulder italics what do you

(33:46) think we'll do it we'll do it uh **truth**ful transparency that's a little little wordy our TR our goal is to we say we demand the **truth** no okay B is easier full **truth** or just **truth** I kind of like just having the Bold on just you must act yeah a lot of people prefer without the highlighting I think I'm going to get I

(34:50) I think I prefer the italics for the ACT I think we'll keep that bold just flows is better this way maybe have another line here because it's a little bit different than this this looks better my favorite line do we need more Bolding let's see welcome all new followers to the case you get to be part of the greatest conspiracy of all time the real story of

(35:53) MH 370 greatest fed pile the greatest is greatest or largest or something else well we have okay I'm just going to read it out loud instead of just to my head welcome new followers to the case you get to be part of the greatest verifiable conspiracy of all time the real story of MH370 please remember that we all come from different backgrounds and be civil to one another what we all have in common is that we maintain an open uh maintain an open mind open open openminded we maintain what we all have in common is that we maintain an

(36:39) open-minded approach to solving this mystery these videos can bring us Unity most sophisticate is a little bit too much take it easy Amanda thank you very much we're going to be closing on the stream after we make this post to the passengers of m370 you are not forgotten to the families of the victims we feel your pain to the pilots who are vilified you will be Vindicated to the witnesses who are discredited you will have Redemption to the leaker of the videos you are hero to United States Congress to let's

(37:09) put the United States Congress you must act for those who want to help the case we want your suggestions please make content they will help spread the evidence our goal is the **truth** I think I'm going to make B bold that or maybe I just bold mh37 I'll just bu the m37x our goal is the **truth** disclosure on our timetable we can say we demand full transparency or is that just redundant probably redundant I think this is good what we all must have in common I don't think we must maintain what just is an open-minded

(38:11) approach to solving the mystery what we all have in common is a open mind is an open-minded approach yeah I think that's right I think this is good capitalize **truth** maybe bold **truth** think we just bll the whole thing if that's the case or just the **truth** okay last last thing do we like Bolding the whole sentence or just the **truth** we like it like this or would we like it like

(39:17) this I don't think can you underline you can't underline I don't think you can't underline here some people like our goal is the **truth** being [Music] bolded I think we're going to leave the disclosure phrase as it is some people like the **truth** we kind of torn huh okay we'll leave it like that disclosure on our timetable not disclos closure is on our timetable just disclosure on our timetable it's like the next phrase so our goal is the **truth** disclosure on our timetable yeah you like it with all

(40:18) caps man I don't know guys it's getting a little nitpicky can't decide can't decide either all caps or lowercase T I think we got lowercase T like this I think I'm going to C I'm going bold at all I think our goal is the **truth** and then I think what I'm going to do here is I'm going to I'm going to italicize this that's how we're going to do it I'm just taking reins on this one guys okay that's it that's the personal statement capitalize every other letter

(41:09) our goal is the **truth** okay this looks legit guys uh I'm going to post this feel free to like it follow it whatever tomorrow morning we'll probably be streaming we got a lot of work to do got a lot of stuff to prepare um I want to clip some stuff I want to make some I want to make some content as well thank you guys thank you for all for being here tonight this is pretty sweet highlight okay I'm G to put this in the chat you guys can see it thank you all for hanging out tonight uh thank you for helping write the

(41:52) personal statement tomorrow we will be doing more work we will uh got a lot of stuff to go over tomorrow so let me just take a quick look at what we've got to go to over tomorrow we got to get ready for we got to do some video shorts uh probably solicit some ideas for Content that we can do I think video shorts would be good we got to get ready for the Bob Greener interview as well which will be on Sunday I want to clip a couple videos I want to post a video of this needle thing as well uh so we got a lot of big stuff to

(42:31) do oh and I need to link that that stream as well I'll probably just do it in the morning because I'm tired um but the one we were just watching I got a I got a link as well so thank you everybody for being here thank you Susie Drew Paul Professor Jay Shear UFO nut Saint Andy Jay all you guys are in the chat if I didn't say your name I apologize Matt everybody who's here thank you very much we'll talk again tomorrow otherwise check out my Twitter and you should be able to find a lot of the answers that you want uh thank you

(43:04) guys Violet as well thanks for showing up at the last minute everybody have a great

Transcript:

(00:07) welcome everybody we'll get getting ready here in a few minutes hey yo tier how's it going hey diarrhea farts give me a minute gotta get a new camera I think maybe we'll shop for a new camera what's up you guys want to shop for a new camera is there anything I might there

(01:19) might be stuff I don't want people to see on here like my credit card information uh let's see today's deals we can we can look to go let me just double check don't see anything here uh anyone have any recommendations for new camera hey tier uh doing pretty good man we got a live live uh stream is going to happen in like an hour of one of the podcasts I just did so I'm going to answer questions on that but I think I'm probably I don't know if I'm going to watch while I do it or just

(01:58) answer questions while people are in the chat haven't quite decided today's been good I think we gained over a thousand followers today just from uh it's going viral randomly so I think I want to work on how to better Market my stuff like the same feedback I keep getting from people is how to better Market our situation wish there was an easy way there's got to be like a oh share there it is live let me test this real quick interesting there's the share button let's try I'm GNA see if this

(02:45) works yeah okay that looks like that works so if I do that live one I wonder if that embeds it in Twitter yeah I need a camera for recording hey guys hey hey whoopy hey Pierre hey Andy hey diarrhea farts um we could do some spicy content we could read comments from a podcast we could look for a camera here we can do salvator PI science we can let me look at my list what do we have to do we got a lot of stuff to do Edward L part two close that disinformation we can work on original content I think the thing I want to work

(03:26) on the most uh copy this real quick is uh like how to better get better content how to like package it better ideally yeah this Logitech I got some crappy camera hey Amanda webcam for streaming anyone have any recommendations here I don't want some piece of crap like this I need something that's good quality the current one I have is really bad I might try to get a professional one I don't know he's all say 1080 but I feel like is mine already 1080 I just don't know these are all just garbage

(04:31) let's do high quality streaming camera what about this one it's from Best Buy oh it's Black Friday know Vlog camera for vloggers I'm not a vlogger though I don't does anybody know about cameras webcam Marketplace is terrible when you're looking for a real camera the one people tell me was the Sony or Sony 6700 look at that oh a I think it's the

(05:42) a6700 here's the a6600 I really have to be treating myself to get one of these huh oh there we go holy crap \$3,000 look up Razer Kio okay I'll look that up in a second what the heck

razor 60fps adaptive light sensor wide angle lens adjustable field of view it's actually pretty cheap huh phone is probably not worse

(06:48) either honestly maybe maybe that's good this one's got a light on it this is a good one though maybe this is the one I want to do this is pretty cheap it's two normally \$200 it's only 70 bucks interesting I don't know I'm going have to think about this I got to reach out to some people that know about cameras thing is if we're going to end up uh filming something then we're going to need better

(07:52) cameras I don't know I don't know if we're it's going to happen or not though let see what's going on here oh yeah we got we got a bunch of stuff we got to do here um okay what else are we going to do I'm probably going to close my Twitter for now Twitter's just I can't keep up with Twitter anymore it's too much oh so yeah I got to make a compilation list let me put that on my list as well I got I have a huge list of stuff to do guys um podcast compilation tomorrow we're be streaming

(08:30) we're going to be getting ready for the Bob excuse me boy I was just eating Bob Greener interview we got some things we need a clip as well hey what's up everybody I didn't even post this on my Twitter actually uh I don't think I'm going to although yeah I guess I can share Twitter SU I hate how it puts like via YouTube I just don't give a crap about all that and Twitter is getting uh hammered like all these they're like the fullon disinformation trying to get people to cancel Twitter it's going wild right now

(09:24) all these they're trying to like unreddit you every single thread on the news news subreddit is about TW somebody canceling their Twitter uh advertisements like Jesus man Reddit such [ ] okay let's see what we got going on here this supp work every single thread on the news Okay looks looks like that works that's cool I may delete that after and then repost it or something okay but I want to show you guys how dis information Works real quick check out Reddit news everybody let's see Lions Gate suspends

(10:10) all advertising on Elon musk's at X this is the top post on the news subreddit you guys think this is the most important news in the world right now in the United States having lions gates to spend advertising on Elon Musk that's the the top thing on Reddit right now I mean Jesus oh look the next one is Apple Disney and IBM just pause news as well or pause the advertising like this is not organic at all there's zero% chance this is organic yeah we're probably going to get to 3,000 honestly tonight it might

(10:47) happen I don't know um yeah so this is not organic what else is there even more just God the news subred is just the freaking worst I don't care about any of this crap this is why I go to conspiracy when I want to figure out what the news is because this is how bad this is now he took a plea deal in the financial case this is actually interesting this should probably be at the top and it's got 276 up votes in six hours garbage let's see what's really happening in the news I feel like if you

(11:21) guys are watching the movie Men in Black are you guys too young for that the hot sheets they have to go to like the the you know gim~~mick~~ stuff for it I this sub~~reddit~~ too just is too much political crap all I want is real conspiracy stuff j6 tapes speak okay should they release the tapes whatever what's this okay here's something atmospheric nuclear tests were there really that many atmospheric nuclear tests that's a lot of atmospheric nuclear tests that might be relevant to us though but yeah ~~redd~~it's

(11:58) just okay let's see what else we got here okay what are we going to do fake video requirements I don't think we need more of that sure save video requirements piest questions we already did see we got here sorry sorry guys I'm checking this out real quick what's this like Okay so let's take a look what we got here Let's uh look at some videos while we're

(13:02) doing this some people might be wanting to know what the videos are they were actually telling me they wanted to know what we dealing with what I want to do tomorrow is do a couple Clips I don't know if I'll live stream them I might just do them privately uh do some shorts related to the videos and just over like you know speak over the top of them like I am right now video shorts and that way I can post them on Instagram and on Twitter and wherever else me look at that new full screen maybe do it where like I have my

(13:39) my you know my camera in the corner whatever kind of like what you guys are seeing because I got people on Twitter asking me like what what's this all even all about you know my dog is walking by this I have like the cutest dog in the world yes what a cute dog she's more like a cat than a dog though I would I would send you guys pictures but I'm being stocked on a lot of fronts here right now so I don't really want people to see what my dog looks like um do you know the difference between conspiracy and reality couple months

(14:22) yeah it's about right yeah ~~Reddit~~ man is messing with people's minds it's really really messing with people's minds it's really messed up cat dog yeah I'd love to show show you guys her but uh not tonight I don't think maybe another time I don't want people to be able to stalk me or whatever if somebody hurt my dog that that would probably be the only thing in the world that could make me lose my mind um let me see here I think we'll do a little uh let's read some comments I'm

(15:01) not really this kind of person but I want to read some comments from uh a podcast that I was on recently I love who whoa let's see here I'm not even going to show them I'm just going to read them off to you guys uh I don't know [ ] about this guy I never had any interest in MH370 but this guy presents some seriously interesting evidence like other commenters have pointed out he's not pushing any sort of grift or anything with financial incentive for him in the end all he's doing is presenting the evidence open

(15:44) source information he gathered as evidence for a theory just how these videos are real and why the incident would have occurred I don't see the vital coming from a podcaster that a lot of people are complaining about but I do see a complete unwillingness to accept anything this guy has to say as a possibility especially given the title of the video the podcaster seems

hellbent on **debunk**ing everything this guy presents for whatever reason I've seen him of guests on here before he's obviously disingenuous and full of [ ] and the

(16:11) podcaster lapped it up like a dehydrated dog the episode where the guy claims to be a CIA contractor for ground Branch comes to mind even basic cursory research on that guy showed he was full of [ ] this guy presents a great case why have him on not to hear him out to the fullest extent question mark or you just having on to **debunk** him you should come with counter points or at least do some research into why he was saying what he what he's saying is wrong o embarrassing 134 up votes brutal guys uh good presentation here I agree

(16:44) the podcaster gatekeeping of the information is super annoying let the man present his data and let people make up their own minds the way you approve or pooo is research in real time with no research of your own is a constant annoyance guess there isn't going to be a part two which is a shame the podcast was such a douchebag and so confrontational there's a right way and wrong way to treat your guests having some manners is always the right way just in case you guys think I'm I'm cherry-picking I'm not cherry picking

(17:13) I'm literally just reading them right off the top uh I love this show because I usually get to hear the guest perspective without interruptions today I got more of the podcasters while this guy does make some great comments about extraordinary theories that seems somewhat uh Elementary I'd rather hear them through uh hear them through first before getting an interruption each time hey podcaster here's a tip you can express your you can express your skepticism while letting your guest present his case at the same time you have a real

(17:45) disagreeable manner which will drive further potential future guests away from your show the audience has their ability to assess his claims you don't need to be nitpick all the minutia now here's another one did bust a mon set the podcaster up with a contract to shut this thing down I love what the podcaster does fan of the show but this whole situation has a rough look for the podcaster the hotel seems like a simple miscommunication and Ashton acted emotionally Brash about it but has been retive but as far as being

(18:16) receptive to new information the podcaster has Room to Grow I like that you challenge people podcaster but sometimes you should release the desire to win the irony is that the podcaster themselves oh I'm still wondering what what did you expose he seems like a nice guy that genuinely believes he's on to something he has some damn good evidence and theories how does this man intellectual Pursuit hurt you at all I'm not saying it does but your defensiveness felt as you had everything to lose I only interject because of your

(18:44) rude comments on Twitter about your guest saying he needs help mental issues you are looking like a fool the irony of this podcast for giving me any advice yikes man read your own comments of your own fans these are the people that support you holy [ ] this is easily the most meltdown I've ever seen on any interview ever from their own guests these are the people that support the podcaster just to be very clear podcaster and and producer I love you both I'm the guy that knows the Marvel VFX guy that Ashton refers to in this

(19:20) episode that was information I received from Jeffrey Ford as a personal request before I had Ashton on my podcast Jeffrey says it would take some uh just said it would take someone really really good and this guy edited and constructed Infinity War endgame Spiderman no way home and Captain America Civil War he said he could not have made the videos in a time frame of four to four to six days even with all that not with all that research information knowledge of government systems how they look Etc on top of actually creating the video effects

(19:51) editing and then releasing it I'm a fan of your show but I think you got it wrong on this one it was hard for me to accept okay guys do we should we go with the Marvel Studio expert who all he did I mean he doesn't have a lot of credentials all he did was edit and construct Infinity War endgame Spider-Man no way home and Captain America Civil War or should we go with some guy named Nico who has a YouTube channel that **debunks** makes fake videos I don't know guys it's a tough one not sure who has more credibility

(20:26) I'm not surprised at all that the podcaster YouTube channel is dying this was just embarrassing and not for Ashton I actually feel sorry for Ashton even have to sit through all of this good on him for not getting up and walking out these are the top comments guys I'm just reading them right off the top hey podcaster keep hustling my dude I love your content I'm not going to harp on the same BS as everyone else maybe swallow your pride on this one a blanket apology and get back get him back on the show and wrap up anything

(20:56) you guys might have missed I know it's tough it's even tougher for us fans to see peeps beating up on you take it from a fellow New Jersey in South Jersey be the bigger man here you got this spoiler guys he's not the bigger man boy man this is brutal this is really brutal unhappy face come on podcaster I love your podcast and I'm super stoked to see you have on Ashton but just seeing the title and demeanor is hard to watch and listen to I'm honestly let down come on podcast you're better than

(21:29) this I don't understand how so much hostility Ashton seems cool and I don't know the history here but I'm The Vibes I'm getting from you is that you have some prior beef with your guest please leave the emotions out of your interviews it becomes very unproductive and unprofessional I'm super bummed to see you this way I hope you both settle the situation and give your guest another chance prey face or prey hands heart and then I don't know a box maybe to me to me this is solid case deserves more

(22:00) attention after all many other unproductive investigations were made this one has some potential I'm not on Twitter but I don't see what all the hate is from with this guy just a normal conspiracy theory that may or may not be true nothing too outlandish by comparison to other guests uh here's another I'm just going down the list literally reading every single comment by the way guys this isn't me cherry picking you always point out the dumbest details if you found some Smoking Gun without any journalistic investigation

(22:31) of your own but never do the same for more famous uh even more Theory based guests that you've had on previously as I told Ashton I ran the videos by my friend who works at

General atomics and is an expert on those specific drones he builds them he knows everything there is to know about them and he says the videos in his opinion does appear to be from one of their drones beyond that he didn't have anything else to say except for damn that [REDACTED] is crazy Ashton is a legend no need to put pressure on him rather put pressure on

(23:04) those telling false narratives for year I guarantee you if anyone would have done half the leg work this guy had done you would know for sure for a fact there's a lot of [REDACTED] we don't know so I don't know I think that's just a few of them thought that was kind of fun can just read up some of those comments those are just some of like the what 20 top comments on this thing yeah I'd say you know if that's the kind of comments you're getting back from your own fan base wof yikes guys yikes

(23:40) not sure how I can get any worse than that it's about as bad as it gets okay that was fun so I don't know I think if that podcaster was giving people advice maybe he should read his own comments from his own fans maybe he should take his own advice just thinking okay let's see what else we got guys um I'll put a little video on in the background where's my side by side so we can watch the videos here while I'm answering some questions in the chat okay yeah everybody has the opportunity to learn from their mistakes

(24:36) this is from my chat now um everybody has opportunity to learn from their mistakes I hope he takes advantage of this and improves I do too I hope he's able to remove the emotion this is just my opinion I hope he's able to remove the emotion next time you know just because you're wrong doesn't mean you have to try to cut down the guests it's not really good if you're a podcast cter like that yeah the oxygen thing is just irrelevant you know like that's why it's kind of stupid right that's why if you

(25:09) hear me responding on when it was we talking about oxygen it's like fine you're right about oxygen I just literally don't care it's not relevant the plane didn't crash into the South Indian Ocean so since the plane didn't crash into the South Indian Ocean the whole pirate suicide thing is just stupid and irrelevant trying to harp on whether or not you can get in the cockpit or if there's enough oxygen like you might want to do your research first the oxygen it potentially runs out

(25:31) in 30 minutes at best you're going to have a couple hours this plane supposedly flew for eight hours so you know um where is the Nico from the corridor crew video no I don't think so I think we're probably going to have to wait until this weekend or until um Danny releases it I hope Danny does not uh edit it in a dishonest way but we've got no way to know honestly that's why I went ahead and I made the video ahead of time which let's go ahead and watch I'll put the sound on for it

(26:05) too watch we're going to watch the video I made uh so just to give you guys the background on this I went ahead and while I was on a podcast day and this is actually from one of the other podcasters the podcaster that we're talking about podcaster here um from their podcast I was on he was telling me that he had a major Studio that was going to reproduce the

videos in just a couple days that's what he claimed to me and that obviously did not happen and so instead it turned out that they had this P this this clip ready to

(26:44) go and uh while I was on the Danny the Danny Jones podcast and he played it right at the end which I'm guessing he's going to edit it so it's right in the beginning or something like that so he plays it at the end and he definitely thought it was going to be some kind of gotcha like I could look at the smile in his face a little smirk right and like it's definitely going to be some kind of gotcha or something like that and I was expecting it to be like a recreation of the videos right like I knew that he was

(27:10) friends with Julian or yeah whatever and so I thought okay it's going to be a situation where they're going to try to get me or whatever and so I was expecting to be something like kind of amazing right like okay here we go um and I get there and I'm listening it's just literally guy Nico He's Got The smuggest Look on his face like he's so confident which is just hilarious because he just starts listening off all the metabunk things like he's just literally like I'll pull it up because I

(27:39) think I actually have a link to the metabunk thing metabunk airliner here it is this is such a joke so it's just literally like he clearly just went through this thread like he literally just Googled it and went through this thread he didn't didn't do anything anything himself I didn't even spell his name right whatever doesn't matter uh he dis gred the hell of himself anyway he just went through this thread and clearly just picked out everything he thought that they were saying in here but he

(28:11) didn't even look to see if like they had been refuted or anything like that he just literally went through and picked out everything out of here that he thought they were mentioning like oh there's no Parallax and it must be daytime and uh all this stuff so then I'm just sitting there like while he's showing me the video I'm like he just went through the metabunk thread and just posted it even even the VFX **debunk** like that was the last one he's like and the Cuda gra the VFX **debunk** you this is

(28:37) easily the best one and so I'm just sitting there writing it all down right because I'm like okay I want to make sure I hit every single point and I have like you know clips for everything as we're going to see here so I'm writing it all down and Danny's like are you watching are you watching and I'm like yeah man I'm watching I'm taking notes so I can be ready to **debunk** this right and and these people in this thread are some of the most delusional people in the whole face of the planet right we're not even going

(29:02) to go through and give them credit so this is what happens hey everybody this is Ashton Forbes from m370x Recently I was on a podcast where Nico from the corridor crew attempted to **debunk** our real m370x videos problem was he made several false statements that DEC that discredit his position unfortunately so I'm going to go ahead and just review those real quickly the one thing that he did get accurate was that there's no discrepancies anywhere out through these videos he said they're perfect they are perfect because they're

(29:30) real now if you look through them you that was my favorite he several times he says they're perfect yeah they are perfect man because you're looking at real videos they're not fake that's why there's no discrepancies in a single frame you can see that this type of stuff that we're seeing on here is not types of things anyone be able to fake so that's the good part is right away there's these are original works of art we're not copying from anything else right how are people faking these orb

(29:53) movements how are they faking the lines in front of them right of course he doesn't mention any any of that but let's just go into all the details first of all I want to point out that what we're seeing coming from the back of this plane is smoke it's not contrails like Nico uh implied so first thing he talks about is how he thinks it's contrails it's like okay man that's when I knew right away and I stopped him right there in the podcast okay said stop right there like he's already got

(30:15) the first thing wrong right he obviously hasn't even looked into any of this he doesn't realize these are cumulus clouds here and that we're not looking at contrails so right away he's already discredited himself like completely but let's I said okay let's keep going keep going now if we look at this here you can see that actually what happens here when this Smoke Stacks up is that so this is funny he he actually comments on this part right here where you can see the smoke stacking up where it gets

(30:39) darker where it gets like lighter here because the smoke is getting thicker from the angle he claims that this isn't accurate because it's doesn't that's not how contrails work well this how smoke Works actually accurate because what we're seeing is the Smoke's becoming thicker based on our perspective as the Drone flies underneath it here the next thing that Nico got wrong wrong was that the clouds supposedly don't move yeah that he claims the clouds don't move like uh that's like one of the earliest

(31:06) **debunks** this is where I knew for sure all he did was just look at the metabunk thread and didn't do anything else after that move here's the explanation for the clouds moving the clouds actually move it's not as simple as hor there's also another person who thinks is a **debunker** I think it was the same person who posted the um the zap accurate Lumina clouds he actually said as well that one of the things you can't argue about is the clouds moving they do move if you just take a 15sec snippet I didn't pull that

(31:33) one up on this but that's also out there mement as some may expect on a 3D rendered screen the clouds are moving realistically and look here's here's the clouds accurately Illuminating the zap he also says that when the zap happens they don't accurately illuminate you should have seen Danny's face when I pull up the accurate illumination him and his producer were looking at it going like their minds were just broken like they're just wondering like no it can't be right I'm like dude there's

(31:56) literal proof that the clouds accurately illuminated let's go take a look at those I don't know man these guys really really thought see very clearly the clouds are actually wiggling just

as we might expect from clouds moving now in addition to this niik claimed that there was not Parallax but there actually is Parallax we've proven actually do two different videos that there's Parallax yeah the part about him not claiming there's Parallax is the weirdest part because the weird part is he in his video he's

(32:26) looking at he's not at the side by side so why would you claim there should be Parallax if you're not looking at a side by side when you are looking at the side by side we've proven that this is Parallax so let's go ahead and prove right now that there is and this look at this post that post I skimmed through it really fast but it actually has the full breakdown in that in The Parallax part well as well this here that we're looking at this video this one right here the original reg Side Video the

(32:50) first one that ever went out 100% has Parallax in it that's not a debate it just objectively does so you know if Nico I know there's this guy estimate of the situation out there that keeps falsely claiming that there's not Parallax Parallax William is uh that there's two cameras so these videos here when we see them actually let me just pull up the actual one I actually have the better one I think that's proof this stereoscopic don't I have the other better stereoscopic one here give me one

(33:26) sec here we go okay this is because now for people who are not sure about Parallax yeah it's how you get depth so the only way you'd have depth is that there's two cameras that are slightly different angles so in this situation here it's not that this is duplicated these are two slightly different angles here and what that means is you can see if you overlay them you can see that there's they're not the same angle which would be indicative of two different satellites that are next to each other

(33:57) in outer space no Danny Jones I'm be honest guys he was pretty nice okay I mean I don't know how it's going to come out he's going to edit it down from like four and a half hours to three hours so there's a chance that it gets butchered right and maybe he's just lying to me in text messages but I think he's a good guy um so if you fast forward this you can see that he basically assigns the the things here and he overlays them and then so he switches between A and B here so that we're going to be

(34:27) able to see The Parallax so that we can see that they're not the same angle so he's right there so all you have to do is show this now you can see there's Parallax effect that's Parallax right there because you're switching between the Angles and just to be 100% sure he Zooms in for us just to be really really sure Zooms in you can see the clouds wiggling we can see The Parallax effect no question this is Parallax and I love how like I mean how's it it's hard to not be confident when people are just like this

(35:00) wrong but just to keep adding to it just to really drive the point home here just because the guy was so Cocky and Confident when he was wrong about everything uh like you know especially when people are trying to say that I'm Cocky and Confident like don't bring on a guy that's just like objectively wrong about everything where is it h man the red and blue glasses

sorry I'm digging for the the thing but again you can see the wiggling I'm just going to let you guys see that while I look for the

(35:33) video where did I put it I may have to go to my Google Drive I don't know why I keep losing my videos yeah so there now you can really see The Parallax right there right I mean it's just wild man blur but I had everything ready to go pretty much so I'll let this keep playing so you know if Nico had gone and done his homework he would have found that people have already posted all this information to **Reddit** this is by someone named something something B and he goes ahead and takes the original video and

(36:21) he uses this editing software to lay it over the top where you can see The Parallax effect very clearly we have another more detailed version of this which I showed on the Danny Jones podcast that shows absolute proof of Parallax between these videos now in addition to this there was a question about whether or not there was blur there is blur as well in fact when the orbs pass through the back of the plane they do get accurate and this blur part I might have misinterpreted as blur part I'm not sure so if he has any other

(36:50) follow up on the blur part and wants to let me know happy to happy to **debunk** literally any aspect of these videos still looking for my red and blue glasses one why did I not find it cely distorted look at that not just that don't get it but we can actually see blur in the final frame as well as the orbs actually bending this is a very detailed thing to put into your hoax video and why would you do it just in the sing the final frame there unless otherwise this is actually just a plain accelerating like we would

(37:36) expect from an accurate camera now one of the other false statements that he made is that he said that the zap isn't accurately Illuminating the clouds this one I couldn't believe wrong again the zap actually does accurately illuminate the clouds in the foreground and in the background as well as the clouds that are too far away to not be lit up I couldn't believe he made this claim about the clouds like this is a **debunker** that actually proved that the clouds accurately illuminate a guy who literally if you go to his the link

(38:03) where this is comes from he put a disclaimer at the top because he doesn't think the videos are real and he was upset because people kept quoting using this as a source so he wanted to try to drive disinformation and make people think it was fake even the **debunkers** said that there's the clouds are accurately eliminated another false statement that he made was that our videos were at day at night at daytime these videos are actually at nighttime this is indicated by the coordinates that we see down here in the bottom left

(38:32) of the satellite video that indicated to be at the nicobar islands at 2:40 a.m. pitch black moon was down we've checked sun was down there's a witness who saw the plane here as well as well as an intercepted SOS communication only reported in Chinese news what we're looking at here in the satellite video is something called false color IR in fact it's most likely a computer generated Battlefield map this is indicated by the fact that it's six frames per second on a very wide field of view which we've proven because we

(39:00) can see this mouse go off the screen to the top right bottom left to the left side as well indicating that this is a cropped field of view now we can show This Global persistent infrared surveillance continues because we can go ahead and look at this video from Lock Mart this is publicly available look at that these satellites are scanning the Earth all the time this actually explains as well why we don't see more apparent movement from the satellites because they're sending this data and it's building a

(39:28) oops that's f it would be too difficult I for some reason my red blue videos just won't even download like I just pulled it off my Google Drive and it's still not there like I don't know why is it not showing up like it's filtered or something whatever I'm just going to probably pull it up here how many times do I have to download this for It'll like I know it should be on my computer too that's the thing I'm kind of weirded out about because I want to prove people don't

(39:53) think that it's 3D like that The Parallax means it's 3D as well so you can overlay it and you can produce a real 3D video which is like I don't know people don't want to think that's real where is it red what the oh there it is download okay okay guys welcome wel to 3D there it is you can turn into actual 3D so yeah it's uh 3D it's 3D video this is only possible because we're looking at Parallax two side by sides so whoever claims that we can't maybe show them the stream I guess I

(40:53) don't know you know show them the stream not sure yeah now you can tell them you can tell your son what par fig this out otherwise it's also also it's also apparent because we don't see atmospheric Distortion from the satellite shooting down which is similar to what we saw from the Trump picture yeah I should pull up the Trump picture um Trump picture St I think I have this on my files here Trump satellite see looks a lot like this should have added this one in there but I had like so many things open right

(41:35) here when I was trying to make this video so our video looks very similar to this very very similar in fact the angle is the same as well so interesting enough uh our satellite and their satellite was potentially up at the same year so I don't know maybe that's just a coincidence now in addition to this he had questions about the thermal camera well spoiler again this is not a thermal camera this is an elect he thought that what we were looking at here is a thermal camera actually Danny was confused on this as well thinking that

(42:04) we were looking at thermal so they try to keep pulling up these janky commercial thermal cameras they don't realize this is like one of the most advanced cameras in the world this is an electro IR camera from Ron and so this Electro IR camera has built-in software where you can build you can add in over the top the thermal layer over the top IR camera and questioned why the clouds would be so accurate or why they'd be so detailed and again this is an indication the videos are just real to have these very detailed clouds this

(42:34) is an electro IR camera with a the thermal layer added over the top by the leaker indicating that the leaker was an operator we believe this camera is a Ron camera probably one

of the most advanced cameras in the world for 2014 now we have more evidence of that somebody reached out to me directly and they told me that they they thought that this was accurate because they ran it by one of their friends who works at General atomics who's an expert on these drones turns out they actually posted in the comments of one of the

(43:04) videos after they reached out to me and they said it appears to be from one of their drones potentially the mq1 C Great Eagle so we got a literal guy whose friend is an expert in addition to this we have to address some other things as well so that wasn't even enough so then after that I wanted to go ahead and just I really wanted to drive the point home that these videos are real so not only did he bunk every single thing that he claimed uh then I went ahead and did some additional work how do they know

(43:32) what the weather looked like how' they know what the weather looked like chat how did they know what the weather looked like in at the location as we can see from this weather time lapse we have the exact so they were like hey guys you know what we're going to build some coordinates we're going to make it at the exact same location that the plane was even though all this information was being OB fiscated for months afterwards we're going to make we somehow know everything about it we know where the

(43:54) plane was we're going to go ahead and pull up the NASA weather satellite too and make sure we get the perfect cumulus clouds built into the background as well accurate weather here and these low altitude cumulus clouds showing up on the NASA weather view that one right there I mean look at this these are our clouds right here right in the same exact location so I mean boy they got the weather correctly too I mean boy these people are really committed to the lie that's a lot of information to figure out for just either 4 days or 72 days in

(44:23) the exact with no AI tools and no deep fake technology and using computers and software from before 2014 right location as well that's a pretty impressive detail to put into your fake video not just that the coordinates that we mentioned in the videos as well how would they get that coordinates correct these coordinates down here indicate these coordinates are six decimal places six decimal places on these coordinates so they built in accurate coordinate they built a a program that like not even Google has

(44:53) here that will actually move the the picture correct ly to six quarts and it doesn't just like shift from like it's at this point to this point like it's slow the numbers go up like accurately like it's clearly moving in the real life would requ building another program that you would overlay love to see M West or anybody else try to deunk all this places while the while the mouse moves they can't is reality pretty impressive it's a joke let's go ahead and get to the cigra the VFX

(45:21) **debunk** now when we look at this VFX **debunk** I want to first of all state as a statement of fact that even on a single frame it doesn't match close only counts in Horseshoes and Hand Grenades guys my butt is not your butt because they both have similar but holes on them you can't use prosaic **debunks** especially when we've already shown that what we're looking at here is a citric session indicated by the mouse logged in over the actual satellite database six frames

per second versus 24 frames per second

(45:49) but let's look at it anyway like look at this it doesn't it's close but it doesn't match but the reason why it's close is because they literally found an asset that was similar and then lined it up but only at this little point right here it's like oh okay sure you tell the middle doesn't match it's like only on this Edge they match only one dot that's in the right location only one dot do not match the middle isn't even close to the same so again as a statement of fact

(46:16) what we're looking at here look at this the middle is not even close to the same they're similar but all dispersion patterns are similar not just that if we were to actually overlay all dispers patterns are similar just like all buttoholes are similar doesn't mean they're all the same lazy debunkers like Mick West who think everything looks like a balloon that's that's always their go-to you have to expect it's always going to be some prosaic this looks like this the fact that there was a guy from the

(46:41) corridor crew who claims to be an expert who is the one who is saying that this that in him his mind is a perfect match it really discredits them if you don't have two eyeballs you can't tell that those two things aren't the same then really you're not in the business to be telling anybody else what's real and what's fake so honestly at this point this is so bad that everything the corridor crew puts out should be put put into question at this point you should assume that everything they put out is incorrect let

(47:07) me go ahead and pull the overlay up so I hope that he won't actually post that video because if he posts this video after I've already debunked every single thing he claims then he has absolutely no credibility and he's doing so in bad faith you can see that it's not even close on one single frame you can see here that is the frame that they have matched here or tried to match up the best of their ability and you can see it still doesn't match the rest of them aren't even remotely the rest of these

(47:36) frames look at this frame look at this extra blast they've got going on here please uh Nico or anyone from the corridor Crew Please stream pull up a computer I'm sure you've got a computer back there from 2013 somewhere use some old jankie software from 2013 I want to watch you change all the pixels around I want to watch it in real time I want I'll sit there with you all day long for 12 hours 24 hours however long as it takes I'll just watch with you and I'm just going to laugh at you the whole

(48:02) time you can see these extra blast visuals here that don't exist in ours at all the amount of effort to move these pixels around would be astronomical in fact I want to remind Nico and the corridor crew that we're not looking at something that reproduced from something else this would be an original work of art it's important guys it's an original work so somebody just magically was able to figure out which pixels they needed to change in order to get it to look like this they weren't comparing they

(48:29) were just like okay let's let's remove some pixels over here let's remove some pixels over

here let's remove all this inside pixels why I I don't know just cuz I can just I know exactly that it should like this black it should look like this black ring doesn't make any sense what I'd also say is how many pixels match if I were to estimate here I'd say that probably less than 50% of these pixels match now in addition that's the best part how many pixels match guys if they ever say these match all all you have to

(48:56) say all you have to say how many pixels match that enrages them because they know that the pixel matching on here is going it might even be less than 50% if you count the blue and stuff like that it might actually be like 20% pixels it could even be less than that like it's just straight up like almost nothing the VFX that they used here was actually the higher quality one if you were to pull back and look at the lower quality VFX from the original game it's a much lower quality now what I would also when I

(49:30) asked about the lower quality VFX they go oh well but you know that those could have been on some file somewhere else and I said well that doesn't change the VFX that doesn't change it was it was updated back in the 90s you can't use a version from 2015 doesn't matter if it's from the game or you know somewhere else the whole point is it's a lower quality one ask Nico here and let's just pull up that lower quality visual effect to really drive it home this does look how pixelated this

(49:54) is this is very low quality it's a '90s visual effect really going to try 0 visual effect there this is somehow a match of course they use the 2015 looking at here what I would ask is go ahead and stream it go ahead and pull stream up **I want you** to go ahead and move all the pixels around for us use computer from 2014 as well and software from 2014 just to really drive it home tell us how many hours it takes to move all the pixels around individually and all the blue has that one frame then we can work on the other ones as all the

(50:22) blue pixels would have to be moved as well because the VFX doesn't any of this blue in it as well so literally this is actually probably less than 20% of the pixels match maybe maybe even less than 10% of the pixels match as well anyone who thinks these things match is just in another reality this Pyromania VFX **debunk** that comes directly from metabunk from a guy named **Mick** West who has no credibility does not match this effect is not in our MH370 videos I appreciate the effort but next time do your homework thanks guys appreciate you

(50:54) listening sorry I had to be so rude but you know when you come out with a snarky video you think you're going to try to get me boy don't get every single thing wrong again that's this is like the the podcaster trying to get do some gotcha on me and they just backfiring spectacularly right it's uh it's a bad look it's a bad look you know and you know before they try to edit it out or anything I'm I'm on it that's why I kept the notes so I could go ahead and **debunk** that before it even gets to that

(51:28) point okay um let's see here what do we got yeah so I stopped doing the music in the background guys sorry about that I did lower the music level on the after we uh finished that one so yeah um let me see what we got here sorry I'm looking at my notes Here we could uh we

have some salvator Pi science to do I'm actually going to if you guys want to watch just going to show you guys here if you want to watch along here this stream we're going to go live in three minutes this is going to be me I'll post

(52:20) in the chat for you guys I'm probably going to turn the sound off on this CU I know what I did I've already watched and uh I'm going to just answer questions in this chat over here so what I'll do is I'll probably pop this chat out if you guys want to watch along feel free and then I'll probably just answer questions in the chat over here while we're working on their stuff yeah I mean I don't know I don't think my job's going to fire me I mean if they do that' be pretty

(53:05) weird there's nothing I'm doing that's wrong but yeah there's there's no logical argument that and so the other thing too is that and I didn't I think I mentioned this in the podcast but I didn't mention it on my that video I just made is that you can't just say this doesn't look right you got to give me a full story who made this right when did they make it what time frame what how did they pull that off it would take a team of people to produce in with no errors with not one mistake on a single

(53:32) frame okay I really question whether or not people can tell the difference between reality and fiction so especially like younger generation no offense anybody's on here but definitely makes me question um I do want to make some shorter videos yes I did interview Salvador Pas you should be able to see that if you go look at my older live streams I am going to upload that that's something else that I want to do as well um have people come to me at work about this uh how should I answer that yes there's a couple people that have

(54:07) mentioned that they've seen me on some social medias and stuff like that which is pretty funny and I just say yeah sure you know that's fine I talk to them in private if they want but I got to focus on work when I'm at work yeah the the denial was really really awkward um yeah I mean work working at a large tech company there were some people as well that found me on other platforms and stuff like that um but you know I've like backed I've talked to my company already ahead of time about

(54:42) the situation I was perfectly honest about them with them about the whole situation right just because I knew that there would be like maybe crazy people out there that might try to contact my work so I told them that if anybody were to contact them just to get their names and call the authorities right away on them uh so I think that prevents most people cuz they realize they don't want to you know go to jail or anything like that um because I mean when you're talking about somebody who has a government clearance like and the people

(55:07) that were like risking some people were going to like call on my clearance like that person was definitely trying to get other people to do it so just a spoiler guys do not uh call the government to report my clearance if you do that that's a really good way to get arrested definitely don't do that and let's be honest the government knows right they're the ones who are keeping this secret so they know if they were to do something like that it would uh reveal that what what I'm disclosing is

(55:33) the **truth** so they're kind of stuck they can't really do much right they have to just use their Minions on social media they're like little criminal buddies and what have you that uh that they've most likely turned or whatever their their Troll Army or their sock puppets and what have you because they can't tie any of their real names to it they're just they're in a stuck situation right I mean maybe if they come out admit is real then yeah it'll be uh interesting then we'll see what they

(56:00) do but if that were to happen they were admit is real then I'll probably become one of the most famous people on the planet um not that I want that by the way I just that's just the situation we're in now you just have to kind of come to terms with it right yeah I think a lot of our time is spent there's people too that are like they had a couple people today messaging on Twitter claiming that like they can prove that it's fake and stuff like that it's just ridiculous A lot of people are

(56:28) just like I don't know gatekeeper gatekeeper type people right people that just uh they want everything to be about themselves some people are like oh but he's has everything about himself not really like I've been saying from the beginning anybody could do this man if people think that they want to be this person that they want to be that me who's doing this right now well you should have been it you should have been the person that stood up you know I that's a valuable lesson for people to

(56:57) learn is that any of you could be me right now and maybe the next thing that will come up you can be right the next big conspiracy will come up there's more out there right be brave stand up stand up for what you believe in against the face of everybody who's telling you you're wrong yeah so Justin exactly um first they ignore you then they laugh at you then they fight you and then they build monuments to you is the actual quote so first they try to ignore you right then our channel gets too big then

(57:28) they try to Mock and ridicule you right and that they tried that as well that all failed then they try to fight you that's the stage we're on now where they are all trying to like you know get get me on their podcast to like try to belittle me or whatever and then in the end after it gets proven real then they want to build monuments to you and that's the last thing that I want I don't want anyone to be building monuments to me I don't want to be worshiped I don't want anything like that I'm just a normal

(57:54) person um interviews coming with real people let's see yeah we posted did we post the Richard CER one that one was pretty good then they try to put you in jail yeah that's the real story of how it's probably going to play out try to put me in jail after that uh yeah I I don't I don't uh support reporting people for things but um yeah you do what you feels comfortable right I'm not going to tell you no um I have uh Coast to Coast AM I'm going to be on Coast to Coast AM guys uh I'll

(58:33) tell you when it gets a little bit closer on the day of that but yeah I'm going to be on close to Coast amm it's already been booked and what have you and it came out in the Richard Cipher

uh interview as well so people are aware um so yeah that's going to be pretty fun and we have some other big news as well uh so if you're watching right now the uh Oppenheimer Ranch uh interview is started right now yeah uh yeah okay before I get into that yeah so somebody said the way the guy made you angry you handed it well you

(59:04) have better composure than I would have I would have reacted differently as such an arrogant pompous dehe head I hate bullies yeah you have to realize like when you are caught when you're on camera like that too you have to even act better but I'm not the kind of person that's going to you know stoop to that level if somebody like what happened with the the podcaster happens like you know you just have to rise above it you know cuz I knew while that was happening that he was going to look terrible right that normal people that

(59:30) look at that and watch that are going to realize like that doesn't look good you never want to be the person when you are the the interviewer you never want to be looking like a dog if you look like a dog when you're the interviewer it's going to come off so bad right because you're the person who's invited them on they're providing you content and you're going to try to tear them down it's like it only you can that only works if that's the person who's the interviewee right if they act like a dog

(1:00:00) then you can play it out like that but if they don't and they're just acting nice and you just have a smile on your face like that just makes them look terrible like exactly what you're saying you know in the chat which is it it winds people up because people see that you're just acting terrible right so you never want to do that that's why when I do my podcasts like you're never going to see me act like that not in a million years first of all I would never invite anybody on just to tear them down never

(1:00:25) would do that that's just the scummiest dishonest thing that you could possibly do to bring somebody on your podcast to think you're going to tear them down just you're a terrible person if you do that terrible person I would never do that so anyway I'm having uh yeah the Richard CET podcast was uh sorry butchard his name Richard CET it was too short you know 45 minutes 30 minutes you can't get through everything just not enough time really requires about two hours maybe possibly um one sec so I do have some announcements for

(1:01:19) uh we're going to have to get prepared for Bob Green year on Sunday tomorrow so we'll be doing some streaming getting ready for Bob Greener we have hard TRS number two on Sunday with Bob Greener we're going to be going over fractal tral moments we'll probably be looking at the videos as well and I want him to explain to me first I'm going to probably have Bob uh you know tell me about his science and stuff like that and then uh that YouTube link should be working it definitely works we'll be doing fractal tral

(1:01:51) moments and then after fractal tral moments we'll probably have have him uh you know explain I want him to explain the science to me then I want him to go over the videos potentially and yeah probably be like an hour hour and a half with Bob the week after Bob the week of the Sunday after Thanksgiving which what day is that I think it's like 26 let me yeah so

the 19th will be with Bob I'll probably start promoting that tomorrow and then the 26th I'll be doing I'll be meeting with Dave Rossy who is Generation Zed

(1:02:27) podcast and at some point I'll probably be going on his podcast as well so that's been booked as well and in addition to that I have another announcement which is somewhat tentative but almost I think booked December 3D the week after that I'll be having a joint panel podcast with Dave Rossy once again and Salvatore Pas we're GNA have salvator Pas and Dave Rossy head-to-head going through science I can't wait I can't wait to learn a bunch of information um so yeah it's going to be

(1:03:11) pretty awesome uh I can't wait for all that honestly where does my work ethic come from I'm actually a super lazy kind of guy generally uh is it a Cold Case what do you guys think is it a cold case I don't think so let's let's link the evidence for them right let's link them to evidence this why I have my evidence link right at the top I'll I'll answer some questions in our chat as well same time guys so our chat um I guess I don't need this I'm not

(1:04:14) sure why I'm wearing this how did I okay let's let's do oh boy that's hard I don't have the headphones on where did the what do we think the orbs are we think the orbs are a plasma ball so if we look at the one I posted okay um take a look at this guys you guys definitely need to check out this post okay we've got so many notifications today too so this paper by Salvador P explains how the orbs ignore gravity how they

(1:05:20) make their own geodesics how they're inducing The Singularity how we can get fusion power which might be free energy and how it could destroy the planet now if you scroll down through here being enclosed in a vacuum plasma Shield this sounds exactly like what's happening with the orbs like everything I read in this paper and I linked them all here you can zoom in and check them out right if you want download them I'm not sure that's all all this stuff is just directly copy and pasted from there it explains

(1:05:53) everything room temperature super conductivity local phase transition smooth sailing of the hybrid craft how you can do nuclear fusion how the energy can be Amplified like literally everything in this paper it's wild okay how do I how do I reply to people let's see what else we got in there some of these chats here I want to answer some of these chats people and if anyone's jumping in and

(1:06:59) following on our stream well yeah thank you for that um actually I might play the sound here maybe we'll just watch I'll play it really quiet let's see what else we got yeah even if you disagree with people you should have a certain etiquette 100% but I would never invite somebody on my show that I'm going to disagree with I'm GNA mute this for a second how did I hook up with Salvador P um somebody said hey you should hit up salvator Pas and I was like oh yeah but I don't have his email and I think

(1:07:43) somebody found it or something so I email him I thought there's no way he was going to respond right like most other people haven't responded to me he responds to me the next

morning he's like he watched the videos clearly clearly watch the videos and like he can't make any official statement on the videos but man yeah and ever since like we've been emailing back and forth almost every single day almost every single day at this point um yeah I really like him a lot I'm a big fan of his I was actually a

(1:08:10) big fan of his before all this before when I saw these papers in 2018 I read the I remember reading his papers thinking wow this this just makes sense like I'm not a physics expert but I can like visualize what he's talking about right and just looking at it I kept thinking as an investigator I'm reading his papers and I'm going how did he know all this like this isn't the kind of information you just dream up right especially as I read that like and I watched some of his interviews his earlier interviews from years ago and I

(1:08:39) read that yeah you have to go through this whole process you can't just patent anything and that's all the disinformation out there so this is where I go through this I'll go ahead and unmute it this one on the left I had seen this in 2014 and a lot of other people saw it in 2014 as well and I just had no idea understand what I was looking at so let me start from the beginning here these are side by side videos we havep videos see what else we got going on here SM out we know this is SM because cont only

(1:09:21) at that means well uh contrails form between 18,500 and 28,000 ft uh and contrails do not come from the tail of the plane they come from the engines so there would be two Trails merging as one that's not what we're seeing here so when I saw the evidence and your interpretation I think that you're correct here there's probably some kind of fire on the exactly so we think there's a fire which would be IND lium B that are on thise 22 of them now watch you see this orb just flew in off the side of the screen here this orb is

(1:09:57) going like three like 2000 miles hour we can estimate that because it's goinge standle now Ricochet turn aerang I know what this means how do I get this go away now what I see there as is the first or it's almost like has missile detction comes up and detects the object and then it reads it first in two Dimensions yeah lithium batteries 221 kgs you know so that they're in perfect un when they get up there yeah like it misses it right like in the beginning it like cires to the side of it like to

(1:11:00) figure out where it is right exactly that this is for the first part where I'm like okay this is some kind of like tracking where it's tracking the plane and then the other ones complying in and they don't do that same thing they immediately are right on it yeah they know where it is because of the other unit now before we go any further yeah back in 2014 when they did investigations it does look like a 3D modeling scan it really does know about this lithum payLo discussed we found some articles that actually discuss it

(1:11:28) very very few it's almost never discussed in any official let's see space. radio has at least two hours for hosts is space. Radio Coast to Coast am. I don't know thetic and final yeah it's probably American Tech I mean they're the ones were implicated sorry I'm trying to answer questions in two different chats why am I grinding while juggling a job I don't know cuz nobody

else is doing it I wish somebody else had done this early on I tried to get all the media to do it I tried to get all the

(1:12:01) UFO people to do it nobody would do it so I just said whatever we're doing it I don't care I never expected to be in this position not in my whole life yeah they they probably deployed some tech to save these 20 free skill semiconductor scientist we talk about that here Inay theoretically could be a wormhole but I don't think it was but it could be so the passengers were probably still alive based on the knowledge we have where's the thumbs up do you guys see the thumbs up anywhere I don't know how the thumbs up

(1:12:52) works is that over here somewhere guys you know where the thumbs up over here oh yeah this thumbs up over here kind of the point you mentioned earlier it's not coming from the engines it's coming from like the middle of the plane here now before we go any further if this is some advy else news sources videos would have had time so how long had this plane been missing and and what was going on in the meim so that maybe like these Black Ops or these secret operations would have been like they' had they have hours to be like okay

(1:13:38) let's this is because a lot of people don't know the visualization how this goes out so this plane takes off at 1642 we'll go back to the other video in a sec but at 1721 is when the goes dark this is one minute after very calm good MH370 the [REDACTED] think this is the point where the of bur begin because Mike m is on an oil and he seese on the smoke is coming from the heat exhaust ports near the landing gear it's hard to juggle my job and this I'm not going to lie no I don't have Jer Kell's private email I just I reached

(1:14:19) out to him on Twitter okay uh okay I I'm going to make it play it a little louder for you guys and apparently altitude is you fly low so it goes back to the logical location where You' find a um you you go through an emergency situation but it doesn't land it keeps going that should be a little better presumably because the landing gear is either damaged or can't be deployed for whatever reason and the next thing you're supposed to do is try to land on your belly and the problem with that is

(1:14:47) you're filled with fuel so you might try to dump the fuel but you're on fire right if you're on fire and you try to dump the fuel like that doesn't seem good so the next thing you're supposed to do in the P so okay it if it's not a wormhole it's a transitional phase State change of the plane right yeah it's not an explosion or because it's e endothermic event is absorbing energy what's potentially happening is the planes changing phase States and when we say teleportation means it's speeding up

(1:15:11) so fast that we can't even see it if you try to land in the ocean the plane's going to rip apart it's not like Su solenberger Landing in the Hudson Riv the ocean your plane's going to rip apart also I don't know if a lot of people know by sharks yeah a lot of run to the restroom real quick guys I'll be right back don't learn how to swim either it's not like in the west where everybody learns generally from like a young age so this plane was filled with Chinese Nationals as well so this is a

(1:15:36) really really bad situation we presume because the Malaysian Minister of Defense does an interview where he says that they don't have identification of the know it's not hostile and they know it's a civilian aircraft the only way that's possible is if they actually had communication with the plane because otherwise there's no way you could rule out if being hijacked right now additionally additionally there is a absorbant amount of employees from one specific company which is abnormal because you would never have this many

(1:16:07) highlevel Executives on a single plane just for insurance purposes yeah and they weren't Executives but they were high level engineers and scientists I you I'd argue those people are more important than your Executives right they're the ones who know how everything operates you know they know they're doing the stuff right so you've got these what company are they from yeah freescale semiconductors and we found that this company is to defense as well as I don't know I'm not trying to monze

(1:16:32) this at the moment superconductors we found a 2005 NSA National Security Agency report that talks about freescale semiconductors and how they've been advancing their semiconductors to potentially achieve super conductivity and it says that only this will only happen by 2010 or 2012 if the government actually spends funds to support it so these people might be directly tied to techn ology these orbs that we see in the videos well interestingly enough Ashton I don't you probably are not aware there have been several room

(1:17:01) temperature superconductor hoaxes over the last few years the most recent just got debunked in the last few months yeah and I would argue that it's possible that room temperature super conductivity has been suppressed and that those debunks may not even be accurate right because if you think about it it's for show as propaganda to divert like no we don't have that technology okay I'll be right back go that's the idea right yeah to have people say okay we don't have that but here's the thing if we if we're

(1:17:28) looking at these orbs then we do have that technology and it's being suppressed from you know us now going back to your point here uh we have about one hour and 20 minutes or one hour till we get to this point and then one hour and 20 minutes before we get to where this witness is this witness is on a boat here and she sees this glowing orange plane now if this plane was on fire and they're battling it using the fire exing devices it's going to be releasing this bromine gas and you can't keep these lithium ion batteries out you

(1:17:53) can like put them put them out they keep coming back put them out so they probably deploying all the Fire EX stingu machine devices and now it's glowing orange because this gas is permeating throughout the whole plane while they're battling this fire and that's what the witness sees here a glowing orange plane consistent with a hallogen lamp and at this point now this witness sees this and it's flying very low again they recreate it they think it's about 10,000 feet and it circles around the plane or around the boat and

(1:18:17) this is where she goes inside to put the kettle on after like five 10 minutes of watching this plane and she comes back out and there's no plane anymore and so this is the part two

where I asked her what time this happened because I actually got in touch with her she said she thought it was 1840 UTC which is weird because I go and check the old news articles and they say that when they lost contact with the plane was not 1822 they say the old news articles say 1840 is the last contact with the plane this is also the exact time and location

(1:18:45) where the official narrative says this plane turns into the South Indian Ocean and goes down here to the South so now if you think about it from a conspiracy perspective that just means that everything from this point forward is a lie right and what really happens is our videos happen here around this time well wait a minute you said uh the official narrative is they lost contact at 1822 correct so that changed it later on and what happened is this data and then it was and then what was the alteration to 18225 and then it's 1822 and I'm still

(1:19:15) not sure which of those two times it is if it's 18 so they're just cutting off the last 20 minutes because they don't want anyone to think anything happen they don't want anyone to figure it out right they people that so and the Malaysian defense like military guy uh you know is super sketchy about the information they make people look in the South China Sea for like a week and a half while they know that they have radar data that shows his plane going over here so like from the beginning everything is sketchy about the

(1:19:37) situation they don't release the radar data for weeks they don't release the ersat pings which say that it goes into the South Indian Ocean for weeks I look at these IMAP pings real quick and there's an anomaly right at this exact time at 1839 all of a sudden at 1839 in this Excel data it's just zer zeros being disingenuous they're trying to scrub the timeline let's finish the video and show people what happened in your footage so now we're watching it now we've got an idea we had 100 or one

(1:20:06) hour and 20 minutes to respond and so now here we're watching this videos and there we go okay and we can see these orbs again come in I'm just going to show the whole thing it's only one minute long right this happens very fast our orbs get around this plane in like 15 seconds we got three orbs around the plane and now they're in this triangle pattern and it looks like they're mapping the plane they're in this they're creating a sphere around the plane it also looks like the movie

(1:20:31) contact a little bit if you were to map it it also looks like an atom with electrons flowing around it well and they switch Direction twice right there so once they get a flow counterclockwise they go back clockwise yeah and watch this part again here too look at the orbs look you see these black trails this line is in front of this orb this Line's not even behind the orb this is in front of the orb here that would be indicative of what Bob Lazar said they're creating an anti-gravity space in front they're folding time and

(1:20:58) they're moving forward into it exactly and so and that and I was just actually just released a thing from salvator P's paper that explains this as well is essentially this is like a pulse that's using some type of vibrational effect to create this geod guys there some news gravity anding to Lazar it would be a very highend it would be a a stable version of a very unstable

element like element 15 or higher yep yeah and I don't know if they necessarily need one element 115 for this like it's hard to

(1:21:28) tell but sure you know either way they're creating this geodesic right and it gets to the first Cloud here and then the formation changes and then they become vertical and they stay vertical until we see this zap happen now you can also tell from the thermal that there's a heat signature on the orb that's spinning around on its axis we think this is the monopole essentially the point where the laser or whatever is coming from and I would basically just missed it it came so fast now when we watch

(1:21:55) this thermal this it looks so fake man it's crazy but if this is a technology we don't know about what is it going to look like exactly that's what a lot of people would argue right and so and we can talk a little bit more about that but we watch it happen here as well what happens right before this zap is all these monopoles they look like they converge yeah they do on the that's another count frame WIP permanently banned and it begins to blur this isn't from me by the way but get a little bit

(1:22:24) smaller looks like we got another one bites the dust not allowed to create new accounts actually this flash on the right side here Lando in tears Lando is following that account by the way that just got permanently banned DET they're so close they're just tens of meters from the plane yeah and notice as well the clouds don't really move here which is indicative that we're not looking at a black hole and we're not looking at an explosion because you know you expect the clouds either Blast away

(1:22:54) or get sucked in I black hole is a false narrative used using mathematics so this is way this is something much different yeah so this is what we think is happening here is a transitional phase State change of the plane the plane is changing states and the camera can't even catch what happens next which is this plane accelerates to a point where it just shoots off faster than we can even see the experiments have been done where they could do this with single atoms um exactly in in uh in transitional uh phones he's actually pretty smart he

(1:23:25) like knew a lot of [REDACTED] now what we maybe that's baby steps that they're telling us they that we they could do it with an atom but we don't know that 30 years they're 30 years Advanced and they could do it with a plane and this is the first ever of that technology it could be one of the earlier ones or it could be proven too maybe they're I mean Lou the moment you started following that KF account he lost all credibility in my mindos I won't trust anything he ever says ever again what they're doing you

(1:23:50) never find me following some troll account like that right you know especially not if you only have like 100 follows and then 25 of the guys L thee like an so that you can treat something that's macroscopic like something that's Quantum now folks if you're listening what would happen is this the object that's maybe falling to its death would rip out on the other side anywhere else that they placed it on Earth or in our 3D realm so it would still be crashing so how would they save it at that point yes so we do have to

(1:24:23) adhere to the laws of conservation momentum so probably it's going to come out at the other side um at whatever speed they were able to decelerate it to or what have you but that's the part we're not sure about I mean what we know is we didn't find a crash anywhere on the Earth right now at least as we know for now so that's part of the issue is that it seems like it must have survived because we don't find plane parts somewhere in like if you want to go crazy if you have the technology to

(1:24:46) move through that space from one region of space to another which would be similar to a wormhole only controlling it you could literally probably have it come out on the other side stationary just just come out sitting there it might even be sitting hovering above the ground yeah a physicist actually me exactly that that you know colel Douglas McGregor tweeted it retweeted that send me a link to that right so maybe you can just have it completely stopped or at whatever speed you want yeah what I was going to say about Lou

(1:25:25) is that I look to see who he's following because he's only following like 120 people like 20% of his followers are blocked by me like that's that's 20% of people he's following are blocked by me that's a bad sign this guy he maybe they're true about him running disinformation not sure you can move so the idea here would be they could theoretically create in some kind of magnetic shell electromagnetic shell around the plane make it zero Mass make it zero mass and now I can go to the speed of light see I

(1:25:56) like talking to you you're already ahead of me you know exactly what we're trying to get at from the scientific well that's obviously what these things are doing they're mapping it spatially to reduce the mass of the object and they're equidistant at the very end they're spinning they're creating some type of magnetic field which will drop the mass to zero it's almost like but at the same time the tech this technology if it exists what these orbs also have to be doing is mapping every single atom

(1:26:23) in the entire plane all the people their exact positions memorizing it and replicating it on the other side yeah and I don't think we're talking about dematerialize and rematerializing them but we do need but some kind of a spatial RI where you you can it's conservation of mass and energy somehow in this thing that you just move through space and time instantaneously yeah exactly otherwise people would be wiped of their memory they could be [REDACTED] they wouldn't remember I mean like have an arm coming

(1:26:53) out of your head could be like like the early Philadelphia Experiment uh reports this may be a refined version decades later if there's not a field around them then these people are probably in bad shape which makes me think that because we have this fire scenario again we see the smoke here that makes me think that they're attempting to save this plane and because we see this endothermic event in the thermal here when we see this event go off it's cold it's it's completely black in this thermal meaning it's cold

(1:27:23) and that means it's absorbing energy it's not an explosion which is a release of energy yeah so what could be happening is it could be absorbing the energy from they come in and

then it goes black wow yeah it goes completely black and so this is important it makes us think that the person added this thermal layer intentionally over this Electro IR camera so that we'd see these details very clearly if it's black and white it's going to be a lot harder to tell what's going on here now if these

(1:27:50) lithium ion batteries they have run away lithium batteries happen because they have so much energy in them so this could be the reason why they are using this endothermic event is they can potentially AB maybe those batteries are somehow Catalyst [REDACTED] you know I'm still trying to learn more about the science but I'm just now starting to get the terms correct right but I think you nailed is that there's some kind of like I think it's described as an azoth like a like some kind of circle happening

(1:28:12) around this plane that's allowing it to OB chain this Quantum effect and somehow keeping these people alive you just retweet 500,000 followers just retweet my is something being tested like the Philadelphia Experiment you know maybe it is a situation where these people you know didn't make it um and we can't really be sure uh we can only speculate based on um some circumstantial evidence that's out there so who do you think leak this information yeah so I think I dug around and I looked around for

(1:28:41) people that fit the build I need you guys to espionage or you know will for retention of classified data and we have a lot of evidence from looking at that go ahead like information how to add this thermal layer on this like likely rathon uh IR camera they probably had an emotional reaction because the the reg side on non uh description says received March 12th which is only four days after the event it also indicates they might have been there that night um they cropped out the Drone from the satellite video which is

(1:29:21) indicative of them trying to reduce the amount of damage if foreign adversaries were to see 17 minutes ago somebody just and they probably had to convince the Regis side and non account that they were legit because the reg side and non account waited like nine weeks to actually upload it they got they received it March 12th but the upload date in the archive says May 19th they also might have thought they were looking at UFOs they might not even been like I got to pay attention to Twitter now I didn't think I'd have get retweet

(1:29:46) by people 500,000 VI follow UFOs doesn't even say MH370 on it so it's possible the person that leaked this didn't even know so I dig around and I find this guy Lieutenant Commander Edward C Linn who I think is the guy and I think he's a hero he has experience in signals intelligence which is what all these assets C Ln hero baby it's basically like a big network of assets from the satellites the command satellite um to the Drone as well if you Google Sig in payload the top hit says mq1 C gry Eagle that's the Drone we

(1:30:20) think we're looking at he was of this special sad my alerts are going so fast last deployment was February 2014 to March 2016 but he gets reassigned on March 25th 201 wait a minute what drone so there was a not the three objects spinning around the plane drone right see the Drone here right yeah what are you talking this is the mq1 oh sorry if you're sharing I'm

not sharing screen hold on no sorry I lost my share screen it's not one of the three orbs this is something else yes so one of them is a

(1:30:51) satellite and this is the Drone you can see the Drone the how the nose of the Drone here this is an mq1 C Great Eagle oh that's where some one of the angles of the footage is from a drone that's the thermal and the other one that's natural color is from the satellite yes exactly and that's using a false color IR these are both being taken at night so that video that location indicated the guy operating the Drone is INS he's the Laker he watched this his mind was blown he's like I've got I love how

(1:31:17) diamond is on it he figures it all witness Diamond's like easily person guys think he's annoying like the US government knows exactly what happened and there fig in the area so this guy Edward Cen actually flies those awx that's what this uh vpu2 flies they fly the p8 Poseidon and the Aries ep3e and both of these planes potentially have computer screens in them they operate drones they can potentially look at the satellite video as well side by side so this investigation into this guy begins in April 2nd 2014 he gets reassigned

(1:31:53) March 25th 2014 Just weeks after MH370 just a month after he gets assigned to this unit and he gets arrested in September of 2015 who in 20 in 2014 in May of 2014 he gets CAU question flight manifest in his flight through suit from a deployment that included search and rescue code names that's just two months after the incident and he had already been reassigned after that the window of time just indicates that he had to have been part of MH370 either right that night or part of the later search operation this FBI sting they put a

(1:32:27) bunch of they set him up with this other garbage and arrest him a little bit later exactly they set him up with all this other stuff they do a sting operation on him the FBI does they like do some kind of like get him to sleep with some woman and try to like have her like get information out of him to try to prove he's a spy they this was the first major incident of Espionage by an active duty member of the Navy since the end of the Cold War the charges were going to end up in life in prison for him they threw the book at this guy they

(1:32:52) threw a bunch of fake charges on there recently I found more information that he didn't know what he was being charged with when they interrogated him right they these LS there's no reason to steal them there's no I mean it's so stupid they manufacture something that can send into jail for life period yeah and because they I mean look at the like the danger of all this right and so did he get locked up so they his charge sheets heavily redacted we can't find anything about it he's privy to the Navy's black

(1:33:20) program portfolio he had knowledge that could be useful to adversaries but they eventually admitted it wasn't really a spy case and they had no evidence that he exchanged any sensitive information with anyone from China the defense argued that the classified information in questions available on the internet that to me that's just like okay Bingo um and then he got abused while he was in prison he ended up taking a plea deal so they convince him my mind is they convince him that no this actually wasn't UFOs like this was our secret

(1:33:47) technology like because he probably just thought he wasn't doing that much damage if it's just UFOs right right but the moment you say no this is our secret technology then they they force him into a plea deal it's he gets a 9-year sentence even after a plea deal and then they shave off three years because he agrees to work with NCIS and the FBI yeah we're gonna do some kind of responsibility for the charges he was actually guilty of which is just two charges of classified information like mishandling classified information and I

(1:34:15) did a freedom information act request to both the FBI and NCIS I said give me you guys are on it you guys are getting all the questions week later NC sends me back from the head of legal they reject the fire of Freedom of Information Act in total to be kept secret in the interest of National Defense or foreign policy oh that guy was Epstein this guy like I'm like and the FBI has a respons either that or he flipped and he's totally on the inside now or he he flipped no longer above surface one of the so I've already reported this but um

(1:34:45) I looked into him and we were able to find a phone number I called of world do we live in where **Foya** request can be Deni this is this is insane yeah so that's the weirdest part because in 2009 Obama actually made foye request easier to pull but this is actually an Obama era exemption that they in that they quote in my uh denial and so there's very few reasons they can deny them and so the two things that they list are like classified Intel related to defense or like this foreign policy but as we

(1:35:16) know it wasn't really a spy case none of the Espionage charges stuck so the only thing that makes sense then is this defense right so when I appeal I'm Pro that's how I'm probably going to appeal is say well how can this be foreign related if this guy wasn't a spy right I wanted them to admit that oh okay it's just in the interest of National Defense because if so then is this what he **leaked** or is this what we're looking at right here right because to me this is interest of National Defense right here

(1:35:43) right whatever we're seeing on display here yeah Aston I want to really uh bring it all together here in the end of the uh podcast here for those that are listening um when I was in third grade going into I was in third grade my father brought home some material from his place of business and he had it on the kitchen table after dinner and I was like what's that and he's like oh it's stealth material it allows us to line a plane with it and make it invisible this is 1981 the stealth bomber didn't come

(1:36:16) out for a very long time after that or was revealed to the public and I said oh that's so cool tomorrow is Show and Tell can I bring it to school there a piece of **foam** uh looked looked like a **foam** bed m a mattress overlay you know it was like some black **foam** but they were pointy cylinders like this like pyramids real Steep and there was just a piece of **foam** with all these pointy cylinders and I brought it to school and I had Show and Tell and I explained them that this is this uh is stealth material that

(1:36:45) makes ples invisible my teacher thought it was so cute everyone clapped or whatever Show and Tell and then I sat back down um he let me go into school with top secret material

because he knew no one would believe what I said and he knew that the technology was so advanced that even if I brought it to show and tell it didn't matter. And behold in the 90s the F-14a was revealed after some top secret footage came out and it is it's lined with the material my father before he let me take got 53,000 school the

(1:37:16) point being is that the technology we are aware of like people are now talking about directed energy weapons I'm like bro that's a laser that [REDACTED] came out in 1970 I mean the Soviets had that technology in the 60s this is you're just learning about going to be see these videos they couldn't keep it secret for 50 years so the the amount the technology that we're at today is so far advanced think about it think about it how old are you Ashton yeah I'm 41 all right in my life 51 in my lifetime when I was just that when

(1:37:54) I was 12 they came out with the first computer you could own it was 6K six you could basically do like three pages of basic and it was full then we went to 30 150k I mean that was when I was growing up we went from [REDACTED] Abacus to right now the technology we have in just four decades and you think that the technology that we're being told about is technology we have you are being led to the whole alien abduction conspiracy is the US government and and the Black Operations whatever you want to call them Shadow government they're testing

(1:38:32) these Technologies I believe and you and I talked about this that 100% everything that Bob Lazar has said um that we have ancient technology from advanced races that are not currently abducting us trust me that the US government has reverse engineered this technology and is test it now what's even more crazy is all of the synchronicities like The Simpsons predict this Etc you know what I'm getting at that I think that the next step is what talking about is that the alien abduction or the alien fight

(1:39:11) with Humanity you know to bring us all together in that one world government is a reality and maybe this MH370 test has something to do with how they're going to pull it off I'm actually afraid if I call FBI arrest connection what are your thoughts about part of the UFO communities or conspiracy communities before this that's what interesting that's why I trust you first of all if you're listening to this podcast like I'm a good judge of character I know there's no Martian program people live

(1:39:40) there up with decades with yeah he does go as theories a lot but that's fine he had a lot of interesting information and the whole fake UFO phenomenon I mean I interviewed years ago the the hubcap guy you know uh I don't even want to mention his name taking pictures of H hubcaps and saying no one's why doesn't no one follow us anymore I'm like because you're a fraud it's all a fraud let's get to the bottom of it and I think that the bottom of it is a very bad place we all know thanks lisis or Lis

(1:40:10) um do I think the passengers are still alive honestly I think there's no way all of them lived it's just two dangerous situation I think if some of them lived it's possible Al I think it's pretty I think that it's likely that at least one of the pilots lived but I don't know man I don't know F it's pretty messed up one of them is definitely I don't believe there's GNA be some alien

invasion thing you know I think that that they might come with that kind of narrative a lot of people

(1:40:37) say oh this is the fake Alien Invasion whatever like we're not dealing with any Alien Invasion stuff in these videos um you know I think that what we're seeing here is our technology for sure I don't know how deep this Rabbit Hole goes it's getting pretty damn deep to be honest with you like I've even found when these people were silenced the families of the victims they all signed these settlements because it's been so long and they've had no answers and eventually if they want to get paid they

(1:40:58) have to sign a settlement like I found out that the US Supreme Court judge that prevented it from being ruled in the United States is Kenji Brown Jackson current Supreme Court Justice she got promoted two years later by Joe Biden I'm just looking at him like okay man now this is just like I don't know how deep this goes but start to get really weird in my mind bro my research began at uh in 2010 when uh I started to research the revolving door between big a the FDA and our federal government and once I hit that Wormhole where the

(1:41:31) people that are approving food that's safe to eat are the same people that are approving pesticides that will kill you that they get that then are revolved back into the federal government as the liaison for the Food and Drug Administration which then get hired as a CEO and a pharmaceutical company you start to say what in God's name is going on here yeah I get a little worried about like this not necessarily nepotism but like I scratch your back you scratch my back stuff that happen in government um and that's definitely like what I'm

(1:42:02) worried about here with a lot of this is that there's a lot of people implicated in this both sides of the political Spectrum potentially um and so yeah I just I don't know how this goes for me this has been a discovery of a journey of Discovery What's happen right now on Twitter wild man this is like blowing up we might be looking at free energy capab here fusion power you know we might be looking at all kinds of stuff that could just Chang the entire world I think the department of energy is probably the

(1:42:28) ones that are hiding this I even think that a lot of people in the military probably don't think this stuff is real because it's so compartmentalized I need my letter to Congress do I have a link to that I don't think have a link to it even know this my father let's let's get to the bottom of it my Father revealed this to me in the late 80s conversations I had with them he they don't have this type of clearance anymore I don't know my letter Congress is anymore specially compartmented

(1:42:49) information which is change they change it every decade or so but he's he's not allowed to maybe he's almost you know he's in his 80s so he doesn't have I'm sure they won't come and kill him uh where he's retiring but because everyone knows this everyone's been revealed to this you go into a building well first of all he revealed to me that there are underground networks that connect the White House to the Pentagon where the Joint Chiefs of Staff move along in these underground

(1:43:17) railroads that are open air they're not that fast you know they're not covered like a normal Subway it's like a golf cart kind of situation in the cave where they can go from building to building completely safe from nuclear explosions that's how deep these tunnels are then you come up into the Joint Chiefs of Staff Etc you can also come up I I'm try SE the Pentagon where uh this particular compartmented information exists you you get a a code like a card a code card you get access to a door you walk into a

(1:43:48) door you go down to a hallway with thousands of doors your door 198 you have the key code to that door you go into the room it's like a hotel a motel I messed up on my event desk the information you read is there get read there's a slot you put it in it gets shredded and burned and then you remove you you put the card in it gets destroyed you can't leave the room until the information you received and the the key that you entered is destroyed then you get out of the room this is Above Top Secret and there are only certain

(1:44:20) people get the information so even 40 50 years ago there no one knows what's going on you know one thing this other guy knows another thing if you put eight together they may know a little bit but you would need 50 people to figure out that you have anti-gravity or a wormhole machine no one knows what's going on he's like this is a superconductor no one can know about like that's all he knows he doesn't know that it makes a wormhole the planes can fly through and he gets the information so this type of

(1:44:50) [REDACTED] has been going on for decades not only that in the secret Soper Arenas it's been going on in Academia starting in the 80s and the 90s when I got into Academia when I went to get my Master's Degree they separated chemistry from physics from geology they were all in one building back in the 80s they separated them into different floors and buildings that way you couldn't be actually broad-based in your knowledge to understand maybe about magnetic reversal or Cosmic impacts or things that could affect Humanity that could

(1:45:25) send send us back to the Stone Age you wouldn't know that the reason they've hidden that from the public is because they want everyone to be good sheep go along in their slave lives go to their jobs toil their whole lives until they die and and and feed the machine we live in a slave Society I think we're about to have a roote Awakening in the near future because something that's what my channel is based on uh wild right now happen and I think that this technology is a a big part of the bigger picture

(1:46:00) yeah no I think that a couple things you said that were really interesting to me um one thing I want to say though is that everything I've been revealing is public info I don't have any you know compartmentalized information my job isn't related to any technology or uaps or anything like that we see here um but there was a situation where I found who the general was who's potentially in charge of this and I Freedom of Information Act request did all their emails from the nro which I know is like

(1:46:24) satellite organization they for all the satellites and there was nothing so yes even though it doesn't give me information I can glean that okay they're not using conventional

Communications for this so that thing you mentioned about you know destroying that like everything's got either be on paper probably right and then it's being shredded instantly where for these kind of the plane went um which I found was kind of interesting in terms of some of the stuff you just mentioned right because you can't find any I'll answer

(1:46:50) questions a guys sorry I'm trying to exactly Asos to like you know Edward Lyn thing where they say yeah we've got it but we're just not going to give it to you right um so quite imagine if that drone operator you know he's like midlevel military whatever he is there's only two guys ever that could see this information because they know got to kill those guys we probably hit with a missile picture of Malaysian Airlines on it so I mean this is all on purpose it this is the Jeffrey Epstein effect and

(1:47:19) in fact what they I think they he was being used for was this type of sabotage Espionage and blackmail yeah uh if you can get everyone in compromising positions where you have material that could ruin their lives or their uh careers you're you're basically in control of everything now you just dabbled your feet into the conspiracy theory worlds you're you're about to get attacked you think it's just begun it's going to get worse I I think that I have some advice to you just brush your

(1:47:52) shoulder off these people are psychopaths uh in social media there's ways to block these people eliminate them don't eliminate the people that are important to the dialogue or the story you gotta you got to love your enemies and keep them close so to speak but what is okay so you've dabbled here what do you think the bigger picture is we is it just that we have advanced technology and they're hiding it or is there some deeper thing going on with the capture of this plane perhaps um you know I think you you me we mentioned the

(1:48:22) 20 free skill semiconductor Engineers I think they're probably tied to the technology that we see so I think that there's a motivation there to either keep them prevent them from going to China or like you said could be a weapons test on a doomed plane because it's doomed anyway right um I imagine I lean towards the saving them because this was on fire you could just let it crash if you want them to disappear um and also like using as a weapons test seems like a lot of conspiracy cover up you have to do in order to pull that off

(1:48:49) it's really risky but it could be any of those to me I think the bigger thing is why are they keeping it secret and I think there's a couple routes is like you mentioned it could be a matter of this Tech it's too disruptive for socioeconomic situations it's going to wipe out multiple Industries wipe out all the Middle East and fossil fuels the other thing could be they could be afraid of this technology this is going wild okay let me take a look so I can do some po actually argued that you could

(1:49:13) use this technology to blow it's almost over guys whole planet should be over in a minute that's the thing that I think makes the most sense is that you know if you give this type of technology to let's say like terrorists let's say Isis for example back in the early 2010s you know how do you stop an individual who is you know willing to blow themselves up from

destroying the whole country destroying the whole planet potentially maybe the answer to the firmy Paradox and why we don't see other civilizations

(1:49:38) out there it's because we all blow ourselves up when you reach a certain level of technical advancement right so that's the part that actually Spooks me the most as I've dug into this is like beginning it was about MH370 getting the answers for the families of the victim the pilot that was vilified the witnesses that were all discredited and potentially the leaker who **leaked** this basically made a huge sacrifice went in a prison but then you go into the the technology and you're like wow okay what

(1:50:03) are the real implications here this technology right and I start to think like if this wasn't about MH370 I would probably just be quiet about it because I just think about the implications and I go man like we can change the circumstances of so many people but what if the cost is destruction the planet right pretty big names retweeting some of my stuff right now I am kind of person that values the want talk about Diego Garcia duik and so we're in this the Long Haul I don't care how many people vilify me I've got podcasters who

(1:50:34) are looks like they're working with spook we're talk about you in a few minutes after this talking try to disconnect me from this and I don't give a crap about any of that I say come and get it come and get it not afraid I don't care what happens we going to get the **truth** no matter what and anything they do gonna get the **truth** no matter what just backfires back on them because as you can tell I'm an honest person here and uh yeah you know as long as I just keep being honest and keep doing my thing

(1:51:02) that it's going to be really hard for them to try to discredit me and I agree with you that probably will it's probably just beginning all right it's okay well I think the good news is and we learned something today to talking to each other is that based on all these specially compartmented type of things the breakdown of science they've been separating everything since the 80s that in order to use the tech te ology you probably need to bring six scientists together at that last moment and say

(1:51:24) this is what you've been working on blow their minds and that it can only happen if they work together to make it happen and then you've limited it to anyone knowing except those people yeah and that's the thing and then it's like okay now you have to avoid a Bob Lazar situation right where one of these people gets out and they start talking and blabbing and I don't know I like to think of the good and people and they not people out there I hate these Bots I get these Bots liking my stuff and it's

(1:51:48) like it'll be like Elena Elena I block them all every time I don't want to like people trying to be able to report me for like fake engagement I can post it again I know the people who are implicated in this the evidence is extremely compelling last time I posted it the General's information had over 120,000 views if I post it again I feel like it's gonna get over a quarter million so you know just please yeah it's layers of exposure so let's keep it up my channel is going to introduce it

(1:52:16) to a whole group of another people CH they know we're Shadow ban share this information on your social media uh hit up Ashton Forbes on Twitter subscribe there he's also over on Facebook we need you to go over here not on Facebook YouTube you mean YouTube I'm saying YouTube yeah Ashton yeah yep Ash Forbes on YouTube let's get this to 3,000 tonight uh and just the people watching hit it live tonight because we're going to probably do this 800m on magnetic reversal news subscribe right now let's

(1:52:47) get him to 3,000 live right now boys and girls sh this out let's see what we can do we want to do someo Garcia **truth** out therecia technology maybe maybe it's not nefarious maybe this is aliens Ashton and they were trying to save the people and they then suck their brains out and use their DNA to make more alien hybrid babies who knows I again I don't like to set the narratives for people I'm just trying to get the evidence out there and people can believe whatever they want about people want to believe you can pretty

(1:53:16) much make up want all right this is fun before we shut down here we're we're about to go this is a perfect hour one question and be concise did we land on the Moon did we land on the Moon ask I think we did but I can't say it for certain I was before my time we landed on the moon I'm pretty sure we did I've I've spent so many hours and I also know that there's tons of fake there's more fake footage because in case everyone died then there is real footage so that's the problem no one looks into it

(1:53:48) deep enough and they're like it's impossible we could have lost this yeah Amanda the Philip wood picture is one indication that somehow made it all compartmentalized and secret it would be so simple there's no floppy disc there's no internet there's no way to keep it forever it's like a piece of freaking uh if you're on an airplane you can't use a cell phone usually they don't you can't get service too high you take a rock from the Moon and bring it to the Earth all you have to do is throw you try to

(1:54:12) turn your cell phone on WE you're at 30,000 ft or whatever it doesn't work even probably like 10,000 ft it won't work I think that looking up the biggest evidence is that you can see there is a Philip uh message from the plane on Instagram goodes see the haven't got back you know okay I'm gonna close this okay so that was fun so we're going to do some of our own stuff here let me just make sure we've got all this like share subscribe blah blah blah yeah so if you're watching as well I

(1:54:39) guess I I hate saying this but like share and subscribe if you're not although I imagine all you guys are um we are going to do a little bit Diego Garcia here give me a second I just want to make sure we get up to date on the chat messages okay um give me a sec o oh boy full screen face is not really working well um give me one second I'm pulling up Google Earth Pro because we are going to do little Diego Garcia you guys ready for that two Canadian passengers there's the two Iranian passengers that were on the

(1:55:31) plane as well so Diego Garcia is the place where I think that this plane went um let me see passenger still alive I think it's pretty unlikely it's hard to say yeah silencing the families is

messed up you should read my article about buying silence man I feel bad except but this one guy his lawsuits actually in a couple week in like a week is going to be in Chinese Court I tried to message him uh let's see hey don't disparage the host guys he's fine Diamond's good that he's a cool guy he knows a lot that was

(1:56:13) actually good I mean he knew a lot of [ ] part of my French I guess this isn't going to be for children yeah the SOS was reported um 18 or 243 a.m. which you convert that to Malaysian times 1843 UTC and the SOS was claiming they were attempting emergency landing and that the plane was in uh disintegrating which would be on fire right satellite phone I mean I don't know are there satellite phones on planes I think if you have Wi-Fi maybe it was 2014 so Wi-Fi wasn't quite nearly as common as it is now on planes so it's

(1:56:59) possible yeah there was two young Iranians on the plane as well okay some people are some people are coming out to the chat okay I'm going to close out of that chat I think we're good with that one I'm just going to send some heart heart emojis send 100% sent emojis send some of those emojis okay it's all us now let me make sure I close out of those others yeah notifications are just going wild right now okay I'm GNA close my Twitter notifications for a minute every time it updates it's just

(1:57:42) nine more updates nine 10 more guy says I don't who needs a book when you have all this to go through it's true I mean who even needs like Netflix or anything it's just like we're dealing with [ ] that's like just even crazier than all that um yeah so um there's a few reasons I'm going to pull up Diego Garcia here why we think this plane ended up in Diego Garcia and it's easy when we look at the map I think so before I pull up Diego Garcia I'm going to give you guys the very Bridge version of the flight path

(1:58:18) so qual andur is near Singapore down here right so Singapore is a small island I used to live there uh yeah so this is Singapore it's an island right here and it's this is actually water that is disconnects it from Malaysia here it's kind of hard to see in this view U but this right here is Singapore I used to actually live like right where the cursor is right here and then uh where did we move to somewhere up here I think and so I've actually been to Malaysia before I've actually been to panang before as well we drove up here

(1:58:50) one time I was actually talking to my mom today and she we were recounting the situation where we lived in Malaysia or in Singapore and we drove to uh panang I think it's up here somewhere yeah that's way up here it was a long ass drive to get up to panang there's Lanka right there we actually stayed on Lanka God we stayed in this hotel on Lanka that when we got in it it was slanted I kid you not slanted like I was afraid like when we got into the room it was like you felt like you were going to fly out like the balcony or

(1:59:20) whatever and we're like okay we're going to stay somewhere else it was pretty sketchy like Malaysia's like the Mexico of Southeast Asia um so this plane takes off from qual lur right here and it's flying Northeast and it flies over here and then the fire starts and it turns around and goes to panang which is closer than going all the way back to qual lumur not by much but by

a little bit it's the right place to go to so they fly to panang they can't land Here For What whatever reason and then they fly up here towards our

(1:59:53) coordinates which are somewhere up here this is a different Waypoint I don't know why I put it in there our coordinates are like right probably about here I think uh wait they might be up here right about here where my mouse is so this the Drone is most likely being deployed from one of these islands right here like up here in the nicobar anden SE there's like a joint military and uh us uh base so the Drone probably comes from there it intercepts right down here here this is where KT's boat is as well down here right and she's

(2:00:24) going to puket over here okay so they're over here somewhere the Drone intercepts plane flies over here we see our videos happen Okay so we see the plane teleport the leading theory is why I couldn't land is probably that the landing gear is damaged right hey Sandy I saw you in the other chat welcome hell yeah hey everybody hey Michael everybody who came from diamonds chat nice to see you guys we were actually watching and we were talking while that was going on I guess I don't need these headphones

(2:00:53) anymore I'm going to eat my rice crispie bar too so um the plane comes over here and this is where our videos are happening okay and this is where we see our video situation happen now the hard part is okay where does it teleport to like is it teleporting like around the world and then showing up somewhere over here the situation is we think it shows up in the malds this is the Maldives over here notice how close it is to Diego Garcia this is really close this is really really close so this right here is 700 miles

(2:01:24) like this and there's all these little islands and stuff down here and the M Dees one of these called like kuo something or other so the Maldives has a b777 fire suppression device wash up in the Maldives I'm going to I'm going to Google it for you guys look at this thing look at this this is a b77 fire suppression device look at this picture you can see a serial number right here 8219 I can read it this is a fire suppression device from a b77 b777 here here's a picture of where it washed up it washes up in the malds what the

(2:02:13) hell from our fire so this plane somehow probably got over here somewhere right for this fire suppression device to wash up up here again it's washing up up here somewhere actually I haven't ever compared this to the map I didn't know there was a picture like this I should have to save this so this fire suppression device washes up up here these Islanders on here's the island right here Cuda huu this is the one this is where the Islanders see it that's 6:15 in the morning the problem is like this is like

(2:02:52) a 6 or 8 hour difference from when the plane teleports away over here so we've got to account for like six hours maybe not quite six hours but like four to six hours somehow four to six hours later it's over here and so these Islanders see it flying from where my mouse is let me make this bigger hey the date was I think a couple weeks later let's double check my rice krispy bar is going nuts March 25th so literally just like two weeks later March 25th it washed up may even be before that so less than two weeks

(2:03:42) later this heavy fire suppression device washes up up here now when these kvo Islanders see the plane there's like six or eight of them like a lot of them see it the plane's flying over this way apparently from the Northwest and they see it fly like over this island like very low hey synthetic but they can make it out so the plane then is going down here somehow to Diego Garcia I mean this is the only place you're going from up here right so it's probably going over here and it's flying down to Diego Garcia

(2:04:13) it's not very far away I mean this is the place where it's got to be going the malds gets intentionally remove ignored are um intentionally uh removed from the search they're not included in the search at all yeah hey Susie welcome everybody how are the passenger phones still ringing well they had to be somewhere where they had cell phone service that's my opinion certainly can't be underwater so my guess is they fly down here and they get to Diego Garcia sometime in the early morning they land on this giant Landing Strip

(2:04:48) that's actually big enough to be able to take a a shuttle from outer space one of the anasa shuttles can land here this is an emergency landing place for a shuttle CU it's got this really really long Runway look at this picture wait do people know that the plane landed here look at this look that's MH370 right there someone's tagged the Diego Garcia with MH370 on Google Earth Pro I love it so the plane somehow lands here now let's take a look at this guys I've been talking to people we think there's an elevator here

(2:05:33) somewhere to that a plane can go out cuz look where are all the planes where are all the planes at shouldn't there be like a ton of planes on this let's go back to 2013 look at all the planes where did all the planes go guys here it is this is probably an elevator right here I think like look at this weird spot right here for this plane or like this right here well it's it conveniently has a cloud over it oh whoa does that look different wait a minute whoa this looks different doesn't this does this look different to you

(2:06:22) guys this looks like a hanger right here right whoa is it gone now you guys see that yeah it's definitely not a hanger anymore like yeah this spot too could be an elevator there's there's an elevator here somewhere I'm sure of it this could be an elevator right here too the question is where did all the planes go maybe these Circle things are elevators all of a sudden there's just no planes on the runway anymore none not one where are all the planes yeah the roof was missing off that one maybe this is where the electro IR

(2:07:11) telescopes are they have some kind of advanced Electro telescopes here so I've looked all over this place mainly around the hang everybody tells me these Circle things here are like fuel storage I don't know if the cloud made it up here but you can see here this is just yeah this is weird huh it's wide enough for it for sure so I think they've got an underground facility because we found a ton of contracts for tens of millions of dollars people say well tens of millions of dollars isn't that much but tens of

(2:07:48) million in when you have southeast Asia like slave labor um that's a you can go a long way like they're using like cheap super cheap manual labor on this island they basically treat the

people like slaves they're not even allowed to talk to their families excuse me not allowed to talk to their families for the whole duration while they're on deployment here now I want to show you something else weird here this this this is I think the small boat harbor or maybe large Boat Harbor there's a weird picture here

(2:08:21) look at this one what what is this is this an artifact why does this look so weird yeah TS good question do elevators for planes exist I think if you have an underground base then yes also supposedly there's a submarine dock somewhere here in this base if you can explain to me why there's no planes on the runway after 2 14 then I mean the only thing I can come up with like every picture you look at there's no planes on the runway where are all the planes 2016 2019 nothing nothing it definitely looks like the

(2:09:11) roof got came off this place why is it so uh like lower quality yeah I don't know I think I'm definitely eyeing this building right here whatever this is going on right here is really suspicious as well as these areas this whole area is where I'm thinking you got your your elevators here somewhere so they can take planes underground to some kind of underground hanger maybe over here as well it's hard to say the big one is outside to the north of it let me look this is a good picture right here up here somewhere no I think that's

(2:10:00) the these are like Barracks the runway color is different I think it's just CU of the like daytime or night time of the picture but I'm not sure but this base apparently has hydrophones that would have caught the um would have caught the acoustic detection from MH370 because it's not that far away and they actually people they release the data the hydrophones here can hear a plane even if it crashes over by Australia even if it crashes over here Diego Garcia hydrophones can hear it Australia has radar systems that could

(2:10:46) see a plane like way out here if it comes out here here Indonesia can see a plane if it goes down here none of these things saw it Western Australia also has hydrophones okay let me go look at it again I think the plane got here somehow it's the only place that makes sense because if you look at it look how far away this is from everywhere there's no Radars that is going to catch it here now if you think Jeff wise says it went to **Russia** explain to me how a plane gets from here all the way up to **Russia**

(2:11:18) somewhere look how many countries it has to go through it's like 10 different Radars are going to catch this plane there's no way this plane went North you telling me all these countries get silenced they all have radar systems none of them see it that's the reason why they came up with this narrative this basically the only other location for it to go without it being seen but the problem is it should have been able to see so yeah Google Earth uh Pro the one I'm looking at right now is the one to

(2:11:44) use because you can switch the times around it's pretty sweet you can download it for free something about this base man like nothing changes on the surface like look at this let's go back to like where we can actually see stuff 2003 is probably the earliest nothing on the surface changes here wait a minute did that change oh they were building this stuff right here oh wow I

didn't notice that what did they building right here they're building more of these hangers oh whoa you see them move like

(2:12:23) that whoa you think these are where the elevators are at is that big enough for this is that a fighter jet huh oh who you can see it going in there oh boy you can see it going in there they caught it going in there on this picture now I really think it might this might be an elevator in here I don't know there's an elevator somewhere here for sure to take these things underground are these fighter jets now oh wow so fighter jets change to these planes later on huh doesn't seem like it's big enough for

(2:13:21) these just a tip uh why this plane the answer is the 20 freescale semiconductor scientists the 20 free scale semiconductor scientists are the main reason why this plane is going to be the one they are connected to room temperature super conductivity and maybe microprocessors as well as Department of um you know us defense I think they were making like RF chips or something like that uh we were we were looking it up the other day there's a bunch of connections though to the the military for free scale semiconductors and they

(2:13:55) had 20 of their like top Engineers were on this plane so probably was a situation where they couldn't risk losing them yeah these are Big Boys these are big big planes right here this is a big plane yeah you can see this one is like coming off um so yeah oh and also Diego Garcia has radar they can apparently go 3,000 miles so let's see if we can tell is there a thing that says the distance oh here's the eye altitude from 20,000 ft this is also I think indication there's no way that our video our satellite video can be coming from a

(2:14:38) plane like the plane would be much bigger for it to be at 5,000 feet like yeah it's going to be really big 20 miles this is 40,000 feet is there a thing that says how far stuff is yeah it's kind of amazing that they you see all this give me a sec damn 1987 your husband was here that's crazy doesn't oh it goes back that far it does here you go Sue this is when your husband was there this is how get our satellite Optics were not very good you can still see these oil these tanks

(2:15:42) here can't really make out the dock anymore and you can't really tell what's going on here and then the next one is not till 2001 it looks like you don't see those hangers here though and now they're starting to build them so they started to build these in early 20 2003 this one doesn't even look like it's done yet what are these maybe it's like a loading Bay they were definitely building something because now it's just all gone gotta see what we got going on here sorry 1020 probably not going to be

(2:16:32) able to stay on much I later I'm really tired um so yeah this base is a very Advanced base what people are telling me that this base is d uh more basically more secretive than Area 51 and it would make sense I mean look this base is the nowhere right this is where you're going to hide your stuff right yeah they use this as like an Iraq Iraq um like launch point Sorry TS I didn't see it hold on if you asking about elevators I answered it like I mean I don't know if I know the an is to I don't know how I'm

(2:17:20) supposed to know if an elevator for a plane exists I think of course it can exist why not right so and if it does it's at this base there's a bunch of contracts for black construction to build like Advanced like underground stuff at this place this links to the footage because this is potentially where the plane went yeah this is potentially where the plane went this is the only logical place where this plane is going to go on Earth without being seen this is where everybody thought it went all the conspiracy theories they even they even

(2:18:00) trolled this place putting a picture of the plane here yeah take a look if you guys aren't familiar take a look at my pin tweet it goes over all the evidence and what we're dealing with every single thing so really it's really easy you know I'm not I'm not trying to be rude but like you know I can't tell every single person individually what what's going on so go to my profile JX Aston pin tweet all pertinent evidence just click on it just start scrolling requirements understand the videos video

(2:18:39) facts there's links to all the videos you can watch here the archive versions where it all came from scroll down requirements to fake the videos pretty damn extensive I mean this is a lot here's the flight path I list out the entire flight path here why the plane didn't crash into the South Indian Ocean List It All Out people say what about the debris that they found here it is everything you want to know how do we know this is MH370 there's the evidence actually this part I messed up this should be **debunking** the suicide

(2:19:13) myth right here I screwed this up godam **debunking** the suicide myth here's why it's lithium ion battery fire so again all you got to do is listen to read this okay so do a little bit of work yourself I I'm not going to be able to tell everybody everything and repeat it all every time a lot of people already read already know about a lot of this here's the orb analysis information whyatt teleportation right so please do a little bit of work yourself pull it up while we're watching this you can read

(2:19:41) it yourself you guys are smart individuals I'm sure Wyatt reverse engineered versus non-human intelligence everything you want to know is probably listed in here okay but I will answer questions anyway but that will help you guys any other examples of credible videos with similar orbs uh I've been sent a lot a lot of videos anything else we want to see on Diego Garcia I've seen a lot of videos of orbs I'm just not connecting them to our videos um because there's you know they'll use anything else I link to the

(2:20:24) to this case to try to discredit the whole case I'm just going to take one more look if I had to guess either somehow the elevators here seems too [Music] small these things could be elevators maybe we were looking at this before we think these might be tarps that are meant to look like grass it's hard to say but I don't think so this is too small as well to me the place where the elevator has got to be is over here it's either this thing right here or this thing right here might be an elevator somehow something

(2:21:01) big enough to fit a plane we also looked at this spot right here this whole thing maybe would be a huge elevator that would be interesting okay uh can I copy this dang it how do I copy

this I can't copy oh there there we go copy yeah this one this is the one we were looking at too um ink pixie and I were looking at this yes to me this looks like the elevator who does it move it moves you guys see that no I think it must just be the angle that's weird though everything else is in the same spot apparent position so this just this

(2:22:04) to me was probably the elevator very weird okay what are the ramifications of all this good call um I'll pull up the videos so you guys can watch while I'm talking about it ramifications uh are probably that we have technology that's being withheld from us that is very Advanced and you know I think they would have been very very advanced in 2014 but right now it's not that advanc I think it's just being hidden from us but it could change the world if fossil fuels would essentially be obs sete when we

(2:22:49) talk about um if you read my most recent piece you'll see that this can create Fusion Energy so what we're talking about here is like the power of the sun like if you think of the uh um Spiderman 2 movie The Power of the Sun in the palm of my hand that's like literally what we're talking about here right so I'll pull this up real quick read this piece this one is my most recent one that I put out there this is actually a paper salvator Pas put out I just read all of it earlier today uh what's nuclear fusion may also

(2:23:25) be engineered using the concept at hand given extremely high plasma densities and temperatures as well as the high energy confinement times which can be achieved with the the generation of ultra high electromagnetic field intensities what he's saying is that you can create a field where you have your plasma stuck inside the field and you can create fusion power like the power of the Sun and that's essentially why we might be able to get like free energy at that point that's what fusion power is essentially free energy we can just look

(2:23:52) up and see the sun producing energy all the time right like perpetually so this is pretty scary um then this part right here at the disruption Point Energy may be Amplified to such a high degree as to generate space-time curvature Singularity leading to the total Destruction of the planetoid just remove these last few letters guys total Destruction of the planet that's what we might be dealing when you're dealing with amplification of energy that's what you're talking about just achieving energy levels that

(2:24:28) now you just scale it up and you can have a doomsday weapon right this is pretty wild here we have a Discord it's currently not open right now so right now the only ways you can follow is on Twitter or on YouTube we had a lot of people infiltrating our Discord people trying to hack my Discord so we just we had to close that down for now so it's private only ramifications on the yeah we're actually going to be interviewing Bob greener on Sunday so Pat if you want to watch that uh I think it's 1 o'clock Eastern I think let me

(2:25:04) check I gotta prepare for the Bob Greener tomorrow yeah 1:00 Eastern for Bob greener on Sunday hard TRS number two um now look at all this other stuff using the same high frequency gravitational wave generator has a capability of inducing a local phase transition from turbulent to laminar I don't know what that means allowing for smooth sailing of a hybrid craft

through the vacuum of space this is what we're talking about in the videos now I know why salvator Pi wanted to reach out to me like he's looking at

(2:25:43) the video let's look at the video again together here this is this is what he's talking about right here he's talking about what it's doing right there creating smooth sail transition specifically through the conditioned vacuum of space zap that's what he's talking about it's wild enclosed PL vacuum plasma Shield this is what the orbs are it's an enclosed plasma vacuum shield and it even says due to the coupled effects of em field induced air water particles repulsion and the local

(2:26:20) vacuum energy State polarization he's saying that you can create a bubble just like this am I religious I'm becoming more and more religious it's funny I was raised what I was baptized Roman Catholic and I became atheist before and around college and then after that I started become agnostic and the more I learn about science the more religious I become I think that what this means is that our universe is a simulation you know it's a not a simulation maybe but a construct is a better way to think of it

(2:26:56) because I don't want to diminish the value of life life is still very valuable um but it means that there's a creator of some sort out there you know my personal belief is that time is an illusion and that we are reliving lives over and over and over again and that what persists is our spirit our soul if you want to think of it like that right we might all even be the same person whereas from our own because time is a fluid symmetry which means time flows differently depending on where you are so it's very possible that time itself

(2:27:28) is just a complete illusion just based on our brains and how our brains work and what that could mean is that we're all the same person how weird as that sounds and we're just living Our Lives over and over and over again repeatedly we're living every life uh yeah thanks Aaron uh the the wi files actually chimed in early early on the yfiles said they couldn't cover this otherwise they were afraid of getting canceled off YouTube they did an after files piece but it was really bad they they needed a

(2:27:58) lot more evidence like they nobody's to the level we are with MH 370x um yeah eron I'm seeing the chat sorry if I missed anything else I'm trying to keep up it's hard I think that's all the questions that people are at right now yeah our reality is a wonderful creation it is wild to think that so I'll show you guys the video while I I answer some or take a look at some of my tweet replies I posted this video here on Twitter a while back it's called the egg a short story The holdovers is the

(2:28:36) fourar grade A best picture of the year that's glaringly apparent and audience after audience you are on your way home home when you died it was a car accident nothing particularly remarkable but fatal nonetheless it was a painless death the Medics tried their best to save you but to no avail your body was so utterly shattered you were better off trust me and that's when you met me I love this what happened where am I you died I said matter of fact no point in mincing words there was there was a truck and it

(2:29:23) was skidding yes I died yes but don't feel bad about it everyone dies you looked around there was nothingness just you and me what is this place is this the afterlife more or less are you God yes I'm God my kids my wife I love this video what about them will they be all right that's what I like to see I said you just died and your main concern is for your family that's good stuff right there you looked at me with Fascination to you I didn't look like God I just look like some man or possibly a woman

(2:30:22) some vague authority figure maybe don't worry I said they'll be fine your kids will remember you as perfect in every way they didn't have time to grow contemptuous of you your wife will cry on the outside but will be secretly relieved this is pretty messed up to be fair your marriage was falling apart if it's any consolation she'll feel very guilty for feeling relieved oh so what happens now do I go to heaven or hell or something neither you'll be reincarnated ah so the Hindus were right all

(2:31:08) religions are right in their own way walk with me you followed along as we strode through the void where are we going nowhere in particular it's just nice to walk while we talk so what's the point then when I get reborn I'll just be a blank slate right a baby so all my experiences and everything everything I did in this life won't matter not so you have within you all the knowledge and experiences of all your past lives lives you just don't remember them right now I stopped walking and took you by

(2:31:52) the shoulders your soul is more magnificent beautiful and gigantic than you can possibly imagine a human mind can only contain a tiny fraction of what you are it's like sticking your finger in a glass of water to see if it's hot or cold you put a tiny part of yourself into the vessel and when you bring it back out you've gained all the experiences it had you've been in a human for the last 48 years so you haven't stretched out yet and felt the rest of your immense Consciousness if we hung out here for

(2:32:29) long enough you'd start remembering everything but there's no point to doing that between each life how many times have I been reincarnated then oh lots lots and lots and into lots of different lives this time around you'll be a Chinese peasant girl in 540 ad wait what you're sending me back in time well I guess technically this is time as you know it only exists in your Universe things are different Where I Come From Where where you come from oh sure I come from somewhere somewhere else and there are others like me I know you'll

(2:33:15) want to know what is like there but honestly you wouldn't understand oh you said a little let down but wait if I get reincarnated to other places in time I could have interacted with myself at some point sure happens all the time and with both lives only aware of their own lifespan you don't even know it's happening so what's the point of it all I looked you in in the eye the meaning of life the reason I made this whole universe is for you to mature you mean mankind you want ask to mature no just you I made this whole

(2:34:02) universe for you with each new life you grow and mature and become a larger and greater intellect I like that thought just me what about everyone else there is no one else in this

this universe there's just you and me you stared blankly at me but all the people on Earth all you different incarnations of you wait I'm everyone now you're guessing it I'm every human being who ever lived or who will ever live yes I'm Abraham Lincoln yes and you're John Wils Booth too I'm a Hitler you said appalled and

(2:34:51) you're the millions he killed I'm Jesus and you're everyone who followed him you fell silent every time you victimized someone you were victimizing yourself every act of kindness you've done you've done to yourself every happy and sad moment ever experienced by any human was or will be experienced by you you thought for a long time why why do all this because someday you will become like me because that's what you are you're one of my kind you're my child I didn't know you could

(2:35:34) do that wow you said incredulous you mean I'm a God I didn't know you could do that no not yet you're a fetus you're still growing once you've lived Liv every human life throughout all time you will have grown enough to be born thanks for telling me about that TOS so the whole universe it's just an egg I answered now it's time for you to move on to your next life and I sent you on your way one of the best videos I've ever watched every time you victimize someone you victimize yourself

(2:36:17) every kindness you do to another you do to yourself people should remember that yeah pretty crazy huh if you guys haven't seen that video you know that's that one's wild that one's wild right wait I got hit with a copyright claim wait really hold on your stream has been I got hit with a copyright claim

MH370x All Evidence - Version 2 11/13/23 - YouTube

<https://www.youtube.com/watch?v=SbumIND4jyo>

Transcript:

(00:13) okay looks like we're live uh what's my stream for this ready

(01:38) G to close oh wow people are already up here closing down my my Twitter for now hey doing good JL yeah boy we been doing a lot of podcasts starting to get pretty tired that was it was take a lot of energy to start streaming tonight but we got a lot of work to do so time to get to it okay what are we going to add to our stuff here evos I mean if they turn up the heat we'll

(02:40) turn up the heat back I got plans already okay so what do we want to do here the blur oh we got a lot of stuff okay let's where's Edward sedan God we have a lot of stuff to add uh disinformation let's start there I love the the phony compassion is one of the worst pieces of disinformation these families get no answers and we're supposed to believe that uh for some

(03:46) reason that's like hurting the families of the victims that we're like looking into it it's wild no news about the letter to Congress I'm going to be listening some music here while we while we do this hopefully it's not too loud I think it might be I can't tell if it's picking up tell me if you can hear the music I'm listening to I might have to play it quieter if so what else do I have where's the science part

(05:02) damn it what was I going to add here uh was I going to add here I was going to add something I just lost it hey mandolin what's up what's up all fantasy football yeah good uh not probably not going to play music here tonight double s experiment oh time dilation apparently people don't know the time dilation is Real at least the last podcaster I went on uh in person did not

(06:26) know yeah the alien scientist podcast with salvator Pas is pretty incredible I've actually made some new connections from that which are blowing my mind at the moment the videos are 100% real 100% technolog is real too hey faga um what's time dilation good question uh see actually speaking of which I probably should try to find a video on time dilation huh okay I'm going to try to find a

(07:30) video for time dilation for you guys can you do pop out with this or player what that didn't work oh there it did work to quantify object change and Mobility at first glance one could think time dilation pretty much means that space or time however you want to think of space time time flows differently depending on where you are and it's real oh wait can I do like this our per of time does noty during that time though it seems to slow down the weekend at the turn of theth century a discovery radically our pring of relaity you guys

(08:22) can hear that right is noer absolute but relative each item has its own time and clock and previously synchronized clock on it's not even just as you approach the speed of light it's depends on how much mass your next to d The more mass the slower you go slower time flows less Mass faster time flows Interstellar explains it perfectly honestly should find that that as absd as it sounds is a of Einstein's the of Relativity used to speed being for examp rela to a stationary Observer would be observed as moving at 120 mph

(09:18) that's 193 kmph by a motorist heading in the opposite direction at the same speed this same phenomenon also affects time depending on an observer's relative speed or position within a gravitational field time passes at a different rate for that Observer for another Observer this effect known as time dilation is only noticeable under certain circumstances although we are constantly subjected to it at a low level time dilation is a consequence of Einstein's relativity in which time is not as absolute as it may appear the rate at

(09:57) which it passes varies for observers in different frames of reference Einstein's starting point so just real quick there what they said was time passes differently for your different frames of reference so what that means is that time flows differently for you than it flows for me based on where we are in space time now because we're all on the earth time is Flowing very similarly for all of us but if one of us was out in outer space time would be flowing

differently than it flows for the people on Earth the extreme example in

(10:28) interstellar is when Matthew MCC goes near a planet that's near a black hole where there's a ton of mass that's why the waves are super high in the movie and on the planet and then when they leave the planet 20 years have gone by for the people who've been out on the space station so that explain has the same measured speed irrespective of the observer's motion let this play while seeming innocent assumption leads to the inevitable conclusion that moving clocks run slowly this phrase is frequently used to

(11:00) describe time dilation but it's a little deceptive since it places too much emphasis on clocks which are only relevant in the sense that we use them to measure time however rather than seeing time dilation as a clock property we should consider it an unexpected reality about space and time the theory of relativity is divided into special relativity general relativity and time dilation features in both it's true principle that the speed of light is the same for all observers is crucial in special relativity according to Boston

(11:34) University physicist Andrew Duffy one of its consequences is that two observers moving at constant speed relative to each other measure different times between the same events however the effect is only detectable at speeds approaching the speed of light 10 years after he proposed special relativity Einstein expanded his theory to include gravitational effects in general relativity however time dilation in this hypothesis is determined by the strength of the local gravitational field rather than the speed of

(12:08) travel we currently live in a modest gravitational field on the Earth's surface therefore we're already experiencing time dilation without even realizing it Additionally the strength of the effect changes when we move up and down with an Earth's field gravity is weaker on the top floor of a tall building than on the ground floor For therefore the time dilation effect is similarly weaker higher up the further you are from the Earth's surface the faster time passes although the effect is too small to perceive with human

(12:43) senses the time difference between different altitudes can be measured using extremely accurate clocks a spectacular example of gravitational time dilation is the region around a black hole which has stronger gravity than earth see NASA has considered what would happen if a clock was placed 10 km from a black hole with the mass of the Sun the clock would take roughly an hour and 10 minutes to show a difference of 1 hour when viewed through a telescope from a safe distance one of the most perplexing consequences of time dilation is the

(13:19) twin paradox in this hypothetical experiment of twins one identical twin lives on Earth while the other twin travels to a far away star at speeds approaching the speed of light when they reunite later the traveling twin has aged significantly less than the one who stayed on Earth thanks to special relativistic time dilation the seeming Paradox arises from the erroneous belief that the situation is symmetrical in other words you could say that the traveling twin is stationary relative to the Earthbound twin implying that the

(13:52) Earthling would have aged less than the traveling twin however this isn't the case because the situation isn't symmetrical when special relativity talks about relative motion it means Motion in a straight line at a constant speed that is not the case in this illustration because the twins are together at the beginning and end of the journey the traveling twin must Accelerate from a stand still to top speed then turn around and head back in the opposite direction before finally decelerating to a stop these phases of acceleration and

(14:29) acceleration introduce general relativity because they have effects similar to those of a gravitational field when the math is done to account for this acceleration it turns out that like time travel the space fairing twin does age more slowly than the Earthbound twin if you like this video please consider subscribing and click the notification Bell so you do not pretty wild huh so time dilation is important to understand there more mass equals you move slower so think go like as you approach the black hole it's why time

(15:01) slows down and if you were to look at the person moving towards the black hole they would be getting slower and slower and slower two stolen passports size of the orbs might mean something not really sure really what the orbs are doing is they're inducing um they're turning the the plane into a nucleus a nuclei of an atom and so that it can experience Quantum Effects by becoming Quantum most most likely when it gets close to it I have I have to look that part up too let me I'm going to write this down I was trying to talk to my

(16:04) physics experts and get a better understanding today I'm just these people are just so much smarter than me it's hard to keep up I'll pull it up later though sorry if I'm a little just out of it today we're only be streaming for a couple hours today as well try to get this done cuz I got to get some sleep tonight and then uh I won't be online tomorrow I got stuff going on yeah I think Einstein was pretty pretty great um I think he never would he just ran out of time before he could figure out how to how to unify Quantum

(16:55) and macro where huh we're going to take this this isn't a quote though

(18:27) for aeronautical black hole what the hell man there's no such thing literally makes no sense I'm not adding it because it doesn't make any sense it's not pilot suicide we need to add

(19:32) that part too we got a lot of stuff to get through guys I'll put the other evidence over here so you guys can see uh

(20:38) blur I don't know if we're going to add the squawk part I don't think we need to add the KT thing we had one podcast to try to cast a bunch of Doubt on our evidence and honestly I don't I don't know how to not be rude to him it was just stupid uh I got to pick this up guys give me a second

(34:58) okay sorry chat uh yeah you know we had a call my bad uh I couldn't have you listening to that call no offense um so I just had to uh had to take that call real quick but we're good uh it's for something for tomorrow that I needed to handle let me see what we got here um Simon

Holland uh I have not seen his stuff no um let me see what else we got here yeah you wouldn't want to be that guy who tests the teleportation Tech first but uh what I would say is you know probably Philadelphia Experiment

(35:39) would took care of that so I'm starting to get the feeling like this Tech was proven like a long time ago another interesting thought is that if we have this kind of tech we definitely have like faster than like communication Tech which is pretty interesting that's something that I've kind of thought about for probably over 10 years actually before I was even interested in uaps was you know do we really have faster than ltech maybe um yeah so the plan's not flying higher because those aren't contrails you can

(36:20) see the cumulus clouds in the background uh and cumulus clouds only form at low altitudes so what we're looking at there is MH370 there is no other plane it can be actually there is no other missing 777 it's in the actual flight path of MH370 and the time matches as well we were able to corroborate it with a witness as well as with the satellite we found the satellite that was in the region as well I mean you just can't make this stuff this much stuff up guys if it's fake like there's a million

(36:51) reasons why it's real uh let's see what else we got also like I wouldn't have this many physicists and like phds like in my replies and in my DMs uh the fact that those people are in there and replying to me and what have you tells me that those people think it's real right they they're not coming out saying it outright I look like Stephen Merchant that's that's kind of messed up he's he's a funny guy though let's look let's look at him up okay maybe a little bit maybe it's

(37:27) the glasses right the square glasses are doing it maybe yeah my Chin's a little bit more dimply though kind of okay kind of chat kind of uh we haven't got any movement with Congress I mean I don't know it's kind of a crapshoot with Congress you know yeah I mean making sense of the technology is the hardest part for me like it it literally exhausts me to try to figure out how the science works it's so hard yeah we had direct communication with the witness um I'd have to pull up the document I don't want to get too

(38:12) sidetracked here because I want to focus on the stuff I think it was called interview with k t or something what did I call that I'll pull it up for you though if you want to read the the the thing there you go so these were these were the actual questions and answers that I pulled from my interview with her where I was talking to her what time do you think it happened she said it happened around 1840 UTC and then she said maybe it was 1825 or 1940 she couldn't remember based on the the time uh like the time zone

(38:53) she was in or whatever then she said she felt like the experts were trying to get her to change the time to fit with their theories that's pretty messed up real messed up she said the GPS was automatically logging the smoke was thick she said she didn't have a sense of smell as well and that she didn't see any other boats or anything nearby kind of some interesting questions she didn't hear anything unusual no engine sounds pretty odd uh can't really I don't

really know how the zap works and I don't know really

(39:37) how they were able where they were able to teleport it to it's just like to it could be anything they could even teleport like around the earth several times and then have it just stop somewhere it's just I don't know I don't know how that works too like what happens if you teleport and you hit a plane while you're teleporting like at like light speed or moving at light speed I have no idea yeah we had the we did do the orb animation today you can check the Twitter out this witness is Katherine

(40:07) T Kate T this was the witness that was right there within like minutes of when the videos happen we were able to find her because we recreated the satellite we were able to look and figure out which satellite it was and we did that by checking every single satellite that's out there it helped because we had the stereoscopic one so we really narrowed in on USA 229 early and the problem was down here it's in the South Indian Ocean but it's already it's 1830 here so we like how could it get out here in the South

(40:43) Indian Ocean the answer was it wasn't on the south Indian Ocean all we had to do was forward it a little bit and turns out the coordinates were actually up here instead and now you get to 1840 which is when this plane goes dark this is the time where they actually lost contact with the plane according to the next day look at this boom now we're looking right down at it with two satellites this is the agreed upon location of this plane at this time like nobody disputes this is the location where the plane was what they argue is

(41:17) this is where the plane turned into the South Indian Ocean which never happened just didn't turn in the South Indian Ocean what happened was our videos right here pretty wild right look at these two satellites just staring right down boom A and B we'll come back to this I just want to show you guys you ready for this this is the archive version of of the video we look at this A and B we're looking straight down on this plane boom we're looking down on it boys and girls these are two different sat these

(41:56) are two different cameras at least this is a parallax here so unless YouTube can create this we're looking at our proof right here right this is Smoking Gun and even if somehow this is really just one video well we still have the satellite right in the right location at the right time I mean it's right there staring we've got the Malaysian Minister of Defense admitting you ready for this where is it this there are us spy satellites over the regions are we in are we in touch he's already saying yes before he's even

(42:39) finished the question yes we are in touch with yes we are in touch with them yes we are in touch with them guys one more time are we are we in yes we are in touch with yes we are in touch with them there are us spy satellites over the regions yes we are in touch with them here you go guys staring at it we're staring at it that's MH370 right there it's light on the top and darker on the bottom just like MH370 we're watching these orbs that clearly have purpose they go through the plane several times and over the plane like

(43:26) this is the hardest thing to fake unless you fake the whole thing and that's why people are trying to argue oh well just the orbs are fake because the people can't understand how the orbs could be real but they are the zap accurately illuminates the clouds the smoke Trail stops these clouds are super high quality look at these clouds do you really think these clouds are fake have you guys ever seen a movie where they can fake clouds like this no way these are cumulus clouds Guys these are not this plane's not at 30,000 ft it's

(43:55) objectively not at 30,000 ft the altitude of this plane right here is probably less than 5,000 ft because these clouds only form between 1,000 or 5,000 ft and we check the weather and these weather has his low pattern clouds in the area too I mean I don't know how much evidence do need it's just it's overwhelming it's overwhelming I mean I don't want to believe you can teleport a plane either but that's just what the evidence shows you know I don't know what else to tell you guys and then he just goes ahead and admits

(44:28) listen to this can you tell us if you receive data from the Eng engine manufacturer Rolls-Royce Yes yes again says yes twice just to be sure rollsroyce would have proven that the official story is because they would had no data going into the South Indian Ocean I mean it's just it's not even a good cover up yeah I think the plane didn't go I think the plane went somewhere else on planet Earth I think if you read the teleportation section you'll see that that's probably where it had to go based

(45:19) on the phones ringing phones were still ringing and you can travel forward in time but you cannot travel backwards in time unless you go to a different dimension I guess yeah nobody's going to debate me because nobody can refute the evidence if we had a debate it would just be some lowquality pissing match of people just like trying to claim I'm disinformation or something it just be useless okay let's let's get this stuff done um Mike McKay citing altitude let's let's do that one all the other

(46:04) Witnesses uh Mike McCay SE altitude so interesting enough I asked chat GPT to take a look at how far you can see a plane since there was a podcaster trying to cast doubt on whether or not Mike McKay could really see a plane from 300 miles Chad GPT says if you're at 35,000 ft in the right conditions you can see 310 miles so it's actually perfect how far can you see at 35,000 ft at an altitude of 35,000 ft I'll actually just post it over here so you

(47:09) guys can take a look at it I'm going to end up deleting it retyping it out but you just so you guys can see it just so you know I'm not bullshitting you what does it say guys 310 miles the conditions were perfect as well it had just rained meaning that the conditions would have been perfect for Mike McKay this is actually huge evidence here um he also sees the fire for 5 to 10 seconds I'm just going to say McKay the fact that he only sees it for 5 10 seconds would be indicative of them

(48:11) being a put the fire out or maybe he sees the initial burst of the lithium ion battery fire not sure but this would also be I think indicative of potentially it depressurizing the plane and so he's seeing the Flames come from the side of the plane or from something right still may be

some questions about this but the sighting to me is very credible a lot of people wondered if there wasn't a fire due to this and the way they were able to discredit him is they tried to make it like he saw the plane crash and he didn't so pretty

(48:48) messed up man the way they discredited this dude ruined his whole life so the thing is when it no it wasn't high it was low on the horizon I think I said that low on the horizon here and so that's why people said he thought he saw it crash because you see a plane low on the horizon over the water it's pretty much the same as thinking you saw the plane crash but it's 310 miles away it's actually at cruising altitude so sorry what are you saying why would this be painful for the families they've literally never been

(49:23) given any answers so I'm going to go on to the disinformation part for you guys like the thing I hate the most is this idea that like oh we can't talk about this because it hurts the families that's just fake compassion don't pretend like you care about the families they've had nine years they've never got any answers if you care about the families they deserve the **truth** and you should read my piece on whatever buying Buy in silence because the reason why these families have probably gone quiet

(49:54) is that they had no choice if they wanted to get payouts they had to sign an agreement that said they would probably not say anything so the idea that like this hurts the families is so ludicrous it's just offensive frankly if anything it should be the opposite like we're the only people fighting for the families that literally can't even say anything anymore probably yeah not really knowing what happened and they giving some fake answer and then just saying well it's never going to be solved and then

(50:25) blaming a pilot who definitely was not at fault that's that's wild man anyway let's finish this and then I can go over the evidence with everybody and then we don't have to answer all the questions like individually that way I'm going to put some music on on my other headset real quick I'm not going to play music for you guys because I just get a lot of complaints when I play music for some reason yeah William exactly anyone who watches the families right after and sees the hatred from them knowing they

(50:55) were live lied to would never say something about this hurting the families the families got no answers man like none and they knew it was and we all were like oh they're just they're in denial like no they they were not in denial man it was just a cover up and they knew it was a cover up it's ridiculous where are we going to put oh more fire evidence okay let's start at top where's more of the fire oh let's add this here I think this is a good one to add so the original video says airliner

(51:54) and UFOs if the person that **leaked** this knew it was us technology why would he tell them to put UFOs in there I think that he thought it was the UFOs as well and that's why he thought he was okay to leak it right and then later on he gets told no this isn't UFOs this is our Tech and that's why he comes back in the end and says like I'm so sorry for what I did seems to make a lot of sense to me here we go lithium onon battery fire damn we got 82 concurrent

viewers geez lots of people involved in this

(52:49) what's up guys uh I'm not going to speak to the makers of the Netflix documentary I spoke to Florence a Changi and she told me that they were and then she almost walked off and I respect Florence speaking of Florence we might vindicate her too I've got a quote from her saying that she does not think that the plane was shot down that people have misinterpreted her statements there's like 10 articles about them all claiming that she says the plane got shot down when in reality she was just exploring

(53:16) all the options saying here's the things that could have happened it's a little bit different that's like people saying that I said that aliens took the plane even though I said that just like everything's on the table it's like no my real opinion is I think it's our reverse engineer technology so it's very disingenuous when people are like oh you think aliens zap the plane it's like okay I mean I'm not ruling anything out but that's not what I think if people want to say think that

(53:43) it's fine yeah I mean they completely rejected my fire for this guy so makes you wonder right got to be something something going on there okay where's my fire [Music] evidence we looked a lot into this drone too there's a couple other drone like there's this other drone that was a lot newer but I just can't imagine that drone would have been the one that they used the 9C mq9 C they look really similar though it's hard to tell the difference and I I couldn't find any pictures that have the

(54:26) mq 9C with the camera under the wing it's just the mq1 C is the only one so it was it was a very specialized unique drone or it's just a mq1 C greaty Eagle which some of the best evidence for why it's mq1 C greaty Eagle sec I want you guys to watch this okay Sig in signals intelligence payload the very top hit is mq1 C greaty Eagle by General atomics the very first one it's like okay this is this is our drone I mean that's what it we thought it was and then it shows up right at the top seems pretty

(55:14) conclusive want to say hi to our intelligence Community who's watching welcome we're blowing up your spot imagine how it feels be the intelligence community and all it took to uncover this conspiracy was a Twitter account and just Googling a bunch of stuff it's like guys do a better job next time come on this is pretty pathetic like I think I could have done a better cover up than this and definitely don't put the minister of defense on on interviews next time that was someone should have told him not to

(55:46) go on I mean boy that was I dude spilled the beans yeah they don't want us knowing that the tech probably for good reasons I mean this Tech could lead to Doomsday weapons you know so that's that's part of the reason yeah the VFX does not match as a statement of fact so you may have the opinion that you think the visual effects matches but that's an opinion the fact is that it does not match on even a single frame that's an objective fact that can't be denied so just to show you effects you

(56:32) know from just to be 100% clear this here is not in our videos guys let me just say it again this here is not in our videos it's not even close look at you can see the overlay they're not the same effect if they were the same effects take on that we would see exactly what we see in our thermal video video game what's your take on that people are in like mest mindset this does not match not even on one single frame okay not even on a single frame okay see they're not the same see all these extra dots they're not the

(57:11) same see how the middle doesn't match see how the middle isn't even close to the same these are not the same effect as a statement of fact notice how the left side over here isn't even there notice how this side also doesn't line up like they try to line it up and it still doesn't line up like this it does not match like Jesus you guys the people that like can't admit they were wrong need to just get over it you were wrong you got fooled by **MC West** he's a con artist he has zero credibility he has zero

(57:44) credibility he tries to **debunk** literal Declassified videos he tries to **debunk** videos that the dod Declassified okay that's not somebody who has any credibility so you know if you're one of these people who thinks that the the VFX **debunk** matches like just get out of my stream like go back to **mcwest** and jerking him off or whatever you do on your side the dots are not the same we just looked at it man they're not the same objectively speaking it's not the same you can't edit it for the video because

(58:15) this is an original work you're not copying something like use your head man use critical thinking this isn't a situation where you copied something to make it look like something else it would have been an original work like man people just can't think for themselves it's ridiculous sorry to put you down but man you're really just asking for it well they edited it to look like that well they didn't because there was nothing to compare it to Jesus man all I have to say is how many pixels

(58:48) match and then everybody just goes worst is that even if that that matched on the single frame which it doesn't even if it matched on the single frame it wouldn't **debunk** any of it it wouldn't **debunk** any of the videos it's just embarrassing **debunk** man like don't get fooled by **Mick** West anymore man don't get fooled by **Mick** West anymore the guy's a con artist he's a fraud he has zero credibility he most likely is connected to the intelligence Community very likely he hasn't had a job in 15 years

(59:26) what do you think he what do you think he does he's a an influencer the account that put the **debunk** out was called I slide a one-day old account that the moderators had to give manual approval for that didn't didn't answer any questions IC slide stands for IC Forum slide intelligence Community Forum slide they just made it obvious IC Forum slide like guys stop getting tricked by stupid stuff it had some numbers at the end of the name too like they literally just had fake accounts that they're pushing

(1:00:19) up of course **Mick** West is connected to this account he's literally the only person that claims to have found the VFX **debunk** the VFX on the same day that this account posted it what

do you think he was sitting there on his 3DO looking at his old video games playing him of course not he's connected to the account you guys got to stop getting tricked by frauds like **mcwest** man look at how much evidence we're dealing with here look at this and you're stuck on a VFX that doesn't even match like we're moving on from that because

(1:00:58) like realities it doesn't match you got to just we don't need anything to compare anything like we don't need any professionals to look at it if this was fake we wouldn't be able to come up with any of this evidence we're we're way past the VFX thing like you guys are in like three months ago mode we've already Pro we already figured out who the leaker is you guys are still talking about VFX as the D match and people wonder why they get blocked it's like man like you use critical thinking in the future please

(1:01:27) and for a lot of people they just can't admit they were wrong like it's just it's too hard for them right like you look at something that objectively doesn't match and then their minds they go I can't be wrong I can't be wrong it's like no you were just wrong you got fooled by a guy who has no credibility sorry next time be better okay let's see what we got I have the fire evidence over here how yeah that's a good question question how have they not um how have they not physically harmed

(1:02:01) me CU I think the reality is they don't like first of all if I like imagine what would happen if I disappear I've got 23,000 followers like if I disappear people are going to like 10 people are going to rise up in my place first of all because what I'm doing nothing it's nothing of what I'm doing Special like I'm going to give you guys access to this document if something happens to me you guys just take my place in addition to all the people in my Discord will take my place like it will stop nothing

(1:02:25) if anything it's just going to prove that it's all real if I were to disappear and then the second part is that like I don't think that's how they do it anymore right they try to discredit people that's why you have so many people online trying to like attack me personally but none of them are attacking the evidence like even here people are trying to talk about VFX is they're not attacking any of the evidence right that proves that it's all real because the reality is like they have to try to discredit me somehow

(1:02:49) right that's the only way that you can make this go away at this point good luck I say I got more VFX **debunk** stuff too I mean I did like I knew that they were going to push some stupid crap like that so I have like I have so much more than any of my other stuff yeah here's the one I pulled before this one I need to put in my other folder I how could people think this is the same they they modified it what do you mean it's not even close man like look at this look at this frame look at this Frame right here is this

(1:03:35) our thing look at all this extra stuff on over here what do you think they painstakingly removed all these pixels one by one man just so bad here we go guys I found the VFX guys ready here it is honestly this dut matches the VF our image better than that VFX does frankly this donut is actually a better comparison Bingo it was a donut all along guys videos are **debunked**

it's a donut guys they just modified the doughnut man come on you just it's easy just use some visual effects and modify this donut into our

(1:04:18) thing obviously that's what they did obviously it was just a donut but sorry I'm just messing with you vfxs I'm just in one of those moods right now uh where is my fire stuff though okay here's another piece for our fire where's the fire this is pretty interesting here cargo compartments designed to withstand a flame source of 1700 degrees fah

(1:05:25) over 900 Degrees Celsius for at least 5 minutes so this is actually really strong evidence that they could actually battle that fire without the plane like falling apart because you just keep putting it out right here's another one the lithium ion battery would have escaped from the fire compartment cargo compartment here's the third

(1:06:53) one this is pretty important can't be extinguished by the fire suppression device um did we have the part about the glow in here I don't do I not even have the part about the glow wow I don't even have the part about the glow in here okay uh I have Source willing to testify who's

(1:08:26) spent time on Capitol Hill who will testify the fact that it was most likely lithium ion battery fire and that it the glow would be consistent as well as that they could have lasted for over an hour I talked to them again the other day and confirmed their uh information just because people were questioning it they are highly credible I mean doesn't mean it's a guaranteed thing but still highly credible okay so we got bunch more fire evue we added in there spice that bad boy up oh fire changing in the belly

(1:08:59) where is um here for we're going to add the blur in the

(1:10:11) science area as well yeah the patents are interesting but I wouldn't worry about the patents I mean it's more so that you connect them to us defense which we did and the 20 people on the plane being connected to the US defense indicates a motive for why you would want to save them right which is I think very important okay we did the Mike McKay thing okay we're doing pretty solid okay

(1:11:14) the pilot suicide let's get that in there so we have the NSA report that super conductivity report yeah this podcast I did was just man want to be FBI agent honestly tried to claim like oh the reports 200 pages so it referencing free scale nine times doesn't even matter like what it's like it's like 150 pages of appendixes man this is also they launched a major initiative dedicated to serving RF power needs for us Aerospace and defense that's that's to me is pretty pretty damning you know we should we should

(1:12:10) validate this though I don't want to get caught in a lie on this let's validate that real quick if I just Google this directly I wonder if we'll find an exact hit yep there it [Music] is h

(1:13:27) huh yeah okay well nxp does it so makes sense oh we didn't oh wow I mean that's the first hit I didn't even put in free scale and the first hit's nxp okay yeah I think we're good with

this the problem is free scale sold itself off eight years ago so there it is okay this is legit well okay there we go Business Wire that'll do there it is okay guys I think this is good enough right 2013 holy holy yeah we're good let's I'm GNA go put this in my my Discord real quick I mean what else do we need guys

(1:14:21) this it's definitely those scientists on board of the reason let's be honest with ourselves okay that corroborates that we're good we're definitely keeping that in there okay let me see if we got any questions yeah I mean the fire is going to break containment and make the plane disintegrate you got to battle that fire non-stop you know the VFX donut man I might have to I might have to pull the VFX donut out um I'm I'm gonna have to add this I'm definitely adding the VFX donuts for my

(1:15:06) next podcast I do in person we're going to break that out part of the best way to break down brainwashing is by humor and like no offense to the people who think the VFX is legit I understand how you can be fooled by it you know like that's peer pressure is such a powerful thing so when people tell you something that you believe in like you're going to absorb it as your own belief but that's why brain like humor breaks down that brainwashing so when you show people the donut and say hey no you just matched the donut and people

(1:15:34) are like oh wait maybe I should think about this twice right that's why I like the donut stuff yeah why would they get away with this um I don't know man I feel like must have been a really desperate situation these people must have been really important right or maybe they just did the right thing you know I don't know I mean that the the cover up was pretty sloppy it wasn't a very good cover up but they did get away with it for nine years so right the portal has Parallax uh I don't know it's probably only one frame or so

(1:16:22) it's probably too hard it's especially in the satellite video it's like the satellite video is six frames per second so it's like literally like one frame oh also the frame rate is indicative of it being real as well because the part of the reason why you would have six frames per second oh yeah 20 is too many people where is that good call on that um but yeah I think that six frames per second like why would the satellite video be six frames per second especially if it's faked the reason why

(1:17:12) it's six frames per second is because the satellite's 1 th000 miles or 1,000 kilometers away at least that's what people have told me I probably should validate that too I haven't added to the evidence list yet though I can't tell if it's because it's a wide field of view or if it's far away I would imagine it's because it's a wide field of view right like The Wider your picture is the lower frame rate I would have imagined but I'm not an expert in Optics uh there's no way to contact reges

(1:17:56) sideon on I don't think we have any contact information if somebody got silenced they would be rded on but maybe even reeside and on didn't even know the **truth** you know like they probably had to be convinced themselves hard to say yeah having 80 concurrent viewers is kind of a lot like that for account with a YouTube it only has I don't even know do we even have 2

th000 subscribers like it's not even that many okay let's get this done so we can go through all the evidence though um everything looks the same guys on the

(1:18:41) VFX thing like the dut looks the same that doesn't mean it's a donut it also looks like an ink drop and also looks like a supernova that doesn't mean it's those things either it's called prosaic so you guys should look up the word prosaic cuz prosaic explanations I also don't use prosaic explanations for on the affirmative side either because prosaic explanations don't have any they don't have any um credibility having the same style looking similar essentially this is really not the best

(1:19:19) in context definitions here yeah these definitions aren't great but what this means is like the same way they always say everything looks like a balloon just CU something like you can line something up doesn't mean that is that thing like that's very bad logic and that's what **Mick** West excels in is terrible logic oh yeah uh German Wings we are going to add that where's the German Wings yeah it's right here so the thing about the German Wing situation he crashed that plane less than 10 minutes after he locked out the

(1:19:58) co-pilot that's way different than our scenario where this this plane flew for six hours afterwards that's where my argument of being able to enter the cockpit comes into play so let's go do that part they ended up changing the policies after that so that you there can never be one person in the cockpit at a time because of that and just just to point this out saying something objectively looks the same is an objectively an opinion I'm saying that objectively as a factual statement

(1:21:03) are not the same I want a VFX donut t-shirt too sorry I'm a little bit behind on the chat uh we won't be contacting any remote viewing groups uh people have reached out quite a lot honestly remote viewing and psychic stuff is the most common things that I get asked about and uh first of all I'll be honest with you guys like I'm not really big into the esoteric aspects in general like it was hard for me to even accept that this conspiracy was real okay like I was never really a huge into conspiracies

(1:21:40) I'm a very logical person and I was never part of the UFO communities I was never into any remote viewing stuff I have nothing against people who are um but the main reason why I'm not connecting any of that to this is that that will be used to discredit me and it will be used to discredit the evidence so that's the reason why we can't we objectively cannot do any remote viewing or psychic type stuff we can't even add it on our list even if I wanted to so I mean people can do that if they

(1:22:08) want but I won't be uh included in my case I know people believe in all that stuff and like you know maybe it ends up being true maybe the science here points that we live in a simulation and all the stuff that I would think is Magic ends up being real maybe but uh we have to realize that the people that we have to get this in front of are not the kind of people that are going to uh believe in that kind of stuff the people that believe in the remote viewing stuff are going to have no problem believing this

(1:22:34) anyway so that's the **truth** of the situation for that yeah a lot of people just believe they see what they want to see right I think that we we've we're not seeing what we want to see here we're just building evidence and evidence is just overwhelming one podcaster tried to argue that like oh you're are you just having confirmation bias like uh does this look like confirmation bias no this is called the most evidence in the history of the world of a court case people have been convicted of

(1:23:13) murder for much much much less than this we have two videos that are in perfect sync just to begin with we have 20 Witnesses it's like that and that's just the beginning uh Michael shellenberger I think stopped following me did he stop following me I don't know what his deal is uh Jesse Michaels no comment for now I think for a lot of people it's either if they're very prominent then they might be getting told not to look into this because it's classified and National Defense and then the other side

(1:23:53) of it is that like the VFX people they might just not be able to think that it's real right there's a realize there's a certain percentage of people that will never be able to accept these videos to be real no matter what doesn't matter how much evidence doesn't matter if this is 20 pages long they just can't accept that there's advanced technology and that government's lying to them and even some people that can accept the government's lying they can't accept that there's anything that is um not

(1:24:20) Supernatural but uh what would be the right term just beyond their basic understanding you know a lot of people just only think that whatever the TV tells them can be real and everything they see in front of them it's the only thing that's real and anything that seems exceptional just has can't be real people should try to break away from that type of uh closed-minded mentality in my opinion because the reality is the world we live in is a lot lot specialer than we think and that's the reason why in the science I start

(1:24:48) with a double slit experiment because the double slit experiment proves that there is more of this world than we you think just straight up uh Hey New Order MMA what's up what did Ken Iverson say sorry I'm not I'm missing a lot of the chats here guys yeah I mean I'm a pretty skeptical person honestly as well that's what people don't really realize about me we're at 216,000 subscribers wow yeah that's increasing a lot holy crap no wonder we have like 87 viewers right now that's a

(1:25:40) lot welcome everybody who's watching I want to do uh I'm going to be out tomorrow you can probably guess that what might be happening uh I won't be online tomorrow uh but later this week I do want to do a space where we do like you know how streamers do the like um the ban appeals we're going to do block appeals uh I'll spoil it though anybody who's been like raging against me your appeals already going to get denied I mean you can we'll let you maybe appeal but I'm going want to really do the

(1:26:11) appeals of the people who like literally aren't just trolling me 247 I don't know how it'll go we'll see yeah I was talking to my uncle and he's like I show him the evidence you could tell

that he's like he's like can't resolve it right and he's like well you'd have to do it again I'm like you have to I have to teleport another plane I already we already teleported one I got to get two more videos teleporting another plane come on please it's just I can't get I can't do another

(1:26:48) one uh remote viewing might work but like I said we won't be tying into this case no matter what unfortunately I don't know everything that could ever be invented has been invented already that's exactly the hubus of man right which is that we already know everything there is to know right like we've already figured all science out it's like no no that's like when I first looked at these videos that's when it realized like oh we're actually just cavemen and like we think that we've not

(1:27:25) figured everything out but we're literally cavemen oh Steven Greer um I don't know I was telling I was talking about yesterday about Steven Greer like I'll be honest before I thought he was kind of like uh a little bit of a phony but that he actually did have inside information and now I'm thinking like maybe he isn't as much of a phony as I thought like maybe he actually has just been getting discredited because he he does have a lot of inside information I was watching the interview where I was

(1:27:54) watching like where he was in in front of Congress or whatever going over all this stuff and it seems almost impossible right but then you look at this case and you're like huh is it impossible maybe not but again I'm I'm not going to believe in aliens until like I don't know I'm going to have to see one honestly I think it's possible it could be like ultraterrestrials like Breakaway human race that's like in the water or something that we just haven't seen somehow just cuz the the ocean's so huge

(1:28:23) huge but it's just I I'm telling you guys I'm pretty skeptical I got to see it even like uaps don't prove aliens to me they could just be like you know robot Rob like a AI or something is controlling them uh I did talk to Jack s uh what I would say is if you're a fan of Jack s you're probably being misled usually if I reach out to somebody very nicely and ask them and they're just a jackass to me usually means they're not a real scientist there's a lot of people people out there that claim to have all these

(1:28:53) answers for people right especially in ufology and they claim like they know everything right and people get sucked into that type of Personality like oh he must be super smart right but then you really have to like digest it this also happened with that orb guy I don't even remember his name like I looked into the orb guy he's a total fraud like his book is total nonsense and Mr Fireside is actually you can find that guy um and Mr Fireside actually did an interview with me and I thought Mr Fireside was a very down earth guy and

(1:29:25) he reviews the dude's book of these orbs or whatever and like he actually reaches out to the guy he's like why are you asking data questions like what kind of response is that he got blocked for saying that for asking data questions well I don't know you're apparently an expert on orbs and you you can't answer any data questions that's a pretty big red flag folks so yeah anybody who can't explain their own science and who's not like willing to talk about it like look

how I interact with people right and I answer

(1:29:54) like so many questions right people reach out to me I answer I talk to every single person to DMS me I respond to I mean I don't know how long I'll be able to do that for but I've been trying these are people that have like a third of the followers that I have and then they just act like complete jackasses and won't explain anything when you ask basic questions those are the people you should be very skeptical of especially when people are trying to sell books and stuff like that too Kim Iverson I might have to look

(1:30:23) into her I don't know who that is but generally if people have requested somebody than they on Twitter like I've followed them which is part of the reason why it's so weird that like nobody has reached out to me yeah I've been talking to some people who do have labs and are doing actual experiments so it could be cool we'll see yeah yeah we're at Peak civilization guys guys it doesn't get any better than this if you think this divided ass world that we live in right now is Peak civilization man then I really want I I

(1:31:00) would worry about Humanity yeah the part about KT going to make tea bothers me like in the back of my mind I always thought that she saw it disappear and she was just too afraid to say so because she's a very rational person as well from talking to her so like maybe she's just too worried that people would make fun of her and just like ruin her life right part of me still thinks that she might just either have blocked it out mentally cuz like you're watching this plane like why are you going inside to put tea on right the

(1:31:32) the I mean her excuse makes some sense she was in a fight with her husband she was super pissed off and she told me he came out and she didn't show him the the plane and keep in mind this plane's not like right there right it's like off in the distance up in the height right so I guess you could argue it's like oh she just didn't think it was a big deal but it is a little bit weird but the glowing orange plane is corroborated by the fire and everybody else saw the fire too so or at least

(1:32:00) they F saw something consistent with fire I don't know about transporting to Mars uh I actually reached out to mitaku because he before I met Roy D Herbert he was my favorite physicist on the planet I had seen all his appearances um on all the TV shows that Mitch ukaku had done I reached out to one of his email accounts that I found I don't know if he ever read my thing I imagine he's got like a million followers so I imagine he gets like 50 emails a day so it's not really weird that he wouldn't reply he might

(1:32:36) also have a hard time believing these videos to be real as well honestly but if Mitch ukaku is out there anybody knows him I would love to have him weigh in on the videos Eric W Davis apparently s Pas uh came out on the stream yesterday and said that Eric Davis like acted like a jackass to him about the patents um so we should be a little bit skeptical of Eric W Davis especially because like I literally uh used his one of his papers for VM teleportation um so kind of interesting I looked up that orb research it was not free but the book is

(1:33:21) from the review I read on that or book not worth your time you can just listen to Somebody claim to know everything and you'll know everything about that book but you know if you like them you know and you like that thing I'm I'm not against it right there's a lot of people out there who are grifting people whatever and if people are into it fine like I'll be honest with you guys I used to watch those Ghost Hunter shows I love those Ghost Hunter shows I just I don't know something about it I I love those

(1:33:43) little Ghost Hunter shows doesn't mean I necessarily believe in ghosts but those Ghost Hunter shows are just so entertaining like they're like out there like finding go looking for ghosts and like I watched like I don't know how many episodes dozens and like only one time out of all the shows was there ever anything that was like oh wow that's actually pretty super weird all the other times it was something like very minor like oh my phone moved a little bit which is okay it's kind of weird but

(1:34:07) not that unusual good night one foot five uh n5d the basement office guy maybe oh wait is that Steven **Green Street** if that's Ste **Green Street** we're just deleting that have I tried reaching out to stepen Spielberg or Christopher Nolan I mean like I don't know should I just reach out to President Biden too I mean that's like that's asking for a lot I'd say uh yeah I mean I had I went on Chris Leto's show but I mean Chris Leto is like a busy guy man so I would maybe have him on but I like Chris Leto a lot

(1:34:50) honestly I think he's a really nice guy genuine guy um so yeah I'd definitely have him on if he was interested but I think he's he's too busy to be on my show we're going to have Bob greener on at one point I gotta get back in touch with him actually but I've set up my next um my next podcast is actually going to be with I'll announce this right now it's going to be in like a week and a half I think the 26th it'll probably be hard TR is number two unless I get Bob greener on ahead of

(1:35:28) time with Dave Rossy Holla If you guys don't know who this guy is he was on the panel yesterday and super smart guy blew me away like he was going back and forth with Salvador Pas and I was like holy crap these guys are smart as hell I can't wait to talk to this dude I I hope people start to learn who this guy is cuz he's very impressive um and I what I've starting to realize too is like phds or whatever don't mean anything when it comes to what we're talking about in science like this stuff's Cutting Edge I'm sure pH

(1:36:06) having a PhD is nice but people who are dedicated who are experimental scientists who are actually out there testing the stuff that we're talking about those are the people I want to be talking to yeah some of the people know when they saw them uh Rich Dolan would be cool I mean I have I I think I've followed Richard Dolan um yeah like dude Shawn Ryan posted and said who should we talk to and like I'm 100% like I have the top post reply by like 10 5,000 between the next highest person and almost as many likes as Shawn

(1:36:45) Ryan's post had and there was like three dozen people who said that Shawn Ryan should chat with me which reality is Sean Ryan should I mean he has on people that are like

psychics and stuff you can't talk about MH370 come on anyway let's let's see if we can get this done here uh BL crash I looked into how long the oxygen will last for crew and it's it's almost impossible to figure out the official report doesn't measure it in terms of 100% oxygen flow which is what you would use if you

(1:37:19) are like actually needing to use it so like the arguments I've seen have been like anywhere from like dep if this like one person like maybe it'll last for like up to two hours but probably more so like way less than that so I'm not sure what I want to put on here related to this I'm gonna have to be careful I'll probably have to edit this if we can find some people who are smart and can tell us how long the oxygen will really last because I I want to get some hard

(1:38:26) evidence on this but the evidence here would be that there no way this plane is like going to make it to the South Indian Ocean if it's depressurized right you just not you don't have enough oxygen you wouldd have to be flying really low the whole time so I don't know if I really want uh I'm could get rid of this I'm going to leave it there for now got rid of that got rid of that okay okay we're going to probably try to wrap this evidence up in the next 15 20 minutes so that we can go through all

(1:39:08) the evidence and review it all and then maybe I'll come up some other stuff while we're doing it so we'll do a little bit of evidence review um trying to think if it's okay to announce this probably fine I'll be talking to Danny Jones pretty soon I'm pretty excited to talk to Danny so keep your uh keep your fingers crossed on that one but Danny seems like a really cool guy so that'll be pretty sweet um my Discord has like eight admins in it that I trust implicitly they could get turned but right now I trust them so

(1:40:04) information is not going anywhere no matter what and uh I've got all my stuff backed on to backed up too yeah Danny Jones would be straight up fire I mean that could be a podcast where it goes over a million views especially if we do a really good job where I think he would be dedicated to doing it and like that's why we're working on this theoretically right so that we have a solid list of stuff to go through um let's see uh BL blah blah for

(1:41:39) I'm not going to put the last one I found some evidence there might be another way to get in the cockpit but that might postdate this event but apparently I found out that if the plane depressurizes like in the passenger Bay these panels will break out to equalize oh let's call it to equalize and that equalizes the pressure so like theoretically there would be some panels to bust out now you can break into the cockpit yeah if Kurt uh jangle wanted to you know interview me absolutely I feel like he's so smart

(1:42:31) man he he mentioned me oh was it in the one about huh yeah I mean if he wanted to like I just some of these people I feel like literally outclassed by though frankly even Dave Rossy like I'm a little worried that this dude's just going to straight up outclass me like hard Russell Brand I have nothing against Russell Brand actually um you know of course if anyone that big wanted to interview me I I don't care about their politics or whatever like fine um and honestly my true opinion is that I think Russell Brand probably got

(1:43:04) uh I actually call it getting Russell branded now where they like you know go find somebody in your past and they claim that you sexually assaulted them or something that's part of the problem if you're like you know if you sleep around a lot though cuz they're going to be able to find somebody who will come out and make some up about you and that's why it's like if it's 20 years later I'm like not putting a lot of stock in it you know but the truth is like we need to take sexual assault very

(1:43:27) seriously it's a lot of women get sexually assaulted and they're too afraid to report it and um yeah it's not cool so you know I think you know Russell Brand hopefully learned a lesson from that you know and I don't think it'll impact him permanently but I actually kind of Wonder should I even say this this could be defamatory let's say say this I'm very curious to find out what James Fox is afraid of very curious to find out what he's afraid of that would ruin his career I can't think of a lot of things

(1:44:03) that you could be afraid of that would ruin your career let's say that okay we got the entry in the cockpit thing Okay the reason why this stuff is important is that I've on many occasions claimed that You' be able to get into the cockpit and uh I think you would I think you come a guer your way in there right in a six-h hour flight now the reality is that Oxygen's only going to last for like 15 or 20 minutes on the masks uh but there there's actually a chart that I saw where like unless you

(1:44:41) fly really high hypoxia is not going to take everybody out right away James Fox hasn't said anything for legal reasons or Russell Brand hasn't I thought Russell BR says hope hope I've deleted my browsing history good news is I got nothing to hide I got nothing to hide unless they we should probably check uh actually I don't want I don't I mean it's not that I'm afraid of the government here but I I just don't want you guys to see all my if I have personal documents but um yeah unless they download something

(1:45:18) on my computer which they easily could right like they could download some CP or something out of my computer and then like how would I how would I even argue against that I'd have to like somehow look at the file documentation and be like no this wasn't mine but that's one of the things I do get worried about if they were going to try to like discredit me that they would try to upload something to my computer but that's why I keep my computer like really clean there's like nothing on my computer at all other than

(1:45:45) like MH370 stuff so if anything else were on there I'd be like okay you guys freaking put it there yeah James Fox made some claims about um he he made a weird video about like some people are trying to ruin his career and it's like what stuff could there be out there that you're afraid of that they're going to ruin your career like let's be honest guys it's usually the same thing every time is he getting Russell branded I don't know I'll be curious to see especially like that's why you don't

(1:46:23) really like I he's trying to get ahead of it too right that's when you do those like kind of videos like that you're trying to get ahead of the case so not sure maybe he's being blackmailed

right I don't know I don't know I don't want to speculate oh the voltage thing I think we want to put the voltage thing in there that was really interesting the voltage thing also I kind of want to put something about these evos what did the Evo stand for again does anyone remember what the Evo stand

(1:46:53) for again Pegasus code yeah I don't want to be famous either man this guy I was talking to is like you're in a good spot right now or like you're like internet famous like on in only like very small communities so like you don't walk around and people don't recognize you oh here's the crew oxygen stuff so this is the one where I was reading this and it's like this guy right here was saying it'll only last 66 minutes and if you have two crew at 100% you only get 42 minutes but I I don't know have any way

(1:47:47) to confirm this I'm not like a I don't know what kind of engineer you need to understand this stuff so we would have a 50 this would be they would have at least one of these maybe two so they probably got about two hours or less depending on how much it's flowing if the plane's depressurized yeah I mean and it depends on like if these things have been checked and filled up recently if they haven't you're going to have even less time oh I'm going through a different one here oh yeah I need to save a bunch of

(1:48:43) documents too okay where's the part about the orb pattern where is it here it is I have to go find that PhD guys's

(1:49:50) reply I think he was saying that it creates a zero point in the middle right is that is that I hope I'm explaining this correctly we may have to update that later but I think this is correct this at least seems to be what Chad GPT is saying oh we need Sino I'm going to say this this wrong sinos said I'm freaking butchering it means like is anyone can anyone is anyone smart in here YouTube unsubscribed me that's weird we're getting one sub per minute

(1:50:57) wow guess spot on Ancient Aliens yo we might have to owe that Ancient Aliens guy like a big apology if those naaska mummies end up being real that guy might be the most Vindicated man on the planet sorry who pissed off NASA I think I was losing track of the conversation oh Pegasus is the spyware on your phones yeah yeah I mean I just assume they read everything and see everything I do they probably know what know what kind of porn I'm into then again I mean I mean I feel like everybody's going to be subjected

(1:51:52) to that uh I don't know Megan I have been uh standoffish about it recently ultimately it doesn't really matter the satellites there looking down no matter what Sino saidal sinos saidal s soo senu soo senu I think it's sinos saidal saidal sinal sinal cocal that sounds right sinal sinal I think that's the way I think Williams got it sinal sine wave sin you I think it's sinos God we got like 10 different options on here sinos Scooby-Dooby-Doo cidal sin aital I think that's it sinal sinyal I'm going to butcher that

(1:52:49) tomorrow I'm sure sure of it yeah it doesn't really matter either way on the the satellite and we've already got the guy admitting that he they were in contact with the US spy

satellites that Min defense man I could watch that that Min defense video every single day I just love it I love it okay we did the voltage we're almost done here nuclei conversion okay I've got to go read my buddy uh Roy deep Herbert's messages real quick man trying to understand physics literally hurts my brain hurts my

(1:53:36) brain more man more videos in uh more triangle orbs I don't think those are real no that's Def definitely fake that definitely fake actually I shouldn't say that I mean I don't I don't know what's real or fake anymore oh there we go wait when did this guy oh he sent this an hour and a half ago tipler cylinders are predicted to produce sinus ital distortions in SpaceTime emitting gravitational waves in a repeating wave pattern oh we're using this holy that's cool we're adding that

(1:54:31) wow yo Canadian by birth thank you for dming that to me like an hour and a half ago wow that's very relevant that is very relevant I wonder if we should move the orb stuff to the the science part H feel like it's a little bit redundant this is very interesting because if you are creating a repeating wave pattern that's where I think you get those weird donuts and where you can also begin to like generate an amplification of energy but I'm just that's in my head I'm not sure if that's

(1:55:17) real or not interesting okay let's [Music] see yeah try to understand the physics is definitely the part where we need the most help on honestly I'm hoping Dave Rossy can help me with that I want to be able to refine this so that it is legit and make only makes sense at that point I'm going on to change the zap to phase transition

(1:56:22) I'm told that's the better way to phrase it so that we can't be questioned oh yeah that's another good part um we're going to add this in the teleportation part right here so it's not a black hole uh so we're actually just going to change this to transitional phase St change because nothing's getting sucked in so what's happening here is the plane is just changing states and that's why what we see here doesn't zap anything out or suck anything in that's why the clouds barely move at all is that the

(1:57:16) plane is simply changing states to Quantum and teleportation time so now we're going to beef that part up and then we will go through the evidence so when they converge they're encouraging the transitional trigger that's an interesting way to put it oh there it is right there

(1:58:20) we're just going to change this one there may be a few we have to delete here huh this is an interesting thought so the orbs are already essentially acting like electrons potentially using superconductivity to act as um Quantum that's why they're floating right so they become part of the relationship with the plane is the plane's acting like a Ulus and then they're causing all the

(1:59:23) electrons of the plane to cohere with those with those orbs and now it extend the electrons extend out all the unshielded electrons extend out at the point of transition which reinforces the transitional phase change H interesting I like that let's see how are we going to put that we'll put it right here here is that spell

(2:00:48) nucleus that's a pretty interesting way to phrase it we may have to work on that that phrasing but I think that's okay for now properties denote the behavior that's a good way to put it too I'm going to change this so if you have the properties of Quant you get the behaviors of quanta I think this is good enough

(2:02:03) it's man that science is tough man I hope we're solid on this okay it's pretty solid oh we have to post this too well we got a lot to do here okay let's do a review evidence Review Time folks let me do some questions first I think the quartz crystal is pretty interesting okay wait what yeah Elon probably knows what's up FYI yeah I'm not sure about the whole

(2:03:14) element 115 thing maybe like real UFOs use Element 115 I really don't think ours are using Element 115 I don't think it's required for anything we're seeing I haven't heard that at all uh the satellite FPS let me Google this real quick there's nothing about it I need somebody who's uh person who's very smart at Optics to explain to me the frame rate thing oh here we go hello well this isn't really going to help us I don't think the distance should change the frames per second doesn't

(2:04:18) make sense it's definitely field of view I think the field of view is what's causing it for sure I think whoever told me that like I just get a lot of people sending me disinformation the field of views would be what would change your frames per second I feel like maybe I'm wrong yes field of view does impact frames per second yep see because a wider field of view requires more computer processing so yes it is actually indicative of a higher frames per second and that might be indicative of wow that it's actually

(2:05:18) Compu comp program I'm 100% sure that what we're looking at is a computer program generating that satellite video 100% that explains why there's not the atmospheric interference it's IR sending the data to a computer program uh let's add that in here we're going to add it to the facts because I think we're solid on that where's the satellite stuff for yeah lower frames uh field of view can

(2:06:21) reduce the amount of resources resulting in higher FPS that's definitely what's going on this is a computer program very interesting okay good we got that covered so whoever was trying to sell me that thisinfo yeah Kurt jangle is a very smart guy my impression of him is that I think he's a very logical person and he's probably trying to reconcile Academia with some of the more advanced science that requires you to think outside the box that's the impression I got from when he was talking with Salvadore Pas

(2:07:08) is he's sitting there trying to figure it out like does this math add up um and yeah and that's why the difference when I looked at Dave Rossy right and I watched Dave Rossy I'm like Dave rossy's got it figured out like he's like he gets it they're both very very smart people don't get me wrong and they're both way smarter than I am no no doubt yeah all matter is essentially um matter is energy so e equal MC s oh Kurt J mangle mathematician oh okay I mean he's extremely smart when Kurt jangle on the Salvador

(2:07:56) Pas podcast explained quantum gravity holy I mean that's that's one smart dude very smart guy I mean I I that's the other part about this like I've met so many super Geniuses just in the last few weeks it it's blown my mind I think I'm pretty smart but some of these people are just head and Toes above me head and shoulders I guess I should say yeah giving I think you mean ufology yeah anyone who's willing to be open-minded from the Academia perspective and look at the ufology stuff I mean there's something there you

(2:08:46) know that's what I concluded back in 2017 was oh there's actually something here like this isn't just nonsense and I kind of was waiting for something like this to happen where it's like okay this is undeniable I didn't think we would get like what's happening now it's every day I wake up like is this is a dream okay um so the requirements to understand this I think these are solid changes macroscopic Quantum coherence we don't even need wormholes anymore it's weird that I was on the UFO

(2:09:36) Urology if you guys don't know what Urology is go Google it um we were all about wormholes when we started right with these physics and our our understanding of physics has advanced so much during this investigation now we're on macroscopic Quantum coherence and Bose Einstein condensates it's like man CU like we went from what we think in science fiction is how it works to like how it really works in the real world okay videos appr proven a date back to 2004 okay so we're going to do our evidence review guys so we just did

(2:10:11) the requirements here um the videos proven to be March 12th or May 19th in terms of upload date so very narrow field of or window of time to produce second video came out later thermalize or color color thermal added mq1 SE Great Eagle Electro IR camera we needed a 2017 DOD UAP videos to show what the forward forward looking infrared I believe is what it stands for it should just be called ffor forward- facing infrared I feel like that rolls off the tongue better uh we need the Trump satellite picture uh from USA 224 which

(2:10:52) was sent up in 20 2011 which let's look at that one more time real quick I don't like to get too sidetracked but I want to look at this and yes if you saw that I do watch NFL you found out my secret I I watched NFL on Sundays um Trump Shadow what is that okay you got me I got I gotta check this out Trump Shadow is that supposed to be a shadow Trump right there too funny man oh man do we really have to go to NPR's website let's go to this one hold on uh how do I just like make the picture bigger oh here we

(2:11:53) go this doesn't I just want the picture there we go okay so we look at this picture I think this is looking from the cber system as well that's why there's no atmospheric everyone's wondering why there's no atmospheric Distortion how do they remove that because they're using the cber system this is a computer generated image that's I think the answer huh that's why people didn't think this could be real they actually probably had video of this right and they just took a snapshot

(2:12:41) of it that's wild man huh okay we needed the advanced theoretical physics lk99 to know that we are in the Emer emergency emergence of superc conductivity let me know if you

gu find any typos as well please uh AI chat GPT oh yeah no Saints fans in here just kidding um video facts okay we don't need these extra capitalizations video proven a date back from 2014 and there was many people who saw them including myself yeah Neil deGrass Tyson I lost so much respect for I used to have a lot of respect for Neil deGrass Tyson when I watched the uh

(2:13:33) Cosmos and all those other shows and then I saw how close-minded he was about UFOs like oh they can't get here it's like well what if we just don't understand physics that well he's like one of those people like the exact type of Ty of person where it's like we he thinks we know everything like that humanity is on the Pinnacle knows all it's like no we're actually just cavemen Neil um the perspective changes eight times in the videos with coordinates visible in six satellite coordinates shifts

(2:14:05) prove the location is the nicobar islands 3D stereoscopic video requires two satellites in close proximity on the same orbital trajectory now for Megan notice how in this part where I leave it a little bit open-ended I'm not saying that this is necessarily but if it is 3D it does require two satellites and we have that so we're covered if so we have a general atomics mq1 C gry Eagle we have uh I wonder if I need to move this to speculation 99% sure mq1 C thermal using Advanced Electro IR camera I do have that on here

(2:14:43) which is good we don't need all these extra capitalizations purpose of C and sign tracking boats planes electronic signals monitoring intelligence and Battlefield awareness there are alternate sources that are in higher quality so I can't control click on these this is the one where you can see the coordinates a lot better you see that you can see the nrl22 a lot clearer in this one what the hell was this intro always there you can see the coordinates a little bit better but they're more cut off in this

(2:15:31) one my initial thought was that they got the person there was an original source and the people that uploaded this one just didn't upload the 3D stereoscopic version because they didn't understand what they were looking at but it's hard to say it's really hard to say I'll tell you this if I get famous then it will not corrode me at all I'm not the kind of person that gets Shell Shocked by famous people I get shell shocked by intelligent people and I don't even think fame's a good thing

(2:16:13) so oh it's because this is both videos is why is this not the right one is this one the better one this one might yeah this is the one okay that's why that that might even be a different version part of want crunchy fresh and part of you wants melty Smoky pepper both use win big you pick two and get more this one was from freshly prepared with clean ingredients August 27th oh yeah you can see this is the one where you can see most clear this is the highest quality one this is one where they pulled the

(2:16:48) screenshot that you can show it's n22 will the thing go away there it goes I mean you can tell it's 22 Newsweek if you're still out there retract your your **debunk** imagine thinking Newsweek has any credibility yikes and I don't want to get political but there's another Newsweek article that really bugs me this Newsweek article really bugs me the secret history of

the Shadow campaign that saved the 2020 election this is just such a sketchy ass headline it's like oh we had to make a Shadow campaign to save the election

(2:17:47) like if you're somebody who thinks that the election was stolen and you read this what the hell are you going to think like this just shouldn't exist no matter how you look at it from either political Spectrum like Newsweek oh this is Time Magazine Jesus Time Magazine wow I thought it was Newsweek sorry I'm wrong it's not just Newsweek that needs help but anyway Newsweek is wrong about our thing and they need to get that corrected get YouTube premium what do you get with YouTube premium like what does YouTube premium

(2:18:28) even give me I don't know you guys let me know on the YouTube premium part I've lost a lot of faith in traditional media though man this the articles I read are just so garbage man I just want real journalism once again can we just get real journalism back please okay so there's a hole that forms in the left part of the cloud in the satellite video uh let's look at that again people are trying to cast doubt on that I just want to look at that again real quick together step into Wick Studio does YouTube premium get rid

(2:18:59) these commercials built for a oh no commercials yeah but don't you have to pay money I don't like paying money you can literally skip the commercial after like 5 Seconds okay let's let's go full screen with it where okay so where's our Cloud okay this is the cloud right over here guys we're waiting for this Cloud I think this is is this the cloud no no no wait no not yet this Cloud right here right where my Pointer's at this little hole is going to open up right where my pointers at

(2:19:27) here I'm going to leave it right there yeah okay there's definitely a little hole opens up right there oh yeah 100% something like happens right there I mean it doesn't happen on any of the rest of these clouds but right there a little hole opens up I don't know that's just weird \$15 a month yeah no no way guys I'm too cheap for that and I don't need it to download There's programs you can just download YouTube videos and that's what I use I actually I shouldn't admit to that

(2:20:20) should I uh just kidding if anyone's watching I don't want to give them any reason to arrest me for anything okay the videos show the coordinates but not when the mouse moves when the mouse moves the coordinates don't update you this is an a screenshot from it where you can see it's nrl22 what did I just do you can tell it's not three because there's literally just a three right here Mouse moves off the screen on thep bottom top right and the bottom left indicating a large field of view this is

(2:20:53) viewing custom video software cber system for panning around large areas um and what I should say here is we're going to change this the coordinates only show two axes so it's not tracking the plane it would take three axes to be tracking the plane because the plane's flying in the sky so this is how we know it's like Google Earth the six frames per second is indicative of a high High field of view which requires more processing to render the plane is making a leftand turn and descending consistent with the max

(2:21:54) capabilities of 77700 the plane's altitude is low based on how close they are to the cumulus clouds the mq1 C greaty Eagles cropped just out of view the user closes the window after the plane disappears indicating that this was not recorded in real time that's actually really important that means what this is is real-time video playback of the entire world uh a couple producers have reached out to me we may make a documentary but we're in the early stages uh Googling Sig payload top hit references mq1 C Great Eagle and just as

(2:22:31) another thing in terms of the producing stuff like that's that's taking a back seat for me um sure I want to make a documentary about this so we can get the word out but the investigation is the most important part for me uh reeside defended the veracity of the videos in a later uploaded video video speculation we believe it's using USA 229 to produce the cers video um we assume that n22 is the relay satellite command satellite had a clear view at the time from the North Pole of the other satellites yeah this being this being on

(2:23:10) Netflix I mean our documentary be 10 times better than Netflix is crap sorry if this is a little disjointed and I'm adding commentary between but hopefully it's education uh Smoking Gun USA 229 is at the right location time apparent angle and with a sister satellite capable of taking stereoscopic video at 1840 UTC cameras on this equipment are made for filming the events the original Source may have come from a private form or left on the dark web um I don't think it was left on the dark web this is probably a private

(2:23:46) form uh Mouse acceleration is explained with either stealth or South uh soft Mouse 3D there's actually Mouse acceleration that we see in there as well which is like people thought it's like a middle like niit button on like maybe a a laptop but I think they're actually using a specialized Mouse but that's speculative right screen capture this is this almost could be just in the fact actually screen capture of a terminal running at 30 frames per second Citrix is running at 24 frames per second which

(2:24:20) overrides the 30 frames per second therefore streaming on a remote virtual desktop at a different resolution of 24 frames per second uh I don't think it needs to be different let's just say remotely navigating around a very large area this video playing at 6 frames per second so this is really our proof that what we're looking at as a citric session here um and that's very strong evidence that what we're looking at is all real or at least there's a base video is real leaker was likely caught went to prison

(2:25:01) they weren't using a camera right they were likely a mil US military operator who saw the event in real time and had emotional reaction okay that's our video evidence uh path okay now I like to have this note here because we started by trusting all the official data and We systematically R only ruled it out if it we thought it was not factual or itself self riddled with inconsistencies so really what I'm talking about here is the whisper data we lost trust in the whisper data and the emstat pings after 1840 UTC they

(2:25:39) made no sense whatsoever hey Justin how's it going buddy um I looked at the whisper data went through all 300 pages of it and after you get off the coast of Malaysia The Whisper

data makes no sense I don't know how anyone could think it makes any sense in the uh who was the one I think it was the one I was just doing uh yesterday was it God alien addict and they post the the clip of the guy going oh we know where the plane is and there's a picture of the whisper data there I'm just looking at I'm going dude

(2:26:14) this is the most ever like they're never going to find that plane there if you're following the whisper data you're never going to find the plane this plane did not do a magic cut back and look behind it and then do a 30 almost 30 minute uh holding pattern come on doesn't make any sense I was never comfortable with the whisper ATA early on I and even if you listen to my first interviews and podcasts I was like I would even say like everything makes sense till you get to this like whisper data part where it

(2:26:43) just doesn't but if you do believe in the whisper data then you 100% believe these videos are real because the whisper data if you put a minus sign in front of the coordinates this plane goes right through the whisper data like flight path to an insanely accurate degree and that's the reason why I was like wait it has to be there but no just coincidental uh it goes through both points interestingly enough the plane doeses if you believe in the whisper data uh thank you figment figment of mind yeah this documentary would be

(2:27:17) absolutely incredible it would just be incredible I would even watch it Congress does not respond to the letter I feel like we could make not only a documentary but we could actually make like a movie like the Facebook like The Social Network movie about just the case the evolving case right and then like **Mick** West would be the villain right and like he's the one who just put some **debunk** and like brainwashes a bunch of people and then we come back with all the evidence and just like dunk on him um okay satellite pings switch to I

(2:27:53) like 30 minutes before takeoff and they never switch back even though the plane flies East towards P like it just never switches to P the reason why this is important is that you lose Doppler tracking was Doppler the right word no um you lose triangulation so if you have two satellites that are pinging and you only know the distance you can figure out exactly where the plane is if one satellite's pinging now you have the arc problem that we had so this actually is strong evidence that this was Espionage and that's why I was pretty

(2:28:29) heavy on the Espionage angle I'll pull up the video here so you guys can watch while I'm explaining the flight path I'm probably going to have to hurry up with this too because I'm starting to get tired I have to go to sleep soon got stuff I got to do tomorrow oh wait this isn't even the right one and we still got to upload all the stuff here so plane flies over here 1721 plane goes dark all civilian radar cut off last contact was actually at 1830 UTC according to the transport minister or whoever that guy was during the the

(2:29:11) press conferences that's what they said early on the radar data does a bunch of impossible stuff which pretty much rules it out from being credible radar data wasn't released for 5 weeks but they gave given to the Americans after 5 days again according to the press conferences the Armed Forces knew much earlier that the aircraft could not have tracked back

this is why the search was expanded to The Straits of Malacca within a few days which is like why were we if they knew right away the plane turned back like this why were we searching out

(2:29:42) here in the South Indian Ocean for like nine days or something like that or I mean in the South Chinese Military did not confirm this due to much uh until much later due to resistance from senior officers and the government needed to step in we wasted our time in the South China Sea that's a direct quote defense minister claims they knew it was civilian airliner and not hostile without uh identification which I mean how the hell would you know that it's a civilian Airline or not hostile if you don't have

(2:30:16) Identification on the radar doesn't make any sense plane changes directions heads to Panglao International Airport closest airport that can accommodate a 777 an emergency defense minister claims they knew it was civilian airliner but did not know it was MH370 I'm going to move that one oh I already had the Hostile thing okay we got to delete that it's redundant wired article argues this is the correct location uh to go to in electrical fire when the plane gets over Panglao the cell phone of the co-pilot

(2:30:53) pings the cell phone tower so they must have been flying pretty low probably last Malaysia radar is over here they actually changed this time like multiple times reports the next day indicate that contact was lost at 1840 and then there's anomalous ping data at 1840 UTC so that's our flight path and then we have KT's boats going to see the plane here where's my sketchy data where's sketchy data okay sketchy data one guys 1839 UTC what the hell is all this what's all this all of a sudden and this isn't even

(2:31:46) all of it but it keeps going with zeros like this and then this comes up all these zeros and then all of a sudden this is five hours of data right here 10 rows five hours of data no one in the world can tell me that something didn't happen at 1840 UTC here or 1839 UTC what the hell I mean look at this 1839 UTC 1941 is the next one this is this data is super weird this is the official Amerasia pings you guys are looking at right here official iMat data how many people even looked at this when I look at this I wonder like did like five

(2:32:32) people on the planet look at this how am I the one who's showing that this weird sketchy ping data happened here nobody brought this up hey Jimmy uh you're doing fine yeah Jay's podcast Jay was Unity right yeah Malaysian Minister of Defense no he wouldn't even be say the data looks good Malaysia Min defense would be like um the data will come out in due time and I'd be like we're looking at it sir and he'd be like it I've been consistent that it'll come out during the course of the

(2:33:12) investigation the guys we might have to play him again uh going to play him again I need to laugh right now I just want to laugh it's my favorite video it's my favorite video I'm gonna turn my music off so I can listen to it uh where's the four oh here it is wait I I don't want to miss any I don't want to miss any this guy should be on Saturday Night Live this is a better skit than most Saturday Night Live skits Minister when did you become aware that MH370 was missing M sometime that morning it's like you know what she's

(2:34:02) asking you man what time did you become aware um sometime in the morning  
sometime in the morning what time does it matter does it matter what time does it matter I  
mean what are we sitting down here doing this is an interview right in a storytelling sense yes  
yeah yeah in a storytelling say yeah yeah but again the timeline uh will will will show the  
timeline will show dude you're the guy man you're the guy it's supposed to know you're the guy  
and I I think when the um inquiries when the inquiry start this is

(2:34:46) seven we Weeks Later guys seven weeks later Malaysia can hide why does he say like  
do you really think Malaysia can hide the way uh things have unfolded of course not but this no  
no we couldn't hide this no why don't we this is not a controversial question this is not a  
controversial question I love this woman I I am her on Twitter because if she's not married I'll  
probably just uh propose frankly this is not a controversial question out it's not it's not well so  
why aren't you answering it man what

(2:35:24) time did you know and basically uh and the reason is because if he says something like  
you know after 1840 UTC like we're going to know he's full of crap like he's been talking about  
the plane you know knowing it's not hostile so like clearly he was informed early on right we're  
trying to coordinate 26 countries for search why he start talking about we're trying to coate 26  
countries working into a deep I don't know how she doesn't get enraged the last thing on my  
mind if I'm

(2:35:54) interviewing this guy I'm starting to get like if you have a hostile witness like this like  
this in a storytelling sense for a documentary take us back to the take us back to that day March  
the 8th how take us back to that day he's like looks confused oh yeah oh you wanted to talk  
about the day the plane were missing oh were you informed that the plane had disappeared uh  
there were phone calls there were phone calls this is like uh and Iraq and the wars and the maps  
like the the women from the maps is what it

(2:36:25) reminds me of Iraq and the such as and the maps I've got to look it up real quick Iraq  
and such as US maps this this is exactly what it reminds me of recent polls have shown a fifth of  
Americans can't I personally believe that us Americans are unable to do so because uh some  
people out there in our nation don't have BS and I believe that our education like such as in  
South Africa and the Iraq everywhere like such as and I believe that they should our education  
over here in the US should help the us

(2:37:09) or should help South Africa this is this is the Malaysian defense minister this guy  
countries so we will be able to build up are this is this is what I think OFA and I'm in a way quite  
fortunate that I'm also the minister of defense I think no one out there why is he smiling so  
much man um I'm always fortunate a minist Divine this is divine I had calls from the Air Force  
this is divine so many such a weird answer man I'm just telling you guys put me in the room with  
this guy for like 15 minutes

(2:37:45) we'll get get a full confession we'll get a full confession to everything this guy will fall  
apart this is you have to understand you know what time it happened you have to also

understand where he goes you have to understand what time it happened yeah we were asking this dude we were asking you sir what time did it happen it happened it was at the time in which they moved into Vietnamese airspace there was unbelievable man period of time let's skip ahead I understand and surveillance right but you on that

(2:38:15) morning came out and said that this is something that is baffling to all baffling yes you as Minister for defense then and this should not be controversial and this is really a key Point here and it was in my list of questions MH370 flew through multiple military radar zones right did the Malaysian military detect MH370 in real time we detected an uh an airline but uh we detected an airline we I think we've got a record to say that was not identified he doesn't even know this is s weeks later and he's trying to keep

(2:38:52) his story straight I think we've gone on record to say that it's not identified like in a minute from now he's going to say that they knew it was was a civilian airliner and that wasn't hostile completely contradicting what he's saying right now Uniden an aircraft unidentified was detected that morning so you detect an unidentified aircraft there's only one missing plane out there guys one missing plane you detect an unidentified aircraft what could it be what could it be guys came out i' I've

(2:39:25) said at the beginning and I think that's confirmed by the Prime Minister too what did the military do when it was detected well I mean it is an airline that came from our airspace is a commercial airline and the military is actually he just said it's commercial airline literally 30 seconds ago he said that this was unidentified now he just said it's commercial airliner they didn't consider it as a hostile and he just said they didn't consider it as hostile what you just said it was unidentified how could it be not hostile

(2:39:57) um um how could you know it's a commercial was I relying on to come to the conclusion that it was a why perfect question right I'm in love with her why by the uh um officer that was oh well the officer just decided okay how did he decide charge no answer and like I said earlier there was an inquiry under the U the Royal mil the worst liar ever that will come out too it'll come out it'll come out I mean this this says it all right here right this says it all right here like this guy is melting

(2:40:36) [Music] down need a screenshot I need screenshot screenshots [Music] this might be my new Facebook Pro picture so who was on duty who's he looking at right there I mean this who is on duty you dare ask me this questions like I said is not going to get us very far well what we're trying to understand is I don't understand the level of knowledge I understand I understand fully no he clearly doesn't and surveillance right but you need the experts you need the experts dude you're the Minister of Defense you're the also the

(2:41:22) minister of Transportation the acting minister of Transportation he is the expert this is the this is the guy this is the guy right here like I said there are we are talking about going through multiple countries oh I actually submitted myself to the AO and if you do though it's like a crime if you are lie and I submitted the case and I haven't heard back yet there's no chance

they're going to call me it's all the AR is controlled by the Department of Defense and they know these videos are classified military as

(2:41:52) space and they can't even come after me either from a legal perspective because I can literally go to court and prove the videos are real like we've got these people over a barrel I love it you need to talk to every single country out there about their military capability why would we need to talk to other countries dude we're talking about your country and flying over your country that's the line of questioning that you want to ask about Malaysia what is more important is for us to actually understand how we

(2:42:20) looked at moving from the South China Sea to The Straits of Mal where's the part about the shooting down the plane I think it's coming up soon agree that does a single word saying um she doesn't single saying I don't think it's so controversial that it's going to um be something that will impact so much on what we are investigating in is that unfortunate that the decision was made it wasn't hostile well it's not for me to judge it is absolutely for him to judge he's our he's the guy I mean do you want

(2:42:57) we we didn't go through alert uh with special Sops space we're not at war with anybody if they did go up in with anybody right now Pentagon and on the way to uh uh Washington for them to have the present sop we are not at war with anybody right now so do you really think that I want to um put our uh suco uh on high alert uh with special Sops I mean yeah that kind of situation to track a but why not send the Jets up if you you you have conceded earlier that you knew very early in the morning the plane was

(2:43:39) missing there were there was 4 and a half hours time in which to respond and find out hostile it was commercial it was from our aspace we're not at War he again says that he knows back then that it was commercial and that was not hostile if they did go up in hindsight would you agree that we wouldn't be in the situation we are now which is I don't think I don't think that's speculative that's speculative guys it's speculative that if we sent up a fighter jet to follow the plane we would know

(2:44:12) where it went speculative it wouldn't are you going to say that we're going to shoot it down well you said that not me I'm asking you you said that not me yeah I'm asking you he's asking the interviewer if we're going to shoot down the plane like of course not not if not going to shoot it down what's the point of sending it up to see where it's going to see where it's going I am in love with her just cold blooded what's the point of setting it up he's got a smile on his face and

(2:44:45) grin to see where it's going well to see it going you need a fighter for that you need a fighter I don't know what else do you want to set up you want to set a helicopter up there I mean what is he talking about they were talking about about military military he just talked about his military procedures procedures and down You' be the first to say how can you shoot down a commercial nobody asked them to shoot the plane down 14 Nationals half of them is it was a fire i' would be in a worst position

(2:45:18) probably why shoot it down though if it's not hostile why the Americans would the he doesn't miss a beat like she's not even done asking the question the Americans would look at this like this guy's total meltdown and then he looks over there again what is that who's he looking at why shoot it down though if it's not hostile why the Americans would what what is this going on here this is just the weirdest interview I've ever seen man okay I think we're done with that but my God okay um sorry to

(2:45:54) get distracted plane did not crash into the South Indian Ocean no debris field found not possible for 777 most expensive and extensive search in history did not find one single piece of the plane above or below water they spent 42 planes and 39 boats looking for this plane they find nothing no black boxes found so system doesn't hear anything same system that heard the Titan sub pop Navy lied about it for 5 days Western Australia and Diego Garcia hydrophones hear nothing Indonesia and Australia's radar systems see nothing 19

(2:46:29) families of the phones signed a statement saying they could call the phones for up to four days impossible if the phones are at the bottom of the ocean one proves it on live TV some social media sites have't being online active shipping route in the South Indian Ocean no Witnesses despite the fact fact it crashed supposedly in the morning official flight path has it running out of gas there's nowhere else for it to go the official search looked everywhere along the final arc on the flight path South Indian Ocean malaka

(2:46:58) Straits and Andaman sea they don't find anything initial narrative says it did a 90° Swan Dive later changed to 14° not possible for it to not leave a debris field none of the elt beacons activate on Crash I mean these are redundant beacons you can't deactivate these how do they not go off some people what about the debris okay well we found no debris above below water after the official search this is the part about the planes the debris that they did find is consistent with the fire and teleportation events that

(2:47:30) we've presented some debris even had burn marks on it they've just ignored that the burn mark debris actually had the honeycomb that's consistent with Boeing only I should add that uh flapper on matched with a non-unique serial number unique serial plate was missing that's pretty sketch debris found years later not consistent with the Barnacle growth at least according to Jeff wise I personally don't give a crap but maybe Jeff wise got one right um the plane there was a plane that was bought and

(2:48:13) scrapped in 2013 By GA tesis exact same models MH370 purchased in October 13 um and it was scrapped like a decade or two too early maybe we need to update this that's fine okay why is this MH370 only missing 777 silhouette matches perfectly from the thermal color tone matches out of Malaysian Airlines satellite coordinates put it at the flight path around 1840 UTC the nicobar islands is our Smoking Gun same as uh that's where our satellite also sees it note this is the same location as they turn into the

(2:49:02) South Indian Ocean purpose of Sig and cers is to track planes like this US Government had to be tracking a rogue 777 and a post 911 world did we get the part about the Min defense

admitting that um they talk to the US satellites do we add that part oh we got to add that part okay and we've proven that the US military was in had satellites in the area US military also confirmed the cers provided data to the intelligence

(2:50:06) Community to help solve the mystery of MH370 I mean guys a plus b plus C I mean this is just how can this be this is just proof absolute proof right here okay **debunking** the suicide myth everybody stands up for him including his wife officials co-workers 18,000 flight hours no indication of suicidal intent in the flight path German Wings pilot crashed the plane within 10 minutes after locking out the co-pilot uh crew oxygen has two 115 mm tanks um are they 115 millimeters or centimeters crap that's awkward if I get that wrong

(2:50:52) huh give me one sec I'm looking where is it I don't know where I put that link it's awkward I'm going to change this to oxygen tanks uh we'll we'll put the size back later on uh several ways enter the cockpit there is an keypad override there is disabling the electronics Bay according to Jeff wise and the panels will break out when plane depressurization happens to equalize the pressure Captain bellany this is a quote that's suggested whoever's in command of the aircraft would have intentionally

(2:51:47) disconnected all four electrical generators and apus it's not possible practically impossible for someone to do that within 64 seconds uh zahari was rostered to fly mh50 on February 4th the route on a simulator closely matches mh150 route to Jetta um with a diversion point in the South Pole or South Indian Ocean flying is over his hometown is silly flight path indicates an emergency event people would K down the door before they would get knocked out due to pressurization I'm going to delete this part cuz we already we changed it to be

(2:52:23) something more accurate I actually lied apparently I I was **I was wrong** we did have that in there so we've removed that now um oxygen mask would last for 25 plus minutes and Narrative of plane uh we should call this passenger oxygen Narrative of plane running out fuel is contrary to a suicide lithium ion battery fire 221 kg of lithium ion batteries put together the same day the plane took off batteries skipped two security screenings cargo compartment was designated to withstand a flame source of 1500 degree or 1700 degrees

(2:52:59) Fahrenheit over 900 de Celsius for at least 5 minutes so this would be indicative that uh the source which told me the plane could last for over an hour while battling the fire lithium ion battery fire could escape from the cargo compartment fire could not be extinguished uh by the palon fire suppression system there is a heat signature in the bottom near the exhaust panels of the landing gear the smoke trails are coming from the back of the plane in both videos um from the yeah AC units may be flushing smoke from the

(2:53:31) plane I think we should move this up one altitude is too low for contrails May oh the batteries uh probably need to say batteries here may have been packaged unsafely due to the pictures b77 fire suppression device washed up in the Mal Dives orange glow by the witness is consistent with the chemical reaction from Halon releasing bromine hallogen gas there was an SOS only reported in Chinese news intercepted report indicating plane was on emergency

landing and disintegrating FAA changed the rules no longer allow lithium ion batteries in

(2:54:13) the cargo of Passenger PL in 2015 there's more than one lithium ion battery uh on passenger planes per week in the United States fire event is corroborated by at least 15 witnesses there are eight Witnesses on a boat nine on the coast there's Mike McKay and then there's Kate T so that's what we can actually just do the math right 9 17 19 Witnesses no at least cber by 19 Witnesses covering up the fire event is explained by technology that is deployed so that's also important right why why would you not even cover this up why

(2:55:02) even cover this up the only reason is the technology that's deployed is to cover this up so KT I like both of our blogs that were relevant here I wonder if these these still work right do these tiny URL links stop working that would be really awkward no still works sweet okay reconstructed sighting based on automatic gtps told me that you saw our sighting was 1840 felt pressured to change the time plane descending from the beginning to the end plane was flying low glowing plane had no navigation lights saw two

(2:55:41) other planes with navigation lights at cruising altitude sighting lasted five to 10 minutes had orange glow black smoke resembling a contrail couldn't see any fire flames silhouette matches did not see any other boats didn't hear the didn't have the radio on doubted or sanity do to the odd sighting we're going to delete that one it's not relevant went inside to put the kettle on plane was gone when she came out Recreation of the plane has the plane circling around the boat counterclockwise to the

(2:56:13) east the other Witnesses Mike McKay sees the plane on fire at 1720 UTC he sees the plane on fire for 5 to 10 seconds and it stops sees it low on the horizon due to the max distance of the plane at cruising altitude g chat GPT says at an altitude of 35,000 ft human eye can see proximately 310 miles unclear conditions if you can see one way you can see back the other way guys people on the coast of the South China SE hear loud noises at roughly 1720 UTC same time as our event fishermen 10 mes off the coast South China Sea report seeing the plane

(2:56:46) flying unusually low there's eight fishermen at this point um at 1730 UTC and then there's the communication as well that's received by an unnamed 777 pilot at 1730 UTC claiming to hear the pilot or co-pilot I'll do a few questions and we'll keep going I'm actually like they've kind of chilled a little bit on um Twitter thank God not really they still hate me but the thing is all the people that hate me on Twitter are all over Reddit as well and I think a lot of them are Reddit moderators shock big shock

(2:57:36) huh so they're very delusional yeah we are going to do a part two interview I've just been super busy guys but I will schedule with s I've actually got to email him later what what did I say about the orange glow yeah that's fine uh I'm not a Navy contractor no I'm in healthcare that's all I can say about about it okay two fake passengers using stolen passports uh they changed their appearances uh the satellite can only indicate the nicobar islands uh because the video predates the South Indian

(2:58:26) Ocean narrative according to March 12th although yeah we'll leave that down there uh we actually added this up above so I'm going to delete this part we'll probably leave this satellite movements are ignored by cber System yeah this these need to be changed okay sight can see in the dark due to false color IR total darkness moon was down no Shadows are visible in our videos zap illuminates uh the clouds which indicate nighttime potentially White House was calling Malaysia every day Obama visited

(2:59:29) in April Source mentioned that a general who's in charge at the time was shown the videos by their nephew and indicated reaction that confirm their authenticity I'm not naming that General in here although I can and I may talk about that Rolls-Royce silent even though each engine transmits data plus the plane itself on adsb aar's data sets were the only real Footprints left after the adsb ATC radar and audio were lost is assuming we believe that that audio is lost which where am I missing a word uh red panda don't worry don't don't

(3:00:17) talk to UFOs man just don't you don't all you're going to do is add fuel to the fire the reason why UFOs banned me for 30 days is because they absolutely hate me with the passion of a thousand sons and that's the reason why I'm going to keep exp exposing them I told them I would too like I literally told the UFO mods one of them that if they keep trying to come down hard on me every single podcast I do I'm going to expose how they are uh that they potentially are hiding in these videos which they

(3:00:47) are um motive 20 free scale semiconductors scientists and Engineers 20 people flying on the same plane from the same company breaks policies plane was doomed couldn't land a panang uh Landing in the ocean would have broken the plane apart 2005 NSA report on Commercial superconductivity development references free scale nine times free scale semiconductors launched a major initiative dedicated to serving RF power that needs the uh serting the RF power needs of the US Aerospace and defense sector pretty good possibly preventing the IP from

(3:01:23) going to **China** possibly preventing the loss of the IP related to the technology deployed and possibly testing the technology on Doom plane orb analysis uh what about orange glow oh I I didn't say glow is that what I messed up on no it's right there plane has an orang orange glow it's fine we don't need it to say orange glow on this one it already says it right down here orb analysis three orbs approach the plane and estimate Mack three speeds using super conductivity H let's say we don't need to say reduce their

(3:02:06) Mass let's just say in order to obtain Quantum properties and ignore gravity generating their own geodesics possibly VI accelerated vibration through a pulse current um the dark dark lines are in front of the orbs no visible propulsion mechanisms uh no known let's oh yeah no known visible propulsion mechanisms cold lines may be changing the pressure of the atmosphere heat signatures and the orbs are spinning on the axis orb triangle pattern is consistent with the three-phase sin oh God damn it guys uh

(3:02:43) sin [Music] sinos sinos sinos sinos swal I I'm going to have to spell this out or

something anyway uh whatever this word means three-phase sinus 440 volt electrical system at 120 degrees that creates a zero point at the center again Sinyal sinyal waves tipler cylinders are predicted to produce local distortions in SpaceTime emitting gravitational waves and repeating wave pattern it's just interesting the orb patterns encircle the plane over time orb pattern changes to become a vertical ring around the plane before the black

(3:03:31) hole we're going to change that before the phase change a phase transition occurs as the orbs Bend and move towards the plane did we say that the mon were yeah that's fine gravitational lensing in the frame uh before the phase transition why is teleportation plane disappears from SpaceTime instantly the zap is cold endothermic event in the thermal transitional phase State change not a black hole because nothing gets sucked in it's not cloaking because the smoke Trail stops when the plane disappears due to  $E=mc^2$  this rules out

(3:04:09) Annihilation because the mass and energy has to go somewhere teleportation could go to another dimension Planet future or another point in the earth cannot break causality time travel unless you change timelines or Dimensions let's say travel to the Past open area may be required I.E object in the air teleportation may be used to hide the plane teleportation may be able to put the fire out say cold or or absorb energy teleportation may be used to save the plane uh I think that's goes without saying right that's in the motive so

(3:04:57) let's get rid of that families of the phone are ringing impossible if it's underwater another dimension I think we can get rid of that right we've already got the phones ringing and I already talked about causality here so these last two I think we can get rid of I think we're just going to get rid of this one okay science double slit experiment greatest mystery in physics proves quantum teleportation time dilation is real more mass equals slower time worm moles have been shown to theoretically

(3:05:47) be possible by three at least three scientific papers Oh I thought I deleted all this didn't I delete all this we're getting rid of the intermediate black hole here oh my God we already talked about the orbs exhibiting super conductivity as well some of this is getting a little redundant I think we get rid of this too redundant ah do I even want this Wormhole stuff in here I guess we can maybe not rule the Wormhole stuff out we'll leave it there although I don't think it's wormholes room temperature

(3:06:45) superc conductivity can be induced by metam materials the Wormhole stuff you can read for yourself if you want to check out um or it can be induced by repeated false vibration uh repeated pulse vibrations from transducers orbs appear to be mapping the plane in a spherical pattern AI explains the pattern it's not being manually controlled orbs are not solid there a field combined uh or to too toroidal movement can cohere electrons orbs become part of a relationship with the plane acting as electrons around the nucleus which

(3:07:31) extends unshielded electrons at the point of transition that sounds really cool when electrons are driven from equilibrium they self-organize into a matter wave solid state objects may be able to achieve macroscopic quantum coher appear orbs converge in their monopoles

making their own azth as they collapse in the plane orbs converging are triggering a transitional phase State change low temperatures allow the electrons to couple and move as one fracto tural orb moments create a unification of forces that induce the

(3:08:05) phase Singularity properties denote the behavior Quantum properties may include Mass reduction maybe that's not the way to phrase it that's fine we'll leave it like that time is a fluid symmetry faster relative flow equals no inertia equals z g plane in the orbs blur in the final frame indicating acceleration and possible Mass reduction less Mass equals faster time which means the ability to achieve extremely higher speeds high speeds okay why is it NW C Lin uh this is all evidence V2 it says right at the top uh pending fire uh on FBI and

(3:08:52) NCIS actually I can update that now right what was the rationale they gave me where is it we just quote it straight up here Jesus this is just like wild man this is I'm just little quote this to be kept in secret in the interest of National Defense or foreign policy Jesus man leaker was most likely a US military personnel likely an operator had an emotional reaction removed the HUD data cropped the Drone out likely had to

(3:09:55) convince Reger side and N the videos are real may have thought he was looking at UFOs later to be revealed to be us technology uh this is actually this is still accurate but he may have also flown the p8 PID think I'm going to leave this on here though still it's unclear which planes they were in experience in signals intelligence special projects uh Patrol Squadron 2 Wizards vpu2 last deployment was February 2014 to March 2016 but he was arrested in 2015 oh is this the right version man this isn't the right version I don't

(3:10:54) think whatever here we go um reassign March 25th 2014 charges would result in life in prison first major incident since the end of the Cold War heavily redacted three trades charge sheet privy to the Navy's Black Project Port portfolio knowledge could be extremely useful to adversaries not really a spy case no evidence he ever

(3:11:58) released information from **China** defense argued the classified information is available on the internet in 2014 he left two flight manifests that included search and rescue code names I'm going to move this one up abused while in prison took a plea deal accepted responsibility for the charges he was actually guilty of interesting did I miss anything on Edward cin fake video requirements between 2 and 72 or 4 and 72 days to create no reference copy so again a lot of people were like oh I could have copied that

(3:12:42) and turned that into into that well there's no reference copy to copy this from it's completely original work you have to know how to create the volumetric clouds how to accurately animate the cameras how the clouds form at low altitudes how to accurately light the volumetric clouds uh recreate exactly what MH370 looks like have to know what the turn radius of the 777 is at the certain altitude while in descent it's perfect where the plane would have been at this exact time accurate coordinate shifts

(3:13:14) relative to the location how to animate the coordinate shifts what the weather was

like in the nicobar islands how to accurately create the smoke Trail the plane is using in two videos what the thermal looks like at a level of fool the experts how to animate the heat signature in the AC units knowledge of military classified systems unknown to the public you have to know the military is using a Citrix environment the frame difference created by capturing the satellite footage on a citrix session what mouse they use the

(3:13:42) satellite do you have to know what satellites us has in operation what their payload is what false color IR looks like how to create 3D stereoscopic imagery how to animate the orbs how to create a particle system for the orbs forward-facing engine how to animate the final frames with orbs flatten and the plane blurs what an mq1 C gry Eagle drone looks like what mq1 C Dre payload is where on the payload is the where the payload is located to get the exact camera angle better VFX skills than the lead VFX artist for top gun Maverick

(3:14:16) Marvel VFX experts said it would take at least 6 months with today's technology better understanding of physics than most phds understanding of advanced mathematics including sinos said God damn it whatever patterns how not to use a 2d visual effect in a 3D environment low quality from the 90s here's a I we're going to move this in front I don't like putting stuff back like that and then you'd also have to know that you'd never find a planing even nine years later disinformation videos were

(3:14:56) censored August 19th from the UFO sub reddit fake compassion trying to find the truth hurts the families of the victims manufactured consensus using sock puppets to post fake content and have it uploaded narrative control censoring those who tell the truth which would break down the brainwashing Forum sliding logging into each account both real and fake and then replying to pre-positioned postings with simple comments this brings unrelated postings to the top of the Forum list and critical postings slide down I don't think we need this login in

(3:15:31) thing let's just call it use fake accounts yeah this is what we want like simple comments like this this debunks everything social contagion fake content spreads through word of mouth and peer pressure individuals adopt beliefs as their own without even knowing the source you guys would not know how often people tell me wasn't that debunked from a video game and I say oh you follow mcwest and they're like who what I don't know where that comes from you should at least know where your opinions are coming

(3:16:09) from addressing the fake VFX debunk icy slide account was a one-day old sock puppet had to get manual approval from the moderators of the UFOs icy slide is a plan words icy slide stands for intelligence Community Forum slide Shockwave VFX does not match on even a single frame it was edited comes from an unreliable source and is the wrong color for our thermal event how many pixels match no response 2D asset would not be used in a 3D rendered environment videos are perfect with no discrepancies and no reason then to use

(3:16:42) a local quality 90s video game graphic uh videos would still be real even if the video effect matched which it doesn't prosaic comparisons of the zap to an ink drop Supernova energy field video game for the 90s and a donut which are all similar in shape none of these show that

the videos come from those things most likely an attempt to **debunk** the zap because they needed to deny the technology in order to admit that the videos are authentic we're not going to let them do that addressing other **debunks** there's no

(3:17:13) discrepancies despite hundreds if not thousands of community individuals and **debunkers** searching frame by frame full story is needed to explain these videos beginning with reges side and on somehow being in on it otherwise he why would he be lying about the date being received four days after The Disappearance you need the 72 day day time frame to even begin to think these videos could be faked four days is simply unrealistic clouds do move they just move very slowly you can see the movement if you you take a 15-second

(3:17:43) clip smoke flows naturally the Jitters that people have uh argued are contributed are attributed they should say attributed the stabilization software is what's causing the jittering I don't know that the **debunkers** just that they either know that and they're being dishonest or they don't realize that you can't use something that you edited to claim that the video doesn't look right mq1 C experiences turbulence and when it goes through the Wake prosaic **debunks** are countered by the evidence that the

(3:18:14) citric session is real logging into the videos what evidence of citric session indicating the vase videos are real yeah okay that's that's good um why is this reverse engineer versus non-human intelligence no reason to do such an extensive cover up for an anomalous event if this is UFOs I don't think we would have this level of cover up assets filming our US military they're filming before the orbs appear and the orbs are moving Mach 3 so the plane can't outrun them pattern is explained by AI a computer program fire

(3:18:43) event indicates a rescue motive cannot attribute human motivations to a non-human intelligence science can explain everything that we see that might be the most important one if we couldn't understand the science then we would not think that this could be us but since we can understand the science it is Diego Garcia there's another thing we have to add in here what is it Diego Garcia Ultra what do they call it some kind of I don't even know uh it's like a optical relay system there it is groundbased Electro Optical deep

(3:19:21) space surveillance that's pretty weird definitely get that up in this pardon my French can't I can't copy paste this whatever I'm going to get rid of these heat map ones I don't like it we're going to change this out uh radar supposedly can see 3,000 miles and then we'll do this Optical IR thing here okay um 20% of space actually this 20% of space force may not be correct it may not all be space force Essentials here everybody thought it went here it has enough space for 777 actually Landing

(3:20:20) Strip is uh yeah that's fine there's a mald sighting around 6:15 where they caught it caught the plane pilot had Diego Garcia in his simulator it's not open to commercial craft no departure 72 hours the flight logs were destroyed and damaged let's look that up and confirm that well that's interesting I mean there you go guys July wow the flight logs were destroyed in July why holy that's crazy yo that's wild convenient huh flight logs just got destroyed in July just

a few months after pretty

(3:21:26) weird underground facilities maybe a black site Philip wood P exif data picture tens of millions in Black construction locky Martins had a contract for upgrading Power and Water uh photos of Diego Garcia Facebook that look like the crew sources claim multitude is more important than Area 51 radar supposedly can see 3,000 miles let's say it look similar let's say look vaguely similar and I'm going to move the area 5 on the area 51's at the bottom what about the passenger families of the victims never believe the official story

(3:22:14) families of the victims while gone silent if alive passengers could have been returned in exchanged for their silence some could be living on Diego Garcia um uh settlements likely Force the families into silence we're going to change that US Supreme current is it brown Jackson or Jackson Brown we'll have to double check ruled against civil suit 2018 that's pretty damn wild that Supreme Court Justice ruled against this

(3:23:19) lawsuit kangi I head it backwards Brown Jackson if alive passengers would have been returned in exchange for their silence some could be living on Diego Garcia American passenger may have gotten a witness protection nephew of the pilot was told his uncle was collateral damage damage French father told two awaks were in the area Americans know what happened former Indonesian head of police knew what really happened to MH370 okay are we missing anything it's probably good huh 12 Pages uh I'm not sure I'm gonna be able

(3:23:59) to post this tonight I'm just I'm tired I got to go to sleep I may have to post it tomorrow so I may just make a Twitter post and say good night everybody and like I'll post the the we finished the um all evidence version 2o and people can watch if they want to watch it um oh resemble the crew that's yeah I think vaguely resemble I mean they don't really like some of them are look close other ones don't really look that close honestly where was that way down here I also think I may move the hoax

(3:24:39) the fake requirements up near the top because I think you should go right after the videos like that's the first thing we should I think drive into is you talk about the videos and then you go into this right and then you can start talking about the flight path because I think people need to realize how difficult it is to fake these videos and then we can start breaking down south Indian Ocean stuff and all this other crap the science and the Diego stuff should be the end yeah I appreciate you guys being here with me

(3:25:14) tonight I got to get some sleep I got to flight I got to catch if I disappear for some reason my plane disappears you guys know you guys know where to find me right right there this is where you find me find me a Diego Garcia folks yeah I think the fake things to the top I did a six-h hour interview or uh podcast and we didn't even get to the **debunk** stuff that's how long this could take theoretically I don't want to be six hours though I want to be a lot faster this was legit though thanks guys for being here with me tonight um we'll

(3:26:05) just do a little cool off session here um yeah thanks for hanging out tonight um I'm not

going to be online tomorrow as you heard I've got a plane I got to catch tomorrow I probably won't have much activity either on on Wednesday either probably not very much uh but I will be back probably Wednesday night and we'll be posting more control F glow by okay hold on N this is fine I mean it does sound weird um well we'll say there we fixed it for you okay witness sighting of glown wait s's consistent with chemical reaction

(3:27:09) from the hon from hon releasing bromine hallogen gas yeah okay thank you for that correction do I watch football yeah but I wasn't watching tonight was it was it good I got to see if I won fantasy football hold on let's find out guys I was playing against uh somebody in my family this week so uh oh it's not looking good damn it I barely lost it was close though freaking Josh Dodson gave me a zero man what is that embarrassing dude if I got one more touchdown I would have won oh well yeah I don't watch nearly as much

(3:28:04) football now um because I've been doing so much of this stuff so I don't want to say who my who my team is but you might be able to deduce it based on who I hate uh let's see here I'm just looking through some chat messages or anything else we didn't get but yeah thanks for going through the evidence list with me guys so if you think there's any other stuff maybe that we can add on here maybe stuff that you've been seeing from my posts and stuff like that um let me know but man I think it's looking pretty solid I think

(3:28:39) it's looking pretty solid I would like to post this and the only reason why I'm not doing it tonight is do you know how many posts it takes to post all this like it takes like 10 posts I kind of want to try though should we just try should we just try to post it right tonight and see hold on maybe we'll just try to post it y'all I do want to get the information out there cuz **I want you** guys to be able to share this information the problem is it's going to take oh God I don't even know how much

(3:29:18) you can fit let's just how much do we think we can fit in one post oh you can fit we can fit a lot but we're going to have to format all this oh boy yeah I don't know if I can do this tonight oh boy I'm going to try one more thing maybe there might be another way to do it you can't control delete this okay well we'll just discard this I got another thought got another thought here give me a second save this let's download this as a PDF okay there we go let's try this let's try this what I can't control delete

(3:30:29) control okay well whatever this seems to work like how much can we fit in one post do you think oh we can even fit more than this if I is this going to work is this going to work we're going to give it one try and if we can get it to work we'll do it I think we can get this much I hate why do we lose the enter the enter keys this is going to take forever why does it keep going to the bottom as well oh yeah it did it did cut off

(3:31:38) here oh no no it didn't this might be okay we might be able to just crank this out here oh could I use AI to format this maybe well AI format this for me I actually have chat GPT so I mean if that would work I could do it I think it's fine this actually works pretty well looks like we can actually fit more

(3:32:42) info here I want another space here though this is MH370 **debunking** the debris I just want to get this out here because **I want you** guys to be able to quote this while I'm gone for a couple days and I don't have to answer all the questions so all the people that are watching all the people that are supporters like I'm I'm empowering you here guys here's the list somebody says hey Ashton what about the debris or hey Ashton why would you do this to the plane or hey Ashton where' the plane go

(3:33:19) you know you just pull up the section about Diego Garcia or about whatever motive and you just link it to them right copy and paste that's the play here and if you don't have blue then yeah you get kind of screwed over cuz you can't post like 50,000 things like I'm posting here and if I go through this and I hit post and it says you can't post I'm going to lose my f in mind oh the flight path note okay

(3:34:23) okay you guys think elon's up to date on the investigation I doubt it that'd be crazy if Elon Musk replied to one of our uh tweets or something like that I mean like have you ever looked at any of his stuff like his random posts get like 20 million views like he probably couldn't respond just because of like how crazy it would make that it would like blow us up to like the next level we'd get like 20,000 followers just if he like replied to one of our posts but he owns the starlink like he's

(3:34:58) got to my guess is he's got to like he can't talk about stuff like this I think that's my opinion I would have no I have no way to know but okay requirements okay highlight this holy crap this is a lot man I want to put in as few posts as possible we we'll look back and see exactly how much we how many this is I like pulling it from the PDF though where it has the little dots that makes it a lot nicer I didn't I didn't even know that the PDF did that this should we should be looking at video facts

(3:35:53) right yeah okay uh you can't tab these in can you what did I just do oh I think tab just went to the bottom okay it's fine flight path sure yeah I mean if you know if you are the person in charge of starlink like how do you not know about like UFOs and stuff right just like NASA like NASA's so full of if I end up taking anybody down after this it's going to be NASA I don't believe NASA for a damn second okay wow this is pretty good uh I don't do we do we want theories on here I'm just going to have

(3:36:54) a call all perent evidence I don't not going to put an MH370 in there should I I think I'm just going to do like this I'm going to do it like this this time we're going to do it without the dots this time without our classic thing the videos archive uh okay like that enter here wait oh here it is I'm

(3:37:58) jez requirements understand the videos to be authentic we're missing something here oh here it is video facts there should be one called video speculation here too we're missing that somewhere somewhere right in here here it is okay we've got video facts video speculation fake requirements flight path **debunk** in the debris wait we're missing something in here here it is plane didn't crash in the South Indian Ocean this takes a lot of work as you can guys can see

here right sorry did I miss something yeah I

(3:38:55) split the links up right are we're good or no these should be split up these are split up as well I think we're good on the links okay and we can add more it looks like so that almost gets us halfway I think I do want to add this as well at the bottom who's texting me pretty late to be texting right now sorry just let me know if I if I'm

(3:40:07) missing something doing something wrong if I go through this and I post and it doesn't work I will lose my f in mind guys I think we might well fit the rest of this in one I'm going to do think I'm going to post these also in here we can't get it all in one post but I think this is enough this puts us at page seven right yeah okay this should be enough then the rest should be able to fit in over here okay blog 2008 blog 2014 main witness Katherine t uh no they're not morph together that's one link it's a it's an archive

(3:41:11) it has to be put together like that that was intentional the ones at the top you can't use the YouTube link the YouTube's have been deleted so you have to use the archives that's why it looks Blended together is all their Witnesses okay are we confident we're going to be able to fit everybody else in here maybe we put other pertinent information at the bottom right and then we go into motive after in the next one motive orb analysis blah blah blah Diego Garcia yeah let's pull the orb analysis in here

(3:42:14) too or this will this will ensure that we can fit the rest of it in there although I'm pretty sure we're good at this point okay well we only spent like 10 minutes on this if ends up messing up it's not the worst case in the world oh I remember why I broke it up into more before I wonder if we can do it in one post I just don't think it's going to fit in one post we didn't more than more than post last time because we wanted more um we want more pictures but I'm just not using the pictures this

(3:43:04) time yeah there's no way you're going to fit it all in one post it's just too long although we could put more in here let's let's break it off at a better spot let's although maybe moo is a good spot no we'll put motive in here too we'll end it at motive and then we'll move on although I kind of want to see what it all just fit kind of wondering if it just all fit now one giant post it's the longest post in Twitter history what do you guys

(3:44:13) think have a good night man take it easy Sean and everybody else is going to sleep how many hours hundreds hundreds of hours guys maybe even over thousands of hours at this point I'm not sure a lot a lot of hours okay I think we're going to cut it there and then we'll add the second half although I don't know how this is going to play out I'm just going to try something here I just want to see how much we can fit oh crap oh my

(3:45:30) God yeah it doesn't fit okay that's going to be part one and then we do MH370 X # mh3 70 I'm not even going to put my name at the bottom of it maybe I will put my name at the bottom of it just in case somebody tries to copy and paste it copy it from your final draft I don't know what that means okay part one boom wow work oh I kind of wanted to add a picture n

whatever add the highlights go ahead and uh whatever tweet it or something I'm going to I'll we'll do the second half in here in a second

(3:46:33) guys although I just lost my copy and paste okay oh good we can get it back okay see here Bo what the hell was that okay going to sleep once I finish this but I empowered you all with everything on here you now have the power the power of a God maybe not that much power but power to at least tell the **truth** about the MH370

(3:47:39) case for for what's the next

(3:48:47) uh oh this is **debunking** right yeah addressing the **debunks** okay this is the VFX **debunk** this is disinformation I'm zooming through this one yeah this these couldn't all fit in one it's crazy that we were able to even fit into just two this is the Edward seed Lin oh that was not what I wanted to

(3:50:02) do okay starting to get sloppy here then this is science almost near the top here oh boy it's yeah I wanted to be asleep an hour ago oh well I think I missed one here we missed something down there there's y teleportation there's where's the science there it

(3:51:08) is this is Orban I think this is the last one just double check orb analysis okay Orban analysis let's look back through this let's go from the top Orban analysis y teleportation science science Edward C Lin disinformation addressing **debunks** the other **debunk** oh reverse engineering versus non human intelligence we missed that one okay okay Diego Garcia what about the passengers that's it then we have our thing and we have that part two of two get post okay there we go okay oh uh let's do this add that to the

(3:52:19) Highlight let's remove this one add the highlights okay highlights what the hell oh yeah okay wait what why I want them the other direction what the there okay now it's good right dude what why does it keep switching the order of them whatever just how it's going to have to be I guess okay sweet guys uh thanks for being here tonight um use that link uh and then I'll I'll post this link too

(3:53:22) this part two I mean you can see it in the replies it's not really big deal so I'll talk to you guys uh in a couple days please grab and use the evidence to your uh the best of our abilities here share this with as many people as we can out there if you guys can help me answer questions with evidence that you see out there that would be huge that's probably the best thing that we can do everybody have a wonderful night I thank you for being here and uh we'll talk soon

MH370x Content Work - YouTube

Transcript:

(00:29) for for [Music] we'll be getting started here soon oh

(02:13) hey guys we'll be getting started in a second I'm uh finishing up some food here want

(05:34) okay we're going to try to get it so that the desktop audio is not too loud I think I can adjust it like this actually testing okay I think this so this sound should be pretty faint coming out the back well o too much there we go welcome everybody let's get this set up correctly okay let's figure out what we're up to today let me know if the music's too loud as well guys let me

(06:45) see this up understand why the YouTube video doesn't seem to be upload updating here oh there it is interesting it's not live that's why okay the music's quiet yeah probably I'm going to keep it pretty quiet let me see a lot of people don't like the music but I need it to to work a little bit let's see uh kavelli let's see is there a video out there that 100% proves the VFX was not used the circles actually do not match that's a that's a false statement so just because things are

(07:42) similar does not mean they're the same so I will go ahead and show you we'll start with the **debunk**ing the VFX cuz this is like like the biggest disinformation that's out there in general so let's start with this one this is the one that shows the single frame you can see this is not the same effect right see there's a bunch of dots missing there as well so just because they were somewhat able to line this up on one single frame you can see it doesn't even line up right it doesn't

(08:21) actually line up here what they did was they found one frame that they tried to resize to try to match against one other frame and it need to perfectly match you can't just be close you can see that this is our real effect with with the one behind it it's not even similar it's not the right color doesn't size doesn't match here so this is how they trick you is **debunk**ers will try to make things this is called a prosaic explanation prosaic explanations don't have any Merit so a praic explanation is two

(08:52) things look similar they must be the same you also see this a lot where they try to say like things in the sky look like balloons um you have to actually prove it's actually that thing now the other argument here against the VFX **debunk** and I'll I'll play this one more time so you can see that even on a single frame it doesn't match the whole left side isn't even isn't even match so they they TR literally just try to match like this tiny little portion of it and it still doesn't match um

(09:23) now this one here shows you that the visual effect is not even close to what we're looking at here this is and this is the remas higher quality version of it that came out in 2015 so this actually post dates our videos the lower quality one you would never think could possibly be in our videos it's like super grainy pixelated it's from the 9s I mean if you looked at '90s Graphics we're not looking at '90s Graphics in our video here guys so not only does it not match on a

single frame

(09:53) and all you have to say to counter that is how many pixels match because the pixels don't match it also does not match and these are statements of fact these aren't opinions these are actually just statements of fact this does not match our our zap over here it's not even close this this over here on the left is not what we're seeing in our videos so just to prove that again we will go ahead and do oh where's the where's the other one this is from the Chris Leto interview so this is actually it's

(10:24) superimposed I actually where is the superimposed one I actually just have the super POS one somewhere let me pull it up I think this is it yeah okay here it is and now you can see very clearly it's not the same thing right so what the **debunkers** did uh here who they're always dishonest is that they tried you can see the one frame this is the frame they try to match right and they try to claim this is the same why will this not just pause you can see that actually does not match over here it doesn't match you can

(10:59) see outline and this is where they tried tried their best to try to get it to match these extra dots aren't here this whole line like the whole thing is completely different this is also as an explosion ours is an endothermic event their the VFX here is an a release of energy ours is an absorption of energy completely different things this here I mean how could you possibly say this matches this is this is not even close so I just want to go ahead and you know **debunk** that get that out of the way ahead of time and then we're going to

(11:33) get on here and start working on it cuz this is how disinformation works is they post something that's false and they get everybody to believe it and then everybody spreads it as though it's true you guys can't hear can you ignore can you hear me let me know if you guys can hear me uh adequately here where's the chat oh okay you can hear fine okay so I was worried thank you guys for uh clarifying whose question is being ignored um with respect to Shawn Ryan guys I appreciate everybody you know getting the message

(12:22) out there for him I think the getting on Shan Ryan would be you know kind of the dream so to speak uh but you know if he accepts or what I'm probably not going to be able to announce it ahead of time as much as I would want to just because I you have to keep those kinds of things close to the chest you know um as you saw there's a lot of people out there who are trying to you know discredit me discredit the the case in general so what that means is that we have to be very quiet about our appearances on

(12:49) podcasts uh but I do appreciate you guys letting them know that you know just to counteract the false statements that people are making about about me out there uh you know let them know that I'm a normal person you can just watch my podcast I think if you watched the one last night with um Zack Payne you know I even I didn't did a little shout out to anyone who might be interested you know saying that all you have to do is watch my podcast and see that I'm a very nice person and uh very cordial in all my

(13:14) interviews uh and then yeah awesome yeah uh OC Rams um yeah a lot of people are convinced by the **debunk** um and that's why one of our pieces is going to be called disinformation that's coming up to kind of go over how disinformation Works um and now that I look at this I need to delete part of this let me find this and I'm probably like in the disinformation piece we're just going to go through the types of difference disinformation and how they do it I think this is fine to share over here do um and I've already kind of worked on

(14:15) the outline of some of this I obviously haven't edited it very much but the three factors of really disinformation are manufactured consensus and social contagion along with what's not on here is like Forum sliding which works very well on sites like **Reddit** and social media and so Forum sliding is you know essentially getting fake content pushed up to the top where everybody believes it because humans are very social beings like a lot of people don't social contagion is the scariest one and you guys will probably have experience with

(14:47) this where with social contagion you may adopt a belief of somebody who's one of your peers or family members without even knowing where the source of it comes from and you see this a lot with the VFX if you go look at um the person that posted the VFX in their YouTube trying to **debunk** it it has very little views compared to how many people think that the VFX is **debunked** because people talk to one another and they go oh that was **debunked** from a video game right nobody and they go you asked them where they came where did they heard that and

(15:16) they'll be like I don't know right they don't even know where it came from that's how powerful social contagion is and the government uses it that's how they discredit things um it's not just these videos either guys they This Is How They brainwash people right this is really a mechanism of brainwashing because whatever other people say is true you end up believing it and then you spread that to other people they believe it and the manufactured consensus part is based on like especially **Reddit** which is probably

(15:43) the number one source of misinformation on the planet right now uh you know you whatever's at the top is what people believe and you can control the narrative by only have allowing content uh based on what you want people to believe and then social contagion takes over and then people spread it and that's how it gets around I can't tell you how many times even people in my own family have fallen victim to social contagion and they don't even know where it comes from like I'll say Hey you know you should

(16:08) probably stop listening to the TV or you know the cable news and they go well I don't listen to cable news or I don't listen to **Reddit** it's like well you're getting your information from **Reddit** on a roundabout way through your peers who are listening to it right um so what this all comes down to is critical thinking you know and that's probably what we should put up here critical thinking is how you break down these mechanisms and it takes work you know you actually have to open the article up if there's a claim in an

(16:36) article open it up and see what's in there you know this is the best example is the

Newsweek **debunk** and so I'm going to go on a little bit of tangent here and let's go do this because I think this is an interesting topic and I'll work on it a little bit later but if we Google MH370 videos I'm guessing Newsweek will be at the top actually it's not surprisingly at the top Let's Go videos debunk cuz everybody does the same thing right they go to Google huh the Newsweek article is gone wow that's

(17:11) interesting huh okay MH370 videos **debunk** I don't see the Newsweek article on here pretty bizarre but I do see this one France 24 this was the one that was out there since March 22nd the predates the videos reemerging here if you guys have questions feel free uh I'll answer a couple of the questions in just a second but other people in the chat probably can as well so I'm going to say deny on this one so when you look at the **debunk** right you people think right away okay it's got to be fake right now if you look

(17:47) through it though let's go to the fat what is this this isn't even the right one this isn't even the right one huh why do they get rid of it let's let's look up teleport I can't believe it's actually like not showing up in Google now here it is first part about this is weird is that the **Reddit** post that was posted actually does mention teleportation but like early on in my investigation I was not I didn't think it was teleportation I had no idea even now we're not 100% sure I'd say we're

(18:18) like 99% sure but there's a there's a possibility could be Annihilation I guess if it's some exotic thing we don't understand but what's important is that you need to read through it especially when people claim like these Newsweek like **debunks** and fact checks they're wrong almost all the time almost every single time guys and so you go look through this and I think that where does it get to the like look for the substance right okay so here's the **Reddit** post August 7th am I wrong about

(18:43) the date maybe it was August 7th so I've been saying August 8th um and you can see it does say teleporting away with it so I guess technically they're right on the teleporting part here now let's look for the facts that **debunk** this okay and here's the France 24 **debunk** that they link to this article is literally just a copy and paste from this France 24 **debunk** literally just copy and pasted um so later uploads they claim show that it was a simulation but look what's in quotes the simulation part is not in quotes this is

(19:20) editorialization that they've added here so this part right here is already a false statement they're they're being misleading about this the details do not say it's a simulation the details say that they think it's CGI in one of the later uploads and I'll go ahead and pull that up because it's important to fact check these things I actually have it linked to the thing the video I'm going to show you how easy it is to lie using fact checks super easy I think it was the YouTube

(19:57) link no it's not that one it must be the Vimeo link I think hold on yeah here it is let's translate to English okay so here is the Vimeo one this is what they're quoting here it says a video editing Enthusiast created what appears to be this this is an opinion this is not a statement of fact that this is just a description of the person who uploaded it so again what Newsweek is

saying here is not a statement of fact that's an opinion it's really important to understand editorialization and you can see right

(20:40) here is that reeside and non actually they miss they don't add this part that regicide and N is actually arguing for the veracity of the videos right so they completely misinterpret what's being stated up here this is somebody's opinion that doesn't matter they're just somebody who uploaded it they don't have any insight as to whether or not this was uh CGI and this was actually being translated from another language see right here my opinion is that it was edited from a real airplane from near an airport obviously

(21:12) this is false because we're looking down from outer space this is not from an infrared camera near an airport there's no airports near this this is just objectively wrong right but this part's very interesting the Regis side and non account was arguing that the videos were real that is extremely important so this Newsweek **debunk** already first part of it objectively wrong now let's see what else we can find an analysis by hoaxy this is potentially the only fact in the whole thing right analysis of hoaxy says that

(21:45) it's NR 33 well what do you guys think there it is right there there's a 93 right here is this 33 right here it is not it is n22 and we can tell because it doesn't look like the three right over here it looks like this two right here now this is really important because that means that this is the only fact in the whole article and it's wrong it's objectively wrong so this Newsweek **debunk** is false it's objectively false it's not a statement of opinion but a statement of fact that I'm making here

(22:20) um and so this is why you have to be careful about this now look they claim that this is not footage of MH370 this is a false statement this news week **debunk** here is objectively false and if the videos turn out to be true I think Newsweek could be liable here for this Newsweek should retract this and issue an apology for making false statements about the videos because otherwise they theoretically are complicit in the coverup of MH370 there's something called criminal conspiracy where even though you're not

(22:55) directly involved if you are involved in the cover up of it you can be liable for it so it's one thing to Claim falsehoods about like UFO videos and stuff that doesn't hurt anybody right there was 239 people aboard this plane that never got any official answers and Newsweek is posting false content to try to prevent us from getting to the **truth** that's very scary first of all and it should completely destroy newsweek's credibility no one should ever believe anything Newsweek ever says again certainly nothing anyone this author

(23:28) writes ever again who's up here at the top I'm not going to say their name you can just read it yourself you know this is just a garbage this is garbage this article right this needs to be retracted immediately and I've already informed them the same day that they posted it that it was wrong so this is 3 months later and they still have this false article out here and this has fooled people who are even um uh I forget who was the Admiral who or uh vice admiral or whatever he was that was on Tim letto it even fools

(23:59) people that are extremely intelligent that's how fake news if that you want to call it that disinformation I think is a better term that's how it operates so be cognizant guys when you're out there and you are you know looking at stuff you know we we will probably put the link in here uh when I do the disinformation piece I'm probably just going to tear Newsweek down um because yeah I I think that these false fact checks are some of the most damaging stuff uh in general in the world right now okay let's take a look at some

(24:29) questions now after we took care of that um yeah so why is the satellite footage bright because it is a false color IR it's potentially even a computer program that they are pulling data it's called the cber system using signant signals intelligence where they can pull data from satellites and potentially other assets as well to create a 3D Battlefield awareness map and we know that because the mouse goes off the screen on both top right and and the bottom left indicating that there's a much larger field of view

(25:02) there the frame rate in the satellite video I'll pull it up and we're not going to we're going to dig into some of the work here in just a minute I don't want to rehash all this you can actually watch like any of my podcast if you want to answer these questions the frame rate here you see this jitteriness this is six frames per second so this is actually pretty slow and that indicates they're looking at a very wide field of view it would be a much higher frame rate if this was something that was a closer

(25:31) camera you can actually tell the color tone here when it turns like this you can see it's it's dark light on the top and darker on the bottom this is also indicative of MH370 we know this is an IR as well because you can see these clouds the clouds are brighter on the top because clouds have more IR radiation on the top than they do on the bottom that's why it's lighter on the top like this these low earth orbit satellites you can tell this is not looking straight down this is looking at an angle low earth orbit

(26:00) satellites rotate around the earth every 90 minutes meaning it has to be able to see in the dark in fact for intelligence purposes you need to be able to see in the dark as well notice there's no Shadows there's no Shadows anywhere in this video that also is indicative that what we're looking at is nighttime and then when this zap occurs over here it's actually very prominent zap even though it most likely isn't super bright if you were to look at this in the daytime you saw that flash happen

(26:28) that also is indicative that what we're looking at here is nighttime so you see a little flash happen the flash accurately illuminates the clouds which are these very detailed volumetric clouds very very difficult to fake this if not impossible and this zap accurately illuminates them some people ask well why is this not a 2d visual effect because we have two angles so in order to have two angles like this you would have to build a 3D rendered environment so here's the second angle completely different angle this is from

(27:03) a drone from a different angle from the other side so if someone built a 3D rendered environment you can't use a 2d visual effect it would be wrong on one of the sides automatically

you need a 3d effect something has volume in order to put it in here so that **debunk** you know all the **debunks** have failed miserably they're not even good attempts if I'm being honest um they could have done a lot better if they were trying to cast out on the videos the reason why they couldn't do any better is because the

(27:29) videos are real anything you try to **debunk** just authenticates them further okay let's see what else we got uh why didn't **Mick** West try to refute your reputation of his reputation uh the reason is because he knows the videos are real and he he can't anything he says is just going to prove them to be true and more importantly he may have liability again like I mentioned you know there is uh what what rule is it called there's a rule that basically says that if you are involved in covering up a conspiracy

(28:02) even if you didn't commit the conspiracy you have legal liability so I would argue that anybody who's trying to hide these videos should be charged with seditious conspiracy um as we saw from the January 6th situation there were people that were not even there that got 17 years in prison so people that are trying to cover these videos up they should be issuing retractions of their statements uh formally and formal apologies cuz if they don't they're going to have legal liability in my opinion I'm not a lawyer but you know if

(28:32) this comes out as true I will be seeking and and and promoting for the people that were covering it up to uh be investigated and potentially charged with conspiracy so don't lie about the videos guys um you know unless you can prove that they're actually fake coming out and trying to lie about a video of plane disappearing um that was never had any official answers could potentially be criminal I mean there's two almost 200 there are 239 people on board This Plane guys so do not lie about the videos um you know just be a good person

(29:05) if you don't know just say you don't know don't pretend like you know it's fake okay what else do we got here um why would the US wait for their version I don't think they would wait right so if there's a theory here where the people on board This Plane are tied to the technology then you could make a pretty strong argument that these they don't want these people to go to **China** because if they get to **China** then you're going to have a situation where you know they catch up to this

(29:35) technology this could be pretty scary right okay let's see what else we got um let's see you say you're open to challenges I am open to challenges uh the people that have respectfully challenged it uh don't get blocked so there's nobody out there that's been blocked who doesn't know why they've been blocked so if you are block if you were blocked you know why don't troll don't be disrespectful you know if that's too hard just don't do it guys and if you complain about being like your post

(30:18) being hidden or whatever you're also going to get blocked if you complain that you got blocked on your other account you're also going to get blocked right the community I'm building is not reddit it's not where you can just go and complain and cry about stuff right we're building a community here that's more respectful than that so again you know be respectful be on your

best behavior when you're in my replies if you're not on your best behavior don't cry about getting blocked there's plenty of other

(30:47) places where you can go talk about the videos you can talk about them to your own audience you can talk about them anywhere else right if you're upset that you're not seeing my content then you should probably look inwardly about how you're acting um and again like I don't care how people think about me that's none of my concerns at all to be honest with you my intention here is to get the **truth** out and I'm not going to let people put you know um disinformation as we just went over the disinformation how it

(31:13) works that's not going to fly in my post and my replies to my audience if you want to try to convince other people of whatever other weird conspiracies and things like that do so on your posts man and if I come to your posts and act that way to you feel free to block me feel free to block me we are not connecting anything to mh17 I'll be very adamant about that we are not going to connect anything to mh317 under any circumstances that has a completely separate Plane full of a different number of people from

(31:53) different country um I know people want to think that that's somehow a Connection but that is not something we're going to be doing and I'll be elaborate about that I was online I'm old enough that I was online when that actually happened and actually saw them claim credit for it while it happened until they deleted their Facebook post 15 minutes afterwards because they realized that they didn't shoot down a Ukrainian plane they shot down a passenger plane full of people so after that the they changed it

(32:24) so that the plane was not flying those planes were no longer flying over the Ukraine over that was during the Crimea incident uh and they probably should have done that ahead of time and that was the argument that I think **Russia** made was well why are planes even allowed to fly over that right there is no connection to that plane and MH370 that's my personal opinion and you know anyone who's trying to promote that in my replies as well you're risking yourself getting blocked as well so please do not try to connect other

(32:53) conspiracies specifically do not try to connect mh17 to this instant okay and just as a heads up like if you come in here and you cry about this you're also going to be blocked from this particular Channel as well um you know so I see you in the chat you know you're going to you're gone and let's see so again guys like be an adult be an adult if you want to be unblocked I'm actually a reasonable person but if you come in and you try to cry about it or try to like denigrate me in some way about it or make false statements about

(33:40) it then you're never getting unblocked okay uh so you only get one chance here guys like just you know act like an adult or or don't either way you know a lot 99% of you are fine 99.9% it's the 1% of people that can't control their emotions uh that you know feel like they're entitled to express their opinions in my in my replies that you know you need to think about what you're saying before you post it okay okay let's see what else we got I'm not going to dig more into that I don't

(34:15) like talking about that kind of stuff in general um you know and the people that were doing that know who they are and they've been removed you know no trolls if you don't know what trolling is like you need to grow up a little bit you know and I I feel bad for the people who are young that have they haven't ever experienced the internet where it didn't have just constant trolling and constant trying to cut people down where everybody thinks they're smarter than everybody else because it used to

(34:41) actually be a good place where you could actually express ideas constructively get constructive feedback you know now it's just low effort like I don't I don't agree with that no that's wrong right it's like okay that's low effort man come in here Express an opinion explain why maybe you'll get an answer right so we're we're we're going back to that you know and if it means that a lot of people are getting blocked well sorry okay let's let's uh get going here uh no I don't have to allow

(35:13) anything I don't want Kyle you're also gone as well so you know the self-righteous people are the ones who feel entitled to being in my replies again you you have your own audience feel free to preach to your own audience about whatever you want right I've got my audience I'll preach to them however I want right you're not entitled to be in my replies in any way shape or form I'm doing you a favor by letting you be in there uh you think that's self-righteous that's fine I don't care what you think about

(35:46) me okay now here's a good question uh from vinc let's move on to some other stuff that's better and now that we've addressed all that I think everybody knows the ground rules here uh um you know and if you do want to be unblocked you better humble yourself and you better you know not you don't necessarily have to apologize but you have to say that you're not going to act like that anymore um so for vinc is it possible that the plane belly landed on on Diego Garcia so this is an interesting question and I want to get

(36:19) into doing some work here in a minute but the what you're supposed to do is First You're supposed to try to land during a fire as fast as possible now if the landing gears damaged which it potentially was because it didn't land at panang and I'll pull up the video y let's see now if you see here they fly to panang directly to panang right and they don't land here so potentially the landing gear was damaged otherwise you just land right even an emergency landing even in the dark you're just going to risk it

(36:59) the next thing you're supposed to do is try to land on your belly on the ground actually the problem is this plane's filled with fuel so you need to get that rid of that fuel first otherwise this plane's going to explode when you try right now if you try to dump the fuel which is what you should do then beforehand first problem or the main problem is that your plan on fire so if your plan's on fire when you've got all this fuel it's probably going to light up and explode as well so dumping the fuel while you're on fire

(37:30) seems extremely risky which is probably why they then win into the water because that's the next thing you're supposed to do you're supposed to try to land in the water but

landing in the water is dangerous too you need support you need people in boats that can start you know getting people out of there right away in fact what's also going to happen is this plane's going to tear apart um I think there was a video let me see if I can pull it up yeah here it is hijacked plane disaster actually this is also from

(38:08) 2014 this is a this is a video game in the background watch this where is it I think it's right over here that gu so look at this so this is trying to land in the water this is a controlled Landing watch what happens to this plane look at that guys does that look like that's going to be safe landing in the ocean is not the same as Landing in the Hudson River this plane is going to rip apart the fact that Sol solenberger was even able to land in the Hudson river is frankly a miracle so this plane was doomed like

(38:51) that's going to this plane's going to get ripped apart so to vinc question is it possible that the plane belly landed at Diego Garcia um yeah it's theoretically possible uh but the big thing here is you had to get rid of the fuel first right so you need to put this fire out primarily so what we're thinking is this zap that we saw is either cooling the plane to put the fire out or potentially it's um absorbing the energy so remember it's an endothermic event that we see so that means it's absorbing energy so

(39:25) maybe it's able to absorb the energy from the lithium batteries excuse me if it can absorb the energy from the lithium ion batteries then now it may be safe to land the plane on its belly theoretically um but we can't be 100% sure you know this plane never showed up anywhere so you know Diego Garcia is just speculative highly speculative so okay let's see what other questions we have do we know the positions of other satellites yeah there was no other satellites that were near the area at 1840 UTC there's a couple

(39:56) other that are in similar spots there's actually a geostationary satellite let me see if I can pull this up NRL 32 which is early on I thought this must be n 32 but it's geostationary meaning it's too far away which means that it is uh would be looking straight down trying to figure out if there's an image of it there's not an image of its Geo position let me let me try this yeah this is that this is a weird image so it's actually I don't know if this B location is correct you can see

(40:38) this is Malaysia it's actually like right down here in the South Indian Ocean but it it moves up and down here the geostationary NR 32 does but that's too far away it's 40,000 km away so it's going to be looking straight down so if you look at the cers mission video here it's these out these ones on the outside are your geostationary satellites that stay stuck in position like this versus the ones that are moving around and so it's pretty much impossible for the image to be coming from that but if it's using this cber

(41:11) system to create this 3D Battlefield awareness map then part of the data could be coming from the geostationary satellites but these are so far away that most likely these don't have the optical capabilities to resolve the plane to the high degree that we see so good questions there let's see what else we got yeah I mean if you guys want to jump into other conspiracies you're free to do that we're just not going to be tying them to MH370 and part of

this uh conspiracy yeah there's no such thing as

(41:37) a graviton Brett uh that's so that's not how gravity Works actually it doesn't work based on gravitons gravity actually works based on um the the warping that's happening from SpaceTime so let me see I have a video of that too we'll look at that that just a couple more questions and then we'll dig into it I for what's the gravity one I have so many videos now it's like I got to keep the I probably have to organize these better where is it here's here's gravity visualized oh this is not the right one

(42:25) but this this works too so this is how gravity works it's not a graviton that's pulling anything down this is spacetime and then when you put Mass on space time like a planet like he's about to roll on here you watch how it gets bent so it's bent like this now right and so now any object you put on it as time moves forward that object is moving towards the bend this is called the curvature so this is how gravity Really Works close to to this the curvature as time moves forward is what causes objects to um uh Converge on one another

(43:05) if you want to visualize this imagine wherever you are on the Earth right now and you walk in a straight line towards the North Pole just straight North and I'm in a different point and I walk in a straight line North we're going to intersect at the North Pole because of the curvature of the earth even though we're both going in straight lines same idea here now you can see this is how it orbits right if you're moving fast enough as you go around then you continue to orbit around the center of

(43:33) mass here and that's why that that happens in general okay you have to play in Crash Into The Ocean it would have been a huge debris field would have been oil slicks all kinds of stuff uh yeah the alien addict one let me look I mean I don't think any of the podcasts I've done are going to be canceled in any way shape or form alien addict is tomorrow I've got one like every single day pretty much guys so it's it's a lot I've been doing more than one per day on some cases yesterday I did two and a lot

(44:19) of them are going to be released like there's I think one coming on Monday one coming out on Tuesday so there's a lot of content coming out there if you want more questions on some of this stuff I suggest watching some of those um no one no one tried to get any information from the passenger cell phones as far as I know yeah so which is interesting because 19 family members said that they were able to call the cell phones and and actually signed a statement that they sent to the government I believe it

(45:01) was a Malaysian government I do think that Edward Lynn possibly **leaked** these videos and sent them out we're going to go through some of that evidence here in a little bit yeah I think he passed them on to somebody it's pretty interesting as well in the timing front of it it's not 100% but I I mean I'm pretty sure I don't know how we would find anybody who fits the bill better than this guy um there's no comments in the from anyone in the world around this issue in the videos no as far as I know they've

(45:36) made no comments and again a lot of that is going to be plausible deniability right is that you can't go and issue a statement because if it's real then you get a lot of trouble if it gets proven to be real and you claim that it's not one of the only um one of the only uh statements that was made is I think the government said there was no explosions detected but it's funny because it's not as we just showed it's not an exothermic event endothermic uh I don't know what you're talking about

(46:14) Jim you don't need to show the curvature we're on a we're on a round earth that's the whole reason why curvature exists so everything can be explained by curvature so if you try to look at go look at the Horizon and the reason why you can't see infinitely far is cuz the Earth is round and the fact that the Earth is round at all is because of the curvature from the mass that is we're on a very large bit of mass so the same same movement applies and that's why the Earth is formed into a ball is that the

(46:46) mass is warping SpaceTime and then it's uh converging on itself that's why we have round objects everywhere we see when we look in the sky when it's all perfectly explained okay let's do some work um Damian I think you need to look into uh time dilation okay so how time a tion works is that it's all based on your frame of reference so if I move at the speed of light then my frame of reference time will not move very fast but when I show up a bunch of years have gone by this is a real effect this is not science

(47:42) fictions is actually real so the movie Interstellar had a very extreme example of it where Matthew mcc's character um and I believe it was an hathway uh both go to a planet that's near a black hole where there's a ton of mass in the black hole more mass equals more slowing of time a time is fluid so you have to think of it like that that's pretty weird but time is actually fluid time flows differently wherever you are we experience time in a very similar rate because we're all on the same planet and we all have the same

(48:14) amount of mass near us uh if you were to go up into space there's going to be less Mass so time will flow quicker now when he goes to the to the near the black hole time is slowing down for him when they leave the black hole they've only been there for an hour on the planet for an hour they go back to the space station 20 years have gone by so this is because there's two different relative rates of time flow the closer you are to the giant amount of mass the slower things are the further you are away the faster they are so this is how

(48:44) you don't break causality is that theoretically Matthew MCC teleported to the Future right not really though if someone was observing it it would just look like he's moving very slowly for like 20 years years you know so that's how everything kind of fits together and that's why you can't go back in time I mean they think now that maybe you can but if you were to go back in time you'd have to jump to another dimension or Multiverse or whatever you want to call it how can there be an SOS call at the

(49:19) time that it's supposedly disappeared the theory here is that the SOS call probably came from a few minutes beforehand and and it Corr it's corroborated by the videos where we see

the plane descending and on fire and the witness who also saw the black smoke coming from it and also saw it descending and saw it at the same direction as the plane would have been in and what we see in the videos as well uh yeah actually if you look at the earlier reports like check this out this is something fun to look at

(49:52) MH370 contact lost March 8 it's actually hard to find this now cuz they've censored like everything on Google but if I switch back and do a custom range 0307 2014 I'm just going to change the search here to look two days back take a look at this so I did a custom search here of the day it disappeared 2:40 a.m.

(50:31) that's 1840 UTC later confirmed contact was lost at 1840 UTC buzzing guess what guys that's the time of our videos that's the time the witness sees the plane that's the time our satellites there that's the time the plane supposedly turned into South Indian Ocean they changed this time later on and claimed that they lost contact at 1815 UTC which is 2:15 a.m.

(51:03) so they had to build a cover story right they had to change this time because otherwise you're people are going to wonder wait a minute you say this plane disappeared the same time it turned into the South Indian Ocean but never crash into the South Indian Ocean and the whole idea that this plane flew to fuel exhaustion is pretty ludicrous in of itself how many times you have there like somebody hijacked a plane just flew it out till it was out of gas this doesn't happen okay let's see what else we got okay I want to dig into some stuff

(51:32) here okay I'm going to be looking to the side here because I'm pulling up some evidence that we had the first thing I want to do is the families getting paid out okay should it be a breaking update we'll just do regular update okay where's our evidence I'll let you guys see the evidence when I'm pulling it up I'm just need to grab it real quick so what I was able to do is I dug around cuz I'm trying to figure out if these families got paid and could they have been silenced and the answer is yes

(52:14) yes they actually could have been let's go ahead and pull this up this is some of the evidence I'm going to rewrite it so don't don't freak out at this I might not use all this as well I'm just going to be want to have this out here for some context these people did not get paid nearly as much as you would expect at least in my opinion they got silenced for very little money 250,000 I found some stuff as well that argued that if they were able to uh try this in American courts they would got

(52:58) millions each but they weren't able to district court in 2018 dismissed litigation saying the case belonged in Malaysia feels bad and uh I forget the is this ring I forget the name of their currency in Malaysia but that's not a lot of money Malaysian Court dismissed as well some argument based on what was this argument forum nonvenous I don't even know what the heck this means yeah so they basically wouldn't

(54:12) let it be tried in the United States even though Boeing uh might be in the United States pretty wild this is how they got away with not paying people a lot of money okay I think that's all

the evidence that I have straight up we'll look at some of these articles as well together goal definitely could be to prevent the the people from going to **China** I mean you can believe whatever you want honestly I don't I don't really care but um to me the tele pation has to be to put out the fire because this plane's doomed if you want

(55:01) it to crash you just let it crash right yeah the IR the satellite was definitely cropped there's no question about it it's cuz we don't see the Drone so I think I have an image of [Music] that actually I'd have to dig around for it it's tooo much of a pain in the butt right now uh Google Google Drive I've got a Google drive with everything on it as well let just make sure there's nothing that I'm worried about people seeing yeah I mean I guess people could theoretically see the folder name but

(55:53) they're not going to have access so it doesn't even matter um let's see what we got here satellite drone position here it is so here's the satellite drone position so you can tell it's cro the Drone is like right back out here somewhere on the other side of the smoke Trail probably actually more over here where my mouse is and then early on it goes underneath the smoke the smoke Trail here and gets a little bit uh distorted by the turbulence and then it's staring at the plane over here so they definitely cropped this for

(56:34) sure oh man just closed that whoops okay let's see if we can get I want to get this first piece out as fast as we can yeah in terms of other stuff that's happened now you can chat with other people I get sent like things like 10 things per day about other similar incidences and what have you I just I don't have time to dig into a lot of that and we're not going to be tying a lot of that to our situation like whatever Happened Here is unique and yeah I think it can be tied to other stuff in theory um but I don't want

(57:00) anything to be able to discredit our case Okay so this was one of the first payouts here let's look through this let's see if there's any other details that we want to pull out so if you guys are watching along and you see something that you think is relevant um let me know in the chat so this is not a lot of money I also wonder is this per person or is this total if this is total this is nothing I expect these people to get like a million dollars each this is like I'm not sure yeah 32 clients had to split 1.1

(57:52) million Eur okay we're definitely posting that that's probably part of our thing so let's go back to our piece here how are we going to frame this so this is not part is like how do we editorialize this for

(59:10) who paid this out wow Juan is the Chinese currency right for

(1:00:31) this is wild right here we put this quote in there well italicize that I'll probably put this one in here as well both those quotes those are good I don't know if we're going to end up sourcing all these links we'll see maybe this part is wild this is nothing Jesus 58,000 for a family of three they ruin these people's lives man okay so that's good for that article okay so that's our first part and we'll move some of the stuff around

(1:01:39) here okay yeah it's very little I think I also read that people got 50,000 payout early on where's that part where's that part I'm going to have to Google that one separately yeah intern payment here we go

(1:03:23) for this is what we want that part there anything else in here we want to look at so this is interesting they were trying to this might be why they tried to blame the pilot cuz then it doesn't put the liability on the United States or Malaysia honestly the more I look at this these videos are real United States government have a huge legal liability like huge like to the tune of like Millions per person not that it matters for the US government this would be dropping the bucket

(1:04:31) what year was this oh this is 2017 wow look at this these people are scumbags they tried not to pay them anything this is really what's gone holy crap look at this see they settled this is articles from 2017 as well so we already have a pretty good case for why most people right here based on this statement most people would have been silenced cuz your settlement uh if you settle with them they're going

(1:05:41) to have something in there says you can't make any disparaging claims against us or whatever in exchange for the money right this is interesting so they were pretty much screwed over from a legal liability standpoint already yeah I think this got dismissed this United States claim I think didn't we have a link to that let's leave this one up here where was the United States dismissal right here boom boom probably from this one

(1:06:57) oh stack them up there it is yikes yikes let's put the US payout the US dismissal thing here we'll take

(1:08:06) that okay let's see what other questions we have yeah 34,000 sounds like nothing man yeah JoJo you're another 3D Enthusiast anybody who's an honest person that uh is VFX related they know that these are not fake it's way too much detail guys it would have taken a mass Studio or the government themselves to make them and neither of those scenarios make any sense whatsoever based on the videos um the videos just have to be real that's why the people that are **debunking** them are probably very dishonest they probably know

(1:08:43) they're real and they're trying to cast out on them um and that's why when people are trying to **debunk** them with stuff like that I just I just block them usually people have literally tried to make the videos and failed and said it'd be impossible with enough time of course you can make anything but these videos have no discrepancies in them and the time frame is 4 days to 72 days so good luck and using 2014 Technology no AI yeah exactly shoot it from multiple angles is the best way to prove that

(1:09:26) something's like not deep fake cuz deep fake you just take something else and you put it over the top of it too right de fake is not like some original you can't like create original art with de fake thanks Professor J I mean some people think the plane just Zapped out of existence I mean that's fine the problem there is you have to understand that  $E = mc^2$  math Mass

equals speed of light squared or energy equals mass time the speed of light squared so the speed of light is a very big number um and that

(1:10:02) means that there's a huge amount of energy in every bit of mass that means what we're looking at would have been a huge explosion if it was annihilated the question you have to ask yourself is where did the mass and energy go right so if you can explain that then you could explain why it might be Annihilation regarding the pieces of the plane that were found we've addressed that many times we're going to work on this later as well **debunking** the debris no debris found by the official search they had almost 42 uh I think

(1:10:42) this I have these numbers backwards I think it's 42 planes and 39 ships but either way a lot so they had a crap ton of stuff searching and they are also uh admitted that they were working with us spy satellites as well we also have them the United States government uh admitting that they used the cber system to help solve the mystery of MH370 which was never solved so that's pretty weird we have a general that was potentially in charge who got promoted to being the highest ranked military officer after never finding

(1:11:13) anything the debris that was found is consistent with fire in fact we may be adding to this that there is uh the pieces of the debris they found had a honeycomb that's that is unique to Boeing that was had burn marks on it that bla Gibson guy found several pieces that had burn marks on them the debris is consistent with teleportation if we're dealing with teleportation guys that's no problem with the debris the flapper on was not matched with the unique serial number the unique serial plate was missing they

(1:11:42) used a non-unique serial number which means that's just aart from a 77700 the debris did not have consistent Barnacle growth it was found 18 months later at least some of it didn't at least um but again this can be debris from MH370 it's not a problem and then there was a duplicate of the plane that was purchased in October of 2013 that was scrapped uh at least a decade too early maybe even multiple decades too early that's the exact same model number as MH370 so debris **debunked** uh I I would not go hunting

(1:12:25) down family members doesn't seem like a good idea um let's see yeah I mean this isn't even one salary in these payments settlements often times do have gag orders they can for sure not necessarily gag orders but disparage orders like you can't come out and go on TV and start claiming that the official story was a lie right they also always pretty much indicate that you can't bring further legal action against them I'm not a lawyer but so if anyone is and wants to correct me if I'm making any false statements

(1:13:02) please do yeah he had a huge simulator in his home which actually doesn't cast doubt on him if anything LEDs credibility to the fact that he was not suicidal you know he loved flying we don't know where the plane went we can only speculate hey Camille how's it going buddy I I can't guess who everybody is I have no idea if you want to let me know do but you don't need to dox yourself on my channel I appreciate how everybody's being respectful here as well I do a little heart in the chat for you

(1:13:46) guys um you know I always have people coming in and complaining about whatever if you're somebody who's out there who thinks hold on why is this not oh there we go is that better my mic was set on a weird setting yeah if you're somebody oh it's a little bit loud how this work there we go uh if you're somebody out there oh what the heck no I don't hear myself now testing okay if you're somebody out there who thinks that um you know you were falsely blocked or whatever you can use the chat

(1:14:24) um to let me know your tag and explain why you think you're falsely blocked um but realize if you come in and try to you know talk smack then you're definitely definitely not being unblocked so uh be act like an adult you know use your use your polite voices Let's uh set a good standard so let's keep going here H still negotiating the final figure so this was when when was this article Al so this is 2019 so this is four years later don't know what's up with the mic whatever we're going to go with it

(1:15:10) like this yeah so look how much faster mh17 was settled they had settled like all of the claims this is another reason why mh17 is not the same one guys there's different family members completely different family members completely different people on the plane not connected in any way I know a lot of people want to think oh well another plane crash can't be a coincidence yeah can be a coincidence not just a coincidence but a tragedy and the guy who did that is never going to face punishment which is brutal

(1:16:13) um okay I don't think there's anything else that we're going to glean out of this one let's see what else we got down here where this is already pretty long okay we're gonna move this down what about this one

(1:17:26) what this the music stop did I actually close all the windows H wait what where's this what's going on here oh [REDACTED] did I just ACD close the window you guys still hear me and stuff right yeah okay I think I just accidentally closed the window huh it's good to know I don't have to keep it open though um what the heck I don't even know how

(1:18:35) to get back to the streaming window thing whatever I'm just going to ignore it okay um YouTube copyright free music kind of weird oh no there it is what the heck yeah we just hit the end of the music that's why okay we'll go with this other one too loud there we go okay to figure out okay let's see what else we got for comments wait Camille you're you're

(1:19:46) definitely not the general but uh I see if you're the person who I think you are you should reach out to me via DMS if you can't reach out to me via DMS just uh get in touch with me somehow yeah the **Reddit** content got uh censored so that's the reason why we ended up taking up the ring you know **Reddit** was trying to silence it like they usually do for stuff they don't like yeah Damian I don't know if the spread of my channel is limited I don't really care it's not a big deal either way

(1:21:00) um Enron musk I don't know if you can find a video that shows that connects uh connects Sarah to the to the passengers feel free to let me know plane could be anywhere just

makes the most sense that it would be somewhere on Earth I mean if you're teleporting it to another planet why not just let it crash it's already doomed anyway sorry I'm just reading some of the questions here yeah okay um I'm going to delete your comment uh it's not not to censor

(1:22:06) you I just don't want people to be able to find you um I I will I'll check my my DMs uh I don't see any DM from you so so feel free to DM me oh damn Gabe that's a pretty cool picture let me put this in the paint that's a cool one I like this one that's pretty sweet I like the AI art people are making I'm a big fan of it I even started making my own that's the one I posted today was one I made it's pretty low quality but it's cool still oh I have a thing for MH370 art oops I guess

(1:22:57) I should have posted the stuff there this is from Gabe where's Gabe what's gabs Grayson Gabe thank you Gabe for the art try to as much as I can I'll try to um Source people or whatever oh oh okay okay I see you did message me okay got it never mind sorry I'm just reading some

(1:24:11) comments see what we got here and I get a lot of tweet updates now I can't keep up with them all I try to respond to everybody as much as possible but I just I don't have the time to do it all guys I do try L people are uh people think they're going to find the plane in the bottom of the ocean guys it's it's not uh 2015 anymore man it's 2023 they're never going to find this plane in the South Indian Ocean I guarantee it guaranteed they would have found it they they searched the black boxes they

(1:24:55) searched everywhere along the arc they had the most expensive search in history didn't find one piece of the plane it's never G to happen Okay okay let's see what else we got here what is the role of water I don't know doesn't really make a lot of sense okay okay let's get back at this I want to get this pushed out so we can work on the next piece so this one's pretty interesting right this let's see what else we got we got one two okay what do we got

(1:26:16) here I think we already got to The Airliner one right oh no I think this is the one where's that airliner raiding one I'm getting confused under my like sources here yeah this is the one about saying that the courts dismissed it okay let's push this one over here and then we can delete this delete this part too this part I find this quote here I'm GNA I can't wait till this we're going to look at this one last but this is very interesting goes to show how screwed over these families got let's look at this

(1:27:21) one this is the US government case I think is this the Supreme Court Justice I can't tell yeah holy [REDACTED] Supreme Court nominee holy [REDACTED] that's the Supreme Court

(1:28:29) Justice are you kidding me whoa holy [REDACTED] she ruled against the Malaysian Airlines and became Supreme Court Justice I rule against this case oh boy this is spicy oh this is spicy wow guys wow okay okay holy crap all right we got to be 100% sure on

(1:29:39) this guys this is not something you can be wrong about for boom that's spicy holy crap

we're going to need this quote we're going to actually just use this one instead of the other one this is wild guys the reason why

(1:30:51) this is so so big is that if the US government disappeared this plane they're 100% legal and it would 100% be correct to to try the case in the United States now I'm not saying that the Supreme Court Justice is somehow corrupt involved in this like she probably had no idea but she made the right ruling for to protect the government and then she gets promoted to be in Supreme Court Justice wow so a lot of people get promoted after this incident that are involved directly with it that's pretty interesting checking more

(1:31:46) comments yeah the case is part of another country but Boeing is an American company so people Sue Boeing because Boeing is the plane that disappeared and if you can argue that there was something wrong with the plane like with the supermax uh what were they called 767s or whatever that plane was that crashed like you can have you have grounds to sue the American company and if the United States military disappeared the plane well then they're 100% responsible right it's not Malaysian Airlines fault this is getting spicy guys this is

(1:32:25) getting really spicy um Enron musk uh no comment let's say what I'll say is that I've made contacts with people who are pretty connected in general and I've talked to a lot of people that you guys have mentioned in general some people haven't reached out but other people have and uh yeah we're going to be looking to get the best appeal possible on our Freedom of Information e request I already have a way that I think we can appeal but you know having some legal people who are prominent help

(1:33:19) out would be pretty nice yeah there's a lot of nepotism if you watched Um Zack Payne interview yesterday I don't really like talking about politics in general but we dug into a little bit of politics um just because when you're talking about corruption it's hard to avoid politics you know there's a lot and nepotism seems to be a thing you know these government agencies are all there to like justify their own existence right yeah salvator PAs will be on the alien scientist podcast that we were on

(1:34:06) tomorrow so feel free to check that out Congress apparently it takes like a month they say to go through like the capital police screening because I got to make sure that people aren't um you know getting sent Anthrax or anything like that what I will say is yeah Danny shean seems like he's a pretty smart guy uh and it'd be cool if he helped us out okay so this wow that's wild oh we we we deleted this okay this is fine we don't need this one anymore we can close this one did I wait I put it up here right

(1:34:48) yeah we we're using that one right yeah there it is HK law wow that's crazy Supreme Court Justice is involved in this every time we dig down we find something sketchy every single time guys literal Supreme Court Justice is the one who made the ruling holy crap man let's pull up the rest of these links and see what else we can find got that one that one this one okay let's save this ah sh won't save it just I'm going to pull it over here real quick while I save it call this one the payout or the

(1:35:50) payoff is that we calling it the payoff uh it seems a little I know the problem with the payoff is it sounds like you're you're it's like a good thing um maybe not okay let's start with the fle free Malaysia I think this might be redundant excuse me see what we got here huh so who are the defendants in

(1:37:11) this civil aviation Authority cuz I guess the Malaysian Airlines was owned by the government I guess is it music too loud or is it okay yeah good question I don't know how Philip wood got internet we can only speculate on the Philip wood XF data picture maybe they're dumb enough and they had an open internet Wi-Fi or that he was able to connect to like uh somebody's Wi-Fi that was nearby not really sure this is this is pretty garbage is that it this okay this one's terrible search officially ended in 2018

(1:38:10) four years later they didn't find a damn piece of the plane it's ridiculous at least the official search didn't that's why anyone who thinks that going to find a piece of the plane I got bad news for you they're not going to find this plane we people sent me some pretty interesting stuff on uh Steven Greer Dr Steven Greer he's actually a Doctor by the way he used to be an ed Emergency Physician which is why I call him doctor people may know that I'm not big on calling people doctors who are not

(1:38:49) actual doctors um just because you have a a doctor it does not make you a doctor people that want to call themselves doctors because they have phds usually have extremely inflated uh senses of selfworth and egos um I actually work in healthcare so I work with real doctors um pretty much on a very frequent basis and I respect them a lot if you're an academic you're not a doctor so don't make people call you doctor it's it's really sounds bad when you do when people do that I'm not sure a lot of people don't know

(1:39:26) that either I don't think CU when I was younger I didn't know that either but um most people only refer to Medical Doctors as doctors this is pretty interesting so is this true about these documents cuz these documents could have Communications in them I mean I just listen to Greer's uh testimony from I don't know they posted a link he's I've now started to rethink a lot of my opinions on people especially after seen how the disinformation works how they try to discredit people I've

(1:40:23) always thought that Greer had inside Knowledge from I think it was the Clinton Administration um I could be wrong on the administration the part that bugged me about him was that he was you know charging people money to go out into the Joshua tree and you know claim to be seeing seeing like you know pictures of aliens or what have you that's the part where it kind of feels a little wrong you know I would never do anything like that but at the same time you know he's he's got to make a living he's got got

(1:40:51) to try to fund his his documentaries and what have you so yeah people are entitled to do what they want to do just it looks bad from the outside perspective but a lot of the stuff he says I mean it seems like it could check out it's verifiable information so I'm not going to judge people uh just based on what I've heard I judge people based on my interactions with them and

determine whether or not I think they're credible just based on my own person and you know who who I think they are uh I think I'm a pretty good

(1:41:23) judge of character in general but I don't like to judge from out of context stuff okay so we already I think refer we got this we already talked about this right this is this piece is looking pretty long already jeez and generally when I do research I don't I don't like to add my own editor realization very much I just like to summarize what we're looking at just let the documentation speak for itself right people can come to their own conclusions didn't say anything about this oh here we go oh

(1:42:16) wow so it's just the procedures so this is nothing so this is they they released nothing this is useless but interesting this would have this would have basically cleared the pilot of wrongdoing right here um what Malaysian Airlines received a massive windfall so they got an insurance payout for this that probably exceeded the amount they paid out for the families holy crap this is so sus man

(1:43:40) F not I don't fully understand the implications of this but it sounds sketchy as hell there's a lot of money I play here I'm getting a little bit worried about this these are prominent these are powerful people were that are connected to this this is 2016 so this isn't right this is not really enough evidence what I wonder if we can dig in and find this oh

(1:44:44) wow so they renamed the company and then they like made it into a shell so that the old vers old version of company he's gone wow holy crap they fly by the same brand name holy crap okay let's add this this is probably going to come in here as well e we are going to we are going to post

(1:46:07) this cuz this was after two incidents right okay now what else this is the last part I think we don't really need this part wait did we already do this DW one I think we looked at this one it wasn't very useful oh this is the Jin we won okay that is the one we're looking at okay so that's the one we're looking at this we'll delete this need this wait did we look at this one this one we got rid of this is crazy man is that is that in our thing here

(1:47:19) yeah oh my God this is pretty sketch okay I think this is pretty good already what we've got I'm going to start posting Twitter here in a second I think we this is the last part I just got to decide if this is worth putting in there what are you guys thoughts so far this is pretty interesting huh these payouts are a lot smaller than I thought I think the highest payouts are only 250,000 and that's the ones for the Australian um families people like Sarah who is girlfriends of uh Philip wood probably got

(1:48:32) [Music] nothing this guy should reach out to me I mean look guys they spent months looking at the bottom of the ocean found nothing no Alliance was the company that actually owned Malaysia Airlines and then they restructured it under a new name so that whatever was left was all that was left of the old company and that would potentially be to limit the liability let's see

(1:50:19) see it's hard for me to read some of this it's so emotional I mean this guy like his M he lost his mom and look at they're trying to give him like nothing as a payout and they're they're trying to you know get him to silence basically silence him by taking the payout and you're never going to get any answers right this was four years ago there it

(1:51:36) is Boom look at this oh we're just going to S quote this whole thing boom that's a Smoking Gun that they were silenced that's what we needed that's the quote we needed to end this one oh watching the things about the families really just actually enraged me the press conferences watching that defense minister just lie to people like man I hope these guys if they don't face Justice in this world I hope they face it in the next world

(1:53:03) of course they're never going to search for the plane again they knew they were never going to find it the whole search was probably a sham but they had to make it look like they were trying right just want to let you know uh jingu if you're watching buddy we're still fighting for you even if you get silenced we will not give up we need some pictures yeah 50,000 most seem to they got a 50,000 initial payout which is US Dollars and then the subsequent payouts were even like less than that and is

(1:54:06) what it looks like 54 58,000 for a family of three this seem seems to be a combined amount look at this 1.1 million for 32 clients combined total compensation they got like nothing they got like \$30,000 I mean that's maybe in China that goes a little further but the United States it's not even like a portion of a year salary the Australian passengers seem to have got 250,000 I would have expected these people to get like Millions each if this was litigated in the United States they would have probably got well

(1:54:58) over a million each there was a different article about it um I think we're okay to pull this over we need pictures though I like to post pictures with all my stuff we are going to make it a breaking update wait this offer just one

(1:56:13) R Like This was oh I spelled the this wrong let I don't like including non-related pictures we might include a picture of that jingu guy that was that one had me uh yeah kind of tearing up a little bit

(1:57:49) this Allan I'm going to do you one favor here bud and I'm not going to block you here permanently again but please realize man that crying about being blocked is a sure way to get yourself blocked okay act like an adult okay I really don't care if you can't stop trolling you are going to get blocked please this is your only chance I normally don't give people a chance like this okay I mean honestly I'm looking at your post here man and uh you know trolling you wonder why these are like the people that want

(1:58:49) wonder why they get blocked right and they cry about getting blocked they're literally just trolling you know so don't be like this guy people yeah actually now looking at this like yeah you're not getting another chance you're gone don't be like this guy people I'm actually reporting you as well you've been blocked for my entire Channel yeah no I mean I got rid of him

he's

(1:59:51) gone so guys don't act like a loser like that guy was like these are the people who complain about being blocked like they have serious issues you know just act like a normal person if you can't do it then just don't post you don't have some right to be trolling me I mean this is what's wrong with the Internet these days people are so self-important okay let's get back to the work here let's not be distracted by people like that okay let's keep going sh

(2:01:23) oh this is this is actually not this is not a code this is mine I don't know what people's problems are like they just people are just obsessed with me I don't really get it let's see this is looking pretty good so far we need some pictures to go along with this though what

(2:03:18) for for sh to

(2:05:26) I wonder if there are any payouts in **China** it might just be cuz isn't Juan the Chinese currency yeah that's **China** this is wild that's very little money yeah so 7 divided by that is yeah what 60,000 a pop we don't need surprisingly here it

(2:06:38) can just be the payouts you guys can still comment right did I close comments somehow no never mind we still got 70 concurrent streamers Watchers got kind of a lot of people following welcome let's see I'm going to post this and I'm going to take a five or 10 minute break uh wow we've been live for two hours already then we'll work on the next piece which won't take as long as this one and then we'll work a little bit on all evidence

(2:08:08) okay this is I think we're good on this do one more proof read because I always make a spelling mistake for okay we're going to we don't want that I don't want that what are all these spaces we have down here let's put some

(2:09:11) pictures in there I think we're going to use this last one and we'll definitely pull up a picture of the guy I'm sure this is the guy right yeah I think I've got some pictures here where is

(2:10:17) it some of these pictures are hard to look at guys I was not expecting to see all this oh wow didn't think I'd get

(2:11:28) emotional okay okay okay here we go uh yeah my chat's not working for sure it's not working oh there yeah now chat just came back sorry guys hey Krypto uh sorry I my chat was not working there for a minute when I Ed that person out it all

(2:12:36) crashed uh so yeah let me look back at some of these messages yeah someone used a program to find that VFX **debunk** there's no way they just somebody happened upon their old 3DO 90s video games let's be honest they looked for something they thought they could link that they could **debunk** the stuff which just makes it even sketchier okay I think we're good to post this um so far we haven't had any uh success with the larger podcasts but I wouldn't be able to say so even if I had so you know can't really believe me even
